LOCOMOTIVE FIREMEN'S MAGAZINE.

VOL. XV.

JANUARY, 1891.

No. 1.

OFFICIAL ORGAN OF THE

Brotherhood of Locomotive Firemen.

Entered at Terre Haute Postoffice as second-class matter.

PUBLISHED ON THE FIRST DAY OF EACH MONTH AT
TERRE HAUTE, INDIANA.

TERMS—ONE DOLLAR PER YEAR IN ADVANCE.

ADVERTISING RATES given on application to
W. N. GATES, SOLE AGENT,
29 Euclid Ave., Cleveland, Ohio.

COMMUNICATIONS should be addressed to
LOCOMOTIVE FIREMEN'S MAGAZINE,
TERRE HAUTE, INDIANA.

EGGENCE V. DEISS, . . . *Editor and Manager.*

A. M. 5894—A. D. 1891.

According to accepted chronology the work of the Creator in building the universe was completed 4004 years before the advent of Christ; add to this the 1890 years constituting the christian era and we have a sum total of 5894 years since the "morning stars sang together and all the sons of God shouted for joy" when the foundations of the earth were laid.

Some people are disposed to correct our chronological tables. They will have it that the figures used to indicate the number of years since

"The perfect world by Adam trod" was completed, and the "evening and the morning was the sixth day," that millions of years have come and gone, and that we nurse the most egregious errors relating to what we call "time."

Possibly, nay, most positively, it is a variety to suppose that 5894 years measure the distance between the laying the "foun-

dations of the earth" and the present. But wherefore bother with such problems?

"Think we or think we not, Time hurries on
With a resistless, unremitting stream;
Yet treads more soft than e'er did midnight thief,
That slides his hand under the miser's pillow
And carries off his prize."

This has been true from the "beginning"—whether that be 5894 years in the past or that many millions of years. The past and the future make up the circle of eternity, and it were sheer folly to attempt the incomprehensible. We deal with the present—the now. The past is gone; it can return no more. It has exhaled the dew of life; its glory—whatever it was—has departed. True, some records of wisdom, of folly, of ambition, of victories, of failures, have been preserved, but unless they teach men to be industrious, independent, self-reliant, virtuous and strong, they are of no value to the living, and all the years, and centuries, and cycles become, with all their hoarded treasures, utterly worthless. We may sip the cup of promise, and with eager lips drain its nectar till the fume mounts kindling to the heated brain, to realize at last that all is dead sea fruit—that the one road to success is work; work with hand and brain; work early and late; work, as does the silkworm, the bee and the ant. Time is relentless and autocratic. Its mandate is, work or starve, all too often work and starve; work in rags, live in dens, in filth, in wretchedness, and die, at last, as do the beasts of the field and of the forest!

Time ought to be an educator. Its lessons ought to be written upon the minds of men

as old Job wanted to preserve his words, "graven with an iron pen and lead in the rock forever." That it is an educator to some extent, is shown, by the uprising and the organization of workingmen.

A poet refers to Time as a "tomb builder." In the past he has been a throne builder as well. Apparently, he is becoming tired of the vocation and is turning his attention to building lodges—parliament houses, where workingmen deliberate. The indications are that workingmen will no longer

"Plod in sluggish misery,
Rotting from sire to son, and age to age."

And of all the lessons Time has taught, not one is of more value than that which teaches the men who toil that they can, if they will, be free; and they are saying to those who oppress and degrade them,

"Go tame the wild torrent, or stem with a straw
The proud surges that sweep o'er the sands that
confin'd them:

But presume not again to give TOILERS a law,
Or think with the chains they have broken to
blind them."

The last decade—from 1880 to 1891—has been fruitful of inspiring progress. Labor has won victories and experienced defeats, but, on the whole, surveying all the battle fields, where the hosts of labor struggled against a rich, well disciplined and arrogant foe, the verdict is—

"The God of battles smiled and Justice triumphed."

We now enter upon another year—1891, and another decade, which at its close, will usher in the twentieth century, during which Bellamy's millennium is to dawn. We are not particularly interested in a future so far away, but we confess to special interest in A. D. 1891. It is with us. We stand upon its threshold, but, alas, we are not a seer! No seraphim has touched our lips with "a live coal from off the altar." We know not what there is in store for workingmen. We may, with others, admire the covenant bow upon the brow of the storm-cloud, and say "seed time and harvest shall come" in regular order, the "early and the later rain," but let it be remembered that while the seasons may come with their "seed time," "the harvest" will not come unless the seed is sown and the plants nourished. There must be work.

We do not doubt that the year 1891, and

all the years to 1900, will give workingmen numberless opportunities to sow precious seeds of truth, and if sown, abundant harvests will be garnered and splendid progress made.

"There is a tide in the affairs of men
That, taken at the flood, leads on to fortune."

But the tide must be taken "at the flood," for if

"Omitted, all the voyage of their life
Is bound in shallows and in miseries."

As we write, we surmise that the spirit of brotherhood in the ranks of workingmen is stronger, more active and conquering than in all the past since time began. It is the spirit that animated David and Jonathan which has gone forth into the world and is glorifying fellowship, creating confidence, breaking down the barriers of envy and jealousy, and establishing brotherhoods, and sending Robert Nicoll's song, "We are Brethren, a'," around the world—

A happy bit hame this auld world would be,
If men, when they're here could make shift to agree.
An' ilk said to his neighbor, in cottage an' ha',
"Come, gi'e me your hand—we are brethren, a'."

The knave ye would scorn, the unfaithful deride,
Ye would stand like a rock wi' the truth on your side:
Sae would I, an' naught else would I value a straw,
Then gi'e me your hand—we are brethren, a'.

We belong to that class who believe that during the next ten years the decisive battles between capitalists (not capital) and workingmen are to be fought in America. This conviction is derived from our knowledge of what has transpired during the past twenty-five years, more especially the last ten years. We do not overlook the fact that capitalists have vast resources at their command. We do not underestimate their tactics nor their strategy, nor do we doubt their tenacity of purpose. They hold on and fight with determination and with desperation. It has been said of "capital" that it is "timid." It would be quite as rational to say that a boulder is timid—one is as inert as the other. Capitalists are "timid;" or, more properly, distrustful. As a general proposition, they invest their cash cautiously. They want dividends and profits, and to secure them, are cruel beyond measure. These dividends can be secured only through the agency of labor. Without labor, the investments of all the capitalists in creation would

never secure *one* dollar. So far as dividends are concerned, \$1.00 would be equal to \$1,000,000, or any number of millions. The vitalizing force in the world's enterprises is work; and, as a bed-rock proposition, if the world's capital were sunk in an hour to irrecoverable depths, labor could and would recreate every dollar. We do not care to discuss such axioms now. The fact is that capitalists have demanded and secured, in the past, more than their fair share of the wealth that labor has created. It has been so from the first, under every form of government of which authentic history speaks or which exists in legendary lore. It is an old-time and an all-time truth, and demonstrates that an era of justice has never been known.

It might be interesting to know when the germ of resistance to the wrong was first planted, and who was the first workingman, of all the centuries, who paid the penalty of martyrdom for daring to proclaim his abhorrence of the policy of capitalists. There was such a time, there was such a man. From that time to the present, the nature of the capitalistic class has remained unchanged—policy and theories are the same. But a new force has appeared. The workingman has said, "Let there be light," and light has come. This new light has had liberating, elevating and redeeming power. It has increased in effulgence. Workingmen no longer walk in the dark; millions of them are no longer benighted. They stand erect, disenthralled, emancipated, independent, self-reliant. They are now demanding in America, as the demand was never before made since God said, "Let there be light," their fair share of the wealth they create.

Do the capitalists hear the demand? Yes. Do they heed it? No. Hence the coming conflict.

In view of such facts, the present generation of workingmen may owe a debt of gratitude to Time. That they owe a debt of gratitude to workingmen of the past who dared rebel against oppression, there can be no question. They owe a debt of gratitude to the workmen of the present century that no mathematician can compute; and they will pay it—pay it in such a way that the next generation will consider how they can best bear testimony of their obligations.

We turn from such fields of reflection to our own beloved Brotherhood of Locomotive Firemen. It enters upon the new year, 1891, with the most cheering prospects of success and prosperity. It is strong in every principle of brotherhood. It is young in years, but old in wisdom. It has not reached its majority, and yet its policy bears the stamp of mature judgment. It numbers 20,000 members. If there is a problem relating to permanency and prosperity that remains unsolved, let it be suggested, by friend or foe, and it will have attention. Such a problem does not now suggest itself. While it has demonstrated intelligence of a high order, it is still advancing in knowledge. It is steadily increasing in membership. We can not see the future—we have no power to draw aside the veil; and yet, judging by the past, we predict, when another century dawns, our Brotherhood, serene as the sublime elevation upon which it will stand, will be then, as now, the unfaltering friend of labor, of organization and federation; and then, as now, proud of the splendid organizations with which it is in alliance for the glorious purpose of securing right and justice for railroad employes. True, we do not know what oily tongues may be invited to deliver orations at its biennial conventions whose hatred of organized workingmen is so hot and implacable that they can, if permitted, employ bands of murderers to shoot them down as if they were dogs. It may be that creatures like the President and the Third Vice President of the New York Central may be invited to sting workingmen with words like the lash of scorpions; but we do not believe it. We would rather see the Order, with all its well-earned fame, go down beneath the black waves of oblivion, than live to achieve such monumental degradation.

Again we turn to the year that is gone with no regrets, except such as come to all for opportunities to do good which were permitted to pass unimproved; for such errors of judgment come to all fallible mortals—to all

"Poor wanderers of a stormy day!

From wave to wave we're driven.

And Fancy's dash and Reason's sway

Serve but to light the troubled way—

There's nothing calm but Heaven."

The New Year bells are ringing joyfully, and our heart is in tune with their melody. To our friends,—and to enemies, if such there are,—to all, we send, without mental reservation, a happy New Year greeting. Let the toast go round—"A Happy New Year to all;" more than that, may many happy New Years come to all. As the months come and go, the *Magazine* will go forth on its mission; and, we hope, to cheer and encourage its readers, to add something to the store of their knowledge; and with this our ambition will be satisfied.

"There is, they say, a bending form of love,
Who spreads his dove-wings over us and bears
The wearied in his gentle arms above
All earth has to assail us—sorrows, cares,
Toll and disease and want, till cool, sweet airs
Breathe odors from never fading flowers
That grow in Heaven, where peace eternal wears
The same undying smile, and, as the hours
Steal silently along, descends in balmy showers."

PARNELL.

"So dear to Heaven is saintly chastity,
That when a soul is found sincerely so,
A thousand liveried angels lackey her,
Driving far off each thing of sin and guilt."

Mr. Parnell, by the verdict of an English jury, has wrecked a home. It was not a "packed" jury—not a jury selected to convict—and its verdict will stand. Nor will it do to assert that Mr. Parnell was the victim of partisan hate, of sleuth hound persecution, because he had expanded by virtue of his great abilities to the leadership in parliament of the Irish cause.

Mr. Parnell has not been deprived of his intellectual superiority, but, great as it may be, it was not sufficient to enable him to rule himself. With all his towering faculties he was weak.

It has been accorded to few men to achieve the splendid renown that had become the heritage of Charles Stewart Parnell. It belonged to the world, though Ireland and Irishmen claimed it as their own. Parnell, as a leader in a cause that enlisted the sympathies of all lovers of liberty, of all enemies of oppression, stood without a peer in the closing years of the nineteenth century. He had become a great figure in history. Calm, confident and self poised, he was Ireland's favorite son. Gladstone was proud to do him honor.

Those who opposed him and his cause admired his courage and believed him patriotic. When he spoke, England and Ireland and the United States, and all christendom listened.

Evicted Irishmen, standing around the ruins of their homes, Irishmen enduring the pangs of famine, Irishmen in prison and in exile, and Irishmen, still permitted to speak by Balfour and his British sleuth hounds, looked to Parnell—their hopes centered in Parnell. Alas, their idol is shattered.

It is not required to be sentimental—nor yet to rave—but the exclamation, "How are the mighty fallen!" is in order. Parnell, the leader, is no longer the leader. As a leader he has committed suicide. He is dead. His name is everlastingly associated with Mrs. O'Shea and adultery. The miserable woman and her paramour are alike wrecks. O'Shea's home is in ruins, and his children are a thousand times more to be commiserated than orphans.

Who wrecked the home? Who orphaned the children? Who despoiled the wife and mother? Parnell. A statesman, a patriot, a leader, a member of parliament, a man whose brightening fame filled the world—Parnell. He wrought the ruin, he perpetrated the crime, and now, silent as the tomb, he must suffer the penalty of righteous scorn in every land where home is held as sacred to virtue.

Parnell cannot plead youth in extenuation of his escapade. Indeed, he does not plead at all. For Parnell there is neither apology nor excuse. He gave his passions full play and they led him on to ruin's brink and over it. He could not curb them, or would not. Home, wife, mother, children, divine law, human law, all, everything went down before the fierce passions of the hour—proof that

"When headstrong passion gets the reins of reason,
The force of nature, like too strong a gale,
For want of ballast, oversets the vessel."

Ireland's cause may suffer for a time, but not always. Some say Parnell will retain his position as leader—that the great world cares little or nothing for such a record as Parnell has made. If so, our boasted civilization is a stupendous sham. We doubt if the world is ready for such a verdict.

THE FEDERATED ORDERS OF RAILWAY EMPLOYEES.

There are six organizations of Railway Employees who are engaged in the train service of the various railroads of the country.

There is high authority for saying that there are now 160,000 miles of railroad track in the country, which, it is said, required the investment of \$8,500,000,000.

Of this investment, it is said, railroad corporations represent \$1,500,000,000, and private individuals hold the remainder, \$7,000,000,000, and of this remainder vast sums are owned in Europe.

This investment, for the year 1889, earned \$1,089,985,831, or 12.80 per cent. on \$8,500,000,000. The total expenditures, for all purposes, amounted to \$988,597,095, leaving a balance of \$101,388,736.

There is not a man in the wide world, who knows anything at all of railroad building, who believes that the railroads of the United States cost \$8,500,000,000,—\$53,126 a mile—including every conceivable item of expenditure.

It is universally conceded that \$25,000 a mile is a large average estimate, and that the cash invested in the railroads of the country does not exceed \$4,000,000,000; hence, it is believed, that of the \$8,500,000,000, not less than \$4,500,000,000 is water.

We have stated that the gross earnings of the railroads of the country in 1889 amounted to \$1,089,985,831, or 12.80 per cent. on \$8,500,000,000. But assuming that the railroads cost in actual cash but \$4,000,000,000, then in that case, their earnings in 1889 was 27 per cent. on that amount.

We have stated that the total expenditures of the roads for all purposes amounted to \$988,597,095. In these expenditures is included dividends on stocks and interest on bonds, estimated, as we have shown, at \$8,500,000,000.

Suppose we put the rate of dividend and interest at 4 per cent. In that case the expenditure would reach \$340,000,000—\$8,500,000,000 at 4 per cent. yielding that amount. But estimating the cost of the roads at \$4,000,000,000, 4 per cent. dividends and interest would require only \$160,000,000, showing a saving to the earning fund of \$180,000,000.

The point we make is this, that the railroads, by paying interest and dividends on \$8,500,000,000 of cash and water instead of \$4,000,000,000 on honest cash investments, railroad corporations find an easy excuse for cutting down the wages of employés.

Occasionally the great railroad systems issue reports, and the Alpine piles of figures they contain are well calculated to bewilder the average reader. These figures are so adroitly manipulated that only experts can tell head or tail of them, but they enable the corporations to impress the public with the monstrous fiction that capital is being sacrificed for the welfare of employés, and the trick is played so dexterously as to extort the exclamation, "Certainly, capital is doing all in its power for labor."

Money in large "blocks" has for years been down to 3 per cent. interest per annum, but suppose we allow 4 per cent. for the rate of interest and dividends as before stated; then tabulated, the account would stand as follows:

\$8,500,000,000 at 4 per cent. is	\$340,000,000
\$4,000,000,000 at 4 per cent. is	160,000,000
Difference	\$180,000,000

Now, then, this difference, \$180,000,000, is paid on water, on fictitious capital that has no existence whatever. It is one of the most stupendous frauds of this or of any other age, and it is just that much wrested from labor and paid to capitalists.

It is authoritatively stated that the employés of the railroads of the country in 1889, were as follows:

General Officers	4,737
General office clerks	20,817
Station agents	24,171
Other stationmen	58,037
Engineers	30,217
Firemen	31,993
Conductors	20,953
Other trainmen	53,160
Machinists	25,214
Carpenters	33,244
Other shopmen	75,669
Section foremen	25,539
Other trackmen	115,101
Switchmen, flagmen and other watchmen	33,011
Telegraph operators	16,337

Deduct General Officers	601,423
	4,737

Total workingmen 596,686

We have before us as we write an exhaustive analysis of the wages paid railroad workingmen on the railroads of a Western State, officially reported by the officers of

each corporation to the Bureau of Statistics, and the average is \$1.84 a day. We do not doubt that this average will hold good throughout the country. As a result 596,686 men, working 313 days at \$1.84 a day, would receive \$343,643,326, an average of \$576 each.

These 596,686 workingmen made it possible for the railroads of the country in 1889 to earn \$988,597,095. Of this amount they received \$343,643,326, leaving a balance of \$644,953,769.

Loud mouthed ranters are continually charging that labor and capital are at war, when, in fact, but for labor not a railroad train would move an inch, and the capital invested in railroads would be as dead as an Egyptian mummy.

Let us see where the trouble lies. All agree that capital should have its fair dues. Labor does not and never has objected to the proposition. Labor simply asks for fair play, a fair deal, an honest distribution of the wealth it creates. This has been denied from the beginning, is denied now. It is denied under cover of a system of chicanery and is robbery pure and simple. There is about \$4,000,000,000 *honest* cash invested in the railroads of the United States, but interest and dividends are collected on \$8,500,000,000, and this stupendous swindle lies at the bottom of what is termed the "war" between capital and labor.

Of the earnings of the railroads in 1889, capital, representing \$4,000,000,000 at 4 per cent., should have taken \$160,000,000, but instead of that it claimed an investment of \$8,500,000,000, \$4,500,000,000 of which is water, and took \$340,000,000, \$180,000,000 of which was pure and unadulterated robbery. The \$180,000,000 belonged to labor. If the employés of railroads had received it their average pay, instead of being \$576 a year, would have been \$877, a gain of \$301; or instead of \$1.84 a day, workingmen would have received \$2.80 a day, a difference of 96 cents a day.

We have written the foregoing to indicate the high and noble purposes of federation. It is to do what is possible by legitimate influences, to maintain wages, because, say what we will, wages are the foundation of the prosperity, education, independence

and happiness of workingmen. Workingmen do not desire to rob capital, nor do they intend to be forever the victims of robbery. All they ask is fair play. They are opposed to working for the purpose of paying dividends on *water*.

There are now four federated Orders, the members of which are engaged in the train service of railroads, as follows:

The Brotherhood of Locomotive Firemen.
The Brotherhood of Railroad Trainmen.
The Brotherhood of Railway Conductors.
The Switchmen's Mutual Aid Association.

It will be interesting to approximate the membership of the four federated Orders, which is as follows:

Brotherhood of Firemen	20,000
Brotherhood of Trainmen	17,000
Brotherhood of Conductors	5,000
Switchmen's Association	3,000
Total	50,000

It should be said in this connection that each of the federated orders is rapidly growing in membership. Those opposed to organization are being converted, and the opponents of federation are disappearing.

The benefits resulting from organization are recognized by all intelligent railroad employes, and federation is universally accepted as the one thing needful to enable railroad employes to maintain their rights against the encroachments of the corporation.

It is eminently worthy of remark that the federated Orders are alive to the demands of the times, and comprehend fully the requirements which they are under obligations to meet.

Each of the federated orders has its official organ, publications of recognized merit, which are performing a noble work for organized labor, and in the discussion of federation challenge its opponents to the arena of debate, but they do not come.

These publications are:

The Railroad Trainmen's *Journal*, published at Galesburg, Ill., L. W. Rogers, editor.

The Switchmen's *Journal*, rooms 77 and 78, 14 and 16 Pacific Ave., Chicago, Ill.

The Railway Service *Gazette*, organ of the Brotherhood of Railway Conductors, published at Toledo, O., Wm. R. Leflet, editor.

The Locomotive Firemen's *Magazine*, pub-

ished at Terre Haute, Ind., Eugene V. Debs editor.

These four publications have a circulation widely beyond the boundaries of the organizations in whose interests they are issued. If the press, as is asserted, is an educator, then the federated Orders are doing their full share of educational work. They are discussing economic questions from every point of view, and the membership are learning to solve problems which relate to their financial welfare. They are thinking for themselves and speaking for themselves. Federation, therefore, means more than an alliance of physical force, it is a league of mind forces which is daily becoming more resolute, more confident and conquering.

We would have the federated orders feel a deep and abiding interest in each other's welfare. We would have the fellowship close and vital—so intensely alive that each would feel it not only a duty, but a pleasure to aid others in every possible way to grow in numbers and influence.

There are a thousand ways in which such fellowship could find valuable expression. Once let it be understood that federation is a union of hearts and hands, of thought and endeavor—"each for all and all for each," and it becomes invincible. It becomes a method for applying power with the least possible amount of loss, because friction is reduced to the lowest point.

That it has triumphed is a matter well worthy of rejoicing, and that more victories are to come is a foregone conclusion.

We would have the members of the Brotherhood of Locomotive Firemen advised of the address of each of the federated Orders, so that in any event should they desire information to enable them to be of service to the federated Orders, they will know where to write, as follows:

B. of R. T., Wm. A. Sheahan, G. S. and T., Galesburg, Ill.

S. M. A. A., Wm. A. Simsrott, G. S. and T., rooms 77 and 78, 14 and 16 Pacific Ave., Chicago, Ill.

B. of R. C., D. J. Carr, G. S. and T., 139 Huron St., Toledo, O.

In closing this article we send our New Year's greeting to the members of all the federated Orders. We confess to special

pride in reviewing the grand army. We like its banners, its stately stepping, the animating music of its drums and bugles. It means business. It has a mission. There is room for it "on top," and that is where it is located. In the spirit of fellowship and fraternity, we bid our federated comrades God speed.

THE Boston *Globe* says "Pinkertonism must go," and adds that "these Pinkerton forces are simply private armies of hirelings, ready to do any bloody work that may be required of them for pay, wherever there is any pretense that it is in defense of the property of great corporations. The shooting of innocent persons, as at Albany during the New York Central strike, and at Fort Worth during the Southwestern strike of 1886, shows one of the evils of this kind of warfare, but the great objection to it is its utter and obvious inconsistency with the state's legitimate functions. No state can afford to tolerate private armies within its borders. Such mercenary troops are as dangerous to the public peace, safety and liberty as were the private armies of Rome in the days of Rienzi." Mr. Chauncey M. Depew, the intimate friend of Mr. P. M. Arthur, and president of the N. Y. C. & H. R. R. R., don't propose to let "Pinkertonism go."

It is conceded in some quarters, that greater safety to trains would be secured by having a man on engines as a special "look-out" for dangers. The *Western Railway* refers to the matter as follows:

If a fireman has much work to do about a furnace door he is no earthly good as a lookout. The heat and light of a furnace renders one's eyes useless for several seconds after having looked into the firebox. It is our belief that it would be a good idea for our mountain roads to have a lookout on each passenger engine. Surely if it is necessary on a straight track to take this precaution it is doubly necessary on the crooked mountain lines, where the curves are so sharp that the engineer can hardly see the fireman. Eastern runners will be surprised to learn that the card time of our mountain trains is thirty miles an hour.

Manifestly, it is asking too much of a fireman to "keep her hot" and play lookout at the same time, and the fact is plainly set forth by the *Western Railway*.

PROTECTION.

It is a mistake of no little importance to suppose that the students of phenomena confine their observations to strange and unusual appearances in the heavens, the earth, or the waters under the firmament. There is a world of mind in which those who are at all attentive may discover many things well calculated to arouse reflections of intense seriousness. It goes for nothing to say that the great majority are unobservant—heedless of passing events. There are those who never heed the signs of the times, and who, if their attention could be arrested, would simply stare at them with scarcely more apprehension of their significance than so many sheep. They marry, and are given in marriage; they eat, drink and sleep. The skies may be red, or dark and lowering, it is all the same to them. Such people do not keep up with the procession. They are always too late for the train. We can afford to dismiss them. As forces and factors, they are as copper coins among doubloons. If rich, they are like misers, who clutch and count their gold and hide it away; if poor, they accept conditions without protest, and like asses, bear their burdens uncomplainingly.

But there are others who are wide awake and on the alert. They read, they think, they watch. They clamber to the highlands of vision and survey with eagle eyes the surroundings. They detect phenomena whenever and wherever they appear. They see the shadows of coming events. They are the *avant couriers* of all explorers—the path-finders in every wilderness. They are the Johns crying, “make straight paths” for men who have discovered at last that “God is no respecter of persons,” and who have concluded to live and be clad and fed and sheltered by Divine right, without asking permission of mortals.

Here in the United States of America the uprising is phenomenal. It is a phenomenon that creates continental amazement. A writer in a magazine calls it “The Labor Crisis.” He says, “The point to be determined is, whether capital or labor shall, in future, determine the terms upon which the invested resources of the nation are to be employed.” Not exactly. The point is,

shall the men who perform the labor and create all the capital, share in it to the extent of living like men or of living like beasts? The point is imbedded in the question, Can workmen *protect* their inalienable rights of life, liberty and happiness? If so, how? The answers are easy. First, by organization. The extent of organization is phenomenal. It extends to every trade. It is steadily going forward. It alarms those who deem it for their interests to degrade workmen—to so impoverish American laborers that they shall be content to work for such wages as satisfy Italians, Poles, Hungarians and others who, at home, have shared their huts and dens with domestic animals and vermin—who never drew a freeman's breath nor uttered a sentiment in accord with American citizenship. We accept the announcement that a “labor crisis” is at hand. Workmen are preparing for its coming. Every sign betokens its coming.

Those who are observant, will notice that workmen are not only organizing, but are reading. They take the papers, and at last labor has a press. If, therefore, those who oppose the emancipation of labor from debasing enthrallments, predicate success upon the ignorance of workmen, they are doomed to disappointment. The propositions up for debate in the councils of workmen are few and simple, but fundamental. They are not to any great extent discussing Bellamyism. They are not trying to determine what will be the condition of workmen A. D. 2000. They are not switched off to find out whether a worker in Europe receives more or less than a worker in America. The supreme purpose is to obtain such pay for their work as will support themselves and their families decently, and this, as certainly as rivers flow to the sea, they are going to have, crisis or no crisis. It is a righteous demand, and will undergo no abatement.

As matters now stand, workmen are the victims of oppression. They are overworked and underpaid, or, if in any case, justice is done them, it is the result of compact organization. That is what affords them such protection as they have. The fact is recognized and acknowledged. But

It has been found that organization is but the initial step in securing protection, hence the Shibboleth of workmen to-day is FEDERATION—an alliance of all organizations and that once perfected, labor's millennium dawns.

We must not be misunderstood. We do not mean that carpenters and brick masons are to federate with men engaged in the train-service of railroads. Fortunately, these are setting a noble example of federation, and are securing protection. So it may be with men identified with the building trades, and thus, wherever there is an identity of interests, such alliances secure the right and protect the right, and when an organization of workmen is formed, and its chief officers fight protection and hobnob with those who oppress labor, such an organization is certain to disappear. It cannot stand. It is a treasonable organization, and ought to die. All the scabs that ever existed are not equal to the malign influence exerted by a workman's organization in alliance with the Germans of the period.

The era of victory is dawning. The days of doubt and despondency are passing away. The spirit of protection is abroad. Its animating, vitalizing power is felt by the hosts of labor everywhere, and they are moving forward to certain triumph.

A CONSIDERABLE interest is being awakened in scientific circles on the cow-tail question. It is held that "every time a cow moves her tail to switch a fly she exerts a force of three pounds. In the course of the summer a single cow wastes 3,000,000 pounds of energy. The cows of America throw away power enough to move every piece of machinery in the world." To make matters still more interesting, it is asserted that the cow switches her tail when there are no flies about, switches her tail from the force of habit, and this fact, swells the sum total of wasted energies to 15,000,000 pounds during a summer. It will be seen that the cow-tail-energy-question is one which the students of horn power may find intimately associated with butter and cheese statistics and weal pies, to say nothing of udder matters.

KATE FIELD has ringing words for labor. She is as masculine as giant-thoughts can make her, and she is not afraid of millionaires. She says:

The attitude of capital toward labor is a gigantic blunder, because it is opposed to Christianity, which most capitalists profess and which few of them, or any other class, practice. Heretofore labor has been the under dog in every fight in every clime, and has submitted to its fate through ignorance and cowardice. Our republic is built upon the principle that all men are born free and equal, and are entitled to life, liberty and the pursuit of happiness. Every man, however ignorant, is given a vote, and schools are open to his children. Thus labor becomes intelligent and manly and begins to think. "There's something wrong," says labor. So labor strikes—sometimes wisely, often unwisely, always to the detriment of individuals, but always in behalf of the brotherhood of man. Grown arrogant by the power and traditions of centuries, capital, like the Bourbons, seems to have learned nothing. It forgets that labor is no longer abject. Labor may be unreasonable, brutal, even mad at times, but it has ceased to be afraid. It has attained the dignity of self-respect. Why does not capital see the handwriting on the wall and meet labor in the spirit of Christ? Why this church-going if it lead not to the golden rule? Labor asks for arbitration. Why not?

It is a fact that labor has ceased asking permission to live in the world; it has ceased to kneel. It no longer takes off its hat; labor is erect. It has intelligence, spine, sand. It knows what it has done and is still doing for the world. It knows how it has been robbed, and it proposes a new régime. Kate Field is keeping up with the procession.

CHICAGO has a trackless street car called the "curette." This new invention cannot run on the ordinary street car track, the distance between the wheels being greater than the car track width. It avoids delays or blockades, and stops at the curb to receive and discharge passengers. It seats twenty persons, and is drawn by two horses, and has a conductor and a driver. It is said to be very popular among ladies and children.

TAKING the production of cigars and cheroots in the month of September as an average, and the total production for the year would be 4,947,634,560.

IN 1888 six persons cornered cotton for 24 hours and secured a profit of \$15,000,000.

WAGES.

In defining the term wages, a high authority says:

"That which is covenanted to be paid for work done; hire; reward; that which is paid or stipulated for services; price paid for labor; the return made or compensation paid to those engaged to perform any kind of labor or services by their employers; recompense; fruit; that which is given in return. The term is commonly applied to the payment of manual or mechanical labor, other than that performed by the more educated classes, to which the word *salary* bears reference."

The foregoing affords the reader all the information required relating to the meaning of the term "wages."

In very many regards, wages is one of the most important words in our language. It is a word that has more to do with the happiness or misery of millions of people than any other word we can think of.

The discussion of the subject brings up numerous questions, each of which is of such importance that it is difficult to select those which should have preference.

Wages is compensation for work; hence, wherever work is performed, wages has precedence. It is the bed rock, the fundamental, the supreme question. We write of the rule, not of the exceptions. We speak for the intelligent, the self respecting, the ambitious and courageous workingman, not for the scab.

We have no objection to the mottoes of labor organizations. They read well and sound well, but they seldom, if ever, indicate the pivotal purpose. It may be, indeed, it is, true that labor organizations are profoundly interested in promoting morality, sobriety, intelligence and all virtues, and yet, but for the question of wages, it is doubtful if they would exist at all.

It is well enough to extol the virtues throughout the entire list. It is an easy thing to do, and some people never weary of it. The moral reformers are exceedingly felicitous in showing how easy it is to be good, notwithstanding that the "world, the flesh and the devil" are everlastingly on the war path.

Just here it should be said that the pulpit, which thunders its anathemas at sin, has an eye to *salary*, which stands for wages, and but for the *salary* the pulpit would be as silent as the grave of Adam.

This is no reflection upon the pulpit; it is simply the recognition of the supreme importance of wages, compensation for services, which in the case of the pulpit, frequently runs up into thousands, giving the preacher a salary equal to that of a railroad or a bank president—a fact which, however much may be said about a "free gospel," makes it occasionally as high priced as any imported luxury.

The point we make is that, say what we will, the chief concern is *money*, wages, compensation for work performed. It is everywhere, and no where is it as important as in the ranks of workingmen. Their happiness, comfort, advancement, intelligence, and independence hinge upon, hang upon wages.

If it be the purpose of any man, or class of men, to degrade workingmen, the first move is to reduce wages, make it difficult or impossible for a workingman to live decently, force him into habitations unfit for the abode of human beings, compel him to insufficiently clothe himself, his wife and children, and to subsist upon insufficient and unwholesome food.

This done, and the work of degradation and demoralization goes steadily and rapidly forward. It is inevitable. No law of the universe operates with greater certainty. With advancing wages, with fair and honest wages, a movement in the opposite direction occurs; workingmen have better habitations, better clothing, better food, and in abundant supply.

But this is not all. With fair, honest wages, the workingman not only has better habitation, better clothes and better food, but he is enabled to have a few books and papers. His home becomes brighter and more joyous. There is better furniture, there may be pictures on the walls, an instrument of music may be had, and the refining, elevating influence of music felt. Nor is this all; with fair, honest wages children of workingmen are properly clothed to attend school and church and early in life imbibe ideas of worth and moral rectitude which influence their future lives for good.

Reduce wages, deny the workingman fair wages, subject him to wrong and injustice.

and the home at once exhibits the consequences, society feels the shock, and the inmates of the poor houses, asylums and prisons are increased.

The man who denies his employes fair wages is a public enemy, nor does any amount of slobbering over the ills incident to work condone the wrong or make him less a monster. To studiously rob men of wages, and take the money thus obtained to build gymnasiums and bath houses for the victims of their studied piracies, and ask the public to behold the exhibitions of their interest in poor men, is a species of Phariseism that it would be difficult for the devil to duplicate. And that workingmen should, any where, accept such duplicity for genuine interest in their welfare is a most humiliating confession of abasement.

The question arises, how can workingmen secure fair wages for work and maintain the just standard? We answer, through the influence and power of federated organizations. There is absolutely no other way to be devised in harmony with law and justice. Legislation cannot bring about such a result, nor is it desirable. Legislation can and ought to correct numerous wrongs which aid employers directly and indirectly to rob labor and degrade the workingman. Trusts, syndicates, combinations of all descriptions, organized for the accumulation of wealth at the expense of workingmen, can be and ought to be abolished. Men who water stocks and seek to declare dividends on values which do not exist, can and ought to be squelched, but no law can fix the standard of wages. Workingmen can do that if once they can be persuaded to act in concert.

Nothing is more common than reference to the "labor market," to the "supply and demand" of labor.

When wages go down the "labor market" is referred to as being over-stocked—the supply of labor being greater than the demand.

Labor is referred to as a "commodity," to take its chances like hides or hair, guano or jute, or any other article of trade.

Take the "labor market" and supply it with Poles, Huns and Dagoes, and wages go down to a level which would not furnish

subsistence to a millionaire's poodle or parrot. In such an event, the American workingman has one hope, and only one, and that is to organize and federate, and say to employers that the standard of wages is thus and so, and all the Huns and Poles and Dagoes on top of the ground, backed by the American scab, cannot lower the standard. It is the American standard, and organization and federation is the American way to maintain the standard. Let others do as they may, American workingmen should say, "we will not be degraded nor enslaved."

Is this to be the outcome? Have organizations made up their minds to federate and resist all encroachments upon their right to live as becomes human beings? Manifestly, the trend is in that direction.

The discussion of the eight-hour day is well enough, as also the single tax, currency and tariff reform, but the question of wages towers above them all. It is an ever present and vital question. It brooks no delay. With fair, honest wages the workingman advances in intelligence, power and influence. Deny him that, and as certain as the law of gravitation, the work of degradation begins, nor ceases until the strand is lined with wrecks.

It is well said "that a system of social and political economy which compels the laborer to toil daily to keep want from his door, and is so inflexible that the sickness of a week entails want and destitution upon his family, is one of the worst species of slavery." Admit the truth of the declaration, and then estimate the number of slaves there are in the United States, and the number is simply appalling. And it will be noticed that as the number of men increases who toil to keep want from their doors, who are defrauded in ways that would make a bunko steerer blush, the number of millionaires increases. The robber class grow fat as their victims grow lean.

THE world's production of pig iron a year is now placed at 28,000,000 tons, of which the United States produces 10,000,000 tons. At the present annual rate of increased demand not less than 56,000,000 tons will be required A. D. 1900.

OUR LAND.

Hitherto, people of the United States have taken little interest in the land question. There has from the first been a surplus of land. Some one gives the grand sum total at 2,298,282,240 acres. How to get rid of the land, that is, how to make it available for agricultural purposes, has for many years engaged the attention of Congress and State Legislatures. The "Public Domain" has been given away and sold until the people, once so unconcerned, are awakening to the fact that comparatively little is left, and that within a few years all will be disposed of that can be cultivated profitably, or at all. As a consequence people are trying to find out what has become of the land, and are obtaining some startling facts.

The New York *Standard*, reproduces an article from the New York *World*, entitled "England's new invasion," which is an invasion of capital. Neither England nor continental Europe offer English capitalists satisfactory inducements to invest their surplus money that flows to them in a steady stream from the four quarters of the world. The writer says that "The Land Restoration Leagues of England and Scotland, have reached such proportions that the future holding of real estate is of doubtful value, while the social democrats, who seek the establishment of a social republic, are enlisting the workingmen and poor of both countries, and a general uprising is only a question of time. The nations of continental Europe, although more backward, are moving along the lines of socialism and republicanism, and in Germany, especially, the downfall of imperialism must occur at no distant day. Thus the capitalists of the old world have sought new and sure fields in which to invest, and the United States furnish all the requirements desired by the most careful money lenders of the world." And "while the favor with which these farsighted capitalists regard the United States may be accepted as a just tribute to the greatness of the country and the people, the fact must not be lost sight of that their appreciation is entirely selfish. Their willingness to own land, to invest in business enterprises, to possess the patent rights of

machinery, to run breweries, to tunnel bridge rivers, to build houses, to work mines, or to operate railroads, is not from any love for this country. It is altogether that they may lay every man, woman and child under tribute—not only the present but all future generations; that every one here who toils may pile up for them riches to be spent in their own countries; that they may perpetuate here the conditions against which their own countrymen are about revolting. They would fasten on the people of the United States the curse of 'absentee landlordism.'"

Such statements are well calculated to attract attention, and the people once aroused it is fair to assume, that by some process known to the ballot, England will not be permitted to reproduce to any extent in the United States, her rule in Ireland.

We are told that Lord Scully has thousands of miles of rack rented farms in Kansas and Illinois, and that the Dundee Investment Company, of Dundee, Scotland, own 48,000 acres in Arkansas; that Alexander Cross, of Glasgow, has 30,000 acres, and an English syndicate 100,000 acres, making a total of 178,000 acres owned in Arkansas by three foreign concerns. The *World* writes as follows:

This is a bagatelle compared with that held in the neighboring state of Texas. At present the land owned there by foreign capitalists is mainly used for cattle ranches. The greatest holding is by the Capitol syndicate, amounting to 3,000,000 acres in Haskell, Graham and Gallatin counties. This grant was made by the state to Contractors Abner Taylor and John B. Farwell, of Chicago, on condition that they would build the capitol at Austin. They placed the immense tract with a London syndicate. The Dundee investment company, referred to by a previous correspondent, holds the Kings and Kenedy ranches in Nueces county—the former 500,000 and the latter 278,000 acres respectively. The Franklin land and cattle company, of which Lord Roseberry is a large stockholder, has 638,000 acres in Hudson, Robert Carson and Gray counties in the Texas Panhandle. This makes a total for the three concerns of 4,416,000 acres. Of course this is not by any means all the land held by or controlled by aliens in Texas. There is probably another half million acres or more held in smaller quantities. The enterprising Briton does not always desire, however, to be actually possessed of the land, but sometimes prefers to reap the fruit therefrom without the trouble of ownership. So it happens that in Austin there is an Edinburgh firm of money lenders, holding a million dollars worth of mortgages on farm lands, and advertising

and it has \$7,000,000 more to lend on improved property.

Florida has within the past twenty years been very attractive to the British investor, and the state authorities claim that there is more foreign capital invested there in various ways than in any other southern state.

The *World's* correspondent at Tallahassee furnishes a list of a few British subjects' holding land in the sunny state. Sir Edward J. Reid is credited with 99,000 acres and the Duke of Sutherland with 425,000 acres; a Scotch syndicate, 500,000; Lord Houghton, 200,000; William McCabe, 25,000; William Little, 10,000; H. M. Grenrede, 8,000; Florida Estates Company, London, 5,000; Grenrede & Ashton, 5,000; F. A. Williams, 2,000; J. W. Williams, 2,000; J. W. Phillips, 2,000; E. H. Ronalds, 1,638; John McNichol, 884 acres—a total of 2,000,000 acres.

A dispatch from Pensacola, informed the *World's* readers that the Southern States Land and Timber Company (an English corporation) had purchased property in the section aggregating five acres with 400,000 acres of yellow pine land and about forty miles of railroad, for which over a million and a half of dollars had been paid. This respectable deal does not, however, cover all the holdings of aliens in that state.

In Mississippi and Alabama a similar state of affairs prevails. While an English company (represented by Close Brothers) controls 110,000 acres in Alabama, the Missouri land company, of Edinburgh, Scotland, 465,000 acres, and Mr. Ellerhauser, of Halifax, Nova Scotia, is said to possess 600,000 acres in West Virginia, and other aliens property amounting to nearly a million dollars. The notorious Maxwell grant in New Mexico, of which the original grant was for only 96,000 acres, but which was surveyed and patented for 1,714,000 acres, is in the hands of aliens.

The California Redwood Company, a Canadian corporation composed, however, of Scotchmen, secured by false entries under the timber claim laws redwood forests in California estimated to be worth over \$6,000,000. The Schenley family, of Pittsburgh, British subjects, draw \$100,000 a year in rents from Pittsburgh tenants.

Concluding, the writer says:

Leaving out of calculation those who have not been located in this country, but of which there are no doubts, we have the locations of about eleven million acres owned by British subjects. This immense area is more than equal to the combined states of Massachusetts, New Jersey, and Rhode Island, which to day support a population of over 4,000,000 persons, and which are not by any means fully developed.

Here we have about twenty-five English capitalists, owing 11,000,000 acres of land in the United States, equal to the area of New Jersey, Connecticut, Rhode Island and Delaware. The question arises, is this alien ownership of land in the United States to continue, quietly admitted, and that no protest is to be heard? It would be

far wiser to come to a different conclusion. Investigation shows that the home landed aristocracy is quite too numerous and too powerful, and laws should be passed requiring the foreign landlord to sell out and quit business. He may not like to do it, but eventually it will be required and he will have to submit to the "American way." Buying up dukedoms in the United States will prove in the end a hazardous business, and that it should be attempted at a time when England and continental Europe are getting ready to smash thrones and dynasties, scepters and crowns, evinces such stupid ignorance of American institutions, as to stagger credulity. In due time, like the British Landlord in the United States, like "Poor Lo," will have to go, move on, and the sooner he comprehends the fact the more profitable it will be for him.

THERE are eight express companies in the United States, and their mileage is as follows:

Adams Express	24,330
American Express (including Western Division National Express)	38,730
National Express	1,369
Northern Pacific Express	5,058
Pacific Express	21,042
Southern Express	21,740
United States Express	21,345
Wells, Fargo & Co.'s Express (railroad mileage)	22,801

AND now comes the flour trust to advance the price of bread because the wheat crop is a few bushels short. A little more for bread, a little more for blankets, a little more for clothing, and a little less pay or no pay at all; the ice king getting ready to leave his Arctic home for a raid. God pity the poor.

THE income of the Church of England is estimated at \$52,000,000 a year. When the Prince of Wales becomes the head of the establishment it will be a dandy.

SOME one says an insect has been discovered with 11,000 eyes, and strange to say as soon as discovered it was named the "Spot-ter."

Poor's Manual places the number of locomotives in the United States at 31,062.

JAY GOULD.

During the month of November there was great disturbance in the money and stock market in London and New York. For a time everything was chaos. In London, the great house of Baring Brothers went under with liabilities amounting to \$105,000,000. As a matter of course New York felt the shock, and down went stocks, pell mell. The one man, of all others, who was calm and serene while the cyclone was raging was Mr. Jay Gould. It did not seem to matter to him what went down. He simply looked on. Why? Well, all sorts of surmises were rife. Some said that Mr. Gould had conjured up the storm, that the wizard of Wall street, by processes of enchantment, by jugglery, had created the panic. Such stories gained credence from the fact that while Mr. Gould was out of Wall street everything went on lovely. For a time Mr. Gould's health was infirm, and he was under the doctor's care and constant surveillance. He had to choose between New York, his beautiful villa at Irvington, and kingdom come. If he wanted to remain on this mundane sphere, he must quit Wall street and speculation. He must cease shearing lambs and playing with bulls and bears, and go to sea. As a result, Mr. Gould built himself a sea-going yacht. He sailed across the ocean. He visited the classic shores of the Mediterranean, and sang:

"O happy ship,
To rise and dip,
With the blue crystal at your lip.
O happy crew,
My heart with you
Sails, and sails, and sings anew."

In this way Mr. Gould regained his health. He returned to America; he went into Wall street again, and when things came his way, as they were pretty certain to come, he took them in.

Again it is said, that on getting ready, Mr. Gould "tied up money;" that he tied up several millions. Some put it as \$10,000,000. No one knows how much he had in his "strong box" when the cyclone began its gyrations, but when stocks began to tumble, and had gone down to the required point Mr. Gould bought—bought the best, bought largely, that his "joys might be full;" and now, Mr. Gould holds all the railroad

stocks he wants, and is confessedly the "Railroad King of the Continent." He has all he wants. His mighty hand is on the old Gould Southwestern system, on the Santa Fé and the Union Pacific, and he is master of the situation. What is more, Mr. Gould has a son George. George is a very large chip of the "old block." He is immensely bright. His capabilities in managing "properties," are of the highest order. Millions do not confuse him, and father and son make a whole team, as New York admits.

On November 15th, Mr. Jay Gould wrote for publication in the New York Sun the following letter:

To the Editor of the Sun:

SIR—I have read with some interest your recent articles in reference to the railway situation west of Chicago and St. Louis.

A group of roads known as the Western and Southwestern systems, traverses the most fertile and the most rapidly developing territory of the United States. The stock and bonds in these properties are held by thousands of investors in New York and England and the Western States, the stockholders in some of the corporations numbering over 12,000 and probably aggregating 100,000 stockholders, and upon the prosperity of these roads many small investors depend for dividends upon which to live.

THE PRESIDENTS' AGREEMENT.

Something over eighteen months ago, during a period of great depression, the great banking houses Messrs. Drexel, Morgan & Co., Messrs. Kidder, Peabody & Co., and Messrs. Brown Bros., invited the presidents of these roads to meet at Mr. Morgan's residence. The result of the meeting was the formation of the so-called "presidents' agreement," and may interest you to know of the difference in the net earnings of this group of roads as between the rates which were established and maintained for several months after that agreement and the rate that have prevailed under the loose and disorganized state of affairs that has existed since the agreement was broken, each road looking out for itself.

A STARTLING FIGURE.

I estimate the total number of tons moved on mile annually by this group of roads to be 16,000,000,000. The auditor of one of these roads has furnished me a statement showing the difference between the rates under the "presidents' agreement" and the present rate, which amounts to a decrease of 1.4 mills per ton per mile. Applying this difference of 1.4 mills to the 16,000,000,000 gross annual tons, one mile gives the startling figure of \$22,400,000 annual decrease in the net earnings of this system of roads as between their operation under the presidents' agreement and the loose methods now prevailing.

Under this condition of things it is hoped that the bankers can be induced to call the presidents to

other again, with the assurance that they have the whole mass of investors behind them.

JAY GOULD.

New York, November 14, 1890.

It will be observed that the so-called "presidents' agreement" was simply *federation* with a big F. It was inaugurated for a season and succeeded, and the moment the *federation* was bursted, things went prodigiously to the devil, footing up a loss of \$22,000,000 annually.

Now we surmise that the "presidents' agreement" will be reinstated, and *federation* will again prevail.

In this we learn the power of alliance. Mr. Gould can make money by *federation*. The Federated Orders may, at least, learn the lesson that in *federation* they can maintain their rights.

The flurry in New York has subsided, and now Mr. Gould and his son George can sit down at their frugal board and count up the profits. That they will have an immense amount of surplus wool on hand, there can be no doubt.

ELECTRICITY IN RAILROAD SERVICE.

It is universally accepted that the vast resources of the inventive genius of the age are not only not exhausted, but as yet are in the initial stage of development. At any rate, in so far as electricity is concerned, there are none so foolhardy as to gainsay the proposition. Recently Dr. Lewis Bell read a paper on the "Progress of Electrical Traction" before the Scranton Science Club, which will be of interest to our readers. The doctor, among other things, made the following argument for electricity in railway service:

"The possibilities of electric traction are by no means exhausted in its application to street cars. I do not hesitate to say—and I say it deliberately—that to operate an ordinary railroad train by an electric locomotive is a far simpler problem, electrically and mechanically, than the operation of the street cars here on the streets. The slow speed necessary for street cars is, as I have already said, a disadvantage in that it compels us to gear down the motor. In running at railway speed no such difficulty is encountered, for the four or five hundred revolutions per minute made by the drivers of an express locomotive is just about the proper speed at which an electric motor of corresponding power could be advantageously run. We should then be

enabled to dispense entirely with the obnoxious gearing and to put directly upon the axle of the driving wheels an armature big enough and powerful enough to generate the required speed. Nor is there any practical difficulty in building motors big enough to do the work. There are plenty of 100 h. p. dynamos now running, and the increase of size sufficient to duplicate the power of a locomotive is the simplest sort of mechanical operation. I do not think there is a prominent electrical company to-day that would hesitate to take an order for a 500 h. p. machine, and guarantee its performance. I certainly know of several that would be glad of the chance, and would accomplish the task successfully.

There is no sort of difficulty in conveying the current to one of these big motors moving at railway speeds, for it has been established by experiment that the method of running contacts such as is in general use will work admirably up to the speed of 130 miles per hour, at which speed an electric car of respectable dimensions has been actually operated. The question, then, of using the electric motor for railway work is not a question of mechanical or electrical difficulties, but of economy. It is worth while noticing that in an electric locomotive the big machines can be given an amount of care quite impossible on our street cars, for the good reason that while the street car motor is exposed to the wet and dust and dirt to an enormous extent, in an electric locomotive the whole can be boxed up inside of a clean car and given practically as careful attention by the engineer as is now possible in a dynamo operated in a central station.

Now as to the question of economy. The steam locomotive, in its present stage of development, is a remarkably successful machine. Nevertheless, it does consume more coal proportionately than is used, for instance, in the engines of a big steamship like the *Umbria* or the *City of Paris*. It burns, in fact, between two and three times as much coal per horse-power of output. This is not due to any radical defects in the locomotive, which, all things considered, is a good and economical machine, but arises from the fact that the huge engines of the transatlantic liners are condensing engines, nearly always triple expansion, while the locomotive is a simple engine of a class that has been generally abandoned for steamship use. The principal advantage that we should gain by using large electric motors supplied from a central station, instead of the present steam locomotives, would be a much more economical use of coal. It is safe to say that the consumption of fuel for a given number of horse-power produced by big engines in an electric station could be reduced to less than half what is now used to supply a similar amount of power in the locomotive. To offset this advantage, there is the necessary loss of power in conveying the current generated to the running motor. If the length of line to be operated from a single station is great, this loss may be considerable; but it is unquestionably smaller than the gain to be made in the way I have suggested. Beside this, the electric locomotive does not have to drag around its supply of coal and water.

In view of such theories, the question

will be asked, when will the powerful dynamo appear? Manifestly, the inventive genius of the country is aroused; nor is it prudent to believe that it will down until a test has been made demonstrating the superiority of one or the other of the contending forces, steam and electricity, to move railway trains. The test is coming—how soon, it is not necessary to conjecture; but those who are keeping abreast of movements do not doubt that the time is approaching when the locomotive will speed along on iron tracks by the power of electricity.

THE SEVENTY MILLIONAIRES.

Thos. G. Shearman named seventy persons who had managed to gobble \$2,700,000,-000. Here is the list:

- \$150,000,000: J. J. Astor, fur trade and real estate; Trinity church, real estate.
- \$100,000,000: C. Vanderbilt, railroads; W. K. Vanderbilt, railroads; Jay Gould, railroads; Leland Stanford, railroads; J. D. Rockefeller, standard oil.
- \$70,000,000: Estate of A. Packer, coal mining and railroads.
- \$60,000,000: John I. Blair, railroads and banking; estate of Charles Crocker, railroads.
- \$50,000,000: Wm. Astor, real estate; W. W. Astor, real estate.
- \$50,000,000: Russell Sage, railroads and speculation; E. A. Stevens, real estate; estate of Moses Taylor, railroads and trade; estate of Brown & Ives, trade, real estate and cotton manufacturing.
- \$40,000,000: P. D. Armour, provisions; F. L. Ames, railroads, principally; Wm. Rockefeller, standard oil; H. M. Flager, standard oil; Powers & Weightman, chemicals; estate of P. Goelet, real estate.
- \$35,000,000: C. P. Huntington, railroads; D. O. Mills, railroads; estate of T. A. Scott, railroads; estate of J. W. Garrett, railroads.
- \$30,000,000: G. B. Roberts, railroads; Charles Pratt, railroads; Ross Winans, railroads and engineering; C. B. Cox, coal and mining; Claus Spreckles, Hawaiian sugar; A. Belmont, banking; R. J. Livingston, real estate; Fred Weyerhaeuser (?); Mrs. Mark Hopkins, railroads; Mrs. Hetty Green, speculation and banking; estate of S. V. Harkness, railroads; estate of R. W. Coleman, manufacturing (?); estate of I. M. Singer, patents.
- \$25,000,000: A. J. Drexel, banking; J. S. Morgan, banking; J. P. Morgan, banking; Marshall Fields, dry goods trade; David

Dows, flour and speculation; J. G. Fair, railroads and silver; E. T. Gerry, real estate; estate of Governor Fairbanks, patents; estate of A. T. Stewart, dry goods; A. Schremerhorn, real estate.

\$22,500,000: O. H. Payne, oil; estate of F. A. Drexel, banking; estate of I. V. Williamson, real estate and general trade; estate of W. F. Weld, trade, commerce and real estate.

\$20,000,000: F. W. Vanderbilt, railroads; Theo. Havemeyer, sugar refining; H. O. Havemeyer, sugar refining; W. G. Warden, standard oil; W. P. Thompson (?); Mrs. Schenley, real estate; J. B. Haggin, speculation; H. A. Hutchins (?); estate of W. Sloane, retail carpet trade; E. S. Higgins, real estate, principally; estate of C. Tower, coal land speculation; estate of Wm. Thaw, railroads; Dr. Hostetter, patent medicine; Wm. Sharon, railroads and speculation; Peter Donohue (?).

It will be noticed that of the seventy, twenty have their fortunes credited to railroads, and the average is about \$39,000,000 for each of the royal seventy.

Take the twenty whose fortunes are credited to railroads, and the average shows they have absorbed \$780,000,000 of the surplus earnings of their employes, or of labor, and the fact proclaims the reason why railroad men are poorly paid. The 700,000 railroad employes barely live; the owners by hook and crook appropriate their earnings.

It has been ascertained that the United States has one lawyer to every 900 of population, or a total number of 72,222½ lawyers—and the funny thing about it is, that the ½ths fellow is painfully numerous in every little town in the country. He goes to the Legislature, to Congress; is often made judge, and whether he makes laws or construes them, he is always the same little ½ths of a lawyer. The lawyers, who are full measure, are generally employed by corporations, trusts, monopolies, etc., and as a result they always find a hole in the law large enough for their clients to go through without a scratch.

THE Czar of Russia requires three sets of police to keep his miserable soul in his miserable body.

Our Danger.

"An injury to one is the concern of all."

We're told our brother's grave to dig,
And in the shadows of its dept'
Its bulging sides make hugely big,
That all our rights may there be kept.

What, fling within the tomb's abyss,
A brother's right, a nation's glory,
That we a tyrant's hand may kiss,
Who'd rob us of our freedom's story?

AN organization to exist must have a government. The government is the constitution. This instrument should be clear, brief and intelligible; while it may lack the diction of *Paradise Lost*, it should have the strength and force of sincerity in every line, and be absolutely free from absurdities and technical terms. The letter of a constitution should be its spirit. One must not contradict the other. When it does, it is diseased and the parts so affected must be cut out, as you would apply the surgeon's knife to a cancer to restore or preserve the health of the body. If this is not done it is subject to a severe cauterization of ridicule from the multitude. The whole fabric should rest upon the principles of justice and equity, and with these it must be harmonious in its every section. When such a document is secured, only the veriest slave will refuse to defend it.

A constitution is a curbing of the king; its insignia is the *fascia*, so strongly suggestive of democracy—it was this school that gave it life. The crown is the badge of royalty, a decoration of self, a meaningless bauble as empty as a title, that means anything or nothing, generally nothing. These are the two great forces of ancient and modern governments. That of the crown is arrogance and usurpation, springing from ambition and supported by tyranny. Constitutional government is fascine-like in its construction, binding the interests of the whole people in a common cause, and maintained by their suffrages. As one advances the other falls back. If democracy will not advance, it will recede; like the tide, when it is not ebbing it is flowing. The progress of democracy means the retreat of monarchy. It is the shrinking of kingly power. A fallacy exposed. It is the clothing of our children before we pay the landlord. It is the reign of His Majesty, the People.

The illustrious Abbe Fenelon, poet and theologian, says in that beautiful poem, the *Adventures of Telemachus*, whose publication and sale was forbidden within the kingdom of France by Louis XIV., and the author held in disgrace during the life of the king if ever there lived a spirit, a soul of divine and human nature, since the closing scene on Calvary that suggested itself, by the possession of the necessary attributes, to the brilliant Hugo, from which to form that

sublime character, Bishop of D—, in *Les Miserables*, it was the chaste and noble Abbe Fenelon: "Neither can the inhabitants of Boetica comprehend how those who by subjugating great empires, obtain the name of conquerors, come to be so much the object of admiration. To place happiness in the government of others, say they, is madness, since to govern well is a painful task. But a desire to govern others against their will is madness in a still greater degree. A wise man cannot without violence to himself submit to take upon himself the government of a willing people, or who apply to him for guidance and protection; but to govern a people against their will, is to become miserable for the false honor of holding others in slavery."

We all have the king within us to a greater or less degree, and here is where the warfare commences. Labor is the only king worthy of a crown. He that is given a power and wields it to advance his own interests, against those whose labor and intelligence has not only created but maintains his authority, is a miscreant. We have many examples, and tolerate far too many. One of the vilest and most flagrant is that which is illustrated by the cowardly tyranny of Webb in his action against organized labor upon the New York Central. Out upon such infamy, and out upon the people who, inheriting the Constitution of a great nation, will permit such an outrage. Organized labor must come in their might, shoulder to shoulder, in defense of their liberties, and rebuke the arrogance of this Dictator. To stand idly by and allow such atrocities to be perpetrated is proof of their unworthiness. Hear me, you toilers, your Thermopylae is approaching, your Leonidas is federation. Your independence is at stake. Nurse your jealousies, and strengthen the hands of your tyrants. Eternal vigilance is not eternal apathy and indifference to the attacks of Webb and similar creatures upon the vitals of your constitutional guarantees. If the Knights of Labor are denied the rights and privileges of citizenship, who is secure in their exercise? How long will it be before the whole army of organized labor is destroyed piecemeal? It is their turn to day, it will be our turn to-morrow. I hold it a violation of every law, human and divine, to remain passive in this struggle. A manly and fearless stand of every branch of labor is demanded, and I feel confident that their patriotism and intelligence will be equal to the occasion. This is your fight, enter it like a man. Let the fawning coward who stands aloof from the responsibilities of organization, but who accepts its favors, live in the ignominy of his disgrace. Let the false teacher accept the price of his treachery, and ride in the luxury of a palace-car,

haunted by the frowns of honesty and the contempt of sincerity; but men whose toil has made the Republic great and whose spirit and energy has held aloft the arc-light of its education, are now called upon to preserve its integrity. If organized labor fail to recognize this present danger, and heed not the position of their kindred, tamely permitting the yoke to be fastened upon them, then their independence is a sham, and the days of their existence are numbered. The pathetic *Song of the Shirt* will again be sung in poverty and humiliation; the privileges, respect, dignity and power of labor will be swept away as the mist of the morning, leaving, like the Guilds of the 14th century, but the memories of its grandeur and influence.

Tim Fagan.

The Shifting of Land Rents under the Single Tax.

TO many minds earnestly in search after truth, in *economics*, the single tax on land values presents as yet the following obscure point: That tax would increase the national and local revenues by at least 25 per cent., and, since all taxes must come from labor, it would increase the burden on labor by 25 per cent. The answer to that obscure point is as follows: Labor is already burdened by that single tax, in the shape of land rents paid to 100,000 men, more or less, who directly or indirectly are the real owners of most of the valuable land in this nation. Let us estimate the annual land rents of this nation at *one billion dollars*. The real sum is larger. About 60,000,000 working population now pay one billion dollars to about 100,000 men in the form of land rents or interest in the land value of mortgages on their homes, and through increased prices on all they buy, from land rents or interest in the land value of mortgages on factories, stores, shops, railroads and other corporations where goods are manufactured and are handled in their way from producer to consumer. That one billion dollars land rent per annum, in this nation, call it 5 per cent. on 20 billions land values, would form the national and local tax fund, under the single tax, to be used for all national and local expenses, instead of being used, as it is now, to unjustly enrich 100,000 men to whom we give the ownership of the soil that God created for the mass of workers. These workers would then be relieved from the \$800,000,000 national and local taxes they are now paying, every year, in addition to the one billion just referred to. That relief would be but a small fragment of the advantages that the mass of workers would derive from the single tax. This tax, being not a tax on labor, but a tax on monopoly,

would make land speculation unprofitable, and hence it would give to labor the whole supply of land and its treasures with which the creator has enriched this planet, while now, through land speculation, land monopoly, labor has but access to a small part of the land supply in nature, and it has to pay a heavy fine to the few, one billion dollars per annum, in our nation, for permission to live and work on God's planet. If the masses should have at their disposal the whole supply of land, in nature, by simply paying to themselves, the community, for their common needs in governmental administration and general improvements, the land values collectively created by themselves, (because land values are the result of the presence of population) with no taxes whatsoever on their productive or commercial activities, production would greatly increase. Then, again, the distribution would be normal, because of a normal distribution of land, the source of all wealth.

Since all public revenues must come from labor, the producer of all wealth, so must labor be left free from all restrictions, and hence with free access to that natural element, land, indispensable to labor, created by God for labor, not for any set of landlords or mortgage holders.

Give to labor free production and free commerce, and labor shall have no trouble in paying all public revenues, because the fullness of God's wealth on this planet shall then be within reach of all men.

Under such conditions, an increase in production and wealth would not need to imply an increase in taxation, as it is with our taxes on labor products. The single tax could only increase in proportion as population increases—that is, in proportion as the land enables each worker to obtain higher prices for his products or services, and the people need greater local improvements conducive to general happiness.

The economics of the single tax imply a radical change in fiscal and industrial conditions. All radical changes must be attained by stages—through a process of evolution. The first natural stage towards a single tax is a low tariff, with free raw materials.

Any kind of tariff is, after all, but an extension of land monopoly to the land of the nations with whom we deal, thus placing the workers at home at the mercy of the large home manufacturers, sheltered by the tariff from competition with the manufacturers abroad.

When the tariff is about gone, we should work for the single tax, limited, and the suppression of the internal revenue, which is but an internal tariff. Then we should attack all state and local taxation on personality and buildings, and gradually establish the single tax, unlimited, approximately representing the whole annual rental value

of the land which may have any value. Lands beyond a certain distance from markets or railroad depots convenient to markets—such lands have only a monopoly value. The single tax, unlimited, would suppress all monopoly value. Hence, such lands would be free from all tax, because, in the order of nature, they have no economic rent as soon as King Land Monopoly rules the industrial fabric no longer!

And let us remember that the single tax, unlimited, would not only shift into the coffers of nation, states and townships that one billion dollars now paid by the many to the few, but would suppress all monopoly rent, which must exceed by 20 or 30 per cent. that economic rent of one billion. (Of course, the figures given are mere approximations, for the sake of illustration. But, if economic rent in this nation is to-day \$1,000,000,000, the monopoly rent with which our laboring masses are loaded is at least \$1,300,000,000, according to my estimates, resting on all reasonable data, carefully collected.

J. Gros.

NOTE—If the number of 100,000 men I fix as holding the bulk of the valuable land of our nation is too low we can multiply it by 5, 10, or 20. That would not improve, by a single atom, the general conditions of the 90 or 90 per cent. of the people.

Roundhouse Sermon.

BY REV. EMORY POLISHER, DEE, DEE.

MY brethren, I have looked forward to this appointment with as much interest as if it were to be an annual or a biennial convention, and I, gavel in hand, were to preside as Grand Master or Grand Chief.

You see, this is my first sermon for the New Year 1891. It may be my last. Nobody knows. The call may come to go out on a hearse instead of old "93," and whether ready or not I shall have to go.

There is a peculiarity about such calls, my brethren. The "caller" knows exactly where you are, at home or out on the road. He knows every "sample room" on the continent. He knows where you play pool, or poker, or sevenup, faro, or throw high dice—knows where you get your liquor, fire water, liquid lightning, benzine, rough on rats, the stuff that takes the bones out of your legs, transforms your spine into gristle, glazes your eyes until they look like peeled onions or patches of red flannel, thickens up your tongue, until you talk as if your mouths were full of hasty pudding, and finally, as limp as a dish rag, rolls you into the gutter to be rooted around by the snouts of four-legged garbage hunters. But it don't make any difference with the caller, who wants you to take a ride in the hearse o the bone yard. You have got to go. It's

just the same as if you were found in church, at Sunday school, in a library, in the lodge room, at home, or in the cab. I know this, and therefore I say, I don't know but this is my last sermon to you.

But I'm no croaker,
I aint no hooting owl,
I don't wear a white choker,
I didn't come here to howl.

You see, before beginning the regular exercises, I love to prelimate a little; "oil up," as it were, "shake up" the fire, start combustion and see that things are in order for a "run." Having said this, please sing on page 47 of our hymn book, P. M., and Bro. Airbrake will pitch the tune.

O, the flowers, they are thankful when kissed by the dew,
Just as thankful as the engineers when listening to Depew:
And bless the Lord, we are thankful, because we're not dead,
With a Pinkerton dagger in our heart or a bullet in our head.

O, yes, we are thankful, and our thanks we'll rehearse.
Because H. Walter Webb don't run the universe;
And we're going to shout a little because we've often felt,
That God didn't make the world for Gould and Vanderbilt.

That's a good song, and has got a heap of theology in it, and you sing it my brethren as if you meant business. There's a power of inspiration in a good song when all join in and create a sort of a cyclone.

Take a man when he's singing a good religious song and the devil fights shy of him. That isn't a good time to get him down, and the devil knows it, but let him strike up a bacchanal song and the devil chimes in every time; squats like a toad close to his ear and offers him the world if he will fall down and worship him, and too many of us listen to his honeyed words. Then some one puts our eyes in mourning; we paint our noses beautiful crimson and go on dress parade with ragged clothes and a shirt that sings the song of "Dirt." Of all the acquaintances a railroad man ever made the devil is the meanest.

But I guess it is time for me to tell you my text. We will sing and pass around the hat.

Our hymn will be found on page 175 of our book. Bro. T. Rail will pitch the tune.

The poor are always with us boys,
This truth doth make us sad;
Give liberally to-day boys
And, God bless you, you'll be glad.

The poor are always with us boys,
And winter's cold and drear,
We'll warm the widow's home boys,
And the orphan's grateful tear

For weeks, shall make us happy boys,
And wherever we may roam,
A widow's prayer for us boys,
Will make a heaven of our home.

That's why we pass around the hat. You know where the money goes. If you don't, go with me after we adjourn, and I'll escort

you where your eyes will take a tear bath, and if you have not helped swell the little charity fund you will want to get into some dark alley and kick yourselves for meanness.

I'll take you where Tim Slater languishes from the effects of a wreck in which he went down. Ah, you say he was not a member of the Brotherhood. It is true, and Tim sees his mistake and never ceases to tell the boys who are out of the fold to get in as quick as possible, and stay in. But Tim is a fellow mortal and poverty makes his home dark, and sometimes his wife and children suffer. But firemen, thank God, permit the rose bushes of their charity to climb up the fence and blow over on the other side. There are, thank God, brotherhood bonds and ties which reach beyond the mystic circle; and locomotive firemen, members of the Order, help the fellow workmen in distress.

Really, my brethren, what's the use of a text any how? I hardly know—except it is the fashion—and I suppose I must be in the swim, so here goes:

"All for each, and each for all."

You will find the text floating around in books and papers. I don't know who is its author. I don't know who said it first, but he loved his fellow men and I guess his name has been written long ago by an angel in a "book of gold," as one who loved his "fellow men," and therefore loved the Lord.

My text sounds very much like the "Golden Rule," "As ye would that others should do to you, do ye also to them." At any rate, my text is "straight goods, all wool and a yard wide." Pure gold without alloy. There is good music in its ring. Adopt it, act upon it, and there shall be a ceaseless song in your soul; a fountain of joy that will never go dry. Act upon it and, though poor, you would not swap possessions with all the Vanderbilts this side of hades.

"All for each, and each for all."
O, brethren, 'tis a grand refrain,
'Tis peace on earth, good will to men,
The shepherds heard on Judea's plain.

Yes, "All for each, and each for all,"
Means help for men when in distress.
Workingmen who hew their ways
Through labor's howling wilderness.

Yes, "All for each, and each for all,"
Will do for cab, for Lodge and home,
'Twill do for all, except the scab,
And those who want to go 't alone.

Brethren, them's my sentiments, in prose and verse. I'm no poet, like Sandy Maguire, Mother Jones and Nellie Bloom, whose throats are as full of melody as a nightingale's or a mocking bird's. If I could boast of their genius I would so thrill the world with songs and symphonies and oratorios about my text, that the B. of L. E. would prefer one of my poetical productions, or one of my sermons, to a dozen orations by Chauncey M. Depew.

In conclusion and lastly, let me say, be of good cheer and stick to the text. We will now close with one of our doxologies.

We are members of the Brotherhood,
And don't you forget it.
We're trying to do each other good,
And don't you forget it.
For federation we always shout,
And we know what we're about—
And don't you forget it.

We're going to have an honest deal,
And don't you forget it.
In a fight we never squeal,
And don't you forget it.
Our creed is all for each,
Each for all is what we preach—
And don't you forget it.

Always Young.

"Verse, a breeze 'mid blossoms straying,
Where Hope clung feeding like a bee—
Both were mine! Life went a-Maying
With Nature, Hope and Poesy—
When I was young."

WHY not always be young? Why grow old? "It seems to me that," as Kate Field says in her *Washington*, "people grow old unnecessarily."

Those who are familiar with David's poems, called the "Psalms," will remember that he says, in referring to the blessings God bestows upon men, among other things, their "Youth is renewed like the eagle." The poet evidently refers to the long life of the eagle; to its great strength and vigor at a very advanced age, and to the fact or fable that when eagles are near a hundred years old they cast their feathers and become bald like young ones, and then new feathers come, and the eagle again soars away towards the sky.

"With storm-daring pinion and sun-gazing eye."

Physically, there is doubtless much to be said about "old age, growing old," etc.; but, however appropriate such reflections, there is, nevertheless, such a thing as retaining our youth.

I shall not be understood as meaning that we can arrest the flight of years, that we can postpone the coming of gray hairs and wrinkles. There will come the bent form and the tottering step, the dimmed eye; and yet I contend that men and women may remain youthful, for

"We live in deeds, not years—in thoughts not breaths—
In feelings, not in figures on a dial.
We should count time by heart throbs. He most lives
Who thinks most, feels the noblest, acts the best."

The poet, in the foregoing, sounded a key note. We live in deeds and thoughts, aspirations; at least, those do who retain their youth, who have found the miraculous spring, the fabled fountain, whose waters rejuvenate the old, and preserve youth in perennial beauty and vigor.

"To think is to exist," and men may have

thoughts productive of smiles or frowns, joy or gloom, high aspirations, or earth-born despondency. Men talk of the "twilight of a weary life," of "going down to the grave." They will not have it that men mount upward as the years advance. The idea widely prevails that at a certain period in life men must begin to reflect upon death—of bier and pall. They do not adopt the philosophy that they should

Live for the present moment, but live so
As they might live forever; let the cares
And toils of this poor transient being go,
And pluck the fruit the tree of knowledge bears,
And gaze upon the charms which virtue wears
Till her eye's light has filled and warmed your
breast.

No, the great majority, at a certain time of life deem it wise to destroy the flowers that blossom in beauty for their delectation. They have no harvest home songs. The trees of knowledge and wisdom, of joy and pleasure, are barren of fruit. The songs of the brooks and the melodies of bird and bee become an annoyance. They look upon the clouds as shrouds, and the winds as forever singing a dirge for them. The music of laughing, romping, rollicking childhood makes them morose—their hearts are cemeteries where they bury their joys, and delight in reading inscriptions on memorial slabs. Such people are old, no matter what their years may be. They cultivate wrinkles in their souls, and in the mournful cadence of Poe's Raven, croak "nevermore."

It is just as easy to be youthful. The soul snaps its fingers at years. Its imprisonment extorts from it no protest against the charms of virtue. It has no farewells for the haunts of youth. The rose-wreaths it wears are as fadeless as the stars. It is eternally linked to harmony, and would have its possessor, regardless of years, as youthful as its unchanging self. Longfellow sang:

"Life is real! Life is earnest!
And the grave is not its goal.
Dust thou art, to dust thou returnest,
Was not spoken of the soul."

That is the point I make. The soul-life; since it is not dust, since it does not die, since it never grows old, since it lives in perpetual youth, teaches the lesson that men may be, if they will, perpetually youthful in thought, in spirit, in all things that distinguish men from beasts.

Like the kingdom of Heaven, the fountain of youth is within us.
If we seek it elsewhere, old shall we grow in the search.

To live in the present, and less in the past, is the one thing needful if men and women would retain their youth. Sighing for the days that are gone to return no more breeds mental decrepitude, dries up all the fountains of joy, and makes life a Sahara.

This thing of relegating men and women

to old arm chairs when all their mental faculties are in full force has been in vogue too long. True, the old need not join in quadrilles, nor play foot ball, but they may enjoy the merry pastimes of the young, and sing and dance in spirit with all the delight of youth.

There are those who, like Gladstone, though carrying the weight of four score years, do it as gracefully as when but forty constituted the burden, and in the thought of the world are in the advance column. Not every one can be a Gladstone in the affairs of nations, but it is possible for any man to keep up with the procession of mind forces, live with the active present, sing rather than croak, and add to his own joys and to the happiness of others, and thus fulfill his mission.

"There is no death! What seems so is transition;
This life of mortal breath
Is but a suburb of the life elysian,
Whose portal we call Death."

Will B. Young.

The Single Tax.

OUR present method of raising revenue for the defraying of the expenses of government is of a multiform character. The federal authorities levy on imported articles, also on domestic productions—that is, on the manufacture and sale of liquors, beer and tobacco, and various other products. The State authorities have power to raise taxes from various other sources: real estate, that is, from both land and improvements, such as buildings, drainage, fencing, and in fact, all improvements made upon a given piece of land. From licenses governing the sale of liquors, and from venders and dealers in other commodities.

Each and every one of these methods is open to the same objection, namely: that they are restrictions and a hindrance to production. I use the word production here in its broadest sense—the bringing into existence by means of husbandry and of manufacture, also by importation of all useful commodities of whatever nature or kind they may be.

What makes a nation rich is the abundance of useful things within its borders. If those useful things can be obtained with the least possible exertion so much the better. It matters not how or by what means they are brought into usable form, so long as they are at the command of a certain community, the members of which obtain them as cheaply and easily as possible.

If a community or a nation wishes to obtain such a state wherein it can best subserve the interests of all, it must enact such laws as will not be favorable to some at the expense of the rest. Evidently, the means by which to obtain such an end is the enactment of just laws with regard to taxation.

A law which restricts the production of wealth is an unwise law; so, also, is a law restricting the free interchange of commodities. But a tax levied upon *land values* is not open to the above objection, because such a tax does not restrict production. It is simple and more easily applied, more just to the common heirs of nature's bounties. The holders of the richest soil, the *most valuable sites* in cities, the *richest mines*, and, in fact, all those who have possession of the *most valuable* parts of the common heritage, would pay taxes in proportion to the value of the parts they hold. Such a system of taxation, namely, the one and only tax, to the exclusion of all other taxes, would be what is known as "The Single Tax."

Henry J. Wingardner.

"Lo! The Poor Indian."

WITH here and there a bright spot, the records of the white man's dealings with the aborigines of America is one continuous infamy. A nobler race of men than the American Indians never inhabited the earth from equator to poles. Savages they were, and they fought for their lands and wigwams like savages, but with less savagery than has characterized any Christian (?) or civilized war, of which legend or authentic history affords any account. As a consequence of a continuous system of injustice, Indian wars have occurred with every advance of the Anglo Saxon race on the continent, until it has passed into a proverb that "dead Indians are the only good Indians."

What is the crime of the American Indian? Simply this, he has fought for his home. That is it in a nut shell, and it is all there is of it, or in it. The Indian loved his hunting grounds, the burial grounds of his fathers. He absolutely owned the land, if there be such a thing as ownership of land. William Penn recognized the fact. He dealt squarely with the Indians. It was not enough that he had a royal grant from the King of England to the land. He purchased it of the Indians, and lived in peace with them. In a certain sense the white men generally recognized the ownership of the Indians to their lands and the various treaties with the tribes embody the fact, but it is well known that these treaties, as a whole, have been a series of robberies with scarcely a redeeming feature. Driven from their hunting grounds, pressed back to unknown wildernesses to starve and die, the Indian, proud, independent and daring, with savage hate on fire, has been almost ceaselessly on the war path and his deeds of cruelty have been such that no wealth of exaggeration could portray their horrors. But in all of this we forget that they were savages, we forget they were fighting for their homes,

that they regarded all men who took possession of their lands as their enemies.

Such facts are now on many tongues and find expression in all the papers, and the nation seeks, as best it can, to make some reparation.

The tribes are required to receive missionaries; churches and schools are established. Children are taken from their homes and educated and then returned to the tribes in the hope that their influence will be potent in carrying forward the work of civilization. It don't work. There has been on the continent not one properly civilized Indian. A few are brought forward and exhibited as specimens of what may be done, or what might have been done, but in the light of recent events, the discovery is made that the American Indian cannot, or will not be civilized. He will not adopt the white man's mode of life. He will not work, he cannot be enslaved. Here and there are remnants of tribes which for centuries have been in the very centers of our civilization, and what are they but specimens of the lowest degradation? And even the tribes living in what is called the Indian Territory, though they have lost some of their savagery, are Indians still, with no love for the white man or his ways.

Sitting Bull is denounced as a "Bad Indian." Why? Because he hates the white man. Let some one tell why Sitting Bull should love the white man. Even now, with the mutterings of a possible war, what are the facts? It is stated that the Indian Agents constantly and studiously cheat the Indian in giving him his treaty rations. If he should have a beef weighing 1200 pounds, he is compelled to take one weighing 600 pounds. He sees that the agents of the "Great Father" are engaged in robbing him. It is a species of robbery that makes him hungry and cold and naked, and he has no redress. He can only be silent and nurse his hates and hope for revenge.

Sitting Bull believes that the white man has oppressed and defrauded his race, and such is the verdict of all honest white men. Old, savage, full of venom, he would fight if he were younger, but though infirm he can and does encourage the braves around him to fight. It is not wise, but let any foreign foe invade these American Shores, and seek to drive Americans from their homes into the wilderness, and every gray haired American would emulate Sitting Bull and cheer on the braves to eternal resistance, nor would there be any exhibition of conscience as to the means of rescuing homes from the invaders.

What, we ask, are the patriot Irishmen, who denounce English rule, oppression and tyranny, and cheer on their countrymen to resistance, but so many Sitting Bulls in spirit and purpose? An Indian evicted from

his hands, from the streams where he fished and the forests and plains where he hunted, feels the injustice as keenly as does an Irishman. His methods of resistance differ from those which the Irish patriots adopt, but they are strictly in consonance with his savage nature. In the wide world there are none to plead the cause of "Lo" the poor Indian. The white man wants his fertile lands and will have them. It were as wise to attempt to shackle the tides, as to seek to restrain the white man's greed.

The "Messiah Craze," which seems to have grasped nearly all the Indian tribes, is strange, because the savages anticipate a deliverer—a big Indian who will give them back their lands and destroy their enemies. The Jews had a similar "craze" and were mad when their King did not appear in all the pomp of royalty. The poor Indians are doomed to a similar disappointment, but unlike the Jews will fight when the grass grows again if not disarmed.

There is still another view to be taken of the subject. This fair land cannot be given up to savages. If the Indians cannot see it there is but one remedy—the Indians must go.

His mission is ended if he will not work. That he shall dwell upon the confines of civilization as a ceaseless terror will not be tolerated, and the one thing in order is to disarm him, and now is the time to do it. Let this be followed by reducing the chiefs to the ranks and breaking up all their tribal relations. The thing is gone too far to admit of sentiment. In some way the savage is to be reduced to docility. A tame Indian is not picturesque. He is exceedingly commonplace. But to read of flying men and women from their homes to avoid the scalping-knife at once and vividly maps out the course to be pursued.

As a nation, we have marched across the continent regardless of the future of the Indians. They had a splendid heritage and we have taken it and appropriated it, and it is too late in the day to blubber now. If the Indian will surrender, adopt the ways of civilization, let him stay; if he prefers savagery send him over the border to the happy hunting ground where the buffalo has gone. *Sic transit* etc. Tom A. Hawk.

A CASE OF MISTAKEN IDENTITY.

Tommy, a wee small boy was he,
That his mamma had said, was only three;
Yet his eyes saw everything on the train,
From the long bell-cord to the window pane.
But his look though strange, was not of fear,
That fell on the porcelain chandelier,
And he watched the hanging reflectors bright,
That made such great holes in the night;
Then out to his mother he loudly call'd,
And pointing above he fairly bawld:
"See,"—he knew it wondrous soon,
"See, where they've put the white splittoon."

Tim Pagan.

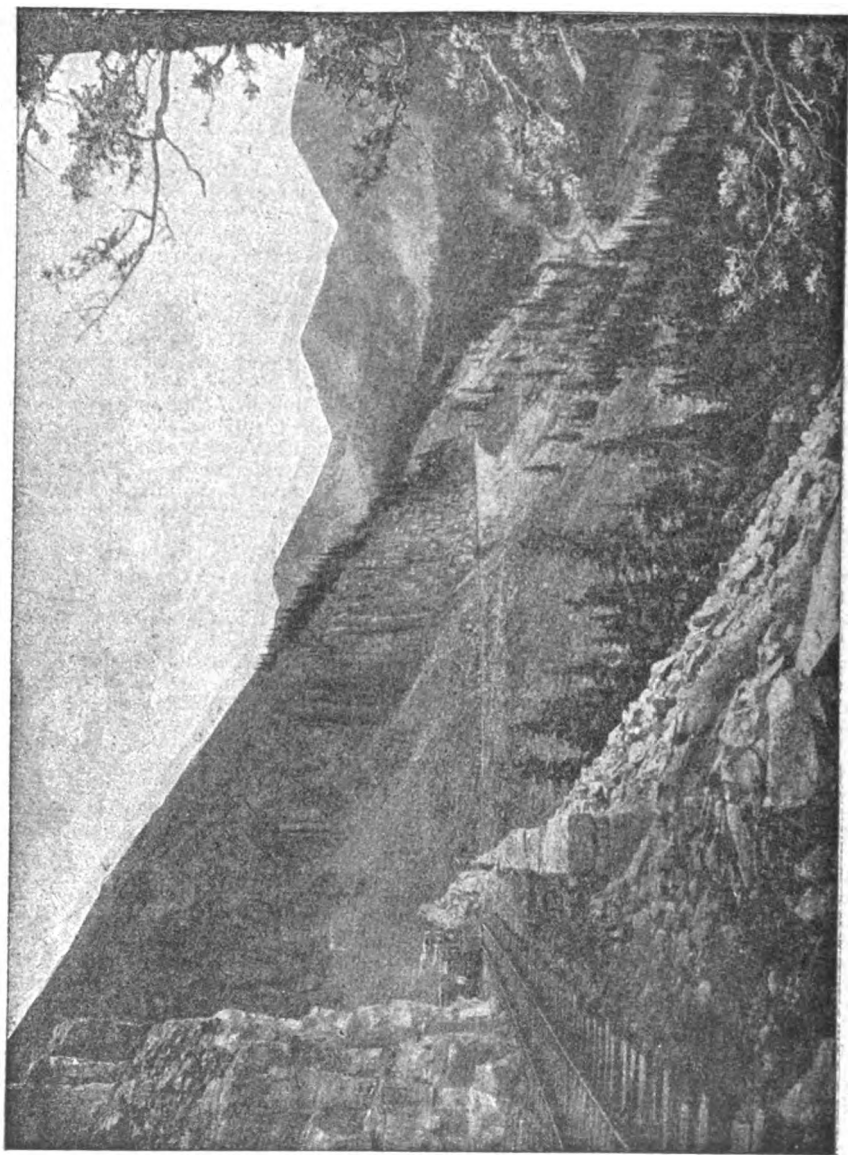

Views on the Union Pacific R. R.

Thousands and tens of thousands of our countrymen visit foreign countries in search of scenic wonders, when, in fact, their own country is the wonderland of the world, of which these tourists know little, and all too often, nothing at all.

It may be said, however, of the great army of Americans, who annually visit Europe, only a limited number are capable of appreciating the beautiful and sublime in nature. They esteem it fashionable to make the tour of England or the Continent, and the great majority of them purchase a guide book and start on their journey. The few are tourists in all that the word means. They are familiar with the grandeur of the contributions of their own country to the scenic sublimities of the world, have sailed on its inland seas, heard the roar of its mighty cataracts and spouting geysers, have climbed its mountains above the clouds, threaded their gorges and cañons, and realized the awful silence of its wildernesses. When such people go abroad, it matters not where, their own great country is their pride and boast, and they view other lands with American eyes, and by their intelligent and patriotic comparisons, endear America to Americans. But the others usually "do" Europe in sixty or ninety days, and are never more pleased, than when they can report that they were permitted to approach so near some spawn of royalty that they could count the buttons on their coat with the aid of an opera glass. Such tourists (?) having more bullion than brains, bring back foreign airs and ideas, and claiming to be "travelled", are followed wherever they go with the sounding guffaws of all sensible people.

Such people never dreamed of crossing the continent via the Union Pacific R. R. They may have heard of the great artery of travel and traffic, but they do not dream of the wonderland it penetrates, nor of the grandeur of the scenery which, on every hand and for every mile, excites the amazement of the tourist and becomes a source of satisfaction and pleasure so great as to defy exaggeration.

This *Magazine*, would, if it could, describe the majestic scenery the tourist is permitted to behold from Omaha to the Golden Gate. This we shall not attempt. Even the limitless plain between Omaha and Denver, in which the sun rises and sets as he does in the ocean, challenges a more graphic pen than we wield, and if such a picture exceeds our abilities, how impotent must our pen become when the mountains come into view. It is then that words are shorn of their power; it is then that the imagination returns from its soaring flights to confess that metaphor and hyperbole do not meet the requirements, and that one must take a ride through Nature's art gallery, via the Union Pacific, if they would fully comprehend the sublime truth that God made the world.

ALPINE PASS. Elevation 11,569 feet.

The tourist in his journey, among other notable sights that will extort exclamations of surprise, will be permitted to see Alpine Pass, above the Palisades, in Colorado, on the South Park branch of the Union Pacific Railway.

The view of Alpine Pass, or, more properly, Alpine Tunnel, though giving the reader some conception of the grandeur of the scenery, like all other attempts of a similar character, at best can scarcely do more than to awaken anxieties to behold it with the "naked eye." At an elevation of 11,596 feet the picture shows a section of the road which has wound its way around the mountain to Arctic elevations, when it suddenly plunges into the mountain, and for 1,773 feet continues its way in darkness. With one exception—in the South American Andes—Alpine Tunnel is the highest railroad elevation in the world, and the view at the point where the locomotive enters the tunnel is superlatively magnificent.

Another of the wonders the tourist is permitted to see, who crosses the continent over the Union Pacific, is "The Loop," above Georgetown, Colorado.

This triumph of engineering commands universal interest and is one of the many wonders the tourist is permitted to view, and in traveling over "The Loop" the tourist is treated to a succession of surprises, the cause of which he vainly strives to comprehend. He sees a road above him on the mountain side and wonders what road it can be. The engine whirls along and is soon upon the elevated highway that but a few minutes below excited the curiosity of the traveler. Now he looks down and sees the road over which he has just come, and again wonders what road it can be, and in this bewilderment he is kept until the last turn is made, when the road, having made its crossings and doublings, has overcome the difficulties of the situation and the traveler proceeds on his journey where other wonders await his coming.

CALIFORNIA.

Beneath the canopied cypress a lotus-bud eating,
While watching an idle sail fanning the deck,
His bark in the offing, a sea-gull was greeting,
And the white surf with its song on the sands
Threw a flick
Of the foam, that the swell had been meeting.
To the fragrant magnolias the oriole sung,
Filling the grove with the joy they created,
And the ripening rays on the fan-palms flung
The blushes of loves that are mated;
Like the day with the morning's memories hung,
Down through the long row'd vineyard wide,
The returning pickers their carols singing,
Having luxuriant loads hung side by side,
Of the amorous grape they are bringing,
And their laughter loud in the roses hide.
In the creamy shadows that the sun is taking
Such luscious tints of an orange bright,
And the vicerra's crest that the clouds are raking,
Looks out on the bay where downy night
On salt-air wings like the tide is making.

Tim Fagan.

THE STATION MASTER OF LONE PRAIRIE.

[UNION PACIFIC R. R., 1880.]

An empty bench, a sky of grayest etching,
A bare, bleak shed in blackest silhouette,
Twelve yards of platform, and beyond that stretch-
ing,

Twelve miles of prairie glimmering through the wet.

North, south, east, west—the same dull gray persistence.

The tattered vapors of a vanished train,
The narrowing rails that meet to pierce the distance,
Or break the columns of the far off rain.

Naught but myself—nor form, nor figure waking
The long hushed level and stark shining waste—
Nothing that moves to fill the vision aching
Where the last shadow fled in sullen haste.

Nothing beyond. Ah, yes! From out the station
A stiff gaunt figure thrown against the sky
Beckoning me with some wooden salutation
Caught from his signals as the train flashed by

Yielding me place beside him with dumb gesture
Born of that reticence of sky and air,
We sit apart, yet wrapped in that one vesture
Of silence, sadness and unspoken care;

Each following his own thought—around us, darken-
ing.

The rain-washed boundaries and stretching track;
Each following those dim parallels and hearkening
For long-lost voices that will not come back;

Until, unasked—I know not why or wherefore—
He yielded, bit by bit, his dreary past,
Like gathered clouds that seem to thicken there for
Some dull down dropping of their care at last.

"Long had he lived there. As a boy had started
From the stacked corn the Indian's painted face;
Heard the wolves' howl the wearying waste that
parted
His father's hut from the last camping place.

"Nature had mocked him; thrice had claimed the
reaping
With scythe of fire of lands he once had sown;
Sent the tornado—round his hearthstone heaping
Rafters, dead faces, that were like his own.

Then came the war time. When its shadows beck-
oned

He had walked dumbly where the flag had led
Through swamp and fen—unknown, unpraised, un-
reckoned—

To famine, fever, and a prison bed;

"Till the storm passed, and the slow tide returning
Cast him, a wreck, beneath his native sky;
At this lone watch gave him the chance of earning
Some means to live—who won the right to die."

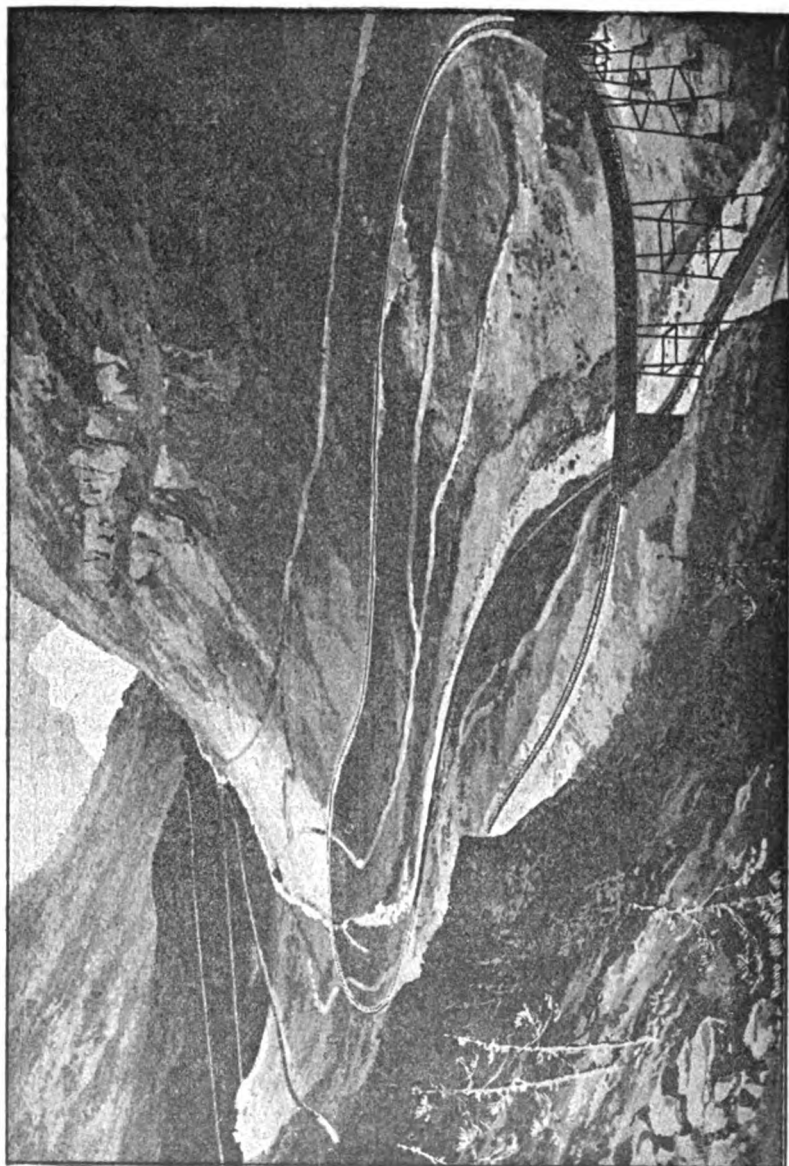

All this I heard—or seemed to hear—half blending
With the low murmur of the coming breeze,
The call of some lost bird and the unending
And ceaseless sobbing of those grassy seas.

Until at last the spell of desolation
Broke with a trembling star and far off cry,
The coming train! I glance around the station,
All is as empty as the upper sky.

Naught but myself—nor form nor figure waking
The long hushed level and stark shining waste—
Naught but myself, that cry, and the dull shaking
Of wheel and axle, stopped in breathless haste!

"Now, then—look sharp! Eh, what! The station
master?
That's none! We stopped here of our own accord.
The man got killed in that down-train disaster
This time last evening. Right there! All aboard!"

Bret Harte.

THE LOOP.

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the *truth day* of each month.

Velocity of Steam.

The utter absurdity of Dr. Wilson's claims as to the probable velocity of steam, coupled with the entire absence of any scientific basis for such claims, induced me to place before the readers of the mechanical department, the recognized rules governing the subject. These rules have been established through a course of elaborate experiments, by the world's most eminent scientists and philosophers, and are sanctioned and used by all engineering authorities that write on the subject. I had written an article on the subject, but before sending it in I stumbled onto the article by Mr. Atkins, which seemed to me to express all the salient points of the principle, in much plainer and better language than mine. I therefore concluded to use his article in lieu of my own. I expected some comment on this article from certain sources, but I certainly did not expect to be compelled to explain the benefit of one so immeasurably my superior in mechanical knowledge, as "Vulcan." I am at a loss to understand "Vulcan's" non-success in finding some treatment of the subject. If he will procure a copy of *Bourne's Hand Book of the steam engine*, he will find the subject treated both ably and exhaustively in an article commencing on page 100. He will also find on page 104, a table giving the velocity in feet per second of steam at different pressures from one pound up to 130 pounds. I will here state that while the article by Mr. Atkins expresses the principle correctly, his adherence to round numbers renders results arrived at only approximately correct. The constant multiplier should be 8.021, instead of 8. "Vulcan" intimates that my indorsement of this rule is in conflict with statements I have made on the injector question. I will be pleased to have "Vulcan" point out to me just what intimate connection exists between the injector principle, as explained by me in December *Magazine*, and the laws relating to the velocity of falling bodies. No, "Vulcan," I can admit that the velocity of efflux of any fluid, vapor or gas is governed by the law of falling bodies without affecting, even remotely, any statement I have ever made concerning the injector. "Vulcan" questions the correctness of this rule because it does not show the

velocity of 140 lbs steam, to be seven times as great as 20 lbs steam. I don't believe "Vulcan" has given this matter proper thought; if he had, he would not have committed himself to any such statement. I should look with extreme suspicion upon any rule that would give the velocity of 140 lbs steam at 10,500 feet per second. If the rule of proportion could be applied to these matters, our calculations would be greatly simplified. It would not be necessary to go through the process of determining the height of a column that would produce the given pressure, extracting square root, etc., for we could take the velocity of 1 lb steam as a constant multiplier, and multiplying any given pressure by that constant, would give velocity at such given pressure. Let us try now, and see what result we will get by this method. Steam of 1 lb pressure will flow into the atmosphere with a velocity of about 482 feet per second. Now, we will say, if the velocity of 1 lb steam is 482 feet per second, the velocity of 140 lbs steam would be 140×482 feet, or 67,480 feet per second, it will readily be seen that this is not a logical conclusion, nor would it be even if steam of 1 lb and 140 lb were of like density; for a column of steam that would produce a pressure of 1 lb (above atmosphere) on its base, would require to be, in round numbers, 3,619 feet high, and a column of steam of like density that would produce a pressure of 140 lbs upon its base, would require to be $140 \times 3,619 = 506,660$ feet high. Now, the velocity due to fall from the lesser height, would be 482 feet per second, and that from the greater, instead of being 140×482 , would only be 5,696 feet per second, or less than 12×482 ; or try it another way: A heavy body falling from the top of our 1 lb steam column would require 15 seconds to reach the earth, and a heavy body falling from the top of our suppositious 140 lbs column, instead of requiring 140×15 seconds would only require 178, or less than 12×15 seconds, so you see, "Vulcan," that even if steam was of the same density at all pressures the rule of proportion would land us a long distance from the truth, and when we consider that the density of steam increases as its pressure increases, we must see that the rule of proportion will land us still farther from the truth, for *the greater the density of a body the less will be the height of a column that will produce a given pressure upon its base*, and the less the density the greater the height, also the more dense the fluid the larger becomes the mass of matter which a given pressure has to move. To more thoroughly understand the relation between density and velocity, let us suppose two boilers, one containing a steam pressure of 140 lbs per square inch, and the other containing a hydraulic pressure of 140 lbs per square inch. Now, the velocity of efflux from the boiler containing the hydraulic

pressure would be about 144 feet per second, while that from the boiler containing the steam pressure would be over 2,000 feet per second. Now, as the same pressure exists in each boiler, there is no possible reason why the velocities should not be the same, except the difference in density between the two bodies. I hope these few explanations will open the way to a more thorough understanding of this subject. If I knew the address of Mr. Atkins I would request him to give us an article, as he could no doubt explain things much plainer than I can. If there is any other point not entirely clear, I will try to explain it.

Before closing this article I want to submit a question of the conservation of the energy, for the wise ones to ponder. I quote from the *New Orleans Picayune* of a recent date: A correspondent writes: "It is a well known law that energy is indestructible, but a case came to my notice a short time ago in which it is hard to tell in what form the energy appears. A metal spring is placed under tension and while in this state is fastened and placed in acid until it is completely dissolved. What becomes of the energy stored up in the spring? Is it turned into heat, and if so, how?"

Vacuum.

Eccentric's "A Few Problems."

MR. EDITOR:—As the new year and January *Magazine*, 1891, will soon come to hand, they remind me of my first article, *Magazine*, January, 1886, page 36, "A Few Problems." It was the answers to these six inquiries that led to the establishment of the Mechanical Department; *March Magazine*, 1886, page 146. If I rightly understand the answers to these six questions as they have appeared during the last five years in the Mechanical Department, it is, as to my first question, that our modern locomotive is a most defective piece of mechanism, because it is bad mechanics to attempt to balance rotating and reciprocating parts in combination with rotating only, at great or varying speeds, or at any speed.

Second. Is it or can it be true that in one movement, the piston, &c., &c., moves through the cylinder, and on the return movement the cylinder moves over the piston?

Third. Has the question as to the measure of the disturbance been measured?

Fourth. Is it true that the top of the wheel moves twice as fast as the bottom, and the bottom stands perfectly still?

Fifth. Is it true as to the difference in speed of the various parts of the wheel as indicated in my fifth question?

Sixth. Can a single valve be made to operate two cylinders?

About some of these questions I am fully convinced, and of others I am not. I feel

sure the first question is properly answered. The answer should be, it is bad mechanics.

Second. The answer to this seems to be that the movement which takes place therein described, is correctly stated, but this I am not so fully convinced.

Third. The reasoning about this is that it is still an undetermined theoretical question, not practically settled.

Fourth. This question seems to have been modified by Mr. Lockwood, (see *Magazine*, December, 1888, pages 893 to 89) "that the bottom of the wheel is at rest at a point above this point of rest which you can neither see, conceive or measure has commenced a movement as compared with the top, the top is moving at four times the speed." This seems conclusively proven and I must accept it as a fact.

Fifth. If I accept the fourth as true then I must concede this, also.

Sixth. This I concede is true, because have seen it and know it to be true.

One main object I have in renewing this matter here is to inquire if all these questions of wheel leverage and movement are accepted as definitely settled by the Brotherhood? If questioned, I should like further discussion until they are settled. Once settled, and that accepted by all, we can then go on and settle questions of the application of power to such wheel leverage and wheel movement. So long as this is in doubt we cannot correctly apply power to such movements.

Eccentric.

The number of passengers carried on the railways of the United States during the year was 472,171,343; the aggregate number of miles traveled was 11,553,820,455. This shows an average of 24.47 miles per passenger. The number of tons of freight carried was 549,639,583. The aggregate number of ton-miles was 68,727,223,146.

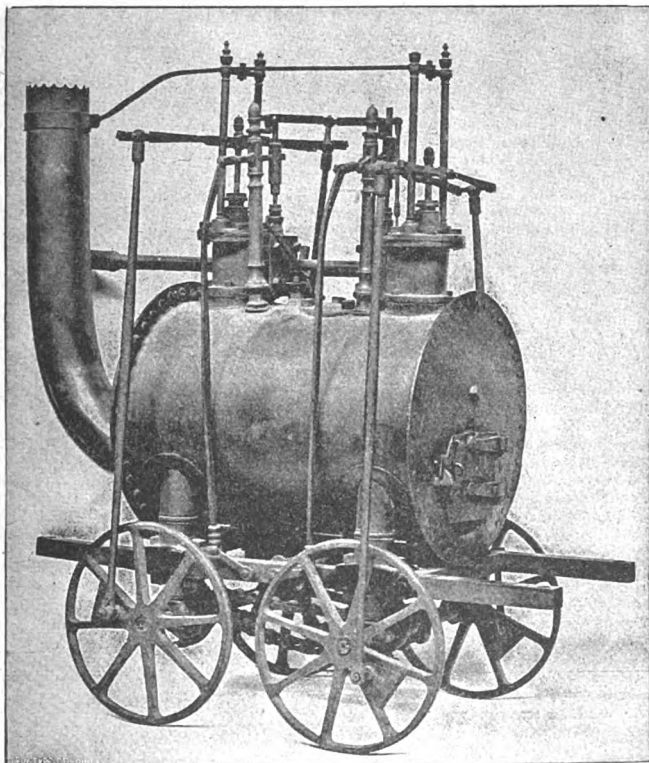

A Valve Model.

A valve model has recently been prepared by Bro. Wm. Weiler, of Port Morris, N. J., to show the link valve motion in common use on locomotives. It shows the left hand side with its cylinder, steam-chests and ports, and the valve with its steam, actuated by means of the usual rocker which, in its turn, is moved by the eccentric cams on the axle of the driver through the usual rods and link. It has the main-rod attached to an extended crank-pin at one end and to the cross-head at the other, thus moving the piston in unison with the other parts. By means of the reverse lever, the motion may be changed, or point of cut-off altered. By special arrangement the eccentrics can be "slipped" and readjusted. The frame and working parts are constructed of brass, and the whole is supported on a neat wooden stand, 3x7 inches. Its length overall is 9½ inches, height, 5½ inches and thickness of works, 1 inch. Its driver is 3¼ inches in diameter, its piston has 1¼ inches stroke and valve ¼ inch travel. Its miniature size makes it convenient for home study, and the low price (\$4.00) places it within the reach of all. Orders can be addressed to Wm. Weiler, Box 25, Port Morris, N. J.

Pioneer Locomotives.

In the December *Magazine*, just to hand, I am pleased and gratified to see your correspondent from South Wales, Mr. James Argyle, has given us an illustration and descriptive article on one of the early workers in the "Evolutions of the Locomotive," Richard Trevithick.

"We come, it is true, the representatives of forty millions of free men by ways our fathers never dreamed of, from religions of which they never heard. We come, in the midst of plenty, under a sky of peace, power in our right hand and the keys of knowledge in our left. But we are here to learn, rather than to teach; to worship, not to glorify.

THE FIRST LOCOMOTIVE UNDER STEAM TO RUN ON AN IRON RAIL IN NORTH AMERICA.

This working model Locomotive is now in the possession of the Franklin Institute, at 15 South 7th street, Philadelphia, Pa. This is said to be the working model of Oliver Evans' Locomotive, for which he applied to the Penna. Legislature for a patent in 1786. Others contend that it is the outgrowth of the efforts of the Pennsylvania Society in 1824 for the "Promotion of Internal Improvements in the Commonwealth," having been ordered by their representative, William Strickland, Esq., from England 1824 and 1826. See Mr. Strickland's illustrated report, published by himself 1825. In the Franklin Institute Library, and "Transportation Systems in the United States," by J. Luther Kilgus, 1888, page 70. From the best data at my command this seems to have been the first Locomotive that ran upon a rail in North America, antedating the "Stourbridge Lion" three (3) to five (5) years, and possible as above stated, thirty-three (33) years.

We come to contemplate the sources of our country's greatness; to commune with the honored past; to remind ourselves and to show our children that joy can come out of sorrow, happiness out of suffering, light out of darkness, life out of death." These were the words of the late Henry Armitt Brown, spoken in his oration at Valley Forge, June 19th, 1878, being the one hundredth anniversary of the evacuation of Valley Forge by George Washington and the continental army.

Much of this seems appropriate to the men who for the past, now near three hundred years, 1602 to 1891, have given their best efforts to the perfection of the locomotive. In my article on the "Evolutions of the Locomotive," *Locomotive Firemen's Magazine*, June, 1890, pages 513 and 514; *Locomotive Engineer's Journal*, June, 1890, pages 444 and 445, I made mention of the fact that in 1786 Oliver Evans applied to the Pennsylvania legislature for a patent for a locomotive; Cugnot having patented one in France in 1784. Some years ago the model room of the Franklin Institute became so filled that in order to make room for the new and incoming, the directors decided to classify and preserve those worthy of it, and then to destroy the balance. This work was delegated to L. L. Cheney, Esq., an aged yet still active member of its committee on the sciences and arts. Mr. Cheney tells me that among these was a working model of a locomotive, and attached thereto a card, old and stained with age, reading "Oliver Evans' Locomotive," and he classified it as such. Within a year or two it has been moved to a more conspicuous position and newly labeled, "Locomotion in 1825." Mr. Cheney says he was further confirmed in his view of this being Oliver Evans' locomotive by finding in an old number of the *Scientific American* an illustration of this model, and calling attention to the fact that it was Oliver Evans' locomotive. It is said that the late M. W. Baldwin, after whom the great Baldwin Locomotive Works, the largest in the world, are named, first saw this locomotive under steam in Peale's Museum, Philadelphia, 1824 and 1826, he at the time being an engraver of copper calico printing rolls. We hope to have, with the permission of the Franklin Institute, this model on the track and under steam at the Chicago exposition of 1892. As my contribution is in the line of that inaugurated by Mr. Argyle, I send you a fac simile from a recent negative of the Franklin Institute's model herein referred to. This was prepared for me by the Leveystype process in their very best manner, and I trust its illustration and description will prove acceptable to all readers of the *Magazine*.

LOCH ARIE, December 2, 1890.

William E. Lockwood.

Lap Table.

The following table gives the proper outside lap to nearest sixty-fourth of an inch, to give slide values to effect average cut-off* at various points from $\frac{1}{8}$ to $\frac{7}{8}$ stroke, and with different travels. Only a very small portion of it has ever before been published in any form or place.

The amount of lap, when there is no lead, is equal to the natural sine of half the angle which the crank makes with the centre line at the instant of cut off. That crank angle has for its versed sine the period of expansion (supposing no exhaust pre-release). Assuming a piston stroke of 20" if cut-off took place at $\frac{1}{8}$ stroke or 12" there would be $20 - 12 = 8$ " of expansion; and the angle which has a versed sine of 8 with a radius (the crank length) of 10, is $78^{\circ} 28'$. Half this is the angular advance, $39^{\circ} 14'$, and its sine is 6.3248 when the radius is 10.

If the valve travel was 2 inches (eccentric 1 inch out of center) then this sine would be .63248, and if the valve travel was 1 inch the sine or lap, to cut-off at $\frac{1}{8}$ piston stroke, would be .31624.

To build up our table we set down the various proportionate periods of full steam; opposite each setting its versed sine (the rest of the stroke; the expansion period if there is no exhaust release); then opposite these put the angles which have those versed sines when the radius is 1; then the angles of advance (half the crank angle at cut-off); then the sines of those angles of advance, and then, halving those sines, we will get the laps when the valve travel is 1.

Such a table is here shown:

Position of Piston at Cut- off.	Expansion Period.	Versed Sine when Radius is 1.	Crank Angle Correspond to Versed Sine.	Angle of Advance.	Sine of Angle of Advance when Radius is 1.	Lap when Valve Travel is 1.
.625	.375	.75	75 31'	37 45'	.61222	.30611
.667	.333	.667	70 32'	35 16'	.57738	.28869
.7	.3	.6	66 25'	33 12'	.54736	.27378
.75	.25	.50	60	30	.5	.25
.8	.2	.4	53 8'	26 34'	.44724	.22362
.85	.15	.3	45 34'	22 47'	.38725	.19362
.875	.125	.25	41 24'	20 42'	.35347	.17673
.9	.1	.2	36 52'	18 26'	.31620	.15810

*Average of both ends of the cylinder, where a connecting rod is used (making no allowance for the slight error of the eccentric rod).

Where the travel is 2" the lap required will be double that needed for 1" for the same cut-off, and this being the case it is easy to construct a table giving the laps in inches, for various proportionate cut-offs, and different valve travels.

The table is given here:

Valve Travel. Inches.	PROPORTIONATE POINTS OF CUT-OFF.								Valve Travel. Inches.
	.625	.667	.7	.75	.8	.85	.875	.9	
1	.306	.289	.274	.25	.224	.194	.177	.158	1

Robert Grimshaw.

Mechanical Studies.

When these lines appear in print it will be in order to wish all our readers and writers a "Happy New Year," and many more to follow, but the question naturally arises, how can we be happy when we are obliged to work hard every day, and have hardly leisure enough to cultivate an intimate acquaintance with our families, to say nothing about taking part in the various amusements or diversions that are enjoyed by others? The Good Master tells us that "Life consisteth not in the abundance of the things which man possesseth," and we find in the events of each day that this is only too true, for whenever the curtain is drawn and we are permitted to behold some faint glimpses of the true inward life of many of our "upper crust," we draw back with a shudder of dismay and would not exchange lots with them. The poor German after a hard day's work, breaks out into song when he hears the bell that announces the day's work ended, and comes to the conclusion that "God has so ordered it for his good," and pities his rich neighbor who could not enjoy his supper for a lack of appetite, and who "amidst his abundance even got tired of resting." If, therefore, riches do not give happiness we will have to look in other directions to find it, and we again turn to the words of the Lord Jesus, "It is more blessed to give than to receive." Let me illustrate the point by a story from

the *Detroit Free Press*: "A waif of a boy was eating a stale half loaf on the corner yesterday with the air of a starving, when a stray dog came along and crouched at his feet. The hungry look remained in the boy's eye, but he glanced down at the vagabond dog, and said in a friendly way: "Wot you want? This ain't no bone. Git!" The dog moved off a little, and again crouched and looked wistfully at the food. "Say, do you want this wus nor I do?" asked the waif. "Speak, can't yer?" The dog gave a quick bark, and the boy threw him the rest of the loaf. "Nuff said," he remarked, as he watched him eat ravenously; "I ain't the fellow to see a pard in trouble." And the boy went one way and the dog he befriended, another, both the better for the encounter."

No one will doubt that the boy went his way feeling far happier over this act of kindness to the animal than he did in receiving or finding the loaf, for it gave him a new sense of usefulness in the world, in being able to confer favors on others worse off than he. And so let our writers find a measure of happiness in having given in the past, and let them continue to bring the crumbs, the crusts, the stale and the fresh loaves, and the fruit cakes and mince pies, for the Editor wants all kinds of food for all kinds of readers.

I was greatly interested in the sketch, description and history of that Welsh engine

FIRST
STEAM MOTOR.

which certainly establishes its priority to Stephenson's Rocket, but it seems that the machine was not improved so as to overcome the grades and curves, and, in fact, proved to be ahead of the age and the world not ready for it yet. But what will our Welsh brother say to the idea that the Prophet Job is said to have alluded to the locomotive in his description of the Behemoth and Leviathan. Do not laugh, but read the following, captioned "Job as a Steam Engineer," from the *Scientific American*:

The last place in which one would naturally look for a description of the modern steam engine would be the book of Job. Yet a recent author has presented in a large octavo volume of 362 pages his conclusions on this very point. They are to the effect that the entire steam plant, railway organization, boiler and engine practice are treated of by the inspired writer. We allude to the work of Mr. Samuel O. Trudell, entitled "A wonderful Discovery in the Book of Job." If the author's view of the case were adopted, a new chapter in the history of the steam engine would be supplied, and the Marquis of Worcester would have to yield to Job as the pioneer in steam engineering.

Behemoth and the Leviathan have always been fertile subjects of controversy. The whale and hippopotamus respectively have been adopted by many commentators as the animals referred to. But Mr. Trudell goes beyond the most daring innovator, and in a revised version of the passages relating to these monsters finds allusions to the steam engine of today. A description of the method followed in his new interpretation will give the best idea of this most striking effort in the field of biblical criticism.

The author, fully to support his theory, has been compelled to furnish a new rendering of the parts of the book of Job which he uses. Accordingly we find a translation given of the passages in chapters xl and xli, which relate to the Behemoth and Leviathan. The claim is made without reserve that it is the modern steam engine in its different forms that is there described. It is evident that our space does not permit us to give the full bases for the argument. The separate verses are made subjects of as many chapters, and the analogies traced between the descriptions in the poetry of Job and the more prosaic steam motor are really surprising. The most curious details are traced out, such as the supply of water to the boiler, the upright smoke-stack, and even the manipulation of the stock of railroad companies is found described. The size and number of pages in the volume give the best evidence of the work bestowed by the author upon his labor of love.

It may be worth while to cite from the special translation appended to the book some of the most striking passages. The account begins chapter xl., v. 15, "Behold now one with great heat, he will consume fodder as well as cattle do," which is a pretty fair description of a steam engine. A little further on, v. 17, it says, "His tail will set upright like a cedar." This, the author concludes, refers to the smoke-stack. In v. 18 we find, "His hollow bones are tubes of brass, his solid bones are bars of iron," which is a very good embodiment of modern engineering practice. In v. 21, which the special translation renders, "He will rest beneath light shelters and within a covering of fibrous reeds and clay," the author finds an allusion to non-conducting covering for boilers and steam pipes. Going on to the next chapter, we find v. 6 thus rendered: "Companies will feast upon him, they will share him among speculators," which it is needless to say fits the case of modern railroad companies and speculators exactly. This is one of the extraordinary parallels of the work. It is perhaps equalled by v. 2 of the same chapter, where the hook (ring) in the monster's nose is construed as an allusion to the piston rings of a locomotive, and where the jaw bored through with a thorn supplies an allusion to the piston head bored through with its piston rod. The bad effects of an engineer allowing his water to run down is given in the same chapter, v. 26, "From

dryness rendering him furious, he will not have power to withhold, the curved vault being caused to break up, and also the armor." This, of course, means that the engineer must watch his water gauges or there will be an explosion.

For a portion of v. 23, chap. xl., and for v. 24 immediately following, the author furnishes the following translation: "Behold, he will absorb a river and will not fret; he will gather it up in his fountains by means of traps and with a perforated nozzle." Our author in this finds described the action of a pump with its valves (traps), and the perforated suction pipe with a screen at its end to exclude solid particles. Even the coupling together of a train of cars is found in v. 1 of the next chapter: "Thou wilt extend Leviathan with a hook, or with a snare which thou wilt cause his tongue to press down." The tongue, our author believes, is the representative of the coupling link, and the hollow drawhead and pin is the "snare." The caulking of the seams of the boiler is found in v. 15 of this chapter: "His strength depends on courses of shields closed up tightly with a seal." Our author finds nothing clearer than that the "shields" are boiler plates and the "seal" the caulking iron. He reserves, however, the possibility that the steam riveter is the sealing mechanism.

This much is enough to give an idea of the book. The author has been his own Hebraist. The Semitic student and author, Rabbi Benjamin Szold, of Baltimore, testifies to his high opinion of Mr. Trudell's translations. It must also be said in conclusion that the subject is treated throughout with full evidence of critical discernment and laborious investigation.

Some time ago I called attention to the fact that some of Job's descriptions were more applicable to the locomotive than to any beast that ever lived, but dismissed the thought afterwards as probably far fetched and untangible, but now find that the same idea has also struck others, and that it has been worked out in book form, and as our esteemed contemporary the *Scientific American* endorses it, in so far as to deem it worthy of notice, there may be something in it for all. Any way it will do no harm to read and think on the subject, for it would seem as if the ancients could not have built the massive structures, the ruins of which are yet the wonder of the world, without the potent agency of steam.

STRAIGHT OR "Pan Handle" asks about the difference between straight and automatic air as applied to brakes. Straight air is the first form of air brake invented, and had a large air cylinder on the locomotive only, from which the compressed air was allowed to rush to each brake cylinder of the train, and by forcing the pistons out to apply the brakes; to release the brake all that was required was to allow the air in the pipe and the brake cylinders to escape, when the brake shoes would be forced from the wheels by the springs. As this brake depended for its efficiency upon its full connection with the air cylinder of the engine, and would not operate without it, the "automatic" was invented, which, in addition to the main air cylinder on the engine carries an air reservoir on every car, out of which air is taken to apply the brake of that car. The train pipe and all the reservoirs, both on the engine and the cars, will be subject to one pressure as

long as all are in free communication, but when the brakes are to be applied instead of having the brake pipe full of air as in straight air, the communication between the main reservoir on the engine and the main train pipe is stopped, and the air in the pipe is allowed to escape. As long as the pressure in the pipe and in the reservoir is equal, the triple valve, which really does the automatic work, is open to the main pipe, and permits air to flow through it to the reservoir, but when the air is allowed to escape from the main pipe, the greater pressure in the reservoir of the car forces the triple valve to move, and to close the passage by which the air entered from the main pipe, and to open another which leads to the brake cylinder, and the brakes are thus applied. If a train is broken in two, and has the automatic in good shape, both parts should come to a stop at once, because the air in the main pipe is then liberated, and hence its name as automatic. To release an automatic brake on a car detached from the train, it is necessary to let the air out of the reservoir, or, in other words, to "bleed it", but if attached to the engine, the admission of air from the main reservoir and pumping up till the pressure in the pipe again equals the pressure in the reservoir, when the triple valve will move to its former position, shutting off the air from the brake cylinder, opening the exhaust and opening communication between the train pipe and the reservoirs, will release the brakes.

AIR SIGNALS. As "Pan Handle" does not specify the air signal regarding which he wants information, we will have to wait to hear from him again with name or place where made or used.

PRIMING. Priming and foaming mean a rising of the water above its real level in the boiler, and its passage through the valves and cylinders mixed with steam and commonly called "working water." The terms foaming and priming are often used in the same sense, as the symptoms are the same, but priming is the result of carrying water pretty high or having the engine blowing off, which in addition to the open throttle causes such a rush of steam to the dome as to carry the water with it. **FOAMING.** properly speaking, is the result of impurities in the water, such as oil, mud, or alkalies.

TECHNICAL SCHOOLS. The article on the work done by the Franklin Institute to promote a higher knowledge of mechanics is likely to arouse attention, for the fact is as stated, that only too many collegians prepare themselves for so-called learned professions, and go through life without remunerative employment, while men with a good technical knowledge

of mechanics are at a premium and in constant and ever increasing demand.

These tables are very well **SPEED TABLES.** as a study, but an engineer on the road does not have time to look down and count the revolutions of the driver, having to depend on his knowledge of the road and its distances and grades for the ability to make time.

INJECTORS AGAIN. "Vacuum" gives another installment on the injector question, which I have duly considered, and also compared with Forney and Sinclair, and still I find nothing that explains why it should act so. In his explanation "Vacuum" says: "If by any means the column of steam can be reduced in bulk without impairing its velocity, etc." That if was well put, for the steam when condensed is not near so lively a body, and will by no means have the velocity it had as pure steam, and for proof "Vacuum" need only be referred to an engine "working water," for he will at once see the difference even a small percentage of water will make. The question still is, while this velocity is generated outside, what is the water at the check doing? Is it devoid of all energy, and is it not as ready to come out as the other is to get in? And why don't it? *Vulcan.*

Expired Railway Patents.

The following list of railway patents, furnished by F. B. Brock, Patent Attorney, Room 26, Atlantic Building, Washington, D. C., expired during the month of December, 1890, and are now free to be used by anyone, viz.:

Lubricating device for car axles, W. J. L. Moulton.
Car coupling, J. C. Maloy.
Sleeping car, G. H. Lindner.
Car seat, P. W. Nolan.
Safety attachment for trucks, G. O. Offen.
Utilizing old rails, G. Futz.
Railway time signal, Fend & Stevenson.
Car brake, J. G. Whiggin.
Pneumatic signal, W. E. Prall.
Rail joint, W. G. Dunn.
Electric signaling apparatus for railways, F. L. Pope.
Elevating and transferring arrangement for cars, W. T. Beekman.
Car ventilator, M. T. Hitchcock.
Car wheel, A. C. Fletcher.
Railway crossing, J. Brahn.

Persons desiring copies of patents, drawings and specifications, can obtain the same for fifteen cents, by applying to Mr. Brock, whose address is as given above.

If a railroad line were laid straight for 3,000 miles across the United States, it would be found by measurement that the rails would, on the whole, be two miles shorter in winter than in summer, owing to the contraction on account of the change in temperature.

Queries and Answers.

In a late issue of the *American Machinist* I find the following queries and answers which I thought it well to reproduce for the benefit of our readers:

"Locomotive, Waterville, Me., asks: What is the fastest time on record made by a locomotive? A.—Perfect records of locomotive speeds are not kept, hence it is difficult to answer your question with reasonable confidence. If our memory is not at fault, 86 miles per hour have been made for a short distance. 2. Where is the largest locomotive? A.—The largest locomotive is used in the mountain service of the Union Pacific road. This engine and the others of its class are the heaviest in regular freight service. It has eight coupled wheels, and a two-wheeled swing bolster truck. Gauge, 4 feet 8½ inches; cylinders, 22 inches diameter, and 28 inches stroke; driving wheels, 4 feet 3 inches diameter; fuel, soft coal; rigid wheel base, 14 feet, total wheel base of engine, 22 feet 3 inches; total wheel base of engine and tender, 49 feet ½ inch; length of engine and tender over all, 62 feet 7½ inches; weight on drivers, two gauges of water, about 138,000 pounds; weight of engine, two gauges of water, 153,000 pounds. Heating surface of fire-box, 178 square feet; heating surface of tubes, 2,144 square feet; total heating surface, 2,322 square feet; and area of tube openings, 833 square inches. 3. Why do European locomotives have such small cabs? A.—There is no reason for the use of the small cabs. 5. What is a pony truck? A.—A two wheeled truck. 6. Can you tell me of a good book for young firemen? A.—Locomotive Engine Running and Management, by Angus Sinclair.

"H. D. B. says: Please inform me through your columns of Answers to Queries whether it has been proved or not by experiment that an engine can start more cars when the couplings are made so as to allow no jerk between the cars, or in other words, does the play between the cars help an engine to start a train? A.—The proof is of every day occurrence on our leading railroads, where heavy freight trains are stalled when an attempt is made to start on a dead pull, but start easily when producing slack by backing before starting the cars.

"R. F. N., Aurora, Ill., writes: Please give me a rule for obtaining the necessary throw of an eccentric when the width of the steam port is known. A.—Add to the lap the width of the steam port; the sum will be one-half of the throw, or eccentricity of the eccentric. With this throw the port will be fully opened—in some cases it is desirable not to open the port fully; in such cases the throw must, of course, be reduced.

One-half of the throw should be equal to the lap plus the amount of opening. 2. Can you tell me what the effect will be on one eccentric by moving the other in a locomotive? A.—If both eccentrics are correctly set, then, in moving one of them a distorted valve motion will be the result. In ordinary American locomotives the evil effect will not be so much noticed when the link is in full gear and the center of the link block is direct in line with the center of the eccentric rod pin, which is actuated by the eccentric correctly set; but, as soon as the link is moved towards mid-gear, the incorrectly set eccentric will influence the motion of the valve, and will either destroy the lead or increase it so as to be detrimental, and the maximum of this increase or decrease will take place when the incorrectly set eccentric is in full gear, and the other eccentric has ceased to have an influence on the motion of the valve. 3. On a locomotive the lead is $\frac{1}{8}$ of an inch at the front port, and $\frac{1}{4}$ inch at the back port. What is the trouble? Is there any way of setting the eccentrics correctly at once? A.—Assuming that the valve rod is of the correct length, it will be found that either one or both the eccentric rods are too short. The first thing to do is to adjust the eccentric rods so that the lead will be equal at both ends of the cylinder, and then move the eccentrics so as to obtain the correct amount of lead at each end of the cylinder. A practical example of setting the valve gear of a locomotive has been given in an article on Modern Locomotive Construction, in our issue of April 30, 1887. You may possibly place the eccentrics in the correct position at once, but generally, in the erecting shop, it will require more than one setting. If the whole valve motion is correctly laid out on paper, the eccentrics can then be set according to the drawings in their correct positions at once, but it is doubtful if any labor will be saved by this method."

As the topics treated in the foregoing clippings relate directly to the locomotive, I have no doubt they will be of interest to the readers of the *Magazine*, most of whom are employed as locomotive enginemen and are, or should be, students of the machine in all its parts. It is the ambitious fireman who devotes his leisure time to study and investigation and familiarizes himself with the whys and wherefores of things who is to make the engineer of the future and hence anything and everything that is calculated to increase his knowledge of the locomotive arrests his attention, nor does he abate in his inquiry and investigation until he comprehends the mooted points. *

WITH average wear a steel rail will last about eighteen years.

Frozen Steam Gauges.

The following query and answer are copied from the *American Machinist* for the purpose of relating an experience I once had with a steam gauge:

F. C. says: After a steam gauge freezes, what action has the frost on the spring to cause the pointer to be on the wrong side of the pin? and if you steam up, the pointer will come back and show how much the frost has weakened the spring. I can't see how a steam gauge can freeze until the steam goes down in the boiler and the pointer comes back to the pin. It seems a mystery to me how the pointer can get on the other side of the pin. And when you find out how much it is weakened, what is the best way to get the spring in its right position again without sending it to the factory where it was made? A. The pipe leading to a steam gauge is or should be filled with water, and is liable to freeze by exposure. In the freezing of a steam gauge the pointer may be thrown clear around against the pin by the expansion of the water in the pipe, supposing it to have commenced to freeze at a little distance from the gauge first. You can take off the head and reset it, but the probability is that the relation of the gauge to the dial marks will be changed, and the gauge become unreliable. Better send it to be repaired and tested.

About seven years ago I was employed as hostler, and on a certain Sunday morning in early winter a number of engines that had just come in were standing outside of the round-house, the house being full. One of these engines came in about six o'clock, had a good fire, about 100 lbs. of steam, and was full of water, so after adjusting the heaters to the pumps and turning a little steam on all the pipes (as it was freezing), I left her to attend to some other duties. About an hour afterward I returned to try the water and found her full as before, with steam issuing from the various heaters, but looking at the gauge I found the pointer at the pin, and, it being not quite light in the cab, I thought she showed no steam and concluded to shove the fire down and get more steam on. After shoving the fire down I thought I would turn on the blower, but I did not expect that it would help much; however, on turning it on I found that it blew quite strong. I then shut it off and began to look around, and as it had become light in the cab, I found that the pointer instead of being on the light side of the pin was on the other side. This staggered me for awhile, and I could not imagine what ailed the gauge; that a steam gauge, in full connection with a boiler full of live steam, should freeze, did not seem possible to me. As I could not think of anything else I held a lighted torch to the gauge pipe, and soon saw the pointer leave the pin, but instead of coming around and going up the light side, it went the other way, and the first figure it had on that side was 240; it did not stop at this figure however, but went around to 75 pounds, and remained there. The gauge was not damaged in the least, but I suppose that the pipe had not gotten real solid yet. A keen northeast wind was blowing that morning

which had opened the door on the fireman's side, and then impinged directly on the steam gauge pipe, and as it was of the usual syphon shape, the cold chilled the water in the pipe, and produced the phenomenon described.

The Compass in the Watch.

A correspondent of the *London Truth* sends the following: "A few days ago I was standing by an American gentleman, when I expressed a wish to know which point was the north. He at once pulled out his watch, looked at it, and pointed to the north. I asked him whether he had a compass attached to his watch. 'All watches,' he replied, 'are compasses.' Then he explained to me how this was. Point the hour hand to the sun, and the south is exactly half way between the hour and the figure XII, on the watch. For instance, suppose that it is 4 o'clock. Point the hand indicating 4 to the sun and II on the watch is exactly south. Suppose that it is 8 o'clock, point the hand indicating 8 to the sun, and the figure X on the watch is due south. My American friend was quite surprised that I did not know this. Thinking that very possibly I was ignorant of a thing that every one else knew, and happening to meet Mr. Stanley, I asked that eminent traveler whether he was aware of this simple mode of discovering the points of the compass. He said that he had never heard of it. I presume, therefore, that the world is in the same state of ignorance. Amalfi is proud of having been the home of the inventor of the compass. I do not know what town boasts of my American friend as a citizen."

Passenger Travel on German Railroads.

The statistics of the German railroads for last year show a considerable increase in passenger travel, the total number carried rising from 295,758,906 in the previous year, to 315,991,747. The increase in mileage of the roads was not large, the average in 1887-88 being 39,261 kilometers, against 38,261 in the preceding year. The first class alone decreased, all the other classes having increased in number. Germans travel much, but in this, as in all other things, they are thrifty, and spend as little as possible. The great bulk of the passengers on German roads take the cheaper class of cars, so that the first class are very little patronized. The division of passengers for two years past was as follows:

	1887-88.		1886-87.	
	Number.	P.c.	Number.	P.c.
First class . . .	1,897,647	0.4	1,864,596	0.6
Second class . . .	32,869,910	10.4	31,724,493	10.7
Third class . . .	206,624,435	65.4	193,131,225	65.3
Fourth class . . .	67,559,874	21.4	62,081,560	21.0
Military	7,329,881	2.4	6,957,032	2.4
Total	315,991,747	100.0	295,758,906	100.0

mitted entirely. I have no copy farther back than 1883, and the only two familiar names I find in these numbers are those of our valued contributors "Irene" and Mrs. Hinchcliff. There are some very readable letters signed "Mrs. Sigourney," Denver, Col. Can any of our readers tell us what has become of her? Many of the letters contain the same old "chestnuts" that afflict us at the present time, "Having seen nothing from Lodge No and No," "Thought I would break the ice," "If this escapes the waste basket," &c., &c. The range of topics seems very limited and, altogether, the Woman's Department is a small affair, so timid and unassuming no man would think of raising his voice in opposition to it. Every year has marked a gradual improvement and, while we feel highly gratified over this fact, I am sure all of our readers and correspondents will agree that it has not by any means reached a standard where it can afford to stop. We want the following year to prove no exception to the general advancement and to this end we invite a cordial co-operation. We particularly ask our friends to write in a helpful spirit. Whatever lessons you learn from your daily life, recite them for the benefit and encouragement of others. Speak a cheerful word if possible, but if you are "weary and heavy laden," we trust you may find sympathy and assistance among those of our circle who have suffered even as yourself.

It is said that a proneness to indulge in reminiscence indicates advancing age. We must accept the imputation. The close of the old year seems a fitting time for retrospect and, whether we will or not, our thoughts wander back, not alone over the year just passing away, but over the many which have preceded it. Every history contains both sad and happy chapters, and both are as necessary to the symmetrical development of character as lights and shadows to the perfect picture. It is a small soul, indeed, that is satisfied with the year's record when he sums it up, but the angel I hope within whispers that upon the fair, fresh pages of the new volume may be written another story which a twelvemonth hence will give us more pleasure in the reading.

A DISTINGUISHING feature of the last campaign was the participation of women in New York City. Feeling that something must be done to redeem the city from a corrupt government, the so called "better element," led by the ministers of various large churches, organized and conducted a vigorous campaign. To their assistance they called the women, and among them we find the names of Mrs. Bishop Potter, Mrs. Wm. E. Dodge, Mrs. Heber Newton, Mrs. Pierpont Morgan, Mrs. Henry Clews, Mrs. R.

W. Gilder, Dr. Emily Blackwell, Dr. Mary Putnam Jacobi, the list running into thousands, representing the wealth, education and culture of the city. These ladies organized, raised money, electioneered and made a strong fight for a "law and order" ticket. The leading newspapers complimented them in the highest terms and they gained many laurels by their brave fight. But they were obliged to stop just at the point where their work would have amounted to something definite. After going through the campaign they were not permitted to drop the one little ballot that would have counted for more than all their labor and all their influence. The "law and order party" was defeated, but if to the votes of the men had been added the votes of the women they would have carried the day. Law abiding, patriotic and conscientious people will some day wake up to the fact that it is not best for the country to disfranchise the greater part of its intelligence, morality and religion.

CORRESPONDENTS will please bear in mind the suggestions in the December *Magazine* in regard to the form of communications, the subject matter and the necessity for giving the correct name of the writer.

SAN ANTONIO, TEXAS, October 14, 1890.

Editor Woman's Department:

One of the writers to Woman's Department a few months past asked for a receipt for plain cake. I thought at the time of reading her request I would give her my receipt by which I bake cake for my husband's lunch. One good feature is, it does not soon dry out, and in warm weather, if kept from the wind will keep several days quite fresh, and is really cheap.

Take 2 or 3 eggs, as you choose (I usually take 3); $1\frac{1}{2}$ cups sugar; beat well together; add one half cup butter, beat again; then add two-thirds cup water or sweet milk, and stir; then to $2\frac{1}{2}$ cups flour; add 1 tablespoon baking powder and beat all together with seasoning. (I find vanilla to be a flavor of which one does not easily tire); beat until quite light, bake in a quick oven. The same receipt makes a very good layer cake.

I have a good receipt for ginger snaps that are good for lunch, as one can always keep them on hand for you know the older they are the better they are. Boil 1 pint of sorghum or baking molasses and let it cool (no, I forgot, you boil two thirds pint of lard with the molasses, then you let it cool), then make a hole in a pan of flour and pour it in and add 1 teaspoon of soda; mix quite stiff, roll very thin and cut, bake a light brown in a quick oven. You will not think them good when fresh, as they are too hard and snappy, but if kept a few days they are very nice.

A good receipt for rolls, and you will find them nice for lunch, is to take 1 quart of sweet milk, let it come to a boil, let it cool, then make a hole in one quart of flour and stir into the milk one-half cup yeast, one-half cup sugar and butter the size of an egg, pour all into the flour and set to rise over night. In the morning mix it stiff with the flour in which it was raised, set to rise again. When light, roll and cut with as little handling as possible, spread butter on each, and double when well risen bake in a quick oven. I have used all these receipts for ten years and know if carefully followed they are a success. A certain blonde engineer on the I. and G. N. can testify as to the cake.

I have some pretty patterns for crochet lace. I will perhaps give some of them in another letter.

Just now I want to tell "May" if I were in her place I should take Mr. Fortune's advice. I should go out with my friends and make the best of life and have a good time. I should first ask my husband to stay at home. If he refused I would then tell him I was going out, and ask him to accompany me. If he refused I should quietly tell him that I would go with Mr. and Mrs. "Smith, Jones or Brown" and I should go. I feel like telling those who write about always having meals ready and the house tidy and in order to keep husbands in a good humor, that they do not understand true men. Is it always possible to have the house in order and everything right at hand for them? Besides that I could not love a man whose first look on entering the house was to see if his dinner was waiting for him, then to see about the order of the house, and if he found everything to his satisfaction then turn and smile—or grin. I think a husband who truly loves his wife will, on coming home, say, "How are you all; is everything all right?" By that he will show his wife that he cares for her, and how she has been getting on while he has been away. Of course his wife should not then start in, "O, Johnny has a sore toe, and Mary cut her finger and I am just as tired and discouraged as I can be. I am the most miserable woman in town, always something happening in our family," etc., etc. But she should, unless something really serious has occurred, assure him that all are well, then inquire concerning his trip and tell him to come and have his dinner. If it is not ready, tell him in as few words as possible and without complaining the reason, then make haste to prepare it, saying something pleasant to him while she is working. There are always two sides to everything and as much can be said on one as the other, and I would like to hear the men tell what they would like a woman to do on their return. I don't believe all men expect their wives to stand in the door with a smile or a grin on their face. Now, I suppose you will think I am an old sober sides who does not believe in laughing or joking or making things pleasant for one's husband. But those who know me know my face is seldom straight, and I am usually in a good humor. I take things as they come, and try to please my husband, but some times he is hard to please, then just do that which suits myself and is the most convenient.

Wishing success to Woman's Department and all husbands and wives their rights, I remain

A Fireman's Wife,

Belle.

[A very sensible letter.—Ed.]

FORT SCOTT, KAN., NOV. 15, 1890.

Editor Woman's Department:

Having been a reader of your valuable *Magazine* for the past six months, and not seeing a single letter in the Woman's Department in that time from Fort Scott, I thought I would venture timidly forward with a few words of kindly meant advice or suggestions, whichever you are pleased to call them, and a few words of praise and honor for those noble, energetic, true-hearted boys of the B. of L. F. who so cheerfully leave their warm, pleasant homes these cold, stormy nights to go out on the dark and dangerous road in the service of a rushing, mighty public. I am sure that we sisters are very proud of the noble fellows, and should spare no pains to make home pleasant for them when they come in. I think there need be very little trouble in managing a husband, if love reigns supreme in each heart it will be quite easy. Poor May's husband is thoughtless and wayward. Now, dear, have you tried real hard to bring him back to his former self? Little acts of kindness that cost us nothing may work wonders. A good, tastefully arranged supper-table, with a neatly dressed, smiling faced wife presiding will fetch a man generally when other things fail. The husband who can look forward to such a state of things every time he comes in will never tire of home, and the wife who studies his comfort will have little difficulty in managing him according to her will. Some men will wander in spite of all allurements, but they are selfish enough to realize where they are treated best, and by taking a

little trouble for the first year of married life the years that follow will, as a rule, find the husband always glad to get back to the pretty home where loving smiles await him, and the good supper is all ready, or as near so as possible. There are some women who say they won't be "bossed," as they sometimes call it. Many irreparable mistakes are made in the home by this one thought. My dear ladies, you can always be "boss" if you take the trouble and go at it the right way. By giving in you get your own way, as you never would by fighting for it. And after all it is better to feel that you respect your husband so much that to give in to him is not a difficulty. Nine men out of ten are manageable if you go the right way about it, and one great point is to act after marriage exactly as you did before. Argument and contradiction are vital enemies to married peace. Should you wish for anything particularly, don't insist upon having it after refusal, but bide your time. Some women are persistent and ask, "Why may I not? Why won't you never do as I ask you to?" and so irritate the man. Rather bide your time, make an extra good supper of his favorite dishes, put a bow on of the color he likes best, make home and yourself sweeter than ever, and he will get you just what you wanted if you did have to wait a little. He'll love you all the more for it. If hubby wants you to go for a little outing, a walk or any place of amusement, always be ready to leave your work at any time, as it will be a great pleasure to him, and nine times out of ten he will help you with the delayed housework when you return. Anyway you have plenty of time to do most of your work while he is away. Give your society to him as much as possible. He'll appreciate it. I think B. L. E.'s letter to "Fireman's Wife" is perfect, and just what she needed. She is carrying a heavier burden than one woman's shoulders are able to bear. If her husband knew the amount of work she has to do in one day, he could possibly suggest to her some way out of her difficulties. Now, this is my first attempt at writing for publication. If my letter is accepted, I may come again. With a host of good wishes for the Brotherhood and its interests, I will stop at once.

Anna, a Fireman's Friend.

[Come again, you are welcome.]

JUDD, COOK COUNTY, ILL., NOV. 6, 1890.

Editor Woman's Department:

I am not a constant reader of the *Magazine*, but when at leisure I love to look over letters in the Woman's Department, and find them very interesting. But as I have a letter of thanks to write, I must not dwell longer on this subject. I must, I think, tell you my trouble, and why I should thank our boys of 249, Calumet Lodge.

My husband was overtaken, in July, with nervous prostration and pain around the heart of neuralgic character. I was away in New York, and they telegraphed me to come home. He was not able to work till the weather was cool; and not only our boys of the B. of L. F., but engineers, and all our friends, were very kind and helped my mother care for him till I came home. And as we have had sickness, more than less, changing the expression a little, for over three years, we had no bank account and one of the B. of L. E., Mr. Christopher Schron, presented him with forty dollars from friends, and after about six weeks or less the B. of L. F. boys of 249 gave him forty dollars, and how like a Godsend it came, for he had worked just seven days and that morning I had asked him to fix the curtain so it would roll up and as he was getting down his foot slipped from the little foot board on the high chair and he fell, his whole weight striking his breast almost at the base of his lungs on the back of the high chair and I thought he was killed. He caught his breath again after a few minutes but was not able to go to work again for a long time and I was ill then and am still too ill to be out of bed. You will know how kind our friends have been and why we are very grateful to them all and join in thanking them great and small, for kindness. Even our babies, we have three, have learned to be thankful to these dear friends.

Mrs. Lillian Keeter.

AUTUMN.

The autumn leaves all brown and sere,
 Lie crushed beneath our tread,
 The flowers that bloomed in summer time,
 Are withered now and dead.
 The chilly winds, whose low, sad wail,
 Falls on the listening ear—
 The dead leaves rustling on the ground
 Proclaim the autumn here.

The robin that so sweetly sang,
 In summer days now gone,
 Has taken flight, where in fairer climes
 He warbles forth his song;
 The leaflets on the maple boughs,
 Are touched with golden sheen—
 The sumach's fruit is red where once
 It hung in clusters green.

I wait and watch in a weary way,
 For the autumn of life to come,
 Like autumn winds it will bring decay,
 When the summer of life is done;
 The hoary frost and winter snow,
 Will follow the autumn blast
 That has chilled the vigor of manhood's years,
 And a blight on age has cast.

I watch and wait for a day that must come,
 When I shall hear the Master's call
 That shall summon me hence to that land of rest,
 To that heavenly home for all;
 And I muse with tears on the fleeting years,
 That have brought decay in their train,
 While the autumn winds sing a mournful dirge—
 A sorrowful, sad refrain.

Mrs. Nellie Bloom.

WEST OAKLAND, Oct. 14, 1890.

[Mrs. Bloom's poetry is acceptable in all seasons, but she must remember that articles for the *Magazine* do not appear for two months after they are written. Her spring poem must be prepared in February. This may require some effort of the imagination, but that will be an easy thing for a poet.—Ed.]

KANSAS CITY, Mo., November 11, 1890.

Editor Woman's Department:

I have reason to believe that many of the brothers read our "Woman's Department," and I would like to ask, how many of them like pie and cake? How many of them remember the pie and cake which their mothers made, and how many of them would ever have married if they had had to give up all pie and cake, and live on meat, potatoes, sauer kraut and pickles? I fancy I hear each one exclaim and say that he would stay with mother, and do without a wife if he had to live that way and do without pie and cake.

But, my dear brothers, you are married, and that dear, little wife of yours makes just as nice pie and cake as your mother ever did. Her doughnuts are just as sweet; her pie crust just as tender, and her cake just as good. She does all for you that your mother ever did, and so far as work is concerned she does more. Your mother washed your little pants; your wife washes those dirty, gray overalls of yours; she takes care not only of you, but of your children; she is everything to you; wife, companion, nurse, seamstress, washwoman, scrubwoman, cook, and general helper to you and your children, and do you ever give her a piece of pie and cake?

O stop. This pie and cake is not made of such stuff as fills your dinner bucket. Almost any woman can make that, and give you a good dinner, but you and you only can give that dear wife of yours the pie and cake for which she is starving. She had plenty of it when she was a girl. Her father's affectionate words; her mother's loving kiss; her brother's proud glances; and her sister's sweet confidences. Those were her pie and cake from which you took her. Then later on the little pieces that you gave her; that stolen kiss; that little pressure of the hand;

those little, loving, nothings were all so sweet to her. Do you remember that first kiss, a lover's kiss? How long has it been since with your two strong arms around her, you have given her a loving husband's kiss? You told her then that she would be a dear, little wife. How long has it been since you told her that she is a dear, little wife? You told her then that she would make you happy. How long has it been since you told her that she has made you happy? You promised then to love and cherish her. How long has it been since you have loved and cherished her with fond, loving words? Do not think that the honor of having your name, of raising your children, and the privilege of making your pie and cake end your obligations. Just as you need a good dinner every day, Sunday included, with plenty of pie and cake, just so your dear wife needs loving words, and kind attentions from you every day, and plenty of them, and they do not cost you nearly the labor that your pie and cake costs her to make.

Try it, brothers if you have been thoughtless in this matter. Give an extra loving kiss and see how her face will brighten up; it will lighten her burdens, and not end there. The next day when you are thundering along on the road, with the remembrance of that kiss on her lips she will clasp her child in her arms, and with tears of joy in her eyes, in her ecstasy she will cry out "O, darling, your papa loves me! He loves me!"

Perhaps I hear some of you say that your wife has all the pie and cake that she could wish. Blessed indeed is she, and doubly blessed is the wife and mother who gets a large share from both husband and children. Brothers, with the beginning of the new year, don't forget to give, each one, his dear wife a loving share of pie and cake.

A Fireman's Mother.

[A happy, timely and valuable suggestion. Many a woman who reads this department is starving for such sweetmeats and confections as our correspondent refers to.—Ed.]

ROODHOUSE, ILL., Nov. 10, 1890.

Editor Woman's Department:

As I always read the *Firemen's Magazine*, and always read the *Woman's Department*, I thought I would write a few lines, and express my opinion of waiting on a man. My ideas of waiting on a man don't go very far. I always try to be at home when my husband comes, always try to have something good to eat, his clothes always mended and clean for him to put on. We have been married three years, and I have never blacked his shoes yet. A man will always find time to go down town, and I think it only detains them a little longer to polish their shoes. When a man feels badly and tired he "lays off," and in the meantime he does nothing but eat and sleep, and lie around on the couch, or go down town. I want to ask the ladies, does the time ever come when you lay off and do nothing, and if you sit up all night with a sick baby who takes your place the next day?

Husbands speak kind words to your wives as you did in your courtship days, and when you come home leave some of the cares behind you; come home with a smile on your face. It always takes two to make a bargain. A wife cannot make a home happy if her husband don't help her.

I will give you a receipt for a fruit cake. A cup of butter, two of white sugar, one of milk, four of flour, two heaping teaspoonfuls baking powder, nine eggs, beaten separately, one pound of raisins, half pound of currants, a quarter pound of citron. Cream, butter and sugar together, add milk gradually, then the beaten yolks and lastly, while stirring in the flour, add the whites. Flavor with vanilla and lemon. Have chopped raisins or seeded raisins, have citron sliced thin, wash and dry currants, before using flour all fruit slightly. In putting the cake in the pan put a layer of cake, and sprinkle some of the three kinds of fruit and so on till all is used. Always finish off with a thin layer of cake. Bake in moderate oven for two hours. Tested by many and never failed.

Minna.

WHAT IS LOVE ?

Love's no irregular device.

No sudden start of raging pain
Which in a moment grows a fire,
And in a moment cools again.

Not found in the sad sonneteer

That sings of darts, despair and chains,
And by whose dismal verse 'tis clear
He wants not heart alone, but brains.

Nor does it centre in the beau

Who sighs by rule, by order dies;
Whose all consists in outward show,
And want of art by dress supplies.

No: love is something so divine

Description would but make it less;

'Tis what I feel, but can't define;

'Tis what I know, but can't express.

Elta Witt.

THE FARM KITCHEN.

Editor Woman's Department:

The farm kitchen, what an awful amount of rubbish and gush is written about it. Sentimentalists quote Whittier's touching description of building the huge kitchen fire, how the rude, old-fashioned room burst flower-like into rosy bloom; the apples, nuts, and mug of cider between the andirons straddling feet—and mighty fine reading it is, too, as you sit toasting your feet on the warm rug before a glowing grate while "the storm raged on." But the Prohibs, the Drs. and the law have proved there is death in the mug, tho' they have still left us the apples and the nuts. But the poet didn't have to tell how many times they turned to warm the other side, nor how soon that fire burned down and had to be replenished with snow encrusted logs, nor how chilly the home was until the fresh fuel caught, nor how disagreeable was the melting snow on floor and hearth, nor how many times his mothersaid, "Boys, I wish thee would not carry in so much snow." How long would a farmer's wood lot stand such a drain now, to say nothing of having to hire a man to do the chopping. It's all right and very picturesque for a wealthy city man to build his country house with a sixteen foot fire place, as I read of the other day, to drive out the damp of summer, but he takes care to flit back to his furnace before he is "snow bound." But for a farm journal to advocate a big kitchen is little short of heresy. Our grandmothers could afford to keep such an instrument of torture; they always had a remarkable hired girl, or rather kind friend, that lived with them from choice, did all the cleaning, turned a cold shoulder to all aspirants for her hand, and when she got too old to be slightly, vanished, like Mr. Haggard's "She." But in these modern days hired help reminds one of the dissolving views that used to be on exhibition, "they cost too much and are too hard to keep." Tho' I never had one that I wasn't glad to say as I bidd her a hurried good bye, "God be with you till we meet again" (equivalent to an everlasting benediction). Who wants to spend all the time scouring the floor and keeping the stone jar full of doughnuts?

My ideal of a farm kitchen is a square room; so you won't have to walk so far, but too small to spread the dining table in; furnished with a good stove, not too large nor too much adorned with extras, either coal or wood for winter, an oil stove for summer, no buttery, two large cupboards, windows galore, and as many other conveniences, as one can command, not forgetting a dumb waiter to the cellar; but no lounge, as I do not intend to stay there one minute longer than I have to. As for eating in it, nothing would induce me to; I'd sooner cook in an open shed the year round, for I despise the steam and smell of cooking and think a fresh room to eat in much healthier, and I have yet to see the first hired man that, instead of rushing from the hot kitchen before he had swallowed the last bite, did not tip his chair and look around the cool, neat dining room with an air of satisfaction. He might not have been able to tell the reason, perhaps he was not clearly conscious that a cheap fruit piece adorned the wall, a lambrequin the mantle shelf, or that it was only

cheese cloth that fell in such pretty folds as the cool breeze lifted them from the open window, but he felt it all the same. I don't believe in parlors, but I do believe in dining rooms, drawing rooms, sitting room, music room, library, or whatever name it may have, but do let the big, roomy farm kitchen go with the loom and spinning wheel, that did often occupy an honored corner in the olden time. But to supplement my ideal kitchen there must be a good out house where butchering, washing, soap making, etc., can be carried on.

Joanna Ploughman.

[Very sensible ideas; the big kitchen that compelled miles of walking has had its day.

—Ed.]

DENVER, COLO., NOV. 17, 1890.

Editor Woman's Department:

We take the *Fireman's Magazine*, and I have just finished reading the November number. I like the *Magazine* better than the *Engineer's Journal*, which we also take, as my husband is a member of the B. of L. E.

It is now 7 o'clock P. M., and my boy has gone out on the road to night, left here just thirty five minutes ago, with a clean suit of overclothes under his arm—bless his dear, brave heart. Sometimes when I see him start off my courage almost fails, and I can hardly refrain from bursting into a flood of tears, but it would do no good, only make my eyes feel dim, and he would go away with the memory of "beauty" in tears, and I am sure the poor boy would be miserable day and night, so I try, to look as happy as possible when he starts out.

A great number of ladies seem to be "putting their heads together" trying to solve the problem, viz: "How to manage a husband." It's my opinion they don't need managing. Any sensible man can manage himself, and make the little woman at home happy too, if they love one another, which they certainly ought to do. My motto is: "Treat your hubby just as you would wish to be treated if you were in his place," and if he is a level-headed man he will treat you just as he would like to be treated were he in your place. They should always show one another the same differential respect that they did before the matrimonial knot was tied. Be attentive, kind to each other, never allow yourself to grow indifferent nor savage. It is just as easy to maintain this respect for one another, as it is to allow yourself to lose it. Always use kind words. Neither need be the other's slave I am sure I don't want to make a mental of my husband, and equally as sure that he has never acted as though he wanted to make one of me, and I am sure none love better than we. I think it the easiest way to manage one another. If manage we must.

I think the article, "Moving the Household Gods and Goods," in November number must touch the heart of every woman that reads it. It is so perfectly true.

Well, as this is my first venture into your bright circle, I must not make this letter too lengthy.

With best wishes and earnest prayers for all the brave boys that shovel coal, as my bonny boy once did, I am ever the fireman's friend,

Vernia.

[Come again.—Ed.]

LOUISIANA, MO., NOV. 4, 1890.

Editor Woman's Department:

For the past few months I have been an interested reader of your *Magazine*, and I like it very much. I have never seen any communication from any of the lady friends of West End Lodge, No. 18, of which my husband is a member. When he is out on the road I always feel uneasy, but my prayer is that he may return home safe to myself and little one. I think the Woman's Department is grand, and as instructive as it is interesting. I have often thought I would write, but was too timid. If this does not find its way to the waste basket, as it may deserve, I will come again. A fireman's wife and well wisher,

Mrs. H. B. S.

LETTER FROM ASHLAND, WIS.

The Editor takes the privilege of printing the following extract from one of the numerous pleasant letters received from time to time.

In spite of all woman has done and is still doing, and there are many men unable to realize that a woman is their equal. And I really get furious when I hear and read that old story of wives weeping and meekly enduring a man's tantrums.

I fully believe that one theory we have always had lined up to us has caused an endless amount of trouble between married people. I think I can be very patient and brave but I never can smile if I do not feel like smiling, and I see nothing to admire in a woman's grin, and trust I am never guilty of making one. I would like ever so much to have a photograph of yourself and daughter. (Cannot you send me one?) It seems as if the Department grows better every month. I envy you your field of labor. It is grand to be able to influence the army of women who read your sensible articles. Some day I hope to have the pleasure of seeing you. Stranger things have happened.

Winter will soon be here and I dread its coming in the cold region. Mercury drops down almost from eight sometimes but the climate is invigorating and then we have so many sunny days. It is beautiful here in the summer. When next you take a trip around the lakes include old Superior in it and make me a visit.

Yours sincerely,

C. A. M.

ELMIRA, November 23, 1890.

Editor Woman's Department:

I do so enjoy to read the *Firemen's Magazine*. I am the daughter of a fireman and have never ventured to write for any paper or magazine before. I am not married but I may be some time. I have read in the *Magazine* about managing husbands, but I think if you marry the right man, that is, if he truly loves you and you love him the same, he will need no managing at all, and if husband and wife work together they will be very happy.

The pleasures and comforts of home depend mostly upon the woman. She should be neat clean, and busy about her housework and also about herself. She should try as much to look charming to her husband as before their marriage. She should also be saving and let him see that what he earns is taken care of. She should manage her work, as far as possible, so that when he is home she can be free to visit with him and be interested in his work and welfare. When he comes home tired, sleepy and hungry, a warm supper should be awaiting him with many other comforts. She should be very happy and thankful that he is once more safe at home and should meet him with a kiss and a smile. I intend to "practice what I preach," if I ever have the chance. I remain

A Fireman's Friend, Ida.

LARAMIE, WYO., NOV. 8, 1890.

Editor Woman's Department:

Unless something is heard from Wyoming I fear the readers of this *Magazine* will think as did an English gentleman, who recently asked Mrs. Stanton Blatch, of London, "Is not Wyoming a very insignificant state?" She told them that "It exceeded Great Britain and Ireland in size, and promised to be one of the richest states in the union." To-day the eyes of the world are upon us, for here is being tested in the truest sense, Longfellow's idea.

"As unto the bow the arrow,

So unto man is woman—

Useless each without the other."

In Wyoming no "management" is needed, because of the equality of intellect and rights.

In the last issue of the *Magazine* was a short article on the wonderful uses the Japanese made of paper.

It brings to our mind how nearly indispensable paper is in our every day work.

Nothing so quickly and nicely polishes glasses and mirrors as a piece of soft paper.

If house plants are near a window, instead of mov-

ing them every night, drop a paper bag over each plant and there will be no danger of freezing. When the kitchen stove, in spite of all care, becomes spattered with grease, rubbing with paper removes all evil.

Comforts are both warmer and lighter with a layer of paper between the cotton and covering. Those who suffer from nausea when traveling should try placing a sheet of writing paper across the chest. It is said to possess some magic power through which all sickness is avoided. We have paper under the carpet to protect it. A piece of black paper deftly adjusted mends the hole in the sunshade. Two square pieces of pasteboard, covered with satteen or silk, having between them several dozen slips of paper and hung in a desirable place, are very convenient for the "guide man" of the house when he decides to have himself "and swear and swear and swear."

A pillow for the hammock may be filled with tiny bits of writing paper (a good place to dispose of old letters). This makes a light and cool head rest for the summer. If cake be wrapped in paper before putting away, it retains its freshness much longer. Most any housewife can add to this list.

Now, according to Owen Meredith, "we can live without poetry, music or art, friends, books—anything but 'cooks.'" I will close with this recipe: Rice Soup—Boil two cups of rice till tender, add a cup of seedless raisins, which have been stewed, three pints sweet milk, thicken with two eggs and a teaspoon of cornstarch stirred into a little cold milk. Season with a spoonful of sugar, a bit of butter, salt and pepper. Carefully prepared, this is one of the best of soups. After partaking one can safely say "fate cannot harm me, I have dined to-day."

Excelsior.

[A very good letter. Call again and tell us how the "equality" works in Wyoming. Ed.]

MEMPHIS, November 28, 1890.

Editor Woman's Department:

As I am a constant reader of the *Magazine*, and having read so many letters from your charming circle, I have at last summed up courage enough to knock for admission into this same circle.

I do not remember of having ever read about or heard from Ft. Pickering Lodge, No. 206, so I am going to tell you about them. This Lodge is one of the best in the city and is composed of some of the best and truest hearted boys you could find. Lodge No. 206 gave a ball Thanksgiving eve, at the Y. M. H. A. Hall, which of course was a grand success. All of the Brotherhood men, especially Messrs. W. E. Owens, J. J. Quinn, Thos. Hoey and G. A. Robinson, tried to make the evening pass as pleasantly as possible for their friends. The stage in the hall had an engine built on it. When we first arrived at the hall, the curtain was down, but after awhile it raised and there stood Engineer Owens and Fireman Quinn oiling and cleaning their engine, and the conductor was there ready "to take the train out." It is needless to say that this was a beautiful sight.

I will close now, hoping to hear from you soon. I remain,

Yours truly, Ethel Mau,

A Fireman's Sister and a Fireman's Girl.

EAST CLEVELAND (late COLLAMER), OHIO, }
November 3, 1890. }

Editor Woman's Department:

In looking over the *Firemen's Magazine*, I have never seen a word from any of the "old or young" concerning the Nickel Plate Lodge, No. 37. I would be very much pleased to see a letter from Kittie Burrow, as she has a brother that fires the 61.

I was once "stuck" on engine 37, but as there is no familiar face on it any more, it does not attract my attention.

I am the sister-in-law of two firemen on the "Lake Shore," therefore take great interest in everything concerning the Lodges etc.

I like to read your *Magazines*, as there is some very nice reading in them.

Wishing success to the *Magazine* and good luck to the firemen, I am yours truly, Nettie Hatley.

GEORGETOWN, TEXAS, NOV. 4, 1890.

Editor Woman's Department:

I ask admittance again. Through the kindness of some good friend I receive the *Magazine* regularly, and honestly, I would rather read it than any other that I have read. I have been entertained, benefited, cheered and comforted by reading the many excellent articles in this Department. It is so nice for the ladies to exchange ideas, but as I have no ideas to exchange, I will be content to take all good advice, but I won't promise you any benefit from my letters. "M. E. J., a fireman's sister," of Clifton, Va., wrote a splendid letter. I would like to correspond with her, especially as she is from Virginia, for my father often speaks of that beautiful state.

My feeble pen can add nothing to what has been said of my native state, Texas. I am proud that I am a Texan, and a country girl, too! I love the country, not only for its pure, fresh air and healthfulness, but also because it produces our grand and noble men, while the women are the standard of purity and strength. It seems that I would tire of the busy, bustling city and long for the sweet air of the country. Texas is a state for all things. We have all kinds of weather, and the soil and climate are adapted to most all kinds of vegetation. All nations under the sun have representatives here, from the high and noble Englishman down to the wandering Arab. Emigration is ruining America, and I trust the day is not far distant when it will be stopped.

I learn that the Alamo Lodge, at Taylor, Tex., will give their semi-annual ball, November 25. Perhaps I will go. I do not dance, but as I have never been to a ball, I may go. I belong to the church—do any of my readers think it will be wrong to go?

We do not play cards in our family. I do not know one card from another. I have six living brothers, and I trust they will all reach a mature age, and know nothing of drinking or playing cards.

Georgetown has no lodge. This town is at the terminus of the I. & G. N. R. R., ten miles north of the main line. We may have a new road through here soon. Taylor is the nearest railroad town, and, indeed, it is a busy, bustling city.

This is election day and, of course, Hogg will be our next governor. He is a friend to the laboring class, but an enemy to the railroad monopolies, trusts, etc. Yours, "Dad a Girl."

[As "M. E. J." did not give her correct name and "Dad's Girl" omitted hers, it is not clear how a correspondence can be arranged, but perhaps both will write again over their correct signatures.—Ed.]

ELDON, IOWA, December 1, 1890.

Editor Woman's Department:

I am an earnest reader of the *Magazine*, especially what the women have to say about managing husbands. I think it is a grand insult to our husbands. Not that I have any fault to find with the letters, they all seem to be managing them very well, but have any of you ever read anything about managing wives? No, a woman never could do anything that her husband would put in print anything about managing them. No, sir, they would hide our faults, and they would die before they would tell them to a neighbor. But let your husband be a little cross, every woman in town knows it. Dear sisters, let us pick the mote out of our own eyes. If our husbands do come home a little cross, remember they have been out all night, while we have been in our warm beds; hungry while we have been enjoying a warm breakfast. But finding fault with husbands is something I despise, and if mine should go away and never come back, my mouth should be sealed to his faults.

In regard to card playing, I beg leave to disagree with sister H. C. Perkins. We must draw a line between right and wrong. This grand and glorious government is founded on the Bible. So should our homes be. Card playing belongs to the gambler, drinking to the drunkard, swearing is disobeying God. The three belong to one class of men.

I would like to hear your boys

say they learned to play cards at home? Who wants to hear your boys say they learned to drink at home? Who wants to hear that your boy's last words were an oath? Mothers are responsible for their early training, so keep all appearance of evil out of your homes. One sister says if husband and children are fully satisfied at home, they won't go away from home for amusement. In the first place children can't be satisfied. Take them when babies, you can give them everything to play with all the way from a top to the clock, and they will want something else. I think if a woman will be more contented with what she has, it will keep her family at home. I think a woman is the cause of many a man's ruin. She thinks if her husband draws \$75 a month she can have a plush coat, silk dress and a new hat every three months. Well, it looks like lots of money, but when everything is settled there is not much left. If you are wanting everything new yourself, what can you expect of your girls? Teach your daughters the value of a dollar; have them planning how to earn it, for how can anyone that never earned a dollar know how to spend it? Then if they are so lucky as to get one of those unruly husbands they will know how to take care of his hard earned money.

I will close with best wishes for the Brotherhood
Fannie.

[The Woman's Department must be expected to represent all shades of opinion and we trust no one will be offended at criticism.—Ed.]

MEDICINE HAT, N. W. T., CANADA, NOV. 5, 1890.

Editor Woman's Department:

It is with pleasure I take up my pen to write these few lines for the *Firemen's Magazine*. It is a splendid book, and I like it more every time I read it. As I am writing this, I hear the familiar whistle of engine No. 146, coming down the hill. I guess the fireman and engineer are glad to reach the Hat again, to have a little rest. I should think the poor firemen have a hard time of it shovelling the "black diamonds." We have some fine engines here; they have been repairing some of them lately. Engine No. 155 has just come out of the shops and she looks very nice now. They all look nice and clean when they go out, and the firemen well may be proud of them; I know one, in particular, who is, when his engine is all cleaned up. My brother, as I have said before, is a fireman, but I have not the pleasure of seeing his engine, as he does not run out of here. We have been having beautiful weather here up till now, and it is snowing to night. There is a fine reading-room being erected in connection with the English Church here. As the Woman's Department is not so crowded now, I hope this will find a space in it. I will now close, with God bless the noble boys of the B. of L. F.

I remain, a fireman's sister,
Helen Beatrice Miller.

WINFIELD, KAN., NOV. 16, 1890.

Editor Woman's Department:

I am still an interested reader of the *Magazine* and read the letter in the last *Magazine* signed "Bell" with pleasure. I think her idea of exchanging patterns for fancy work and receipts a good one, and as I have a good receipt for washing fluid I will send it to you. One pound of Vebblitt's potash, in five quarts of boiling water. When nearly cold add two ounces salt of tartar and two ounces of ammonia. Directions for using: Soak the clothes over night, and to a boiler of clothes add a cupful of the fluid and a half a bar of soap cut up in the water. Put the clothes on in cold water and let them come to a boil. Wash through the suds they are boiled in and rinse through two waters and they are ready to hang out. When putting more clothes on to boil always cool the water and add more soap and fluid. The ladies will find this will save them a great deal of labor in washing, and I would judge it would be a useful article in washing their husband's overclothes.

Wishing the B. of L. F. success, I remain
A Fireman's Sister, Little

THE MAGAZINE.

Rejected Manuscripts are not returned unless accompanied with required postage.

Subscriptions must begin with the January, April, July or October number, and expire with the year.

Changes of Addresses of subscribers should be reported to us promptly to insure the safe delivery of the Magazine.

Contributors are required in all cases to give their real names, not necessarily for publication, but as a guarantee of good faith.

Subscribers failing to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

TO THE BROTHERHOOD.

More than a decade of years has passed since I became a member of the Grand Lodge of the Brotherhood of Locomotive Firemen, my induction into the office of Grand Secretary and Treasurer having occurred July 16, 1880, and at the same date I became the Editor and Manager of the *Locomotive Firemen's Magazine*. These honorable and responsible positions were conferred upon me by Grand Master F. W. Arnold. At Chicago, in September, 1880, I was elected for one year to fill an unexpired term. At Boston in 1881, I was elected Grand Secretary and Treasurer and Editor and Manager of the *Magazine* for a term of three years. At Toronto, in 1884, I was elected to the same offices for a term of two years. At Minneapolis, in 1886, I was again elected to the offices named for a term of two years. At Atlanta, in 1888, I was again elected for a term of two years, and at San Francisco, in September, 1890, I was again elected Grand Secretary and Treasurer of the Brotherhood of Locomotive Firemen, and Editor and Manager of the *Locomotive Firemen's Magazine*; in all, six times I have been, without an opposing candidate, or the loss of a single vote, the recipient of the unwavering confidence of the Brotherhood.

Such exhibitions of unflagging trust in one who had no claims upon the Brotherhood, whose duties as a member of the Order had been confined to the narrow limits of one Lodge, have from the first burdened me with a sense of gratitude, which defies all words at my command to express.

How well I have met the obligations which such faith in my rectitude imposed, is a matter for others to debate. But this may be said, that when I entered the Grand Lodge, the Order was bankrupt and had about 2,000 members. It is now rich in financial resources and can boast of more than 20,000 members. When I entered the Grand Lodge the *Magazine* had 3,500 subscribers. Since then its monthly editions have expanded to 33,000 copies.

In saying this, I am not so foolish as to intimate, that it has been because of my connection with the Order—and the statement is made simply to show the splendid growth of the Order—and to emphasize the fact, that with this growth, the duties of the Grand Secretary and Treasurer, and the duties of the Editor and Manager of the *Magazine*, have even more than proportionately increased, grown to a *sum total* of responsibility, of mental and physical wear and tear, which leaves little, indeed, no time at all for recreation or recuperation. It is one ceaseless demand upon mental and physical energies, which, if discarded one day, only doubles the burden for the next, and this sapping of the vital forces, like Tennyson's brook—"goes on forever."

Having reached the accepted "half way station" in the years allotted to man—"three score and ten"—and other and less exacting business pursuits offering, I have come to the unalterable conclusion, during my present official term to surrender all the trusts committed to my hands, to the Brotherhood, and retire from all official positions in the Order.

It must not be understood that this conclusion has been arrived at without a mental pang of regret. Ten years of uninterrupted fellowship with thousands of brothers beloved, cannot be broken off without producing in susceptible minds feelings of sadness, and in a special sense is this true when, as in my case, these associations have been fruitful of personal satisfactions of boundless proportions.

Between myself and the great Brotherhood of Locomotive Firemen not so much as one incident has occurred to dampen my ardor for its success; to abate my devotion to its principles, or to weaken my fraternal friendship and good will for my brothers of the scoop and throttle, and whatever fate or fortune may have in store for me, the members of the Brotherhood, one and all, will have a warm place in my heart until its pulsations cease.

As I have said, during my present term I shall resign the positions I now hold, nor will I, under any conceivable circumstances, be a candidate for re-election for any other office in the gift of the Order.

Having determined to go into other business, I have deemed it prudent to make this early announcement of my purpose for a variety of reasons, the more important of which is that it enables the Brotherhood without unnecessary haste, to select from the great number of competent members the one most likely to meet the onerous requirements of the positions.

I have no desire to magnify the duties of the offices which I shall resign, nor will I underestimate their importance. Closely identified with the duties they imposed for

more than ten consecutive years, my conviction is that the Brotherhood will esteem it a favor to have ample time for deliberation.

As through the *Magazine*, or otherwise, opportunities will offer to refer to this subject again if required, I close by subscribing myself, in all that fraternity means, the Brotherhood's friend and well wisher,

Eugene V. Debs.

BIENNIAL CONVENTIONS.

At the late convention of the B. of R. T., held at Los Angeles, Cal., it was voted to submit to the membership of the Order, a proposition, substituting biennial for annual conventions.

The movement we regard as specially wise and prudent, from a number of considerations.

At the Minneapolis convention, held in 1886, the B. of L. F. decided to hold biennial, instead of annual conventions. It was an experiment, but there were cogent reasons for making the change, and though four years have passed since the innovation was decided upon, there has never been an objection to the change, on the contrary, the departure from the old order of things has grown steadily in favor with the Order, and any movement looking towards annual conventions would be regarded as simply preposterous.

The Brotherhood of Locomotive Firemen saw very distinctly that financially, annual conventions were a great burden, each costing the membership not less than \$40,000, and when the matter was subjected to investigation, it became transparently clear, that some method should be devised to save a portion of this large outlay.

Necessarily the investigation prompted the inquiry—are annual conventions expedient? are they required for the good of the Order? and if so, what are the reasons? It is not to be presumed that the old order of things was given up without a struggle, but the logic was on the side of biennial conventions, and the new departure was adopted.

As we have said, an annual convention costs not less than \$40,000. Since 1886, the B. of L. F. has had two conventions instead of four, and has saved thereby \$80,000, and, since neither Locomotive Firemen nor Railroad Trainmen find dollars growing on bushes, the saving of \$80,000 in four years, \$20,000 a year, is an argument that working-men can afford to heed.

But the question naturally and legitimately arises, Has any interest of the B. of L. F. suffered because of the change? We know of none, not one. On the contrary, we believe that it is the universal conclusion that every interest has been promoted.

It may be said with prudence, that an organization, in its initial years, should hold its conventions once a year. It is then or-

ganizing, feeling its way. The members, to use a phrase, "are getting the hang of the school house," getting acquainted with each other, mapping out policies, methods, laws, etc., but this once accomplished, the necessity for annual conventions ceases.

We commend the movement of the B. of R. T., because the B. of L. F. has found that biennial conventions, in the full-st measure, answer every requirement and are in fact a decided improvement over annual conventions.

And here it may be said that nearly all the States in the American Union hold biennial sessions. States have found that with annual sessions, there was a lack of stability in the laws; that what one Legislature enacted, a succeeding Legislature could amend or repeal, and that as a result, little, too little, time was afforded, to test either the efficiency or deficiency of a statute, and as a consequence the people were always in a state of unrest and uncertainty, since it often occurred that by the time a law began to be understood, it was repealed, or modified.

What is true of States, is equally true of organizations. The principle underlying the question is in both cases the same—as the case now stands with the B. of L. F., the laws stand for two years. The Lodges become familiar with them, the membership have ample time to test and to discuss them, to note their workings and decide upon them understandingly.

We imagine, if the B. of R. T. decides to hold biennial conventions, the Order will never go back to annual conventions nor for a moment tolerate such a proposition. So far as the B. of L. F. is concerned, it votes for biennial conventions unanimously.

HOTEL DEL MONTE.

At Monterey, Cal., a tourists' home, called the "Hotel del Monte," has been built for the accommodation of guests. Monterey is the most famous seaside resort in California, or, for that matter, on the Pacific Coast. The Hotel del Monte is the finest hostelry in the Pacific States, outside of San Francisco. It is built in modern Gothic style, and the grounds which surround it, 106 acres, are enclosed and are beautifully wooded. The hotel accommodates 400 guests, and is in all regards equal to the best in any land.

We are indebted to Mr. A. N. Towne, General Manager of the Southern Pacific Railroad, for a magnificent picture of the Hotel del Monte, which includes the matchless scenery that surrounds the building. The Southern Pacific enables tourists to reach Monterey, where the climate and the sea-bathing are so health-giving that thousands go there to renew their youth. The picture is fully six feet long, and is a gem which we prize highly.

THE BROTHERHOOD.

Unprecedented Increase of Membership.

The purpose of this article is to give the membership of the Order, a clear conception of its recent unexampled growth, a matter in which every member of the Order takes the liveliest interest. In making this showing, let it be distinctly understood that we deal in actual facts, which, were it required, could be verified by affidavits—in a word the figures do not lie—and they relate to active members in good standing, and do not include honorary members. The following shows the membership on the dates named and the gain:

May 1, 1890, membership	17,842	
Aug. 1, " "	18,637	
Gains		815
Aug. 1, 1890, membership	18,637	
Nov. 1, " "	19,770	
Gains		1,113
Total gains in six months		1,928
A monthly average of		321.3

This gain is over and above all deaths, withdrawals and expulsions, it is *absolutely* a *net gain*. If this rate of gain is maintained for twenty-four months, up to August 1st, 1892—and there is no good reason why it may not be maintained—it will show an increase of 7,880, in which case the total *actual* membership at that date would be 35,557.

Now then it must be apparent to the most superficial thinker, that the Brotherhood of Locomotive Firemen has so legislated, has adopted such laws and policies as to meet in the largest degree practicable, the requirements of Locomotive Firemen.

The Brotherhood lays no claim to infallibility, it does not assume perfection, it indulges in no vain boasting, it simply solves such problems as exigencies force upon it, as it has ability, but it has a right to boast, as the figures and facts warrant, that it has been so fortunate in managing its affairs as to win the approval and confidence of Locomotive Firemen.

The Brotherhood of Locomotive Firemen has the best insurance scheme known to any labor organization, and its laws relating to the payment of dues to meet death and disability emergencies cannot, we verily believe, be improved. And say what we may, when questions relating to finances, the *paying in* and the *paying out*, are satisfactorily solved, the Order, which is so fortunate, has laid the foundation of permanency, that only *high treason* to obligations can disturb. All other matters, however important, are comparatively unimportant.

The figures we have submitted demonstrate not only that our Brotherhood is on the high road of prosperity, but that its membership has an abiding confidence in the principles it advocates, and that locomotive firemen who are still out are flock-

ing to its standard and becoming members.

Such is the outlook, January 1, 1891, and it is a cheering prospect. The *Magazine* congratulates the Brotherhood; it felicitates each member in all our Lodges. We are pulling together; in every good word and work, we are a unit.

We appreciate federation, and with a loyalty that knows no variableness nor shadow of turning, we stand by, first, last and all the time, in shine and storm, our brothers of the Federated Orders.

Nor is this all. We have words of cheer for every organization of workmen, without regard to name, and as we can, we will do them good. Such is our order on January 1, 1891. As we write, its skies are bright; but let it be remembered that "Eternal vigilance is the price of Liberty!"

DRAMATIC.

Chauncey Mephistopheles Depew, is always as spectacular as a trick mule of a circus. He loves to tell of wonders of which he is the central figure. Amidst the awfully sublime wonders of the Alps or the Andes, should Chauncey Mephistopheles take them in when taking an "outing" he would expect beholders to notice him more particularly than Chimborazo or Mount Blanc. Were he in Yellowstone Park, he would want to be known as the greatest geyser, and standing beside Pike's Peak, he would like to have it rated as a gopher hill compared with his own towering grandeur. Chauncey rates himself as A. 1., and don't you forget it.

In telling of his popularity as a politician, he is a Munchausen of superior ability. As an instance, he related the following scene which he said occurred at Chicago:

Chauncey Mephistopheles was a candidate for the presidential nomination, and got most beautifully knocked out. The news of his defeat, Mephistopheles would have the world believe, knocked railroad employes silly.

Mephistopheles, lays the scene in his room in a Chicago hotel. He is alone with his great thoughts; his great schemes had gone where the woodbine twineth and the whangdoodle mourneth. His ambitions, like a car load of shooting crackers in a collision, had exploded. The mighty measures he was going to recommend to Congress in his message, had taken to their heels and gone under like prairie dogs. He was alone. He was walking up and down, hands clasped behind him, and head bowed. At this supreme juncture, a locomotive fireman, just from the cab, with his working clothes on, with all the grime of his work on hands and face, unannounced and uninvited, and with dinner bucket in hand rushed in upon Chauncey Mephistopheles and putting his arms around him, sobs like a water plug because Chauncey Mephistopheles Depew had

been knocked out. This locomotive fireman hugged and bewailed—bewailed and embraced. He deplored the ruin that would come upon the country because Mephistopheles had lost the nomination.

Such balderdash, Mephistopheles tells of himself, and expects railroad employes to believe it. As a matter of course, such trash, such drivel and drivel could only be expected by a man who conjures up a "shoemaker" to precipitate a strike on the New York Central, and who makes an imaginary committee of workmen say to him "we propose to break up the Brotherhood of Locomotive Engineers."

It will be observed that Mephistopheles never gives names or locations in reciting his wonderful experiences. How stupid he must imagine workmen to be to try to palm off such flapdoodle upon them, in order that he may more successfully administer his taffy. According to this same trafficker in fairy tales, one is required to "spend two nights on a sleeping car" to travel from New York to Pittsburg.

MAGAZINE PRIZES FOR 1890.

Late in 1889, it was decided to offer Magazine Agents, two valuable prizes as an incentive to obtain *paid up* subscriptions, during the year 1890, the lists to be perfected on the first day of December, 1890, when the awards would be made.

This has been done, and the piano and the gold watch have been forwarded to the two fortunate agents.

These two efficient agents are Bro. Charles W. Maier, member of Great Western Lodge, No. 24, Parsons, Kansas, and Bro. S. W. Seelinger, member of Mount Ouray Lodge, No. 140, Salida, Colorado.

Neither of these cities is large, but the Magazine Agents named are *large*—that is to say, they are equal to the tasks, they undertake to accomplish. They are fruitful in resources, zealous and tireless. They went in to win, and succeeded. The following table shows the splendid work they performed:

NAME OF AGENT	No. of Lodge.	Prizes.	SUB- SCRIBERS.			Total, equal to yearly subscribers.	Amount (Cash paid.
			Yearly.	6 months.	3 months.		
Chas. W. Maier.	24	Piano	97 25	399 51	328		\$328 00
S. W. Seelinger.	140	Gold watch	130 19	...	144 1/4		124 00

It will be observed that while Bro. Maier's subscriptions are equal to 328 yearly subscribers he obtained for the Magazine 572

subscribers, and Bro. Seelinger 149 subscribers—the total for the two being 721 subscribers.

There are 430 Lodges of our Brotherhood. Now, suppose the Magazine Agents had worked as zealously to extend the circulation of the *Magazine* as did Bro. Maier, then in that case, the subscription would have amounted to 235,900; or, if they had matched Bro. Seelinger's zeal, the subscriptions would have gone up to 64,070. But, suppose each had obtained fifty subscribers, which we assume could have been done, or that that average could easily have been secured, then the subscriptions for the year would have been 21 500.

There were two other brothers, Magazine Agents, who did good work for the *Magazine* and are deserving of honorable mention. We refer to Bro. Charles Cowdrick, of Just in Time Lodge, No. 149, of New York, and Bro. G. W. Adams, of Robert Andrews Lodge, No. 165, of Andrews, Ind. Tabulated, their record is as follows:

NAME OF AGENT.	No. of Lodge.	SUBSCRIBERS.			Total, equal to Yearly Subscribers	Amount Paid.
		Yearly.	6 Months.	3 Months.		
Chas. Cowdrick	149	169 1	5	...	174 3/4	\$33 00
G. W. Adams	165	88	2 102	...	140 1/2	114 75

It will be observed that had Bro. Cowdrick forwarded the subscription price of the *Magazine* for which he obtained subscribers. \$174.75, he would have been entitled to the GOLD WATCH, and it will be noticed further that Bro. Adams fell below Bro. Seelinger only \$9.25, and now comes the sum total of subscribers obtained by those four active Magazine Agents. The record is well worth preserving.

Bro. Maier	572
Bro. Seelinger	149
Bro. Cowdrick	175
Bro. Adams	192

Total 1,088

We congratulate these brothers most heartily. They have done a noble work, which we appreciate, a noble work for the Order in extending the circulation of its official organ, than which, and we say it with becoming modesty, there is none more worthy of support.

The Piano which has been forwarded to Bro. Maier, at Parsons, Kansas, is a superb. Upright instrument, from the great manufacturing house of Kranich & Bach, New York, and was purchased through the

agency of L. Küssner, proprietor of the "Palace of Music," Terre Haute, Ind., and we hope that the home of Bro. Maier will for many years, be made joyous by its superb tones.

The Gold Watch, forwarded to Bro. Seenger, will mark the fleeting hours as they pass, whether out on a run, attending the lodge meeting, or "tripping the light fantastic" at an annual ball.

From the foregoing, a splendid lesson may be learned. Our Agents can, if they will, roll up for the present volume, which begins with this number, a splendid subscription list. Will you do it, brothers?

The *Magazine* is worthy of your best efforts. Begin the work early, and keep at it. Your labors will cheer the Editor in the exhaustive drudgery of his work, and nerve up his energies to make the *MAGAZINE* still more worthy of the high encomiums it receives—not only from Brotherhood Firemen but from all who peruse its pages.

RAILWAY OFFICE EMPLOYEES.

The first annual session of the National Brotherhood of Railway Office Employés was held at Evansville, Ind., October 26, 1890, at which time a constitution, a code of laws and special rules were adopted, to take effect November 15, 1890, so that now the new order is under full headway, having the following grand officers:

B. M. Hopkins, Grand Chief Director, Fort Branch, Ind.

J. W. Luther, Assistant Grand Director, Olney, Ill.

W. W. Casto, Grand Chief Secretary and Treasurer, Washington, Ind.

W. S. Sears, Grand Chief Organizer, Princeton, Ind.

N. M. Drennon, Grand Senior Director, New Pittsburg, Ind.

W. W. Chance, Grand Junior Director, Terre Haute, Ind.

E. B. Gunckel, Grand Inside Watchman, Petersburg, Ind.

A. W. Grizzle, Grand Outside Watchman, Evansville, Ind.

A. G. Matthews, Grand Chaplain, Newton, Ill.

This new order starts out with the following declaration of the purposes in view:

Recognizing the fact that unorganized labor is not appreciated at its true value, and that some means must be taken to effect said recognition, we now offer to the railroad station agents, train dispatchers, telegraph operators and clerks the National Brotherhood of Railway Office Employés, believing that it will supply a long felt want.

Our purpose is to raise the standard of services in our departments, protect our rights, defend our members, assist a brother in distress, to better our morals, and to advance our interests both morally and financially—effecting, if possible, a kindlier feeling between employer and employé.

The latest compilation at hand of the

railroad employés of the country, gives totals as follows:

Station agents	58,037
Other station men	30,958
Telegraph operators and dispatchers	16,937
General office clerks	24,171
Total	130,098

It will be observed that the National Brotherhood of Railway Office Employés contemplates organizing this vast army of men under its banners. The idea is grand. They ought to be organized. Their interests demand it and evidently the new brotherhood has an important mission. That it has come to stay we do not doubt. There is a place for it and a field for it, and this *Magazine* wishes it the largest possible measure of success.

Any desired information can be had by addressing the Grand Chief Director, Mr. B. M. Hopkins, at Fort Branch, Ind. He is a gentleman whose views relating to the importance of organization are fully abreast of the times, and he is determined to give the new brotherhood the benefit of his time and his talents.

MACHINE WOODWORKERS.

We have on our table, No. 1, Vol. I, of the *Machine Woodworker*, the "official journal of the Machine Woodworkers' International Union of America," published at Denver, Colo., by Thomas J. Kidd. In its "introductory" the *Machine Woodworker* says:

Agitation and education are absolutely necessary for the organization of a class of producers who, by their apathy and neglect, have allowed themselves to glide to the lowest possible position of all the mechanical callings, and whose future, consequently, appears not of the brightest under existing conditions. It therefore behooves us to make strenuous efforts to create among machine woodworkers a greater interest in the welfare of our craft, and this can be done more effectually through the medium of a trade paper than by any other means we know of.

The declaration that "agitation and education are absolutely essential" to arouse machine woodworkers, applies with equal force to every other class of workmen, and whenever, or wherever man is found, opposing "agitation" in labor affairs, no matter who he is, he is in league with the oppressors of workmen—in league with corporations and trusts and the millionaire fraternity, all of which devise schemes to grow rich from the earnings of labor unrighteously withheld.

This *Magazine*, hails with special satisfaction the advent of every new labor paper. May they continue to increase in number and influence, until the labor literature of the country shall be equal, aye, superior to that of the subsidized press which ceaselessly magnifies labor's mistakes and dwarfs its rights and interests.

This *Magazine* wishes the *Machine Woodworker* all anticipated success, from No. 1, to the end of a hundred volumes.

THE GREAT DEAL.

Mr. Charles Francis Adams is no longer President of the Union Pacific, Mr. Sidney Dillon now having possession of the gavel and the President's private palace car. Mr. Jay Gould would have it that way. Of late quite as much has been said of Jay Gould as of Sitting Bull. Mr. Gould instituted, some time ago, in Wall street, a ghost dance in all regards wilder, more weird and frenzied than anything of the kind the red man has inaugurated. The bulls and the bears, in many instances, danced themselves to death. Some called it a "shearing frolic," in which Mr. Gould played shearer, greatly to his satisfaction. It went so far that Mr. Rufus Hatch, "Uncle Rufus," declared in Boston, where he was interviewed, that Jay Gould was the "Messiah of Wall street."

Mr. Hatch is a great admirer of Mr. Gould and says that such epithets as "pirate" and "Wizard," applied to Mr. Gould, do him great wrong. In the interview reported from Boston, Mr. Hatch is reported as saying:

Everybody on the street looks on Jay Gould today as a savior. He came to the rescue of the market when it was in a pretty bad condition, and set things right. I get it from the best authority that Jay Gould had \$19,000,000 locked up outside of the banks. When you come to deduct \$19,000,000 from the bank account of New York you make a pretty big hole. Money was tight—tighter than a drum. There were three or four big houses—it isn't necessary to mention any names—that had lots of railroad stock, among which was a good deal of Union Pacific. These houses had to have money. They had to trade, treat or travel, as the phrase goes. One house did actually fail. These people had the kind of goods that Mr. Gould wanted. He bought it in large quantities. He bought Union Pacific stock in job lots. By a combination of himself, Russell Sage, C. P. Huntington, Rockefeller, of the Standard Oil Company, and others, 400,000 shares of railroad stock were bought up. Mr. Gould has the Union Pacific. Everybody on the street seems to know that.

Mr. Gould's ambition, continued Mr. Hatch, is to be the greatest railway man of the world. That's what he lives and works and thinks for, and he is now the greatest railway man in this country. You see Mr. Gould has been working this thing up for two or three years. One of his plans is to do as Commodore Vanderbilt did, build up an immense fortune and power and leave it to his son. Mr. Gould will rest in peace in his grave if he knows that his son George is carrying on the work that he built up. George Gould will be what Bill Vanderbilt was when his father died. The combination now between Gould and Huntington and the other parties to the arrangement is pretty perfect. Mr. Gould has either already secured or he will secure the control of Rock Island. He hasn't anything to fear from the Vanderbilts, because they never cut rates, and they take care of their property. The same can be said of the Burlington and Quincy, and Huntington, who is with Gould, represents the control of the Southern and Central systems.

Such talk is mighty interesting reading to railroad men, but not as important as when Mr. Gould concludes to talk for publication himself, and this he has done lately with more than ordinary freedom.

What we desire in making reference to Mr. Gould, is to show our readers that he is strongly in favor of the federation of rail-

road systems for the purpose of advancing and maintaining rates. On November 26th Mr. Gould was interviewed in Boston, and among other declarations of his at the time, the following was telegraphed over the country as a part of the interview:

"It has been assumed, Mr. Gould, that your taking possession of the Union Pacific has for its object a coalition of the interests of the roads west of the Missouri?"

"That is true: I am a firm believer in concentration, and all my investments in the West latterly have had that object in view. The rates in the West have been exceedingly low. You would be surprised to see the depth to which figures have fallen. This has all resulted from unnecessary competition. By concentrating the roads under one general management, not only may a large saving be made in operating and executive expenses, but the dangers occurring from rate-cutting may be entirely done away with."

The foregoing foreshadows coming events. The point now made is to advance rates by an alliance of a large number of roads. We do not say the next move will be to make money by a reduction of wages, but such a contingency would not be remarkable, and the federation of the roads, if such a course should be adopted, would be relied on to achieve success.

If federation is good for the railroads, and Mr. Gould is clearly of the opinion that it is a desideratum, it must be good for the organizations of employes, and Mr. Gould indefinitely strengthens the arguments that have been advanced from time to time in favor of federation as it exists under the laws of the Supreme Council.

It is well for railroad workmen to note with care what is going on in the councils of railroad magnates. Money talks, and when it does talk, it is well enough to take notes.

"OLD FAITHFUL."

We are under many obligations to Mr. Wm. S. Mellen, general manager of the Northern Pacific, for a superb picture of "Old Faithful," one of the renowned geysers of Yellowstone Park. Those who have read descriptions of the unparalleled grandeur and beauty of the scenery of the park, have not failed to note the fact that "Old Faithful" is not eccentric in its movements, but is always doing its best to please tourists who visit this particular part of our national wonderland. And now that the Northern Pacific enables tourists to see "Old Faithful" throw a column of water 150 feet high, surrounded by the "Beehive," the "Giant-ess," the "Grand," and spouters of less merit, all doing duty for the gratification of beholders, the conclusion is that visitors will annually increase in numbers.

The manner of saying or doing anything goes a great way towards the value of the thing itself.

THE AMERICAN FEDERATION OF LABOR.

The Tenth Annual Convention of the Order Held in the City of Detroit, Commencing December 8th, 1890—The Delegates Welcomed to the City by Acting Mayor Hon. S. A. Gregg—President Gompers' Address.

REPORTS AND ACTION OF THE CONVENTION ON SOCIAL-ETHIC MATTERS, ETC., ETC., ETC.

The tenth annual Convention of the American Federation of Labor, held in the city of Detroit, Mich., was a most notable event in the current history of labor organizations in the United States.

However ancient may be the history of trades unions, guilds, or whatever name was adopted, the movement resulting in the American Federation of Labor is of recent date, and the rapid strides made to greatness and influence is one of the marvels of the times. A writer in the *Chicago Times*, who has given the matter special attention, says:

The dawn appeared November 15, 1881, when 107 delegates, representing nearly 125,000 workers, met in convention in Pittsburgh, Pa., and established the "Federation of Organized Trade and Labor Unions of the United States and Canada." At the second convention, held in Cleveland, O., November 21, 1882, the Federation issued a document urging, not political, but industrial unity as the prime object to be aimed at. "Not," was added in the document, "by prescribing a stereotyped, uniform plan of organization for all, regardless of their experience or necessities, nor by antagonizing or aiming to destroy existing organizations, but by preserving all that is integral in them, and widening their scope so that each, without submerging its individuality, may act with the others in all that concerns them."

It was at that convention that the Federation declared among other things: "We want an enactment by the workmen themselves that on a given day eight hours shall constitute a day's work. Let us, as union men, work in harmony for those issues we comprehend and upon which we are fully agreed, and ignore all questions likely to divide us."

In 1885 measures were taken to prevent the abuse of the boycott. The next year a more perfect plan of organization was decided on, and the title of the Order was changed to its present one—the American Federation of Labor. At that convention twenty-five affiliated national organizations were represented, with an aggregate membership of 319,469 workmen. One year later the membership was nearly doubled. The Federation consisted then, as it does now, of the affiliation of the international, national, and local trade unions, federal labor unions, state federations, central labor unions, and trades assemblies of cities and towns. The organizations are entitled to representation in conventions on a basis of one delegate for every 4,000 members; consequently the attendance of delegates at conventions is not so large as in other orders.

The readers of the *Magazine* will doubtless be interested in knowing as much as possible of the man who stands at the head of the American Federation of Labor, an organization which now represents close on to one million of workmen.

Referring again to the *Times* we find the following:

Samuel Gompers, who was born in London, England, in 1850, was compelled, through the poverty of his parents, to leave school and work in a factory before he was 11 years old. He continued his studies in a night school, however, and when he left stood highest in his class. He left the factory to work at

the shoe trade, but was soon afterward apprenticed to a cigar-maker. When, in 1863, he came to this country a boy of 13, he was already a skilled journeyman, and, as there were no age restrictions then, he joined a cigar-makers' union which had just been organized, and he has been ever since a union workman. He declined the presidency of the Cigar-Makers' International Union in 1877, and has since declined to run for political office. He was the first vice-president of the Federation, in 1881, and at the second convention was elected its president, a position he has held ever since. During the first six years he served without salary or any other emolument, although the period included the time of the great eight-hour movement of 1886. For years he has been the champion of the trade-unions, and, as editor of the *Picket*, fought the Knights of Labor almost unaided at a time when that order threatened to destroy every trade union in the land. His published articles first aroused the trade-unions to the dangers that threatened them, and undoubtedly led to the formation of the present Federation. He also edited the Federation official journal, the *Union Advocate*, and has written many articles for various publications on labor topics.

He is a clear, forcible writer, who never finds himself at a loss to make his meaning apparent. As a public speaker he is in much demand. His cool conservatism has had a large influence in keeping the Federation out of all considered strikes as well as out of political and other pitfalls. When the time seems ripe to act, however, he is bold and unwavering and shows himself a natural leader of men.

A busy life, with every waking hour of the day fully occupied, has not apparently worn off the edges of a naturally pleasant and cheerful disposition, and if you can obtain a five or ten minutes interview with him—as you certainly can if you wait your turn and have something to say—you will find Samuel Gompers a man of quiet, courteous manners, who grasps your suggestions with quick intelligence, says what the occasion may call for with neither hesitation nor unnecessary vehemence, and gives you the impression that, despite other anxious callers with claims upon his ear, you are, for the time at least, commanding his undivided attention. He carries his courteous habits into the most heated public controversies. "It seems to me," he said the other day when he found not only his position in a certain matter, but himself personally, bitterly assailed, "that men in the labor movement can honestly differ with each other without finding it necessary to indulge in abuse," and in that spirit he conducts even his fiercest combats.

Such is a brief outline of Mr. Samuel Gompers, who is directing the destinies of a great and powerful organization, upon which are centered the hopes of a vast number of toilers of the country.

The convention, in beginning its labors, was welcomed to Detroit by Hon. S. A. Gregg, Acting Mayor of the city, and later on by Gov. Luce, of Michigan, whose address is reported in the *Free Press* as follows:

The Governor was introduced to the president, who requested the discontinuance of the debate and presented Gov. Luce to the convention. The Governor expressed his pleasure at greeting the assembly and his regret at the mistake by which he had arrived so late. He said that he was heartily in accord with the labor movement; in fact, that he was a member of one of the earliest labor organizations himself. He had labored all his life up to his ascendancy to the gubernatorial seat four years ago. He went on to review his labors; how he had gone into the woods a young man, and penetrating to the wilds had cleared his own farm and built a small cabin.

"Then," he said, "as my next step I married the finest girl in the world, and we together built and furnished our home."

He could get no further, for the cheers that rang through the room.

It was several moments before the applause died down so that he could resume. When he could, he

said, with a pleased expression, "Every word I said is true and I meant it." This brought another storm of applause. The Governor concluded by welcoming them heartily and expressing again his sympathy.

It will seem that the Governor struck the right chord, and received an ovation of applause.

Following the address of Governor Luce, Mr. Gompers delivered his annual address, as follows:

Delegates to the Tenth Annual Convention of the American Federation of Labor:

FELLOW WAGE WORKERS:—Pursuant to the requirements of our constitution, we meet to-day again in annual conclave as the representatives of the bonafide labor organizations—the Trades Unions of this Continent. We meet to review the past and to take counsel of and with each other as to the best course to be pursued in the interest of the whole wage-earning class. We have the opposition of interested antagonists who recognize in the success of our movement a diminution in their rates of profit or interest, a curb to their avarice and greed. There are those who, failing to comprehend the economic, political and social tendencies of the Trade Union movement, regard it as entirely "too slow," "too conservative," and desire to hurl it headlong into a path which, while struggling and hoping for the end, leaves us stranded and losing the practical and beneficial results of our efforts. I maintain that the working people are in too great a need of immediate improvements in their condition to allow them to forego them in the endeavor to devote their entire energies to an end, however beautiful to contemplate. I maintain further, that the achievement of present practical improvements for the toilers places them on so much vantage ground gained and renders them more capable to deal with the various problems it is in their mission to solve. In the language of that foremost of economic and social thinkers, Ira Stewart, "The way out of the wage system is through higher wages, resultant only from shorter hours." In working upon this line it is not necessary to oppose any school of thought upon the labor problem, but to carry out the solemn duties imposed upon us is imperative.

EIGHT-HOUR MOVEMENT.

When the last convention adjourned and the delegates returned to their respective homes, the great movement outlined had to be put into execution. I called the Executive Council together several times for consultation and advice, and after great deliberation, on March 17, selected the United Brotherhood of Carpenters and Joiners of America to make the first demand. The organization in question responded with alacrity to the Executive Council's decision, and of its own accord put a number of lecturers in the field. The call for the assessments was ordered, and the entire machinery of the organization put into motion to secure the best possible results.

Of the immediate results of the movement I prefer to quote Secretary P. J. McGuire's official report to the Convention of the Brotherhood of Carpenters, held in Chicago last August. Among other things he says: "A summary of the situation shows that the trade movement for shorter hours among the carpenters this season has been successful in 137 cities, and it has benefited 46,197 workmen in that trade, and countless others in every branch of the building trades have also been the gainers." Not only among the carpenters and the building trades, but in almost every trade and calling the movement was taken up and fought to a successful termination.

From statistical blanks issued within the past two months to the Trade Unions, I learn that there are few trades or callings throughout the whole country that have not obtained a reduction in the hours of their labor, or an increase in their wages. In some, where formerly it had been held that the enforcement of the eight-hour rule was entirely incompatible with the interests of the industry, notably among the iron and steel workers, a few of the largest concerns have made a test of the three-shift system with entire success.

There is no question but that the near future is

bright for the eight-hour movement, if the organized wage-workers will but concentrate their efforts upon its achievement.

I am fully aware that the establishment of the eight-hour work day will not be the end of the efforts of the working people for economic and social improvements and reform, and that many things demand our attention in the meantime; yet the great good a substantial reduction in the hours of labor will bring to the toilers of our country, the hundreds of thousands it will save from poverty and degradation, will clear the path and prepare the working people to see the wrongs and injustices practiced upon them in subtle and ingenious ways.

I therefore fervently hope that this convention will continue to carry on this battle for a shorter work-day until victory is assured, and eight hours inscribed upon the banners of the Trade Unions of our country as a limitation of a day's work.

THE NEXT TRADE.

The Executive Council of the American Federation of Labor last March selected the coal miners of the country to make the demand for the enforcement of the eight-hour work day immediately after the contest of the carpenters would close, and so notified the officers.

The time was deemed unpropitious, and they declared for its enforcement May 1, 1891. In consequence of that decision, it upset the plans of the Executive Council to continue in the selection of one trade after another, since none other of a national character was in a position of preparation to enter the contest upon so short a notice, hence we have decided to refer the entire subject to this convention for further consideration and approval.

OUR GROWTH.

The past year has witnessed our expansion in the greater recognition on the part of the wage-workers of America, that the trade union form of organization is the best to protect and advance their interests. The National Trade Unions reported having established 913 local branches throughout the various parts of the country, while 274 charters for local unions were issued from the office of the American Federation of Labor to such wage-workers who have no national union of their trade or calling.

The membership of all organizations, except one, has increased from 5 to 35 per cent.

STRIKES.

From the statistical blanks before referred to, the national organizations reported 1,163 strikes having taken place authorized by them.

Of this number 389 were successful, 76 lost and 98 compromised.

Many were the concessions gained without the necessity of resorting to a strike, and in most cases the answers came too numerous to mention, "Can not mention them all," etc., etc.

The strikes were generally for a reduction in the hours of labor and increase of wages, or the maintenance of the rights of the workers.

All report an increase of wages from 7 to 25 per cent., except one, the silk-workers, who report lesser earnings, owing to dullness of trade.

The increase in wages and improved conditions were shared in proportionately by those who were not members of the organization.

Thus it will be seen that our organizations are continually succeeding in making their members larger sharers in the product of their toil, and doing that work for them which no other organization on earth think it worth their while to deal with.

I am more than convinced that as the working people learn to appreciate the necessity of organization and the federation of all, steadier and larger gains will be forthcoming as the result of our joint efforts, and we shall be so much nearer the end—justice to all mankind—for which we so earnestly strive.

ASSESSMENTS.

With the last convention a new era was opened up in one of the methods of our organization.

We inaugurated a system by which all the National Trade Unions affiliated were required to assess their members or pay directly a certain sum towards helping affiliated unions in conflict to maintain their rights in difficulties with their employers.

Most of the organizations responded to the call at once, while others were bound to await the decision of their convention, and then responded, and a few others from various causes (mainly their own poor condition), have not yet been able to remit them.

The amounts received will be reported to you by the secretary. That the nearly \$112,500 paid by the Federation to the carpenters in their struggle was of great assistance in aiding them to victory, the secretary of that organization frankly acknowledged with appreciation in his report to their convention.

I submit to your consideration the advisability of a continuance of this system, and the extension of it to the local trade unions directly affiliated to the American Federation of Labor, and which have no national trade unions. I propose, however, that if this proposition is approved, the fund when created be kept separate from the National Trade Union assessments in order that practical assistance may be given to both, and neither have cause to complain of encroaching upon the moneys appropriated or paid by the other.

INTERNATIONAL LABOR CONGRESS.

Immediately after the United States Congress devoted upon the city in which the World's Fair should be held, in compliance with the resolution of the last convention, I issued an invitation to the organized wage-workers of the world to be represented at an International Labor Congress, to be held at Chicago in 1893. I urged that no other International Labor Congress be held that year, and asked for the appointment of temporary committeemen for the purpose of making the preliminary arrangements.

I cannot say that the invitation has met with much encouragement. Whether this is due, that for a time all were in doubt that the World's Fair would be held at all, or whether it is due to the fact that since our resolution was adopted several separate innovations, emanating from wholly different sources independent of each other, have led to confusion in the minds of the wage-workers of other countries, growing to the great distance, cost, or indifference to the whole scheme, is more than I can say. I am convinced, however, that if we are desirous of holding a successful International Labor Congress in 1893, we must be very energetic and by all means be represented at the one previously held in Europe.

In connection with this subject, it becomes my duty to call to your attention, that a bill was introduced in Congress looking toward the holding of a World's Congress of Labor, under the auspices of the United States Government. The matter has not received the endorsement of the Executive Council, nor has anything been done to commit the American Federation of Labor to it. The circulars, bills and other papers are herewith submitted for such action as you may deem most advisable to take.

CHILD LABOR.

Of all the ills that mankind suffers from the unjust and cruel tendencies of modern methods of wealth producing, the one that seems to me to rise to horrible proportions is that of child labor.

Our centres of industry, with their mills, factories and workshops, are teeming with young and innocent children, bending their weary forms with long hours of daily drudgery, with pinched and wan cheeks and emaciated frames, dwarfed both physically and mentally, and frequently driving them to premature decay and death. The innocent smile of youthful happiness is soon transformed into wrinkles and other evidences of early decay. The life blood of the youth of our land is too frequently sapped at the foundation.

The hope of a perpetuity of free institutions is endangered when the rising generation is robbed of the opportunity to enjoy the healthful recreation of the play grounds or the mental improvements of the school house.

The children of the workers have none to raise a voice in their defense other than the organized wage-workers, and I appeal to you to take such action as will protect them from the contemptible avarice of unscrupulous corporations and employers.

BUREAU OF LABOR STATISTICS.

The Bureau of Labor Statistics of the general gov-

ernment and the several states should devote more of their investigations to the influence of the labor organizations upon the moral and material welfare of the wage-workers in particular and the whole community in general.

I have been in correspondence with the chiefs of all the bureaus with this object in view. I am pleased to say that several of them show a readiness and have complied, while others have been working in on this line since their inception.

I am satisfied that if the organizations will but make manifest their desire for its enforcement, the Bureau of Labor will be more than willing to respond with cheerfulness.

INTERNATIONAL COPYRIGHT LAW.

At the request of the International Typographical Union, the Executive Committee endorsed the bill pending before Congress for an International Copyright Law, and insisted that one of the laws shall be the protection of the compositors and other wage-workers in the printing trade.

The bill is still pending before Congress, and we have reason to believe will be enacted into law.

BALLOT REFORM.

In several states a reform in the method of voting, by which the citizen is protected from scrutiny and open coercion in casting his vote, has been enacted into law.

I trust that we will not relax our energies to extend its beneficial effects until all the states in the Union are brought into line upon this question.

In speaking upon this subject to bear in mind that notwithstanding all the safeguards that human ingenuity can devise for a secret ballot, political intimidation and freedom of action can only result from economic independence.

COMBINATIONS.

Recently the movement among the corporate and employing classes to combine has taken more rapid strides than ever before.

We frequently hear of the formation of organizations among them with the avowed purpose of antagonizing and thwarting the efforts of the working people. This movement has not only been going on in any one country, but the efforts have been directed to give it an international character. Many an expression have I heard of fear of such a growing power, and it becomes my duty to call attention to the fact that, as wage-workers, we have nothing to fear from such combinations, providing we have the intelligence, the energy and the courage to meet the combinations of our employers with the organizations of labor.

There is no greater power to deal with the exactions or to curb the tendency to injustice of corporations than the well disciplined and prepared grand army of organized labor.

To extend the beneficent influences of organization to the wage-workers throughout the entire length and breadth of our country should be our first purpose, and to ally our forces with those of the organized wage-workers of other countries appeals to our best judgment and deserves our best efforts.

The working people of the world suffer from the same ills and have a common interest in the struggle to remove them. Patriotism, love of country, is one of the noble traits of the human character, but a recognition of the fraternity of all mankind is the highest aspiration of the human family.

Acting upon this thought, I have continued the correspondence with the active men in the labor movement of other countries, and have opened up relations of amity and good will with many new ones.

I suggest that this policy be continued in order that the near future may witness a triumphant phalanx of the world's toilers.

C. L. F. CHARTER.

Some few moments ago the Central Federation of New York City made an application for a certificate of affiliation. It was accompanied by a list of the organizations attached to that body. At the head of the list was the name of the American Section of the

Socialist Labor Party. The matter received my keenest thought and best judgment. I consulted the constitution and saw there clearly defined which organizations were entitled to affiliation with the American Federation of Labor. The Socialist Labor party or any other party or section of a party is not included among the number. But apart from any constitutional considerations, I believed then and am convinced now that the Socialist Labor Party, *as a party*, is not entitled to representation in a purely trade union organization.

I informed the Central Labor Federation of the above fact, and they declared their determination not to ask the Socialist Labor Party to withdraw, and renewed the request for the charter. I reiterated the opinion expressed in my former letter and resolved to refer the entire matter to this convention to decide whether the position I took was correct.

Since this matter was first broached a number of people, glad to clutch at anything that promises something to "talk about" and sow the seeds of dissension, have ascribed to me all sorts of opinions and motives. It has been charged that I am trying to drive the Socialists out of the movement; that I am intolerant of others' opinions, and other insinuations equally ridiculous and untrue, and too numerous to mention. I desire to take this opportunity of saying that I have ever held that the trade unions were broad enough and liberal enough to admit of all shades of thought upon the economic and social question; but at the same time the conviction is deeply rooted in me that in the trade union movement the first condition requisite is good standing membership in a trade union, regardless of which party a man might be a member of.

Those who have had any experience in the labor movement will admit the great work and forbearance, tact and judgment requisite to maintain harmony in organization. The trade unions are no exception to this rule. In the trade union movement I have ever endeavored to attain that much desired end, and recognize that in itself is of a sufficiently important nature and requirements as to preclude the possibility of jointly acting with organizations based upon different practical workings or policy.

I am willing to subordinate my opinions to the well being, harmony and success of the labor movement; I am willing to sacrifice myself upon the altar of any phase or action it may take for its advancement; I am willing to step aside, if that will promote our cause, but I can not and will not prove false to my convictions that the trades unions pure and simple are the natural organizations of the wage-workers to secure present material and practical improvement and to achieve their final emancipation.

During the proceedings of the convention, the employment of Pinkerton thugs was denounced in the severest terms.

The "sweating system," as practiced by some of the great clothing houses of New York City, was condemned, and Congress is to be petitioned to correct the evil. The fight for the eight-hour day will be conducted by the miners, and every member of the Federation will be taxed two cents a week, for five weeks, to create a campaign fund to help secure a victory.

President Samuel Gompers was re-elected President of the Federation—and the convention, one of the most important in the history of organized labor, closed its session in a perfect storm of mutual good will.

Do the grand officers of the B. of L. E. want a chance to discuss the superior advantages of system over general federation? Will they name the time and place? They can have the opening and closing speeches. Will they accept the invitation?

THE B. OF L. E. JOURNAL AND FEDERATION.

We note that in the columns of the *Engineers' Journal* the Supreme Council of the United Orders of Railway Employés, to which we are proud to acknowledge allegiance, is alluded to as the "Supreme Chestnut," and, considering the source from which it emanates, we fully appreciate the compliment.

It is very generally conceded that had the idea of "General Federation" of railroad employés engaged in the train service of the country, been launched at Cleveland instead of at Chicago, the B. of L. E. *Journal* would have favored it. The difficulty, which could not be overcome, was that the *Journal* had no ideas to launch upon federation, or anything else—the lack of ideas being the missing "link," which from the first, has pre-eminently distinguished that publication. During the entire time occupied in the discussion of the great subject of federation, and until federation took form and became an established fact, the *Journal* was dumb as an oyster, nor did it ever so much as allude to the subject without a sneer.

The B. of L. E. *Journal*, as we are advised, has never represented, in any regard, the intelligent element of the Brotherhood of Locomotive Engineers. The publication is supposed to have four editors, whose names appear on its title page, and who monthly mass their intellectual gifts in producing "links." They are opposed to general federation, but not one of them ever formulated or expressed an argument against federation as it exists under the laws of the SUPREME COUNCIL.

A number of intelligent members of the B. of L. E. have been able, occasionally, to squeeze in a communication favoring general federation, but when these engineers made P. M. Arthur's vacillations conspicuous, when they *fraternally* arraigned his inconsistency and dissimulation, and logically demonstrated the benefits of federation, their communications were ruled out, and the editors proceeded to run their "link" machine, forgetting the scientific fact, that a chain is not stronger than its weakest "link"—and of all the "links" manufactured at the B. of L. E. *Journal* factory at Cleveland, its federation "link" is the weakest.

The "links" supplied by the *Journal* are so weak and vapid that at last they have become the synonym of anything jejune, anything suitable for a kindergarten or a baby's nursery.

It must be exceedingly interesting to enter the *Journal's* "link" factory and notice the manipulation of the raw material. It would, doubtless, be seen that the G. C. Editor handed over to F. G. Editor such rare bits of "link" material as the following, to be placed in the "link" machine:

"Tell all the orders of railway employes to mind their own business. Give this special prominence. I am tired and disgusted with this ceaseless yell for federation."

"It shall be done as Your Majesty desires," responds the F. G. Editor. The material is thereupon placed in the machine by the S. G. Editor, and the T. G. Editor turns the crank, and the "link" bobs up and takes its place in the chain of "links."

The cry goes up, "More material," and the G. C. Editor says, "Stick in that I do not want and will not have any *entangling alliances* with any other organization of railroad employes," and the "no-entangling-alliance," "link" follows the "mind-your-own-business" "link." Still, the demand continues for more material, and the Grand Chief Editor hands to the F. G. Editor the following startling announcement: "A \$4.00-a-day man and a \$1.00-a-day man have no interests in common;" and thus the "link" business proceeds.

But our subject leads us to the consideration of facts and figures of greater gravity than such phases of the *Journal's* "links."

In the December issue of the B. of L. E. *Journal*, two "links" are found to which we call special attention. The first is found on page 361, as follows:

The form of system federation adopted by the Denver Convention, which has been in effect during the past year, ceased to be a law at the Pittsburg Convention. The plan adopted by the Pittsburg Convention allowing divisions of the B. of L. E. to enter into a certain system of federation, will not become a law until after January 1, 1891. At the present time there is no law allowing the members of the B. of L. E. to form any federation that will be recognized by this Order.

In the foregoing "link" we have the announcement that the B. of L. E., at its Pittsburg Convention, "adopted" a plan of "system federation;" and this in spite of P. M. Arthur's hostility; it was adopted in defiance of his vindictiveness and his influence; it was a notable triumph of that large and influential element in the Brotherhood of Locomotive Engineers who treat with becoming disdain P. M. Arthur's oft-repeated insult to other organizations of railroad employes, "To mind their own business." It was a stinging rebuke of that pompous declaration, "I want no entangling alliances;" and it was an act which, whatever may be its scope, voices a stern rebuke of P. M. Arthur's repeated aristocratic announcement that "a \$4.00-a-day man and a \$1.00-a-day man have no interests in common." In these regards the action of the Pittsburg Convention on federation expands to splendid proportions.

In this connection, it suits us to demonstrate that Grand Chief Arthur has, first, last, and all the time, been the implacable foe of any system and of every system of federation. To do this we reproduce from the *Firemen's Magazine*, January, 1889, page

5, the following action of the B. of L. F. and P. M. Arthur's words, verbatim:

"Three years ago the B. of L. F., at its Convention, held in Philadelphia, passed the following resolutions:

Resolved, That it is the sense of this body that we do all in our power to create and maintain a harmonious feeling between the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen.

Resolved, That we place ourselves on record with the Brotherhood of Locomotive Engineers, and that the Secretary of the Grand Lodge be authorized and directed to make a statement to the said organization, under seal of the Grand Lodge, to the effect that our Order is now a labor organization, made such by the action of this convention, and that we are desirous of cooperating with them in all their grievances, and that we shall expect the same from them in our troubles; knowing the fact that in union there is strength, we are ready to meet them half way.

Resolved, That these resolutions be presented to the annual Convention of the Brotherhood of Locomotive Engineers, at New Orleans, October 21, by a committee of one, who shall endeavor to bring about a proper recognition of this body, in order that we may be enabled to carry out the purposes of these resolutions by a friendly understanding during times of trouble."

In the foregoing the reader has an official statement of the spirit of fraternity which animated the Brotherhood of Locomotive Firemen. Further:

A delegate was commissioned to present the foregoing resolutions to the B. of L. E., in convention assembled in the city of New Orleans. The resolutions were presented to the Grand Chief of the Brotherhood, P. M. Arthur, who stated to the delegate that

The B. of L. E. never had and never would cooperate with any other labor organization, that it was amply able to take care of itself, and that other organizations must do the same.

We have italicized the language used by Grand Chief Arthur for the purpose of showing his selfishness and exclusiveness, and to show further that the action of the Pittsburg Convention totally disregarded his narrow-mindedness, his illiberality and lack of comprehension of the demands of the times and the importance of federation for the welfare of railroad employes.

It has been said by P. M. Arthur, on many occasions, that the B. L. E. "never would affiliate with other labor organizations, while he was Grand Chief," and that should such affiliation ever occur by the action of the Order, "he would resign." It has occurred, as is seen by the "link," which we reproduce, but P. M. Arthur has not "resigned."

To break the force of the Pittsburg blow, which fell with crushing force upon Grand Chief Arthur and upon the B. of L. E. *Journal*, a "link" was manufactured for the December number, page 362, for the occasion, as follows:

The complexion of the Pittsburg Convention was one of general conservatism throughout the entire sitting. It was a noticeable fact and in direct contrast to the Richmond and Denver sittings. General federation had few advocates, and was considered but three times during the sitting. It was seemingly

a dead issue. In the entire delegation of 406 members present not over 35 were in favor of general federation as proposed at the two previous conventions. Many delegates who favored and were extremists in their ideas as to general federation at the Richmond and Denver sittings, were also representatives at the Pittsburg Convention. They were opposed to any form of federation of a general character. Neither did they hesitate to place themselves on record whenever an opportunity presented itself, as advocates directly the opposite of that which they consistently thought their duty at the Richmond and Denver sittings. A change of sentiment has taken place among many of our members who are the recognized leaders in their localities from that which they entertained during the past. As the tidal wave brings them back to their sense of duty, they stand shoulder to shoulder with their brothers in their devotion to the time-honored principles of our Brotherhood. This must certainly have a tendency to place it upon a more substantial foundation than ever. The public is familiar with its principles. It has from time to time honored us for our devotion to what we have at all times considered and advocated as worthy of our best efforts. Not only during the twenty-seven years of its existence has the B. of L. E. brought solace to its members, but others in railway service. Members of other associations have received benefits that have placed them under lasting gratitude.

Every line of the foregoing is designed expressly as a poultice for P. M. Arthur's wounds, and as a sort of a vindication of the stupid course pursued by the *Journal*.

In analyzing "link" No. 2, which we print for the benefit of our readers, it will be noticed that the *play* is upon the term "general federation," and it will be borne in mind that P. M. Arthur and the B. of L. E. *Journal* never favored any sort of federation or coöperation, or alliance of any description with other organizations of railroad employes. P. M. Arthur's pet phrases have been: "Let other organizations mind their own business;" "We want no entangling alliances;" "The B. of L. E. never has and never will, while I am Grand Chief, coöperate with any other labor organization;" and these pet phrases have been the platform of P. M. Arthur and the *Journal* in fighting federation in the past, no matter in what form it was presented. At Richmond, P. M. Arthur's hostility to federation prevailed, but its influence grew less by degrees as the discussion went forward, and the question of "general federation" was submitted to a vote of the Order, and to succeed, the friends of federation were required to obtain a two-thirds majority of the members of the order. To the extent possible, the press engaged in fulsome laudations of P. M. Arthur's opposition to federation. That portion of the press known to be the enemies of labor organizations, put forth their utmost energies to defeat the engineers who favored federation. But the vote was taken, and we invite the B. of L. E. *Journal* to make a statement of that vote. If it will do this, then we are persuaded that "link" No. 2, which we print, will require no further comment.

We are advised that more than 7,000 engineers voted for "general federation," and that more than 7,000 voted against general

federation. In neither case did the vote reach 8,000. The vote against federation, by a small number, exceeded the vote in favor of it—but had the higher number been cast in favor of federation, the defeat of its friends would have been accomplished, because all who did not vote, were counted, necessarily, against federation; but the point we make is this, that the vote absolutely cast showed that, within a small number, as many engineers favored general federation as opposed it. With this convincing fact in view, what becomes of the "link" drivel about the "change of sentiment," and the "tidal wave" which has brought progressive engineers "back to their sense of duty"?

At Pittsburg, the case stood about as follows: The friends of "general federation" acquiesced, as they were bound to do, in their defeat on the main question, and there came to the front other propositions embodying the principles of federation, *absolutely*—propositions which knocked the life out of P. M. Arthur's "mind-your-own-business" arrogance; propositions that everlastingly crushed P. M. Arthur's pompous pronouncements, "I want no entangling alliances;" propositions which totally repudiated P. M. Arthur's declaration that "a \$1.00-a-day man and a \$1.00-a-day man have no interests in common;" propositions which said to P. M. Arthur, that "the B. of L. E. would affiliate with other organizations of railroad employes in spite of his manifestoes, and if he didn't like it, he could step down and out."

As a result, the friends of federation signally triumphed. Like wise and prudent men, they took what may be called "system federation"—the scope of which will be learned when put into operation—and being the best that could be had, which governs in all deliberative bodies, this *Magazine* most cordially congratulates them upon their signal victory. It was a triumph of the principles which this *Magazine* has contended for. It is the recognition of the right and the might of federation. It is a gigantic advanced step of the great Brotherhood of Locomotive Engineers over selfishness, stupidity and aristocracy. It demonstrates that the great heart of the Brotherhood of Locomotive Engineers is beating responsive to the righteous demands of labor, that its sympathies are warm, generous, manly, noble and true; and that P. M. Arthur's fulminations cannot swerve its members from the duty they owe their fellow workmen in the train service of railroads.

A youthful bicyclist, alighting from his wheel with the grace of a circus rider, hailed Kennedy, the cycle repairer: "Say, Ken, I want a small spring." "Certainly," replied the wag, "which do you want, a mineral or a soda spring?"—*Tim Fagan*.

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the fifteenth day of each month.

Brotherhood of Railway Employees' Home.

MR. EDITOR—Shall the railroad men of this nation have a "Home" which they can call and feel to be indeed a "Home," and know it to be *their own*?

The mere asking such a question of such a class of men as do the railroad work of this country is to answer it. All admit now, that theirs is the most hazardous, and results in more disabled men, while in the prime of life, than any other employment. Then, again, the general public is beginning to realize that these men are, in a very broad sense, not only public servants, but public benefactors. They have become an indispensable help to our civilization. The fearful price paid by these men that the great traveling and business public may have the facilities of railroad travel and transportation, is just beginning to be realized.

If Congress, in its just action, gives millions of the people's money to sustain crippled and disabled soldiers, what is not due to our railroad train and yard men who, in following an occupation honorable, and of imperative necessity to the great commercial business of this nation, are exposed, as President Harrison justly says, "to greater danger than a soldier in time of war"?

While we are not now asking Congress to take care of disabled railroad men by pensioning them, we are proud to think we can appeal to the railroad men themselves in behalf of their unfortunate "brothers of the rail," and feel that such an appeal will meet with a ready response from their proverbial greatness of heart, and well known sympathy for the distressed, especially those of their own calling.

Already has the *Magazine*, Mr. Editor, and journals of the several orders, made very kindly mention of the "Home" enterprise, but I have thought a few words of explanation would be acceptable to your readers. As is already known to many, the name of the writer stands at the head of the enterprise as its president. Allow me to say, I do not have the honor to be the originator of this worthy project. Some two years ago I did write to the grand officers of the Brakemen's Order, asking for such information as they might give me as to the necessity for a home for the orphan children of trainmen, thinking I might, with God's blessing, be able to start such a home. Whether this request was father to the

thought of the friends in Chicago who conceived the idea of this Home for Disabled Railroad Men, I do not know.

I have been invited to come to Chicago several times in the last nine months, to meet with those who are working for this project, for the purpose of consultation, and from the first was urged to assume the presidency of the board.

At first it did not seem possible for me to give the matter the time such a great undertaking would demand, but finally reluctantly consented to act for the present, but only on the condition that I should first be at liberty to give all the time necessary to this other work, which is so very important, viz.: The securing proper legislation for greater safety to these very railroad men. Here, in this line, the old adage is surely true, "An ounce of prevention is better than a pound of cure." The first great work is to stop this terrible amount of the disabling of these men. There will be enough crippled and injured railroad men, at the best, from accidents which no present human foresight seems able to prevent. At least 50 per cent. of this awful work can be prevented, and my duty at present leads in that direction. But pardon this much of allusion to myself. What I want to say to every railroad man who belongs to any of the orders, about this "Home," is this: I am willing to do all in my power for its success. I am not willing that any of its officers shall make anything out of it, or make it a place for some soft job. I shall do what I do for it *gratuitously*. I shall take no pay for my work or time. If the auditing board shall see fit, by and by, after the enterprise is on its feet, to allow me my reasonable expenses, well and good.

Speaking of the auditing board, let me say, as this home is to be a home for Brotherhood men of all orders of railway employes, I would like to have a grand officer of each order to be a member of that board, so that every act and every expenditure, would be known to every order. I will have nothing to do with it only as everything is open as the sunlight.

At as early a day as practical, I would like a time set for a meeting of the Grand Chiefs, or Masters,—whatever the title may be,—of each order, and I would like to meet with them and have a consultation as to the objects, aims, plans, the best way of carrying on the work, and everything connected with it.

It is a great undertaking. "In the multiplicity of counsel there is wisdom." The heads of the several orders of railroad men have gained for themselves a name for candor and wisdom. With the counsel and advice of such men we can not go far astray.

Unless we have the friendly advice and aid of these men, I shall not feel I can stand at the head of so great and responsible an en-

terprise. Railroad men never do things by halves. If they all take hold of this, it will in the end be one of the greatest and grandest benevolent institutions of this country.

Let us once get under good headway, and show that we mean business, that everything is straight and honorable, then the railroad companies themselves will, beyond a doubt, do much for us. They could not well refuse to help us. There are no less than 200,000 men in this nation engaged in railroad work, and about one half of this number are doing train and yard work. A small amount from each one of these would give us a working capital of large proportions. That this small amount will be readily given, there is no doubt, when once it is fully known that every dollar given will be *sacredly* used for the purpose for which it was given. That this shall be done will be the aim and design of the writer as long as he has a vote and voice in the management.

Remember that this is not a hospital scheme, nor is it connected with any hospital. We want to provide a place where a disabled brother can go and feel that he is at home, be cared for, and if able, taught some light work so that he can again make his own way in the world, but if incapacitated from any or all of these things, he can feel he has a roof over his head, is in *his own* home, where, if motherless, if fatherless, and otherwise friendless, he will find friends to help smooth and cheer his pathway down to the silent river, with a sure hope that on the other side there awaits him a still brighter, sweeter and more happy home, from which he will go away no more forever.

When 20,000 of our strong young men are annually more or less crippled, why, oh why, has not this work been done long ago?

Blessings on the good hearts who have launched forth the idea of a HOME for disabled railroad men. Let every railroad man in every order take some interest in this good work, and the blessings of the poor fellows who have to seek its quiet retreat will be upon you.

L. S. Coffin,

President, Fort Dodge, Iowa.

[The writer of the foregoing communication, Mr. L. S. Coffin, is Ex-R. R. Commissioner of the State of Iowa, a gentleman of the highest standing, who has given special attention to the interests of railway employes in matters of legislation and otherwise, and his views in reference to the Brotherhood of Railway Employes' Home, recently established at Chicago and described in detail in the December issue of the *Magazine*, (Page 1102) are entitled to careful consideration. The project is eminently wise and humane and if properly directed, will, undoubtedly develop one of the most philanthropic institutions of the times. We commend the subject as worthy of special and profound consideration.—ED. MAGAZINE.]

TO GEORGE W. HOWARD,

G. C. C. Brotherhood of Railway Conductors.

Worthy Howard, here is at you
In a rhyme of measured ease;
Just a sort of ready ramble,
To be scribbled as I please.
I have meditated often
To inflict you with a strain
Full of sprightly, gleesome fancies,
Such as sometimes fill my brain;
Yet, the words I'll pen are honest—
George, you know me well enough,
And you're satisfied I never
Would insult you with a "puff."
Now, attention, and I'll tell you
One or two things in a song;
And excuse my homely language
As I move the lines along.
You're a daisy! You're a dandy!
You're a thoroughbred, I swear!
You're a rattling organizer,
And ferocious as a bear;
For you jump at opposition
With a confidential grin;
Holding cards in hand full ready,
Which the pot is sure to win;
And you play them most successful—
Just as skillfully as Hoyle—
Winning games in every instance
For the honest sons of toil;
Always leading, always trumping,
Never passing by a trick.
Slapping down the little joker
Which can make opponents sick.
Out beyond the Rocky mountains,
At Los Angeles, I've heard,
There was born a little urchin.
The wisecracks all averred
That he'd never cut his eye-teeth,
But would fill an early grave.
Where the winds of disappointment
O'er his lonely mound would rave.
He was called "a local baby,"
But the little brat has sprung
Into national proportions
For a kid so very young.
He's as gritty as a badger,
And determined in a muss.
He goes bravely at a scrimmage
With a smile upon his puss.
And, dear George, he calls you father;
You're entitled to the name—
The pugnacious little codger
Owes you all his worldly fame.
I have heard you dwell delighted
On how rapidly he grows,
And how tenderly you nursed him
With a bottle 'neath his nose,
Sucking in the milk of freedom
To his manly little breast.
Till the natives grew astonished
At your offspring of the West.
You encouraged him with precepts
Which you found in Holy Writ,
Till he blossomed out delightful,
With the true get up and git;
Now he's weaned and out of short clothes,
And he smiles upon his dad
With a filial devotion,
Like a manly little lad.
In a year or two that urchin
Will be fit to tramp alone,
But he'll never crawl in baseness
To get near a human throne;
If he can't succeed in honor,
He will die before he'll sneak,
Like a lackey, humbly flunking,
Cringing, beggarly and meek.
"Oh, begorra, he's no bosthune!"
As my country people say;
And, dear Howard, you have reason
To be proud of him to day;
For he imitates his parent
Every moment of his life.
Faith, I'll bet the little codger
Has his eye upon his wife!

New another year is dawning,
Known as eighteen ninety-one.
May its womb be stored with glory
For yourself and darling son;
May its days be fraught with wisdom,
And its nights bring peaceful rest;
And the God of love watch over
That young giant of the West!
The rivals all his brothers
In an honorable career—
Firemen, Trainmen, Switchmen—all men—
Black and engineer.
I'll close my rhapsodizing,
For my eyes are growing dim,
And my lady-love keeps bawling
To retire and douse the glim:
I must hearken to her. Bless you!
Those songs I've left unsung,
And the caterwaulings
Of her lunar caustic tongue.

Shandy Maguire.

Population of our Principal Cities.

MR. EDITOR:—The following table is taken from a recent issue of the *Scientific American*, and so much as are interested in our national growth and population, is worthy of being preserved for future reference:

The new census shows the population of fifty cities as follows:

	1890.		1880.
New York	1,513,501	1.	1,206,209
Chicago	1,048,576	4.	503,185
Philadelphia	1,041,894	2.	817,170
Brooklyn	804,377	3.	566,663
St. Louis	460,357	6.	350,518
Boston	448,507	5.	362,839
Baltimore	433,517	7.	332,313
San Francisco	287,990	9.	231,959
Cincinnati	286,309	8.	255,139
Cleveland	261,546	11.	160,146
Buffalo	254,457	13.	155,134
New Orleans	241,995	10.	216,090
Pittsburg	238,473	12.	156,389
Washington	228,160	14.	147,293
Indianapolis	205,669	18.	116,340
Milwaukee	203,979	19.	115,587
Newark	182,020	15.	135,508
Memphis	164,738	38.	46,887
Jersey City	163,987	17.	120,722
Louisville	161,005	16.	123,758
Atlanta	139,526	63.	30,518
Providence	138,327	22.	89,366
St. Paul	133,156	45.	41,473
Independence	132,043	20.	104,857
Indianapolis	107,445	21.	75,656

One of the best criterions of the Nation's prosperity is found in the rapid growth and

increase of population of its cities, which could not take place without a corresponding development of the towns and the agricultural sections, for in the cities we behold the markets of the country whither its products are sent, and from whence they are again shipped to other points in exchange for other products or manufactures. They thus form the exchanges of the country, and if there was nothing to exchange there would be no profits in the market, but that such is not the case in our list of American cities is very evident by a glance at the table above. We find New York still heading the list, having increased her population over 300,000 in the past decade, but whether she will be first in ten years from now is a problem which the success of the World's Fair will determine, for if Chicago should again double her population as she has done, she would in that event undoubtedly lead in the race. While all the cities have added largely to their population, there have been many changes in their relative rank, but very few holding the same place they did ten years ago.

Points to be Considered.

TOPEKA, KANSAS, December 22, 1890.

MR. EDITOR:—Present conditions present certain points for consideration which give the student the headache. The question of federation is being debated by railroad men, and the general public inquires, why don't the engineers federate with other organizations representing the train service? Why don't they federate? That's the point—and the fact that they don't, suggests a number of questions—points: As for instance, have not all engineers at some stage of life answered to some other calling? That's a point and a pointer. Here is another. Do engineers lead a more moral or religious life, since they were promoted than they did when answering to some other calling in the railroad service? Once more, Have engineers more important business to transact, or is their welfare to be guarded with more care than that of other men, because they are engineers?

These are all points, and railroad men are discussing them. Again, have engineers better principles since they answer to their new calling? No mistake, these are points. They are questions for debate, and railroad men will debate them, and so far as I can learn, the conclusion is that engineers are very much such kind of men as they were when they were greasers, or firemen or hostlers, except that they have more experience, but, then, you see experience is not principles; experience isn't morals, nor religion, nor manliness, nor independence, nor courage, nor integrity. It is just experience. Now I don't believe that engineers

have better principles, because they have more of a certain kind of experience than other railroad men.

Some men imagine their rights have been enlarged and their principles improved, because they have been advanced in their calling. Remembering an article in the *Engineers' Journal*, headed "Federation," one would think engineers could not trust an important question to other organizations with which they were once identified.

Now, it may be that the engineers do not think themselves above federation, but just say to themselves, "things with us are lovely and running smoothly, and we are under obligations to no other class of men, and therefore, won't federate with them." Are they under obligations to others? Yes. Who? The firemen. Firemen have cut their own throats to right the wrongs of engineers. Now, should firemen strike, Mr. Eagle Eye, when called would be found an hour later on his seat-box waiting for his scab fireman, and chuckling in his sleeve, because he had "no grievance" and for not being mixed up in federation, which proclaims "rights for all." He is welcome to go on pounding dollars out of his old mill. So long as they receive help, as they have for the past six years, there is no need of federation on their part.

What is federation but an assurance that by it troubles can be controlled in the future in the interest of employes? It is the only salvation for railroad men.

The day is not distant when firemen runners, that is, B. of L. E. men, who have not forgotten that they were once firemen, will down the old "buckers" who have been born on one road, and their only ambition is to serve "Pa," as a child who knows nothing of the rest of the world. This done, and federation will achieve all that its friends have ever claimed for it.

I will now turn on the Westinghouse and remain ever.

Ira D. Mayhall.

INTERROGATORIES.

BY SWITCH.

Mr. Editor—I want to talk to you about one thing and another—

I want to converse with you, because you are my brother.

I want to interrogate you because I want your views

About such horny handed workingmen as the Chauncey M. Depews.

Now I have an idea that these Chauncey M. Depews are the sort of workingmen who always put the screws

To the other sort of workingmen, just because they can.

And I want you to tell if you think they're worth a d—n.

[Take a figure 9 and cut its tail off, and you have our estimate of the Chauncey M.

Depews, as workingmen, or as the exponents of workingmen's interests.—ED. MAGAZINE.]

Mr. Editor—If you are disposed to be obliging, would you care to tell,

When H. Walter Webb hands in his checks, where you think he ought to dwell?

Do you think he ought to browse around in the fields of Paradise?

Or be sent to some other place, where they have no ice?

You know he hired the Pinkertons—murderers from the slums.

You know he supplied these murdering thugs with powder, ball and guns.

Now, by all the gods at once, known to heathen mythology,

If he were sent head first to hades, would that be good theology?

[We are not a theological student, but at the first glance, we should say, if there is a hades, Webb and his Pinkerton thugs ought to find it, and remain there long enough to fry the venom out of them.—ED. MAGAZINE.]

Mr. Editor—While walking around my engine and polishing up the brass,

In a meditative mood, I wondered what would come to pass.

I had read that Chauncey M. Depew, addressed the engineers.

And that the engineers greeted him with the wild sort of cheers.

And now, Mr. Editor—Can you give me any news as to the policy of the Chauncey M. Depews?

Will he permit the Federated Orders to remain in this firemen's land,

Or like Wm. H. Vanderbilt, will he say "federation be dam'd?"

[We think federation will stand, in this firemen's land, in spite of Mr. Depew and all of his band. It looks that way. Such is the drift—the trend. When Mr. Depew reposes in his grand mausoleum, federation will flourish like a banyan tree. The H. Walter Webb and the Pinkertons will be extinct, and future scientists will wonder from what reptiles they were evolved. Of this *Switch* may feel assured while polishing his machine.—ED. MAGAZINE.]

A NEAT little surprise party was recently given Bro. Wm. E. Burns, of Chicago, as will be seen by the following clipping:—

The locomotive firemen in the employ of the Chicago division of the Illinois Central Railroad presented W. E. Burns, representative-elect for the Fifth Senatorial District, with a gold watch and chain and an emblematic charm of the Brotherhood last night. The presentation took place at Winwood's Hotel, Fourteenth and State streets. Thos. Deegan, an engineer of the road, made the presentation. Mr. Burns was greatly surprised, as he had been summoned from his home on the West Side by telegram, and, being chairman of the grievance committee, thought he was wanted on a matter of business. He made a suitable reply, and afterwards a pleasant time was spent. Mr. Burns will leave to-day for Baltimore for a short holiday before commencing his legislative duties.

The foregoing incident evinces not only friendship and brotherly love, but an abiding faith that in the Legislature of Illinois, Representative Burns will stand by the rights of workingmen.

WHEN "NUMBER EIGHT" COMES IN.

often sit by the kitchen fire
 When my studies hard have been.
 And my books seem dull as the strong desire
 For slumber my eyelids win;
 And the clock's dull tick from the other room
 Seems to throw around me a sense of gloom;
 But a far-off sound on the solemn night
 Brings with it memories fond and bright,
 As "Number Eight" comes in.

Far over the hills I hear the sound
 Increasing; and I begin
 To feel the thrill, as perchance around
 The point of a hill, the din
 Is heard more plainly; and sweet and clear,
 The tones of the ringing bell I hear;
 And to warn benighted man or team
 Or the crossings, I hear the whistle scream,
 As "Number Eight" comes in.

I hear the clear wh-o-o-t, wh-o-o-t, whoot, whoot,
 And the clash as the great wheels spin
 Along the rails, the exhausts that shoot
 Miniature meteors, till within
 A half a mile when the long, loud blast
 Is echoed, re-echoed and dies at last,
 As over the trestle the hollow roar
 Seems to add to the grandeur more,
 As "Number Eight" rolls in.

Twixt the headlight's glare and the cab's dark shade
 I can see friend Blanchard grin,
 As with steady hand the stop is made.
 When the brakeman draws the pin,
 I hear just a few short puffs and know
 That the iron horse now to its rest may go;
 And distinctly I hear the "tunk" and "tink"
 As the wheels are tried by inspector "Brink,"
 When "Number Eight" gets in.

"music to me, these wonted sounds!
 And I feel a joy within;
 For each echo that through the night resounds
 Has something that seems akin
 To the lullabies sung me when but a child,
 For even then as my mother smiled
 Above me, I would hear a passing train,
 And it all comes back to my wearied brain
 When "Number Eight" comes in.

Geo. W. Hall.

STANBERRY, Mo., December, 1890.

Literary Notes.**CATECHISM OF THE LOCOMOTIVE.**

We are indebted to the *Railroad Gazette*, published at No. 73 Broadway, New York, for a copy of the second edition of Matthis N. Forney's superb book, entitled, "Catechism of the Locomotive."

The book contains 709 pages, and is divided into thirty-seven chapters, and we do not know how we can better indicate its value than to refer to the subjects treated, as set forth in the table of contents, as follows:

- | | |
|------------|--|
| Chapter 1. | Force and motion. |
| " 2. | Resolution of motion and force. |
| " 3. | The principles of the lever. |
| " 4. | The forces of air and steam. |
| " 5. | On work, energy and the mechanical equivalent of heat. |
| " 6. | The steam engine. |
| " 7. | The expansive action of steam |
| " 8. | The slide-valve. |
| " 9. | The action of the piston, connecting rod and crank. |
| " 10. | General description of a locomotive engine. |
| " 11. | Different kinds of locomotives. |
| " 12. | Locomotive boilers. |
| " 13. | The boiler attachments. |
| " 14. | The throttle-valve and steam pipes. |
| " 15. | The cylinders, pistons, guide-bars, cross-heads and connecting rods. |
| " 16. | The valve gear. |
| " 17. | Action of the pistons, cranks and driving wheels. |

- | | |
|-------------|---|
| Chapter 18. | Adhesion and traction. |
| " 19. | Internal disturbing forces in the locomotive. |
| " 20. | The running gear. |
| " 21. | Miscellaneous. |
| " 22. | Friction and lubrication. |
| " 23. | Screw threads bolts and nuts. |
| " 24. | Tender. |
| " 25. | Water tanks and turn-tables. |
| " 26. | The Westinghouse air brake. |
| " 27. | The care and use of the air brake. |
| " 28. | The Eams vacuum driving-wheel brake. |
| " 29. | Proportions of locomotives. |
| " 30. | Combustion. |
| " 31. | Resistance of trains. |
| " 32. | Performance and cost of operating locomotives. |
| " 33. | The care and inspection of locomotives while in the engine house. |
| " 34. | Running locomotives. |
| " 35. | Responsibilities and qualifications of locomotive engineers. |
| " 36. | Accidents to locomotives. |
| " 37. | Accidents and injuries to persons. |

The foregoing demonstrates with special emphasis the value of the book, and its importance to every locomotive fireman and engineer. Every subject named is treated exhaustively and scientifically, and better still, the information is given in the form of a catechism—questions and answers.

We know of no way that we can render firemen and engineers a better service than to urge them to purchase and study the "Catechism of the Locomotive."

THE COLUMBIA CYCLE CALENDAR.

By far the most valuable business calendar for 1891 is the Columbia Cycle Calendar and stand, issued by the Pope Manufacturing Co., of Boston, Mass. It is in the form of a pad containing 366 leaves, each leaf having on it date, day of week, day of year, and number of days to come, a paragraph pertaining to cycling or some kindred subject. The leaves are fastened only on the end, so that each entire leaf can be exposed. The stand is made of stained wood, brass mounted, with pencil holder and pen rack. Although this is the sixth year of the calendar, the matter is fresh and new, the larger number of paragraphs having been specially written for this purpose.

NATIONAL MUTUAL BUILDING AND LOAN ASSOCIATION

Elsewhere in our columns appears the advertisement of the National Mutual Building and Loan Association of New York. The following named gentlemen constitute the Board of officers: Mr. C. B. Peet, the President, was the founder of the great clothing house of Rogers, Peet & Co., and is also President of the United States Mutual Accident Association of New York; the largest of its kind in the world. James R. Pitcher, the Treasurer, is the Secretary of the same Association, and is known well and favorably all over our country. J. Edward Simmons, Second Vice President, is the President of the Fourth National Bank of New York, one of the largest of the down town banks, and his name is familiar to bankers everywhere. Joseph J. Little, First Vice-President, is the senior partner of the extensive printing and book binding house of J. J. Little & Co. The Secretary, Geo. R. Sutherland, is President of the Bank of Campbell, in New York, and is a financier of marked ability and high character. The General Attorney, George J. Peet, has had twenty years' experience in practice before the courts of New York, and is amply equipped for the responsible duties of his office. The Association began business in June, 1888, and it loaned to its members during the first year only \$17,000. From July 1st, 1889 to November 1st, 1890, its loans to members have increased to \$311,000. The loans to date are now in excess of \$320,000, and loans are being made to members on an average of from \$1,000 to \$1,200 per working day. The business of the Association is conducted on very conservative lines, and in the interest of its shareholders.

Acknowledgments.

AUGUSTA, GA., December 4, 1890.

To the Brotherhood of Locomotive Firemen :

GENTLEMEN :—I wish to acknowledge with heartfelt gratitude the receipt of a draft for fifteen hundred (\$1500.00) dollars, being the full amount due me on the policy held by my late husband, Willie B. Haws. As the B. of L. F. was cherished by my dear husband, so it will always be remembered by me. May God, the father of the widows and orphans, bless the B. of L. F. in all their undertakings, is the earnest prayer of

MRS. WILLIE B. HAWS.

PINE BLUFF, ARK., November 10th, 1890.

To the Officers and Members of the Brotherhood of Locomotive Firemen :

GENTLEMEN :—With heartfelt gratitude I desire to return my sincere thanks to your noble order for the prompt payment of fifteen hundred (\$1,500.00) dollars insurance due me on the death of my beloved husband, S. M. Lowman, who met his untimely death while in the faithful discharge of his duty on the St. Louis, Arkansas and Texas R. R. I also wish to thank the members of Lodge 304, Argenta, for their brotherly kindness to me while in my greatest trouble. I pray God to spare your dear ones the great bereavement that I have had to suffer. May God bless and prosper your noble order is the prayer of your bereaved sister and sincere friend.

ALLIEN C. LOWMAN.

SACRAMENTO, CAL., November 27th, 1890.

To the Brotherhood of Locomotive Firemen :

DEAR SIRS AND BROTHERS :—I beg to acknowledge the receipt of a draft for \$1,500.00 in payment of my disability claim, allowed by the convention, for which I return my grateful thanks. Words fail to express my obligations to the good members of Truckee Lodge, No. 19, for their kindness and attention during all my misfortune. Hoping that the brotherhood will always prosper and with best wishes for all its members, I remain,

Yours fraternally,

J. F. RICHARDSON.

COLUMBUS, OHIO, December 4th, 1890.

To the Brotherhood of Locomotive Firemen :

DEAR SIRS AND BROTHERS :—I have received through Bro. C. F. Reneman, Receiver of Garfield Lodge, No. 203, Garrett, Ind., a draft for \$1,500.00 in payment of my disability claim as allowed by our late convention. For this and for past assistance please accept my sincere thanks and with best wishes for the welfare of the Order, I remain,

Your friend and brother,

MICHAEL SULLIVAN.

BRIGHT, IND., November 25th, 1890.

To the Officers and Members of the Brotherhood of Locomotive Firemen :

GENTLEMEN AND BROTHERS :—I desire to return my sincere thanks, through the columns of our Magazine, for the payment of \$1,500.00 on my disability claim; also to the brothers of Eureka Lodge, No. 14, and Hinton Lodge, No. 26, for their uniform kindness and help through all my suffering and sorrow.

May no brother be stricken as I have been, is the wish of your afflicted brother.

J. A. NORTHWAY.

BLOOMINGTON, ILL., October 22, 1890.

To the Officers and Members of the B. of L. F. :

DEAR SIRS AND BROTHERS :—I wish to express my heartfelt gratitude, for the manner in which my case has been handled, from the time of my injury, something over two years ago, until the present date. I wish especially to thank the members of Blooming Lodge, No. 40. By their untiring efforts, through Bro. Ed Spreen, my claim was allowed and an order for the sum of \$1,500.00 was handed to me by the Receiver last night at Lodge meeting. I wish the Brotherhood at large and Blooming Lodge, No. 40, unlimited prosperity.

Yours fraternally,

JOSEPH BURKE.

TERRE HAUTE, IND., December 1, 1890.

To the Brotherhood of Locomotive Firemen :

GENTLEMEN :—I desire to return my sincere thanks for the payment of \$1,500.00, the amount of insurance due me on the policy held in your Order by my late husband, W. C. Davidson. I also desire to thank the officers and members of Vigo Lodge, No. 16, for their kind attention to my husband.

Yours truly,

MARGARET F. DAVIDSON.

SAN JOSE, CAL., November 20th, 1890.

To the Officers and Members of the B. of L. F. :

DEAR SIRS AND BROTHERS :—Words cannot express the gratitude I feel as I acknowledge the receipt of a draft for One Thousand Dollars, for injuries which I sustained in the accident which occurred at Mayfield, Cal., on the 3d day of April, 1890. I also tender to the members of Golden Gate Lodge, No. 91, my warmest thanks for their kindness during my long period of sickness. Hoping that the Brotherhood will continue to prosper and be successful, I remain

Yours fraternally,

MATTHEW HOWARD.

COUNCIL BLUFFS, IOWA, November 19th, 1890.

To the Members of Banner Lodge, No. 56 :

GENTLEMEN :—I desire to return my sincere thanks for the prompt payment of fifteen hundred dollars the insurance due on the policy held by my late husband, A. C. Johnson, who was killed near Silver City, June 23d, 1890. I also wish to express my appreciation of the kindness and attention shown him at his burial. I have not words to express the gratitude I feel toward your noble Order. May the blessings of God rest upon you, one and all, is the fervent wish of

Yours respectfully,

MENA JOHNSON.

WELLINGTON, November 26th, 1890.

Mr. D. L. Forsyth, Receiver Fort Pickering Lodge, No. 206, B. of L. F. :

DEAR SIR :—Your favor containing a draft for \$1,500.00 for the payment of the policy of the late C. A. Crane has been received. I take this opportunity of thanking the officers and members of Ft. Pickering Lodge, No. 206, for the care of my son Charles during his sickness and death and especially do I thank you, Mr. Forsyth, for the manner in which you settled up my son's affairs in Memphis and for the long and wearisome journey in accompanying the remains from Memphis to Wellington. May the blessings of Heaven rest upon all Lodges of the Brotherhood of Locomotive Firemen, and may brotherly love prevail and every moral and social virtue cement you together is the wish of

Yours respectfully,

W. C. CRANE.

Addresses Wanted.

R. W. BECKLEY—Was last heard from in July, 1890, and was then located at Walla Walla, Washington. Anyone knowing his present address will please advise his mother, Mrs. Eliza Beckley, Eldorado Springs, Missouri.

CHARLES C. LIVINGSTON—Information is desired in regard to the whereabouts of Charles C. Livingston, who was formerly located at Moberly, Mo., and was employed as locomotive fireman on the Wabash railway. For several years he followed the occupation of house painting. Address, Theo. C. Livingston, 1016 Howard street, Omaha, Neb.

MRS. HILL—Widow of the late James S. Hill, who was killed in a railroad accident in October last, near West Superior, Wis. He was formerly a fireman on the Northern Railway out of Toronto, Ont. Her address is earnestly desired by Mrs. G. Sutherland, Essex Centre, Canada.

EDDIE DU PLESSIS—A locomotive fireman, who went from Yellowstone Park to San Francisco, and was seen at the latter place in December 1889. Any one knowing his whereabouts will confer a great favor by advising his brother, C. O. Du Plessis, 108 Madison St., Chicago Ill.

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

JANUARY, 1891.

Assessment Notice for January.

OFFICE OF GRAND LODGE B. OF L. F., }
TERRE HAUTE, IND., January 1, 1891. }

Assessment No. 17, \$2.00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death and total disability of the following members entitled to all the benefits of the Order,

CLAIM No. 342. Wm. J. Fuller, of Lucky Thought Lodge, No. 232, was killed in Railway Accident, July 1, 1890.

CLAIM No. 343. Fred Kaufman, of Pacific Lodge, No. 173, was killed in a Railway Accident, September 3, 1890.

CLAIM No. 344. Gust. J. Eigstaid, of Calumet Lodge, No. 249, was killed by Railway Accident, September 1890.

CLAIM No. 345. A. E. Blanchard, of Evening Star Lodge, No. 112, was scalded to death by Explosion of Arch Pipe, October 26, 1890.

CLAIM No. 346. Murt. Fernan, of Lackawanna Lodge, No. 263, was killed by Railroad Accident, November 3, 1890.

CLAIM No. 347. Patrick Walsh, of Alpha Lodge, No. 26, was killed by Railway Accident, November 1890.

CLAIM No. 348. B. F. Haly, of Alamo Lodge, No. 2, was killed by Engine Falling Through Bridge, November 5, 1890.

CLAIM No. 349. John Werkoff, of Tippecanoe Lodge, No. 36, was killed by Pistol Shot Wound, November 8, 1890.

CLAIM No. 350. Henry Whitley, of Lake Erie Lodge, No. 241, died of Typhoid Fever, November 11, 1890.

CLAIM No. 351. Clark R. Thayer, of D. J. Chase Lodge, No. 259, died of Typhoid Fever, November 13, 1890.

CLAIM No. 352. Eugene Rogers, of West End Lodge, No. 18, was killed by Falling Under Moving Train, November 14, 1890.

CLAIM No. 353. Wm. A. Toohy, of Wm. Hugo Lodge, No. 166, was killed by Engine Jumping Track, November 15, 1890.

CLAIM No. 354. James J. Harlee, of Congaree Lodge, No. 427, died of Typhoid Fever, November 16, 1890.

CLAIM No. 355. John Minke, of Forest City Lodge, No. 10, was declared totally disabled by Amputation of Leg, November 18, 1890.

CLAIM No. 356. Arthur J. Grant, of Eastman Lodge, No. 134, died of Typhoid Fever, November 19, 1890.

CLAIM No. 357. James F. Phelps, of Monte Sano Lodge, No. 279, was killed in a Collision, November 21, 1890.

CLAIM No. 358. Fred L. Dexter, of Mt. Tacoma Lodge, No. 192, was killed in a Collision, November 29, 1890.

CLAIM No. 359. Robert Kennington, of Santa Rosa Lodge, No. 308, died of Small Pox, December 3, 1890.

An assessment of Two Dollars (\$2.00) has been levied for the payment of the above claims, and you are required to forward said amount for each member whose name appears on the rolls January 1, 1891, as provided in Section 52 of the Constitution, said remittance to reach the Grand Lodge not later than January 20th, 1891. Any Lodge failing to make returns as above provided will stand suspended from all the benefits of the Order, as per Section 54 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. and T.

Notice to Secretaries.

OFFICE OF THE GRAND LODGE, B. OF L. F., }
TERRE HAUTE, IND., January 1, 1891. }

To Secretaries of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to Section 51 of the Constitution, you are required to report to the Grand Lodge as expelled all members who fail to make payment of their Quarterly Dues for the quarter ending April 30, 1891. The names of said members must be reported to you by the Collector of your Lodge not later than February 2d, and by you reported to the Grand Lodge immediately thereafter. Failing to report the names of expelled members as herein provided, the Grand Lodge will hold Subordinate Lodges liable for their assessments, as per Section 55 of the Constitution.

Fraternally yours,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. and T.

Beneficiary Statement.

Quarterly Dues Notice.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., January 1, 1891. }

To Members of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to Section 50 of the Constitution, you are hereby notified that the dues for the quarter ending April 30, 1891 (such an amount as may be determined by the several Lodges, provided in no case it shall be less than five (\$5.00) dollars), are now payable, and must be paid to the Collector of your Lodge on or before February 1, 1891. This amount will be in full payment of all Subordinate Dues and Beneficiary Assessments levied by the Grand Lodge for said quarter, as provided in Section 134 of the Constitution. All beneficiary members now enrolled, and all those admitted prior to April 1, 1891, are liable for the full amount of Quarterly Dues for said quarter. All members initiated during April (from the 1st to the 30th, inclusive), are exempt from payment of Quarterly Dues for said quarter, as provided in Section 131 of the Constitution. Any member failing to make payment as above provided, will be expelled from the Order, as per Section 51 of the Constitution, said expulsion taking effect February 2, 1891, and the Secretary is required to make due report thereof to the Grand Lodge.

Yours fraternally,
F. P. SARGENT, G. M.

EUGENE V. DERS, G. S. AND T.

Application Fees, Initiation Fees, and Grand Dues.

At the late Convention held at San Francisco, some material changes were made in the laws relating to Application Fees, Initiation Fees, and Grand Dues, and an emergency being declared for the immediate taking effect of said laws, the same were declared in force and effect from and after their passage. Other changes were made in the laws of the Order, but these do not take effect until February 1st.

The Application Fee was reduced from \$2.50 to \$2.00, and the Grand Dues were increased from \$1.50 to \$2.00.

The Initiation Fee may be fixed by Subordinate Lodges at any amount not less than \$3.00.

Upon the admission of an applicant, the Application Fee of \$2.00 is applied to his Grand Dues, and the Receiver is required to forward the same to the Grand Lodge with the first regular returns made after the admission of said applicant.

Receivers will take notice that from this time forward they are required, under the provisions of the new law relating to Grand Dues now in effect, to remit \$2.00, instead of \$1.50 as heretofore, for each newly admitted member.

All applicants for membership admitted after May 1st, will be exempt from Grand Dues until the following fiscal year.

Grand Lodge.

STILL ON TOP.**PRICES REDUCED.****BAKER'S TRIPOLINE****THE BEST METAL POLISH IN THE WORLD.**

For this year prices to firemen (as agents) will be: One pound boxes, per dozen, \$2.25; one-half gross lots, \$12; gross lots, \$22.50. Three pound pails, \$5.50 per dozen. Five pound pails, \$8.75 per dozen.

Cash must always come with orders to avoid delay. Bed rock prices are here given to firemen as agents and they cannot and must not expect to buy from dealers at these prices. Samples sent free on application. Address

THE MATCHLESS METAL POLISH CO.,
88 MARKET STREET, CHICAGO, ILLINOIS.

Alexander's Ready Reference**New 1890 EDITION For Engineers and Firemen.**

This book contains all of the items that were in all previous editions, some of which have been greatly improved. Two pages have been added to the time and speed tables, also forty five pages of new items have been added. Two very fine and costly engravings of the Westinghouse Automatic and Air Brake Gear have been substituted for the old cuts, one of which is 9 by 34 inches, showing on one sheet the whole brake arrangement from the pump on the engine to the rear end of a passenger car. The new **QUICK-ACTING TRIPLE VALVE**, and the **NEW ENGINEER'S BRAKE VALVE** is shown also, and very clear explanations of the manner of handling are given. A diagram of **SLIDE VALVE MOVEMENT**, 16½ by 18½ inches, accompanies each book, the explanation of which is made so clear that any person can understand it. It shows **EVERY PART OF VALVE MOTION**, from the eccentric to the steam chest, as well as the manner in which steam is admitted to and discharged from the ports in the cylinder. It shows the piston also and everything connected with it. There are also three large engravings of engines, making five in all, in a pocket in each book. The whole work without doubt contains **MORE VALUABLE INFORMATION IN FEWER WORDS**, and is easier understood by railroad men, than any other book now in print, because it is written in the same manner that railroad men talk to each other, and by one who has already had **FOURTY YEARS PRACTICAL EXPERIENCE**. **REMEDIES FOR BREAK DOWNS AND FAILURES OF EVERY KIND** that are likely to occur on the road are given, in language familiar to every engineer or old fireman, also the **BEST PRACTICES FOR RUNNING**. A careful study of the principal items of the old editions has qualified very many good **FIREMEN FOR EXAMINATION AND PROMOTION**. Their letters to me say in substance, "I would not have been promoted without it," or "It put me on the right side." The book is very valuable to **MEN WORKING ON REPAIRS OF ENGINES**, and is a gold mine to locomotive **FIREMEN AIMING AT PROMOTION**. Price \$1.50 per copy.

Address,

THEO. DEBS,

TERRE HAUTE, IND.

8,700 COPIES

OF

Twenty Years with the Indicator

Sold to September 3d, 1890. Two vols. in one large 8vo, illustrated.

Price \$2 50 post-paid.

THOMAS PRAY, Jr.

P. O. Box 2,728,

BOSTON, MASS.

A Brawny Bargee at the Helm.

To-day it is raining in torrents. He knows by experience the value of a "Fish Brand Slicker." It is his sole article of dress, and to him worth drawers, shirt, coat, vest, and pants. He'll tell you tales by the hour of storms lasting days and nights when that "Slicker" made up the whole difference between comfort and misery; and all for a mere trifle from his week's pay. Why don't you buy one for yourself? To realize how little it costs, think how long it lasts. It will outwear four suits of clothes. Better get one to-day, before you forget it. A day's delay may cause a month of sickness, and cost a hundred times the price of a Slicker. Beware of worthless imitations, every garment stamped with the "Fish Brand" Trade Mark. Don't accept any inferior coat when you can have the "Fish Brand Slicker" delivered without extra cost. Particulars and illustrated catalogue free.

A. J. TOWER, - Boston, Mass.

THE International Fraternal Alliance.

Leading Endowment Order of America.

Pays \$700 to \$4,900 during Life as follows:

\$200 to \$1,400 in three years; \$200 to \$1,400 in five years, and \$300 to \$2,100 end of seven years.

\$7 to \$49 a week in case of sickness or accident.

Death Benefits also paid.

Cost to join \$5, assessment \$1.50.

AGENTS WANTED AMONG FIREMEN.

WANT A FEW FIRST-CLASS AGENTS WANTED IN THE BROTHERHOOD.

VARIABLE EXHAUST DAMPER, FOR LOCOMOTIVES.

PATENTED NOVEMBER 10, 1885.

The use of the Damper, placed under control of the Fireman, assists him in the performance of his duties, so that, according to his testimony, the difference is as day and night, as compared with an engine without the Stack Damper.

RESULTS:

TO THE FIREMAN.—Less labor, no coal gas in the cab, no blowing of cinders and sparks into the front of the cab when open, and easy control of the fire and steam pressure.

TO THE R. R. CO.—In most cases large saving of fuel, also preservation of the flue joints and firebox, and safety against fire from sparks.

TO THE PUBLIC.—Cleanliness and noiselessness.

SIDE BY SIDE.

TWO HEROES, speeding toward their homes where Wife and Little Ones await them, **MEET THEIR DEATH** while at the **POST OF DUTY.**

On Friday evening, October 3, 1890, a freight train, rushing down a heavy grade at full speed to the entrance of a tunnel, plunged into a land-slide which had completely blocked the entrance, burying the engine and piling up the cars in a heap of ruins. To add to the horror the wreck took fire. The Engineer and his Fireman were covered in the debris. The Fireman, **GEORGE KNUCKLES**, was caught by the arm, and was not released until about daylight the next morning, while **ENGINEER MCCOY** was literally buried beneath the pile of wreckage. With his head terribly crushed and his body almost cooked by steam and water, he finally succeeded, after more than an hour, in crawling out more dead than alive.

Both men were insured in the **RAILWAY OFFICIALS' AND CONDUCTORS' ACCIDENT ASSOCIATION**, and the history of their case is interesting.

ENGINEER JAMES B. MCCOY, Of Atlanta, Georgia,

was insured in the Railway Officials' and Conductors' Accident Association for \$1,000 at death and \$5 weekly indemnity. He was in a wreck on August 17th, being badly scalded and bruised. On August 26th, the Association sent him, while laid up, his first week's indemnity, and on October 2d, the morning of his death, had sent him the balance of his indemnity for seven weeks. His first run after his recovery was that in which he was killed, on October 3d. He lingered in awful suffering until three o'clock Saturday morning, when his brave soul went on from his poor, maimed body. At nine o'clock that morning the Association in Indianapolis learned of his death, by telegraph. Before ten o'clock they telegraphed to his widow \$250 *Funeral Benefit*, and it reached her four hours and a half before the remains of her husband were brought home. Saturday afternoon's mail carried the balance of his death indemnity, which was paid over to Mrs. McCoy, and her receipt in full obtained on October 5th, just five days after his death. The following acknowledgment was received October 10th:

ATLANTA, GA., October 8th, 1890.

W. E. BELLIS, Secretary Railway Officials' and Conductors' Accident Association, Indianapolis, Ind.:

Dear Sir:—I have this day received from J. D. Collins, your agent,

the sum of \$1,000, being the full amount due me on policy held by my late husband, J. B. McCoy, who was killed at Little Tunnel, K. T., V. & G. R. R., October 6th, by running into a land-slide. I wish to extend my heartfelt thanks to the noble Accident Association. The \$250 funeral benefit was paid to me in six hours after my husband's death occurred. The full amount of \$1,000 was settled in five days after date of death.

I remain, truly yours,
Mrs. MELLISSA MCCOY.

FIREMAN GEORGE KNUCKLES, Of Atlanta, Georgia,

had his arm badly crushed and burned, but the Association did not learn of his being in the wreck until Monday evening, October 6th. He was insured for \$2,000 death and \$10 weekly benefit. On Tuesday the Association sent him his first weekly indemnity. On Thursday they were notified that his arm had been amputated on the night of October 6th, at the hospital in Dalton. The same day, October 9th, they telegraphed to him the sum of \$250, and sent by mail the balance, \$750, due him as *Half Benefit for loss of one limb*. On Saturday morning, the 11th, they were notified that he had died from his injuries on the night of Tuesday, October 7th, and the same day (October 11th) sent to their agent in Atlanta the remaining \$1,000 having settled the full claim of \$2,000 in five days from the first information received of his injury, and within four days of his death.

CELEBRATED

Pocahontas Semi-Bituminous Coal

1 Broadway, New York. 308 Walnut St., Philadelphia.
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

This monthly periodical has proved a great success; contains plans and elevations of attractive and inexpensive country homes. Also, colored plates. Terms, \$3.50 a year. Single copies 25c. Address, MUNN & CO., 361 Broadway, N. Y.

Baldwin Locomotive Works.

**ESTABLISHED 1831.
ANNUAL CAPACITY 800.**

LOCOMOTIVE ENGINES,

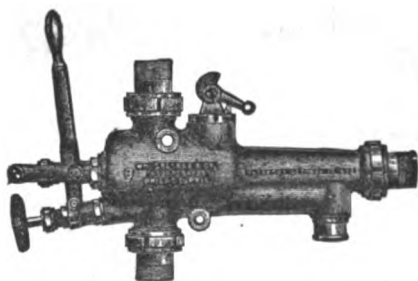

Adapted to every variety of service, and built accurately to standard gauges and templates. Like all parts of different engines of same class perfectly interchangeable. Broad and Narrow Gauge Locomotives; Mine Locomotives by Steam or Compressed Air; Plantation Locomotives; Noiseless Motors for Street Railways, Furnaces, etc.

**BURNHAM PARRY, WILLIAMS & CO., Proprietors,
PHILADELPHIA. PA.**

WM. SELLERS & COMPANY,
(INCORPORATED.)

SOLE PATENTERS AND MAKERS OF

Self-Acting Injector of '87

Range of Capacity over 60 per cent., and can be regulated, therefore, to work continuously for light or heavy trains. Never fails to promptly lift hot or cold water.

No service on a locomotive sufficiently severe to permanently stop its working.

IT WILL RE-START ITSELF

should the Jet break from interruption of the stream or water supply, as soon as the supply is resumed.

ADJUSTS ITSELF

to varying steam pressures without waste of water. Increases quantity of water with increase of steam, and vice versa.

Very easily operated—Started by pulling out the lever, and stopped by pushing the lever in.

Descriptive Circular and Price List sent on application to Office and Works.

JAROS HYGIENIC UNDERWEAR

This UNDERWEAR ESPECIALLY ADAPTED FOR RAILWAYMEN is recommended by **GRAND MASTER SARGENT, VICE G. M. IANNAHAN** and **GRAND SECY and TREAS. DEBS**, in the interest of the **BROTHERHOOD OF LOCOMOTIVE FIREMEN**. Endorsed by **U. S. ARMY and NAVY, POLICE and FIRE DEPARTMENTS** in large cities in this country, also most **PROMINENT PHYSICIANS** in Europe and America.

Particulars of the **SPECIAL BROTHERHOOD ARRANGEMENTS**, also 80 page treatise mailed free on application.

JAROS HYGIENIC UNDERWEAR CO.,
52 EAST TENTH ST., NEW YORK.

DREHER'S

CAR CLEANING COMPOUND

Will clean thoroughly, preserve, and extend the life of Paint and Varnish.

Will make a Locomotive look new.

Use No. 1 on Tender and Cars.

No. 2 on Locomotive Jackets and Cab, and all Brass Work, WHEN NOT BADLY STAINED.

Manufactured by

THE DREHER MFG CO..

7 PLATT ST., NEW YORK CITY.

A conductor on a Western Express is the marvel of those who have been let into his secret. Although having had both of his feet amputated, he is a conductor of extraordinary ability.

He passes through his train going at the rate of fifty miles an hour. The car jolts, hitches, sways, and he retains his balance without the least awkwardness.

At stations he alights with agility, watches his passengers and gives signals. boards his train and walks the passageway with the steadiness of one possessing his natural legs.

Day after day for three years he has performed this round of duty, and not a soul has had occasion to suspect that he operates on a pair of artificial legs with rubber feet, and only those to whom he voluntarily reveals his condition ever know of his dependence on artificial extremities.

All this is made possible by the virtues of rubber, which largely composes the feet; the old methods of artificial limbs, with wooden feet and mechanical joints, would render this man unsafe, tottish, unsteady and unfit for a position that requires sound footing. The engraving represents Mr. Wade operating on his artificials in his chosen profession.

Conductors, engineers, firemen, brakemen, and men of all trades, who have met with the loss of either extremities, have been restored, and enabled to resume their labors by the use of artificial limbs with rubber hands and feet of the MARKS Patent.

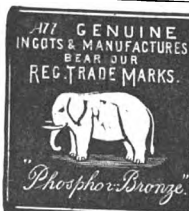

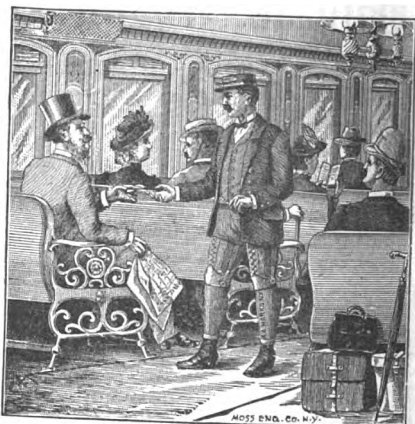

Subjects can remain at home and have artificials made, with fit guaranteed. One-half the legs and arms are made from measurements and profiles, without the presence of the wearer.

Indorsed by the United States Government, the eminent surgeons in the country and over 11,000 men, women and children who wear them, residing in all parts of the world.

A treatise of 400 pages, with 200 illustrations, and 1,000 testimonials, sent free of charge.

Address,

A. A. MARKS, 701 Broadway, New York City.

Be Sure To Get

MEXICAN MUSTANG Liniment.

IT IS for MAN and BEAST.

Penetrates Muscle,
Membrane and Tissue
to the very Bone Itself.

THIS NO SUBSTITUTE WILL DO!

READ WHAT IT HAS DONE!

Office of the City Auditor,
Richmond, Va., Nov. 15th, 1884.
Messrs. LYON & CO., New York.
Gentlemen: On Saturday last, November 8th, my son, a youth of seventeen years, was badly burned on the hands and face by an explosion of powder while assisting in firing a salute in honor of the election of Cleveland and Hendricks.

I at once commenced the use of your **MEXICAN MUSTANG LINIMENT**, and to-day, Saturday, November 15th, he is almost entirely well. His hands and face were nearly roasted. I have used about 10 bottles, 25-cent size, and it has completely healed the burns without leaving a scar. I have no doubt you have any number of testimonials as to the efficacy of your Liniment, but I cannot refrain from adding my testimonial with my heartfelt thanks for the great benefit my son has derived from its use.

I trust you will continue its manufacture, that all suffering humanity may be benefited. It is worth its weight many, many times in gold.

I may add that no doctor was called in or consulted at any time since the accident. The **MEXICAN MUSTANG LINIMENT** did the work entirely.

Respectfully yours,
W. J. GENTRY, Secretary,
Richmond City Gas Works.

LOCOMOTIVE

FIREMEN

YOU WISH PROMOTION. HEALTH MEANS ADVANCEMENT.

YOU ARE AMBITIOUS TO BECOME AN ENGINEER. Preserve your Muscular Strength by a timely application of

M.M.L. **MEXICAN MUSTANG LINIMENT**, which gives immediate relief and speedy cure

to Rheumatism, Sciatica, Lame Back, Pains between the Shoulders, Facial Neuralgia, Sore Throat, Toothache, Bites, Bruises, Bunions, Corns, Burns, Scalds, Cuts and ALL OLD SORES.

As Sunshine, Rainstorm and Snowstorm are mingled in the honest service of all Trainmen, the Faithful **MUSTANG** is constantly needed to cure **CHILBLAINS**, **FROST BITES** and all **INFLAMMATION** arising from exposure to severe weather in climbing over the mountains and plowing through Snow Blockades.

Mustang Liniment discounts all "lay-offs" from **LUMBAGO** or **PNEUMONIA**, if applied in time and well rubbed in! The FIREMEN who "handle the scoops," "shine the brasses," "clean the jackets" and "oil the bearings;" the ENGINEERS who hold on to the "Throttles;" the BRAKEMEN, whose lives and limbs are in constant danger for want of more and better "automatic car couplers;" the TRAINMEN, climbing over "Icy Freight Cars;"—in truth, the CONDUCTORS, SWITCHMEN, YARDMEN, SECTIONMEN, FRICTIONHANDLERS, BAGGAGEMASTERS and all Railroad men need

—MEXICAN MUSTANG LINIMENT.—

Apply it VIGOROUSLY! It will achieve the *Climax of results!* 'Tis the *Acme of Reliable Remedies!* It is not a new, untried article. For nearly half a century it has been sold all over the civilized, progressive world, and has cured millions of both MAN and BEAST!

No Mechanic wants to be a candidate for an "ambulance" or a "shutter;"—hence all should keep the **Mustang Liniment** in Shop, Stable, Factory, Kitchen, Round House, Toolchest, Engine Cab. All Superintendents and General Managers of Railways should see that a good stock is kept among their stores.

To FIREMEN and all R. R. men we say: Let the "head-light" of intelligence burn in your brains, devotion to duty warm your hearts, and the glow of **MUSTANG LINIMENT** run up and down your Spinal Column, and you'll be all O K for work. If promotion is to be had, you'll "get there" sure! Whether you win your way on a six, eight or "ten wheeler" makes no difference.

ALL GENERAL MANAGERS OF RAILWAYS should see that **MUSTANG LINIMENT** is kept in the Shops and carried on all the Freight and Passenger Trains. It is as necessary as Axle Grease for your Trucks, or Oil for Locomotives. Its timely use would save great suffering, much expense and many lives.

Every loving, devoted wife will see that her husband has **Mexican MUSTANG LINIMENT** always kept in his Kit!

LYON MANUFACTURING CO., 59 FIFTH AVE., New York City. (SOLD BY ALL DRUGGISTS.)

If you have Diseases of Skin, Ulcerated or Swollen Glands, Abscesses or Sore Leg, Carbuncles or Boils, Hip Disease, White Swelling, King's Evil, Sore Eyes of Scrofulous Origin, Kidney and Liver Diseases, Headache and Neuralgia, Bowel or Stomach Trouble, or acquired Blood Disease,

THE CACTUS BLOOD CURE WILL CURE YOU.

MEXICAN NATIONAL ENGINEERS SPEAK.

We, the undersigned, engineers of the Mexican National Railway, and members of the Brotherhood of Locomotive Engineers of Mexico, certify that we have used the CACTUS BLOOD CURE for blood diseases, and we can truthfully say that with ourselves as well as with our acquaintances the remedy has effected a perfect cure when other medicines have failed.

Please use this certificate for the benefit of our brother engineers and the general public.

W. M. DAVIS,

GRAND SPECIAL SALE

—OF THE—

RAILWAY MEN'S FAVORITE WATCH.

We are making a strenuous effort to introduce our goods among railway men throughout the United States, and in order to attain our object we are well aware that it is necessary to offer you the best goods, at prices so low that you cannot afford to buy elsewhere. **BEST IN THE WORLD.**

The Dueber-Hampden Watch!
Cheapest House in America

The John C. Dueber movement, made by the Hampden Watch Co., is suitable to the railway service in every respect. It is solid steel, handsomely damasked, full ruby jeweled 4 pairs in gold settings, chronometer balance, patent pinion and escapement, Breguet hair spring, patent regulator, and accurately adjusted to heat, cold and position. This movement is specially guaranteed by the manufacturers to be the best time-keeper in the world. It will not make any noticeable variation of time, and is, consequently, almost indispensable to railroad men.

We quote the John C. Dueber movement in Silverine, Coin Silver and Gold filled cases. Silverine cases are guaranteed to retain their color equal to coin silver. Our Coin Silver cases are of full standard value. The Gold Filled cases are made of two heavy plates of solid 14 K Gold over fine composition metal, and are warrant-

ed to wear 20 years.

ALL OUR GOODS ARE WARRANTED.

READ OUR PRICES.

LEGISLATION.

The season has arrived when the Legislatures of most of the states of the Republic are in session, and one of the signs of the times fruitful of cheering reflections, is, that workmen are on the alert to secure legislation, which, while of vast importance to themselves, works no wrong to employers or to society.

In this connection, the question arises, what laws are workmen contending for? It is only to a limited extent that we can answer the interrogatory, and what we have to say relates especially to railroad employes.

Some very grave questions relating to legislation important to railroad employes are up for debate and will be urged upon the attention of Legislatures.

The right of corporations to employ Pinkerton thugs to murder workmen, ought not to be tolerated in the United States for another month or year. No language, however denunciatory, does justice to the in-

famy. A moment's reflection gives the atrocity such damnable proportions as to create thrills of horror.

Take a recent instance on the New York Central, of which Chauncey M. Depew is President. On this road, or system of roads, a man, by the name of H. Walter Webb, employed these murderers, the most infamous creatures to be found in the brothels, drinking dens and slums of a great metropolis. These thugs, cut throats, outcasts and vagabonds of the lowest type were hired, armed, and sent forth to kill workmen, railroad employes, as if they were so many dogs. Did Mr. Depew protest? Not a word was ever heard from him, nor from any other railroad corporation in the land. Railroad employes everywhere, are, or ought to be aroused, and should appeal to Legislatures to enact laws which put an end to the employment of Pinkertons. Some states have already passed laws putting an end to the monstrous devilishness, and railroad employes should continue their efforts until the "damned spot" upon the escutcheon of the country, is wiped out.

The employment of *spotters*, by railroad corporations, is scarcely less disgraceful than the employment of Pinkerton reprobates. The term "spotter" is everywhere odious. The spotter is a knave. His profession stamps him as a scoundrel. He is the sneak thief who steals a man's good name for cash. He stabs character for pay. For pay he lies—defames men that he may live. The employment of such scamps to ruin the character of men, ought to be made a felony

by the law. Thousands of men have lost employment and been forced into idleness and covered all over with disgrace by the nefarious practices of spotters.

Railroad employes have a deep interest in shortening the hours of labor. Aside from the physical fatigue of their employment, men in the railroad train service carry a weight of responsibility in itself exhausting.

The Legislature of Ohio, March 26, 1890, passed a law, providing as follows:

That no company operating a railroad over thirty miles in length, in whole or in part, within this state shall permit or require any conductor, engineer, fireman or brakeman, on any train who has worked in his respective capacity for twenty-four consecutive hours, except in case of casualty, to again go on duty or perform any work until he has had eight hours rest.

The wisdom of such a statute is apparent at a glance, and such a law should be on the statute books of every state in the Republic for the protection of employes, and the safety of travelers.

Again, railroad employes should act as a unit to have on the statute books of every state, a law similar to that passed by the Legislature of Ohio, April 2d, 1890, as follows:

That it shall be unlawful for any railroad or railway corporation or company, owning and operating, or operating, or that may hereafter own or operate a railroad in whole or in part, in this state, to adopt or promulgate any rule or regulation for the government of its servants or employes, or make or enter into any contract or agreement with any person engaged in or about to engage in its service, in which or by the terms of which, such employe in any manner, directly or indirectly, promises or agrees to hold such corporation or company harmless, on account of any injury he may receive by reason of any accident to, breakage, defect or insufficiency in the cars or machinery and attachments thereto belonging, upon any cars so owned and operated, or being run and operated by such corporation or company being defective, and any such rule, regulation, contract or agreement shall be of no effect.

The foregoing provision of the Ohio statute is eminently wise. It simply preserves and protects the rights of employes. It works no wrongs to corporations or to society. To obtain work the law declares a man need not sign away his rights, and better still, if he does sign away his rights that he may earn a living, the law says such a contract shall be null and void.

Again the Ohio statute provides that:

It shall be unlawful for any corporation to compel

or require directly or indirectly an employe to join any company association whatsoever, or to withhold any part of an employes wages or his salary for the payment of dues or assessments in any society or organization whatsoever, or demand or require as a condition precedent to securing employment or being employed, and said railroad or railway company shall not discharge any employe because he refuses or neglects to become a member of any society or organization. And if any employe is discharged he may, at any time within ten days after receiving a notice of his discharge, demand the reason of said discharge, and said railway or railroad company thereupon shall furnish said reason to said discharged employe in writing. And no railroad company, insurance society or association, or other person shall demand, accept, require or enter into any contract, agreement, stipulation, with any person about to enter, or in the employ of any railroad company whereby such person stipulates or agrees to surrender or waive any right to damages against any railroad company, thereafter arising for personal injury or death, or whereby he agrees to surrender or waive in case he asserts the same, any other right whatsoever, and all such stipulations and agreements shall be void.

The purpose of such legislation is to protect the employe in all of his rights, and to enable him to maintain his independence.

Such legislation as we have outlined and much more that could be mentioned, in which life is at stake, as in the case of brakemen, switchmen, and other employes engaged in the train service—railroad employes, it occurs to our minds, could urge upon the attention of legislators with eminent propriety.

But there are questions coming up, which we doubt very much, if the organization of railroad employes, *as such*, need concern themselves. We refer particularly to legislation fixing the rates of transportation of passengers and freight. It is a branch of railroading in which railroad employes are not directly interested. To fix rates of transportation is a subject, so far as we are advised, which is never discussed in the lodges of the B. of L. F., unless it be at such times when wages are sought to be reduced, while it is known that rates of transportation remain intact.

It will be understood that we discuss this question from an *organization* standpoint, and that we do not so much as intimate that the organization presumes to influence any man's views or vote upon any subject whatsoever of a political or partisan character.

Manifestly the railroad corporation has

certain rights, and we assume none are more clearly defined than to fix rates of transportation, when the laws do not define the rates, but leave it to the discretion of the corporation. It is a financial question, a question which touches wages directly and certainly, if employes do not demand legislation fixing their wages, it would seem unreasonable that they should demand legislation fixing rates of transportation. If in such matters, others feel aggrieved they should seek such redress as prudent action suggests.

A BANKRUPT WORLD.

A Boston financier has recently declared that the "World is bankrupt;" that is to say, the world can't pay its debts. In this case the "World" stands for the inhabitants of the world—the people—therefore this, the people owe the people more than the people can pay. Or, A owes A more than A can pay. The Boston financier, might have said with equal propriety, "I owe myself more than I can pay myself, and as a result, I am bankrupt."

But the Boston financier, after saying the "World is bankrupt," asks, "Where is the government, the bank or the man, who has enough money to pay his or her debts?"

The assertion, that the "World is bankrupt," and the question relating to the ability of governments, banks and men, to pay their debts, creates confusion. Leaving out all reference to banks and men, if the question included only governments—the declaration that the world is bankrupt, necessarily involves the conclusion that governments are also bankrupt—both of which are sheer fallacies.

A contemporary, in commenting upon the Boston financier's propositions, remarks that "Aside from paper and token currency, which is part of the debts of the world, the actual amount of money in the world probably does not exceed \$10,000,000,000 all told, while the national debts alone in the principal countries amount to at least \$23,000,000,000, and the debts of states, municipalities, corporations, and individual firms, including banks, can hardly be less than that of nations, and is probably greater." Accepting this as true, or approximately true,

the debts of the world would amount to \$46,000,000,000. Deducting \$10,000,000,000 cash, and the debt would be \$36,000,000,000. Bearing in mind that the debt of the world, less cash on hand, is \$36,000,000,000, we are told that the "world is not bankrupt so long as assets are in excess of its liabilities. That they are enormously in excess may not be doubted for a moment. The realized wealth in this country in 1880 was about \$48,000,000,000, or 60 per cent. more than it was in 1870. If the rate of increase was only half as great during the last decade as it was during the preceding one the total now must be at least \$62,000,000,000. The debts probably do not exceed \$12,000,000,000, so that the country is worth fully \$50,000,000,000 clear over and above all debts, and would be if the debts were all owed to foreigners, as they are not." Here then, we have the statement that the United States has sufficient wealth, or assets, to pay the debt of the world, \$36,000,000,000, and have a remainder of \$14,000,000,000. Upon the principle, that money or wealth, or assets, "talk," the United States must be preëminently a talking nation, and as a corollary, the man who has the most money, or wealth, is the most commanding talker, if not the most convincing.

There can be no mistake about the overwhelming power of money-talk. We have daily illustrations of the fact. Colonel Ingersoll talks, and the world shouts or laughs or moans, as the great magician sweeps the chords of human passions by his matchless eloquence. Like the storm-god, riding on old ocean's foam-crested billows, Ingersoll lashes the thought of great communities into yeasty waves. The spray mounts high, as at Niagara, bearing away rainbow-fancies of thrilling beauty, pictures that live forever in the memory. But, Jay Gould talks and lo! \$40,000,000 becomes \$90,000,000. It is a miracle of stupendous proportions, and a poor deluded world, with an eagerness which defies hyperbole, thrusts its hands into its pockets and pays dividends on water. Jay Gould talks, and nineteen millions of dollars suddenly take up the line of march in Indian file, to a "lock up," like Sioux hostiles to the "bad lands" and as the last dollar goes in and closes the door it

shouts, "panic" and at once confusion reigns supreme, and Mr. Gould takes many scalps, much wool, and other plunder—certainly money talks.

There have been times when misery talked, and "history repeats itself," so say the sages, and should it ever talk in the United States, would it talk French? Who knows?

But returning to the Boston financier's fallacy, that the world owes more than it can pay. We have the profound declaration that the people owe the people more than the people can pay. The world is the people and the people are the world. When France owed Germany a vast sum of money, the French people paid it. Now France owes France. As a proposition, there can be no greater delusion than to assert the bankruptcy of the world. It may owe more than it can pay for sunshine and moonshine and starlight—a debt of gratitude to high heaven, demanding for its liquidation obedience to heaven's command; otherwise, it is not insolvent, and if it were, one tear of contrition, obliterates all the entries in the book of the recording angel.

But the proposition that the world is bankrupt is entitled to consideration, the moment the people are divided into nations and classes. There is, as between nations and individuals, everlastingly what is termed in commercial circles, a "balance of trade"—to obtain the equipoise is what keeps the wheels of commerce revolving. To collect, to arbitrate to "sue and be sued" is the great business of the world, and is as common among savages, as where the full orbed sun of civilization shines. The only difference is in methods.

And here the question comes stalking to the front, who owes? The answer is, labor. It is not true. Labor owes no one, and yet it pays all debts—has paid them from the foundation of time, is paying them now, and will pay them till the angel, with one foot on the land and the other on the sea, proclaims that time shall be no more.

There was a time when we heard much of the "seven wonders of the world," the Pyramids of Egypt; the Pharos of Alexander, the Walls and Hanging Gardens of Babylon; the Temple of Diana at Ephesus; the Statue

of Jupiter; the Mausoleum of Artemisia; and the Colossus of Rhodes—all monuments erected by workingmen, of which all have perished, save the Pyramids of Egypt. The seven wonders of the world have multiplied by many millions, and the age in which we live is more prolific of them than any other age since the foundations of the Pharos were laid. Workingmen have built them and perished in the buildings as do the coral insects, which lay the foundations of continents. But workingmen were never paid, nor half paid.

Taking this view of the subject the world has been bankrupt from the day that Cain, with a murder mark upon him, fled to the wilderness and built a city. If the stars, and the sands upon the sea shore and the leaves of the forest, represented doubloons and were added and multiplied until only the infinite builder could comprehend the sum total, it would not cancel the debt the princely pirates of the world have owed and now owe the workers. Manifestly, the world is bankrupt, insolvent, and workingmen are the creditors, and the sufferers.

But, says the authority from which we have quoted, the United States could pay its debts and have a surplus of \$50,000,000. If the statement is true, every dollar of the vast sum represents the surplus wealth labor has created and which has been taken by, say 200,000 of the population of the country, leaving 62,800,000 to wonder by what methods the few have secured it all.

The same authority estimates the indebtedness of the United States at \$12,000,000,000. At the mention of the fact, another fact springs into prominence. The \$12,000,000,000 of indebtedness, is on interest at, say, 6 per cent. or \$720,000,000 a year. Who pays the interest? Labor. Stop work and not one cent of interest would be paid. The annual revenue required to keep the machinery of the government of the United States in operation easily duplicates the interest account, and hence when the merry bells tell a new year is born workingmen may say, "there is a sum total of \$1,140,000,000 of interest and revenue to be deducted from our labor this year, and the outlook is gloomy, no fair division can be anticipated ;

the sharks are after us," and then they inquire, "must this robbery go on forever?"

As the question goes round, there are symptoms of resistance. It takes the form of organization—of federation—and hope revives. Prophets say a better day is coming, that Christ is coming. We think so, if men are true to themselves, and are not bankrupt in courage, bankrupt in *spine* and independence. The world is dead without work. Only work vitalizes the world, and work is not bankrupt. It is self supporting and creates a surplus. Shall it have enough of the surplus to live decently? Hitherto there has never been a fair divide. Shall the future tell a different story? If workmen will it, then their redemption draweth nigh; if not, they will wear the badge of slaves till the day that the Judgment Books unfold.

HOMESTEADS.

"Man, through all ages of revolving time,
Unchanging man, in every varying clime,
Deems his own land of every land the pride,
Belov'd by heaven o'er all the world beside:
His home the spot of earth supremely blest,
A dearer, sweeter spot than all the rest."

"Mid pleasures and palaces tho' we may roam,
Be it ever so humble, there's no place like home."

The reader will be mistaken if he or she indulges the surmise that in writing of homesteads we propose being sentimental. Far from it; and yet, there is much connected and associated with home that constitutes it a never failing source of the purest, sweetest and most elevating thought that ever challenged the pen or tongue of the earth's mind nobility.

Home has been the fruitful theme of poets and orators, and will continue, while civilization endures, to arouse the noblest efforts of statesmen and philanthropists, worthy of the name, to secure to all men, to widows and orphans, homes safe from the adversities which in their vandal march, destroy the homes of the people.

In discussing the subject of "homesteads," "a person's dwelling place," we shall refer only to the policy of the government of the United States and of the states and territories, to secure to the people homes: first, by the general government, and, second, by the states and territories.

A public document says, "The homestead bill, or the granting of free homes from and on the public domain, became a national question in 1852. At the Free Soil National Convention in 1852, it was resolved—

"That the public lands of the United States belong to the people and should not be sold to individuals nor granted to corporations, but should be held as a sacred trust, for the benefit of the people, and should be granted in limited quantities, free of cost, to landless settlers."

From 1852 to 1862, the free homestead question became national. It was in the platforms of all political parties, and in 1862 a bill was passed and became a law, that any person who is the head of a family, or who has arrived at the age of twenty-one years and is a citizen of the United States, or who shall have declared his intention to become such, and who has never borne arms against the United States government, might enter 160 acres of the public domain for a homestead, free of cost, excepting the payment of ten dollars, and such homestead, when acquired, should be exempt from execution for debts contracted prior to the date of the patent conveying title to the settler.

This homestead legislation is justly regarded as eminently wise and beneficent. Entries of lands at once began, and steadily increased, until in the year 1883, 608,677 original homestead entries had been made, containing 75,215,104 acres, an average of 123 acres. During the same period, from 1862 to 1883, 213,486 final entries were made, containing 25,917,210 acres—that is, the parties originally entering the lands, had lived upon them the full term of five years required by law. During the year 1883, the number of original homestead entries made amounted to 56,565, embracing 8,171,914 acres, an increase of 11,234 entries over the previous year, and an increase of 1,823,769 acres over 1882.

Such is a brief résumé of the results of legislation on the part of the general government to secure to landless settlers a homestead, and as a result, the area of these free homesteads, absolutely secured up to 1883, was equal to the state of Kentucky,

and the area of the original entries was equal to the area of Kentucky, Indiana and Ohio.

We now turn to the legislation of states and territories to ascertain what has been done to secure the homestead from sale on execution for debt.

There are seven states which do not exempt a homestead from execution and sale, viz: Connecticut, Delaware, Indiana, Maryland, Oregon, Pennsylvania and Rhode Island. These states exempt certain personal property, but the homestead has to take its chances. In all the other states homesteads are exempted. The states specifying the amount of value which is exempt are as follows: Alabama, \$1,000; Arkansas, \$2,500; California, \$5,000; Colorado, \$2,000; Georgia, \$1,600; Illinois, \$1,000; Kentucky, \$1,000; Louisiana, \$2,000; Maine, \$500; Massachusetts, \$800; Michigan, \$1,500; Mississippi, \$2,000; Missouri, from \$1,500 to \$3,000; Nebraska, \$2,000; Nevada, \$5,000; New Hampshire, \$500; New Jersey, \$1,000; New York, \$1,000; North Carolina, \$1,000; Ohio, 1,000; South Carolina, \$1,000; Tennessee, \$1,000; Texas, \$5,000; Vermont, \$500; Virginia, \$2,000; and West Virginia, \$1,000. In addition to the exemption of the homestead, the states last named are liberal in the exemption of personal property required to make a family comfortable.

The states which do not specify amounts or the value of homesteads exempt are as follows, viz: Florida, 160 acres of land, or one-half acre town lot with improvements; Iowa, 40 acres of land or one-half acre town lot; Kansas, 160 acres of land or one acre city lot; Minnesota, 80 acres of land or a town lot; Wisconsin, 40 acres of land or one-fourth acre town lot. These states also make liberal exemptions of personal property.

The territories are liberal in exempting homesteads from execution and sale for debts. Arizona exempts to the value of \$5,000; New Mexico, \$1,000; Utah, \$1,000; and Wyoming \$1,500. The territories are also liberal in exempting personal property.

In the District of Columbia, under the legislative jurisdiction of Congress, there is no homestead exemption. Personal property of moderate amount is exempt from

execution, and wages to the amount of \$100 a month are also exempt, but the creditor may seize the home and sell it for debt.

It will be observed from the foregoing that the great majority of the people of the United States are committed to the policy of rescuing the home from seizure and sale for debt, the idea being that the welfare of society, and therefore the welfare of the state, depends largely upon the home. If it is secure, all is safe.

Thomas H. Benton is credited with saying in the United States Senate that "tenantry is unfavorable to freedom. It lays the foundation of separate orders in society, annihilates the love of country, and weakens the spirit of independence. The tenant has, in fact, no country, no hearth, no domestic altar, no household god." This is strong language; but the idea is that with a home of their own, secure from adversities, the people are more strongly attached to their government and are more independent and patriotic. The free homestead, the homestead that is exempt from execution, is a guarantee of security to the family, to wives and children, widows and orphans. It is a protection against many of the ills of life, many of which may be overcome if the home is secure, but which if the home is taken, overwhelms the unfortunate in "irretrievable disaster." With a home secure, children may be kept together, may be educated, and may go forth from the parental roof to be useful and honorable citizens; but if the home be taken, families become often wanderers, children are separated and the ties of home become attenuated or are destroyed entirely.

To own a home, tho' ever so humble, is a noble ambition, and should be encouraged, and legislation which exempts the home from seizure and sale receives, as it ought to receive, the unqualified approval of the American people, and a state which refuses protection to the home is not keeping abreast of the wise and progressive ideas of the age.

The paper mills of the United States manufacture 2,250,000 tons of paper a year. About 70 pounds for each man, woman and child of the entire population.

THE SOCIAL PROBLEM.

Under the caption of "The Social Problem," Mr. Otto Peltzer, in a recent issue of the *Rights of Labor*, has something to say about "women with revolvers," and introduces the following:

The case of a woman recently arrested at Troy, N. Y., for shooting a man, is one of a class which is becoming altogether too common and which ought to be discouraged by severe penalties. The woman in the case followed the man to Troy for the purpose of shooting him, because he had seduced and abandoned her. This is the case as alleged by the would-be murderess. By her own confession she is a married woman, who perjured herself to obtain a divorce from her husband that she might marry the man she has now killed, who is a married man and the father of married children. Having secured her divorce she thereupon demanded that the man should also obtain one and marry her forthwith. When he failed to do this she followed him to Troy and shot him, and now she poses before the community as the victim of seduction, whose wrongs could only be righted by the death of the alleged seducer, and calls upon people to sympathize with her and condone her murderous purpose. There are plenty of maudlin, morbid women who will do so because she is a woman, just as there were not wanting numerous persons who sympathized with the late Mrs. Southworth after the murder of Pettus, and who are quick to take the side of any woman of the same kind whose alleged wrongs are simply ridiculous.

Take the case as Mr. Peltzer reports it, and the woman must be regarded as a hard case, but strange to say, Mr. Peltzer has no word of condemnation for the man in the case. Manifestly, the man had promised to marry the woman with all her moral deformities. And the fact that the man had a wife and was the "father of married children," presents him as a moral leper, and though it was a crime for the bad woman to kill him, he did not die an hour too soon. Such married men, the "fathers of married children," who go about the country forming liaisons with bad women who are married, or good women who are unmarried, are of no use under heaven in this world, except, possibly, as a fertilizing commodity. And though they ought not to be killed in such cases as Mr. Peltzer cites, the fact that they are dead should excite no regrets. But when these married men, the fathers of children, married or unmarried, seek for their victims unmarried women, or unsuspecting and unsophisticated girls; when their unbridled passions transform them into the most loathsome reptiles that pollute the

earth, worse, infinitely worse than asps, cobras, mad dogs or beasts of prey, then to kill them should be esteemed a public benefaction.

Mr. Peltzer in his article refers to "women with damaged affections" as follows:

A similar case, though having a different outcome, occurred the other day in New York, when a woman who had secured a divorce from her husband without cause and purely for the purpose of marrying a man who had engaged to get a divorce from his wife, brought a breach of promise suit against him because he failed to do so, and actually secured a verdict of damages from a jury, every man of whom should have been sent to some asylum for mental and moral treatment. The verdict is not only unjust but highly immoral. In both cases the action is immoral in every phase of them. There is no possible connection between the alleged cause and the crime. Neither was deceived nor had any honor to vindicate, nor had their victim violated any obligation, nor could they plead ignorance or credulity. It is a little too much for human patience that women of this sort should appeal to the sympathies of the community, whining about seduction and grieving about damaged affections and lost honor. It is a caricature upon justice that such women should be suffered to travel about with pistols and use them to enforce corrupt and degrading contracts which are not valid under any law, and which are disgusting and demoralizing to the community. It is true that these women should be made to pay the penalty of their crimes in a summary manner in the interest of public morals. The sympathy these women meet with from their own sex shows the present mental depravity of women generally, even of the morally good.

The jury in this case are entitled to the highest encomiums. The masculine miscreant, married as he was, was a twofold villain. He found a weak, if not a wicked woman, and his promises led her to wreck herself and her home; and when the ruin came, he, the lecherous, soulless and cowardly villain, sought to escape all responsibility, and, without compensation, permit the woman to bear all the unspeakable burden of obloquy. That he failed in this is proof as strong as holy writ that the jury, whose verdict was a double penalty, deserve the applause of all right thinking men, because it is calculated to throw some protection around the home, without which human beasts would forever place it in peril; in fact, in all such cases, the American home becomes the focal center where all virtuous and manly thought converges. The parties to such suits may be, in fact are, of little consequence, but the homes they wreck are

important. The infatuated woman, virtually an outcast, though she secured a verdict in her favor, will not outlive her disgrace; and, but for the verdict, the masculine dog would have escaped all penalties, except such as a guilty conscience imposes; but such moral lepers are not supposed to have a conscience.

Mr. Peltzer does himself and American ideas of home little credit when he refers to such matters in a way to leave the impression that no interests are involved save those only which attach to the individuals who, with equal audacity, violate laws, human and divine. In all such matters children, near relatives, and society at large, are profoundly concerned. It is marriage that creates the family and the home, and it is divorce and such perfidies as Mr. Peltzer sets forth that destroy the home, and the base creatures who wreck homes are infinitely worse than burglars, foot pads, highway robbers, or felons of any type—in fact, when men or women engage in the business they become the most deadly enemies that infest society.

Mr. Peltzer does himself special credit when he refers to a class of men who tolerate extravagance and then steal to make up deficits in their income. He expresses the robust opinion that such men are cowards, and adds:

The man who submits to the dictation or to the demands of a selfish, vain, greedy and extravagant wife to the extent of doing wrong to others, is as much of a coward as the one who knocks down a patient and suffering home-drudge. The former does infinitely more injury to society than the latter. The doings of the former are generally mistaken for over-kindness, and are always pardoned by women as such, while the act of the latter is at once stigmatized as that of a brute, as it deserves to be. The man, however, who in his home permits or encourages unreasonable extravagance by giving all he can earn for such indulgences, and who then, when the demands for more are to be appeased, quietly steals from his employer or swindles his customers or depositors or cheats any one who will trust him, is as much of a thief as the man who breaks into a house at night and robs an honest man of his possessions. Honesty may bar its doors against the latter, but it can not now-a-days do this against the former, who is a coward besides being a thief.

Mr. Peltzer is not too severe in his denunciations of the entire brood of thieves who steal for style, to keep up appearances, to swim in the polluted streams of fashion;

weak degenerate creatures without the courage to be poor and honest. But such detestable creatures are gentlemen compared with the base and beastly creatures who prowl about society seeking opportunities to debauch virtue and wreck homes.

"SQUEALING."

It is held, in some quarters, to be exceedingly reprehensible to exercise inquisitiveness for the purpose of determining the cause and the motive of human actions, which the *Philadelphia Ledger* calls "boring into character."

Manifestly, it is all wrong to "bore" into the private affairs of people, because they do not concern other people, and society can, if it will, impose such penalties as will remedy the evil. Paul Pryism, eaves-dropping, spying, inordinate scrutinizing, vulgar curiosity, denote always traits of character so low, mean and often vicious, that it becomes a difficult task to prudently characterize them. Such human reptiles, though differing widely in their habits and aims, belong to the same genus as sycophants, lick-spittles, parasites, the fawning breed of spaniels who are meanly submissive to the domination of those who, from considerations of self or position, lord it over their fellows.

In seeking to know the cause or motive of acts, it should first be known if the acts concern others. If it is found that the interests of the public are concerned, however much the term may be limited, then, in that case, the "boring" is justifiable, and ought to proceed until all the facts are laid bare.

The acts of a corporation are *not* private affairs. On the contrary, they are matters of public concern, and seeking to know all about the characters of the men who control and manage them, is in no sense prying into or "boring into" private character, or private affairs. It is just here that the "squealing" begins. Men who manage corporations don't want to be investigated, nor will they be, if they can avoid it. They revolt at criticism, and never with so much obstinacy, as when they know that their business is like a whited sepulchre, which they make appear fair on the surface, but which inside is full of business filth and felonies.

What is the record? Ask the authorities of Canada to name the number of the villains who have fled to their country, and whose presence befoul every city in the Dominion, from Nova Scotia to Puget's Sound—the most of them moral as well as financial scoundrels, many of them rotten pillars of rotten churches, who, like the Philadelphia *Ledger*, protested against “boring into character,” and found a subsidized press quick to “squeal” when the robberies of corporations and trusts, syndicates and millionaires, were alluded to by labor organizations, the labor press and the foully defamed “labor agitators” of the country.

The plea put forth by the millionaire press is, as the *Ledger* has it, as follows:

There is nothing in the universe, so far as we know, so complex, so intricate, so baffling to investigation, as human character. Motives and tendencies are so mingled and blended that it is impossible to lay them out in order and take an account of them. Let any one honestly attempt so to treat his own, and he will at once feel his inadequacy. Yet how much more difficult to enter into another's being, to detect his manifold propensities and weigh their power, to count up and discriminate his qualities, to estimate his temptations, to measure his responsibility. Even where the profoundest interests are involved, this is a task that may well daunt the wisest and the boldest, but where only curiosity seeks to be gratified, who that is rational will attempt to sound such depths or to solve such problems? The fact is, that if we take people as we find them, welcoming all their good points, and passing over the others, and being kind and generous to all, we shall come much nearer to the truth about them than if we labor to make a critical analysis of minds and hearts, of which we can only see a few fragments. It has been truly said that “few persons have courage enough to seem as good as they really are,” and only through sympathy can this courage be stimulated. For the good is always in the predominance: it is positive, and grows by being recognized; while evil is negative, and is dissipated by neglect.

The foregoing is the merest twaddle, an exhibition of senile drivel. It takes neighborhood gossip, the small talk of old women, and seeks to expand a vulgar habit of low bred people, so that honest investigation of the character and motives of men who manage affairs of public concern may be protected from scrutiny by the cry that private character is being invaded by critics whose motive is detestable.

We are admonished to “take men as we find them.” This is very generally done.

With men in private relations, it ought always to be done—but the moment a man assumes any public function whatever, he ought to be taken for just what he is worth in the matter of character, and to know what he is worth, “boring” is not only in order, but becomes a duty, which if neglected, the consequences are likely to be disastrous, as the people have too often realized.

As we have intimated, the lack of investigation, the absence of “boring into character,” has lined the strand with all sorts of wrecks. Misplaced confidence is but another term for a lack of scrutiny of character.

The Government, in many of its dealings with men, assumes that every man is a rascal, and requires bond and security for integrity, and the greater the responsibility, the more exacting is the law. No man can go into court and testify in the case of a dog fight without being confronted with the necessity of taking an oath subjecting him to the penalties imposed for perjury if he swears falsely. It is oath and bond all the way through. The law makes “boring into character” indispensable, but in thousands of instances, the people blindly neglect their interests and permit sleek scoundrels to rob them, and wake up, when it is too late, to the fact that a little judicious “boring into character” was just what they ought to have done—the very thing the Philadelphia *Ledger* would have its readers believe is a disreputable proceeding.

Take the railroad corporations of the country, why may not the public know fully the character of the men who control them? They deal with the public, and so outrageous were some of their transactions that Congress, after ten years of effort, passed the Interstate Commerce law to restrain them.

This “boring into character,” for that is really what it means, has proceeded steadily, until railroad employes are demanding that certain laws shall be enacted which shall restrain the rapacity of men, and inaugurate a reign of something approximating fair play.

The solicitude evinced by the *Ledger* for character is most remarkable. It says:

Then, this boring into character is always unpleasant. No one likes to feel that he is being men-

tally or morally dissected. Conscious as he may be of weaknesses and imperfections, he does not desire to have them patent to another's vision. It tends to embarrass and humiliate him, and finally to alienate him from the one who is thus peering into his nature. He becomes afraid of him, and unwilling to give him his presence or his confidence, and thus much good influence is prevented and much happiness is lost. Even though no word of reproof be uttered, if the spirit of criticism dwell in the heart, it will come to the front, and make itself felt, and will tend to separate us from those who might, by sympathy and kindness, be drawn toward us in friendliness and good-will. To stand apart and look at a man, striving all the time to look through him, will insensibly establish a kind of antagonism, which it is impossible to prevent. It puts men on opposite sides, while if they join hands in generous confidence, each trusting the other, without inquiring too closely into personal idiosyncrasies, the foundation of a good understanding, and of many a possible friendship, may be laid.

Really, the question arises, what is "character?" It is something that every man has, of some sort. It has been the theme of poets, philosophers, and writers, from time immemorial.

It is within the reach of every man and every woman to have a good character or a bad character, or what might be called a character between good and bad, which is neither good nor bad, partaking somewhat of both, but which, in fact, being neither, is no character at all. The *Ledger* fails to make the distinction between making charges against persons destructive of character and "boring into character," which is simply investigating character.

The books say: "A character is given particularly; a reputation is formed generally. Individuals give a character of another from personal knowledge; public opinion constitutes the reputation. Character has always some foundation—it is a positive description of something; reputation has more of conjecture in it; its source is hearsay.

"It is possible for a man to have a fair reputation who has not in reality a good character; although men of really good character are not likely to have a bad reputation."

A good character is like pure gold. It will stand any and every test. "Boring into" good gold is like boring into good character, the more you bore the better it is for all concerned. There is a world of difference in saying, "Your gold is spurious,"

or, "let me test your gold." The same is true of character. If the man having the gold knows it to be pure, he will reply promptly, "Test it to your heart's content." If he knows it will not stand the test, he *squeals*, and in *squealing*, he virtually says, "I was trying to pass counterfeit money." No better illustration could be found in testing character. If it is known to be *good*, the word will be, "Bore, investigate—satisfy yourself, the more searching the better."

Shakespeare said:

"Who steals my purse, steals trash; 'tis something, nothing,
'Twas mine, 'tis his, and has been slave to thousands;
But he who filches from me my good name,
Robs me of that which not enriches him,
And makes me poor indeed."

But "boring into character" is not "filching" a "good name;" on the contrary, it tends to establish a "good name" if the facts warrant such a priceless boon is possessed, and those only *squeal*, who know their character will not stand the ordeal of "boring."

We make no plea for slanderers, nor yet for

"Cold-blooded, smooth-faced, placid miscreants."

What we demand is, that without fear or favor, men who assume public trusts, shall have a good character; that the entire brood of impostors, pharisees and hypocrites, shall be tabooed in the interest of the people, the masses, and this thing the *Ledger* styles "boring into character" shall proceed more vigorously than hitherto.

Scoundrelism is rampant. It is everywhere. It is in the church—in the pulpit, and in the pew. It is in the courts—on the bench and in the jury-box. It is in the trust, the syndicate, and the corporation. It is in Legislatures and in Congresses, and it is in these places because men whose interests are at stake will not "bore into character." This scoundrelism is in banks, in insurance offices, on 'change, everywhere, where it can rob the people and grow rich. Let the boring into character proceed, though the squealing startles the continent.

ALIENS have secured 20,742,000 acres of our public lands, and the demand is that they shall give it up, or come over and take the obligations of citizenship.

Legend of the Montezuma Maiden.

DID you ever wonder from whence came those petrified nothings, known as Indian Legends—those fascinating waifs that drift to us from beyond the boundary lines of history? They seem to emerge from the mists and clouds of a forgotten past.

They do not pretend to be fragments of history. They are not even dignified by the doubtful title, traditions.

Within themselves and of themselves they hold the mystic charm of their own lives.

History contradicts them, reason and good sense smile at their harmless absurdities. More wonderful than all else, is the fact, that the people with whose ancestors they are supposed to have originated are profoundly ignorant of them.

It seems strange, too, that as the old and familiar tales are handed down from generation to generation and rounded to more beautiful proportions by the natural accretions of age, that new and fresh ones from time to time should spring into being.

They come into life clothed with that exactness of detail and fullness of description that would do credit to an act of Congress.

True it is, there may be a dearth of dates or a neglect to record the names of the actors in the scenes described; this, however, appears to be admissible in this peculiar realm of legendary lore.

Gathered in disjointed fragments, as the geologist collects the bones of extinct animals, they are again placed in combination and arranged so that they are supposed to resemble the original.

Another class is brought to light by the spontaneous outbreak of some former devotee of a superstition, who in a burst of confidence tells what he has long suspected to be only a myth of the past.

Among the wealth of legends that seem to permeate the air of our great Southwest, is the Legend of the Montezuma Maiden. As you stand on one of the high peaks of a spur of the Burro mountains that overlook the beautiful and fertile valley of the Gila, and also commands a far-reaching view off over the arid sands of southern Arizona, you may see at the very horizon's brink, a bright scintillating spark.

It looks like a rising star, or a huge diamond in a dark grey setting.

The traveler who is curious enough to wander that long weary distance over the dry, hot alkali sands, will be richly rewarded for his toil.

There he will find, on a slight eminence, a mammoth crystal of pure white quartz.

It stands some four feet above the surface of the plain, and from its base a small spring-like stream of water issues and flows off in a little rill for a few rods, where it is lost in the thirsty sands.

The waters of this little brooklet are clear and pure to look upon, but are bitter to the taste, and like the Dead Sea, or Great Salt Lake, they contain no living thing.

The crystal, or rather combination of crystals, is of that spar-like character known as "virgin quartz," and is perhaps among the largest and most perfect of its kind. The banks of the little stream are fringed with low-growing shrubbery and green grasses and rushes, thus forming a novel contrast to the vast expanse of brown, barren plain that surrounds it on every side.

Were we to listen to the cold, hard voice of science, we would be told that in some far distant day, when the world was young, there stood at this spot a mound or butte of some considerable size; that nature in her world building process had seen fit to form within that butte this beautiful crystal gem; that the friction of time through the long ages had worn away the more friable material and left the hard crystal standing on the little elevation caused by their decay. That the alkalis of the soil and the decomposition of mineral substances have imparted to the waters their bitter and brackish taste, and that the only thing wonderful or abnormal about the spot is the immense size and transcendent beauty of the lone crystal.

These phenomena, however, do not explain the presence of the Montezuma Maiden—as this crystal is termed—to that remnant of people who are still, with pious resignation, waiting the coming of their patron saint and prophet.

That people who worship at the shrine of the wonderful and cling to the traditions of the past, tell of a time when they were a powerful nation and ruled the western world. In those palmy days, on the banks of the majestic Rio Grande, stood a magnificent temple, the Temple of the Sun. Its grandeur was awe-inspiring to every beholder; it was the most gorgeous structure in all the world. About it lingered the quiet atmosphere of peace and plenty. Within its consecrated walls there staid a constant benediction, and through the gold-arched corridors ever sounded the low chant worship.

Its every appointment was fitting to a prophet and a king. Its spacious halls were thronged, and yet a brooding quiet reigned supreme, not that suppressed quiet of fear, but the easy, grace-like quiet of calm, subdued resignation.

Every chamber of the grand palace was open to the populace except one, the Chamber of the Everlasting Fire. Here presided the order of "keepers of the sacred fire," who had been raised to that dignity by the prophet-king as a reward of some act of merit, or for their great learning or piety.

Few were the favored ones beside who entered by permission this chamber at will.

Among the worshipers often present was

a dark-eyed maiden of peerless beauty. Her pious devotion, her modest demeanor and her vivacious wit, combined with her charms of person, had long since won the favor of the prophet-king. She was granted many favors without asking them, and ere long was instructed in the mysteries of the Chamber of Everlasting Fire and allowed to enter it. Here among the sages she often tarried long and gazed upon the sacred fires, or watched the wise men in their profound meditations; the chamber became her favorite resort, and she a favorite of the pious priests.

Growing familiar with all of the appointments of the sacred chamber, she became careless or forgetful of the never varying laws that ruled the place, the infraction of the slightest rule of which was visited by the direst punishment, even to the death of the offender.

It was a gala day in the great province; from far and near came peasant, priest and noble, robed in holiday attire and bearing in their hands the palm and fern, emblems of their south-land homes. A great feast was spread in the banquet halls, and music of the harp chorused by a thousand voices filled the air with melody.

Merry greetings and pious good wishes for the future were extended as friend met friend; and thus the day passed in feasting, song and worship, as was fitting for the greatest gala day of all the year.

Prominent amid the gay throng might have been seen the little maiden of the "fire chamber," the only of her sex that had ever entered that sacred hall, she had joined in the revelry with unusual zest.

As the blessings and farewells were spoken and the guests, light hearted and full of joy, thronged out the palace gate, she repaired to the sacred chamber to rest and con over the events of the day. Long she sat in sweet and silent meditation.

A rose dropped from the wreath at her brow. She held it dreamily in her hand for a time and then, forgetful, tossed it in the sacred flame.

An angry cry burst from the attendant keepers as they tried in vain to snatch it from the blaze. Unwilling hands seized her and bound her, unwilling feet led her before the great prophet-king. There the story of her crime was told. Unconsecrated hands had added fuel to the sacred fire.

That fire that none but those whose order gave them right should keep alive.

The prophet pondered long and prayed; but his law was as unchangeable as that of the Medes and Persians.

The maid must die! Thus with sorrow and deep regret he pronounced her doom.

Not before the populace's vulgar gaze, nor by the common executioner should she die but by his own hand her life should pay the

penalty of the broken law. With a sad heart he led her through the temple gates, never more to enter those halls where her brief life had shed so much sunshine.

For long days the prophet wandered with his beautiful culprit, over hill and dale and mountain pass, far out in the desert wild, away from mart or human trail. At last he rested, and as the full moon rose above the horizon he bade the maiden stand erect, and placing his hand upon her head he sealed her doom.

In life thou hast been a creature of beauty, in death I will make thee transcendent. Thus saying the maiden was transformed into a beautiful crystal gem. There in the pale moonlight he beheld the work that he had wrought, and as he placed his hand upon the cold hard stone his heart was moved afresh, and kneeling down he shed bitter tears, which ran off from the base of the gem-like crystal, and formed the little rivulet that flows from it to this day.

And thus they tell you the story of the Montezuma Maiden.

TRIOY, PA.

Chas. G. Van Fleet.

Pay as You Go.

IT is said of the eccentric John Randolph, of Roanoke, that on one occasion, while a member of Congress, suddenly springing to his feet, he exclaimed in tones shrill and piercing, "Mr. President, I have found the philosopher's stone—pay as you go."

No alchemist from the day his first fire was lighted ever made a more important discovery than that which is credited to the Virginia philosopher—"pay as you go." Search the teachings of all the ancient schools of philosophy, from the *academic* to the *stoic*, or from that time till Lord Bacon laid down his rules for prosecuting philosophical investigation, and nothing superior to Randolph's discovery will be found so intimately associated with men's welfare and happiness. "Pay as you go," is the panacea for more of the world's ills than alchemy or chemistry can lay claim to. In the first place, a man who "pays as he goes" is independent. The man at a dollar a day, who wears "hoddie grey," lives in a humble home and dines on "homely fare," is a more independent man, no matter what the surroundings may be, than the one who lives beyond his means, and is in debt. The man in debt is not, never was and never will be, an independent man. By being in debt will be understood to mean a man who owes more than he can pay—necessarily, not the man who may owe \$1,000 and have \$10,000 in assets with which to pay—not the man whose weekly income is \$6.00 and his expenses \$5.00, and who every Saturday squares accounts with the world, and who is in debt only for convenience; but rather,

the men who, knowing their exact income, make their expenses larger than their income, and therefore, become helplessly in debt. For such men there is neither peace nor prosperity in this world—whatever may be said of the next.

The men who "pay as they go," owing no man, are seldom, if ever, the victims of the temptations that beset the pathway of those who live beyond their means and are in debt.

It will be readily conceded that no allusion is made to debts which result from sickness or other misfortunes. I apply the philosophy "Pay as you go," to the robust, the men capable of earning a living, and who will accept nothing they do not pay for, who will owe no debt except that of gratitude, which, when recognized, as it must be by all manly men when circumstances create the obligation, and which, instead of being a burden, is a priceless benediction—a jewel on the very brow of the soul, never forgotten nor disregarded while memory holds sway.

If the reader hereof will stop to reflect, to call to mind those whom he has known to wander into crooked practices, to have wrecked their integrity, honor and good name, it will be found, in a vast majority of cases, they were the men who permitted their expenses to exceed their earnings, and who discarded the "pay as you go" philosophy.

Such reflections have no relation to a class known as confirmed "dead beats," characterless vagabonds, who prey upon boarding house keepers, and such persons as will lend them money or become surety for them when it is not possible for the law to enforce its penalties—though it is doubtless true in many such cases, that they were initiated into the ranks of petty swindlers by degrees, by permitting their expenses to exceed their earnings; who spending their money for whisky or at cards, permitted themselves to incur debts they could not pay; who, instead of reforming, drifted into the ranks of that despicable class of loafers and outcasts for whom there is no redemption. Of this class are the robbers of lodges, the meanest sneak thieves that infest communities.

If any one interested in such matters will consult social statistics, they will note that wives who seek release from their husbands by divorce, in a majority of cases assign as reasons "failure to provide" and abandonment." Such husbands are the characterless and Christless whelps, who spend their money regardless of all obligation to their wives and their children, imposed by divine or human laws, and are no more fit to marry than guerrillas in a Congo jungle. Nay! beasts are more regardful of their mates and whelps than are such human wretches of their marriage vows.

They are the depraved creatures who are expelled from lodges of workmen upon charges, such as "defrauding the lodge," "conduct unbecoming a gentleman," "dead beats," "swindling boarding houses," etc., all indicative of depravity, which doubtless had its beginning in spending more money than they earned. Such miscreants go from one place to another, always lying, always swindling; everywhere the degenerate creatures whose vulgar villainies excite abhorrence and keep them forever on the run to avoid merited punishment.

The question arises, were these knaves ever honest men? Were they once innocent and inspired by honest ambitions? In response to such inquiries, brief histories are often recited by those who happen to know something of their careers. Says one of John Doe, the confirmed loafer and dead beat, "I knew John when he was honest and respectable, a hard worker and who had a bright future before him. He had the confidence of his employer, and was in the line of promotion, but he drifted into vicious company and vicious habits, spent his earnings like a fool, swindled his lodge, borrowed money without intending to pay, and is now a confirmed vagabond." And thus, often in all circles, from cab to the general manager's office, the stories of wrecks are told, beginning in almost every instance with the fact that "Pay as you go" was unheeded, and debt and disaster followed.

Is there another side to such pictures of demoralization? Is there any plausible excuse that the outcasts can make, which in any wise modifies the severity of the popular verdict against them? Is society involved to any extent? True, it matters little what the "dead beat," the swindler, large or small, may say, the verdict will not be changed. The outcasts are doomed, and yet, men who study social problems are bound by every consideration of honesty, to investigate for causes productive of effects which create alarm.

Is it not true that society, made up of the body social, political, financial and religious, while deploring effects, is itself primarily and largely responsible for them? What is this thing styled "society" *par excellence*, with its cash and caste, its pomp and pride, its fashion and falsehood? Taken as a whole, it does not "pay as it goes." It sets the example of vulgar display and ostentation, fruitful of demoralization, from first to last.

The thing called "fashion," cruel, heartless and hollow, false and treacherous, vulgar and venal, issues its edicts and all fall down and worship, and from the millionaire to the *nickelair*, with eager step, as if their eternal salvation depended upon their worse than pagan devotion, urge their way to the shrine of the despicable goddess to swear

falty to her decrees. The one dollar a day man seeks to emulate the two dollar a day man, and thus on through all the gradations from poverty to plutocracy, "pay as you go" has no place in the thoughts of the surging mass.

To maintain *style*, stealing is universal, until the burglar proof safe has become a desideratum; no one feels secure. The few "pay as you go," the multitude *prey* as they go. Banks, corporations, insurance companies, industrial enterprises of every description, mercantile establishments, railroads, go down in the sweeping cyclones, because they do not "pay as they go." The flight of big thieves is forever going on. Some are sent to prison, others commit suicide, and others linger amidst the ruin they have wrought, to die at last and be buried like dogs.

If men pursue the subject, they will find of every law making body, from a city council to Congress, that charges are made that rottenness is the rule, and integrity the exception. And if investigation proceeds and includes the courts, it is found that in a vast majority of cases money is potent on the bench and in the jury room—that he who has cash goes free, while the poor rascal suffers. As one of the consequences, the man of small income embarks in fraud. He borrows, embezzles, commits forgery or steals, that he may shine, and thus the bad business proceeds on the down grade until the common dead beat is reached.

This thing called "Fashion" has invaded, not only the home, but the church, the undertaker's bazaar and the grave yard—where, if "Pay as you go" is to be the motto the man of small income is everlastingly tabooed.

The poor man, if honest, cannot purchase a pew, and if he would go to Heaven with the aristocratic christians, must confess himself a pauper, and be content with the crumbs of salvation that fall from the fashionable pulpit, from the lips of the fashionable divine who receives a fashionable salary.

The coffin maker takes a poplar plank, and by the magic of art, transforms it into mahogany or rosewood, and to be fashionable the poor man must pay from \$25 to \$75 for a coffin worth \$5.00. If he "pays as he goes" he can't indulge in the swindle. Fashion is autocratic, and to be in the fashion on such a *momentous* occasion, he must become a party to the fraud and receive as a compensation for the loss of his integrity the smiles of society.

But fashion and society have not yet ceased their vulgar demands. The funeral must be ostentatious. The mourners must be robed in fashionable black and trailing crape must add to the debt of the poor man. In addition to this, if in a city, a regulation num-

ber of carriages must be ordered, for a crowd of mourners (?), and in the cemetery, the home of the dead, the aristocratic idea is nowhere in the world more pronounced. The cemetery has its fashionable quarters where the rich await the resurrection, and who don't propose, when Gabriel blows his horn, to be caught in close proximity to the poor.

For such things, society, the church, our boasted civilization, is responsible, and if Heaven looks upon them with the least degree of allowance, the teachings of Christ must of necessity be a myth. To overcome such demoralizing influences there is one triumphant method—"Pay as you go."

Charles Marshall.

Apprenticeship in Telegraphy.

A NUMBER of accidents have occurred in the past six months in which life, limb and property have been sacrificed as a direct result of employing youthful operators, and in this, it is to be hoped, railway managers will realize and conclude that as a general proposition cheap service is the dearest of all service, and govern themselves accordingly. In this connection I introduce the following article, captioned "A Boy's Mistake," from the columns of the *American Machinist*:

What seems to be a new danger in railroading was developed by the accident which occurred on the Delaware, Lackawanna & Western road a few days ago, at a station near Syracuse. According to the published accounts, a boy telegraph operator lost his head just as a fast express train approached the station, and conceiving the idea that the switch was open, threw it, and, instead of closing it, as he supposed, opened it when the train was so close as to give the engineer no chance for stopping. The train ran into the siding at full speed, and struck a freight train which was standing there waiting for the express to pass, and of course there was a destructive wreck, and all four of the enginemen were killed.

This is a wreck which might have been prevented by the proper mechanical devices, and is one the like of which could not well happen on a British road, where all switches are so arranged that the sidings cannot be entered by a train moving on the main track except by going by, stopping, and backing in.

But aside from this, the occurrence should teach the importance of having fully developed men in all positions of responsibility connected with railroads. Boys are very rare who have developed sufficient self control to enable them to act for the best under exciting circumstances, and the risk involved in putting them in places where, by losing their heads, they can bring about a catastrophe, is too great. Of course the boy had no business touching the switch, but who shall say that any person—boy or man—who thoroughly believes that a switch which he can reach and set right is set wrong, and so as to cause a wreck, should not attempt to do what he believes to be necessary to avert the disaster? The boy's action, aside from his mistake, was a creditable one, and we cannot see that he was greatly to blame as it was. All that can be said of him is that he was in a place which should have been occupied by a man, and a man would probably have been occupying it but for the fact that the boy would work cheaper.

Also the following excellent article from the same publication:

The *Railway Telegrapher*, in an article in which

attention is called to railroad collisions resulting from incompetent telegraphers, says:

The boy telegrapher, by general verdict of the public, must give way to the man. Experience has clearly demonstrated the fact that it requires something besides a mere knowledge of the technical formation of the telegraphic alphabet and the ability to transcribe a transmitted message from the telegraph—that emergencies frequently arise requiring the exercise of a matured judgment and an active mind in order to avert the loss of life and property, and that the boy telegrapher is not possessed of these necessary qualifications.

In a recent accident caused by the boy telegrapher "losing his head," to use a common expression, resulting in the loss of life and great destruction, the evidence at the coroner's inquest established the fact that the boy, not seventeen years of age, received a compensation of \$20 per month. No reasonable person would expect that any degree of competency could be purchased for such a price. The same rule holds in the employment of labor as in the purchase of merchandise—to procure a good article you must pay a good price. Cheap prices procure shoddy goods.

There is a deal of common sense in the above. It seems strange that railroad companies should, for the saving of a few dollars, employ mere boys in positions of great responsibility, but it is beyond question that they do so, although we doubt if they save any money in the operation. One first class smash up on a road, caused by lack of experience which teaches men to act right and quickly, would pay the difference in wages between an experienced and an inexperienced operator for a good many years. But railroad companies are the only ones that work on the cheap plan. They are to be found in about all branches of trade and manufacture. The man who will work for low wages, or the boy who can do, in any way, the work of a man, is being sought for in all departments of labor. As a means of keeping down the price of labor this may be a success, but it does not always reduce the cost of the economic result produced. And it has the effect of deteriorating the quality of labor obtainable, year by year.

If the boy in question was receiving \$30 per month, as stated, and a man could have been secured for \$50, it is an easy thing to see that the \$50 man would have been the cheaper, for the loss in property alone would have paid the extra \$20 a score of years, without taking into account the four lives sacrificed, and the damage done the business of the road by the lack of faith in its management which an occurrence of this kind is very apt to arouse.

A preacher, in speaking of faith, said: "It is impossible to run a railroad without faith!" The more you think on this sentence, the more true will it appear, and in fact it seems, on viewing the matter in all its bearings, that more faith has to be used in railroading than in any other business that can be named. For instance, the engineer and fireman must have faith in the man that designed and the men that built the locomotive, or they would not risk their lives and limbs in going near her. The engineer must have faith in the fireman, and the fireman in the engineer, or they would not go out together. The crew on the engine must have faith in the train crew, that they are able and willing to do their share of the work in controlling and handling the train. The whole crew on the train must have faith in the rails on which

their train runs, and in the men who look after the track. They must have faith in draw-bridge and other signal men along the line. They must have faith in the bridges and their keepers. They must have faith in preceding and in following trains, and in others which they are to meet. They must have faith in the financial management of the road, so as to be sure of having pay day come with due regularity. They must have faith in the ability of the officials of the road and their capacity to deal fairly with their men. All this faith and many more ramifications of it are necessary in railroad life, and if any part of it is wanting the result will be discontent and trouble. Among the rest, a great deal of faith has to be placed in the telegraph operators along the line, who are often charged with important duties in the running of trains, which should not be lightly entrusted to immature hands, unless special capacity for the place should be proven. A movement has lately been started among the Brotherhood of Telegraphers, having in view the restriction of apprentices in the offices in their charge, and this is no doubt a step in the right direction, for with so many boys who have some knowledge of the first principles of telegraphy and are willing to take charge of an office at any salary, the temptation to employ cheap labor is so great as to be irresistible to some men, who ought to know better, but to whom a dollar looks very large, when it is to be paid for intelligent labor. It is to be hoped that the telegraphic fraternity will succeed in their laudable effort to secure fair pay for faithful service, and that they will have the sympathy and cordial co-operation of all our brotherhood as far as possible, not only because of their being fellow-laborers, but because better pay insures better men in whom we can have faith in every emergency. Another benefit would result by the restriction of apprentices and consequent advance in wages, and that would be that the offices would afford salary enough to make it an object worth while for some of our disabled members to qualify themselves to fill them. A fireman who has lost an arm or a leg in the service of the company could no doubt yet do effective work as an operator, for his previous life on the rail has given him such a knowledge of railroad work that he has a great advantage over the boy just out of school, who does not know anything about it, except such morsels as he has been able to pick up in the office. All that would be necessary for a fireman to do would be to rub up his knowledge of spelling and penmanship, if he has been so careless as to allow them to slip away from him for lack of practice, and to learn the manipulation of the keys and their sound, and we would have operators of a superior type—men who by virtue of

previous service on the road would be likely to be well acquainted with its rules and regulations, and with its track and switches, and thus be in better position to help to direct the movement of trains by telegraph, when it becomes necessary to do so. With men of this class at the keys, faith so sadly shaken by such calamities as are chronicled in the above clippings would be reduced to the minimum and intelligent and competent service would be at a premium.

The Ghost Dances.

Give way a conquering right I hold
To subjugate the weak,
And crush by steel or gold
The homes they seek!
Their cradle songs we'll change to songs of grief,
Then urge the work to make their sorrows brief.

WE read that the prophet Jeremiah, that magnificent figure in the early history of Christianity, who hurled his ominous threats and shook his fearful warnings at the very thrones of opulence and power, foretold the coming of the Messiah. This was the grand central figure—the triumph of all his prophecies.

Jeremiah has had thousands of imitators in barbarous and civilized life; yet it is a significant fact that the North American Indians have been comparatively free from them. The raising of the Prophet's standard amidst the nomad tribes of Arabia, in Upper or Lower Egypt, or away on the arid plains of the Soudan, has on many occasions been the signal for the inauguration of the most sanguinary wars. How often have our most populous cities witnessed the advent of alleged diviners who preached with the fire of insanity that the world was about to expire in storm and bloodshed? or that they were the Messiah come on earth to warn sinners and evil doers? These are notorious facts that need no elaboration of detail.

I have said that the Indians have suffered comparatively but little from such disorders; yet, notwithstanding this, they have running through their traditions with an antiquity antedating the Spanish invasion of Mexico, and frequently introduced into their weird and grotesque religious ceremonies, a vague and indistinct teaching that a great law giver would appear surrounded by pomp and magnificence and bringing to the sons of men a wonderful peace and harmony. It was a prophecy of this kind, and very prevalent at the time of the landing of Cortez in 1519 when he founded the city of Vera Cruz, that gave him such prestige and proved his greatest ally. The Spaniards were received as the children of the sun coming to crown the Aztec empire with the glory of their wisdom and the purity of their doctrines. I will not enter into the pathetic history of their slavery.

This worship of the sun, that at one time

dominated and directed the civilization of the world, has left many traces of its peculiar observances with nearly every people on the globe. The remnant that the Sioux retain in the repulsive practices of the sun-dance, and which in no way, except by assertion, is connected with the late fraudulent ghost-dances,

Is but the merry, white-souled glee
Of children's sport around the May-tree,
Gone rampant mad in its barbarity.

Pagan Ireland had its *Beltinne*, or Baal's fire on historic Tara. To this day, on St John's eve, the celebration of the *Beltinne* is continued by street fires in every hamlet and village in Erin. Fire or sun worship was simply a degeneration of a sublime conception that the ancients had formed of their adoration of the creator, by keeping a fire continually burning in their temples, as a reminder of God's power and greatness, knowing that all life emanates from heat.

The ghost-dances of the Sioux and other tribes that caused such unnecessary alarms, were not so much the result of would-be prophets who by the florid exaggerations of inflamed imaginations worked those untutored minds, so full of superstitious fears to the very frenzy of excitement, as it was the colored and distorted meaning that unworthy whites had placed upon them; then taking advantage of the confusion that would follow, these men would force every pretence to seize the lands of the Indians that they are so eager to obtain. Here is the boast of one of these white braves:

We are taking advantage of the impatient demonstrations to get them removed to the Indian Territory. That is the secret spring behind all these Indian scares. You remember how I went down to Jefferson barracks after the Custer massacre and plunged into a blue uniform to go out and avenge the slain? Well I was young then and full of fight. I got out to the front just in time to help chase Dull Knife and his gang into Red Rock cañon in the Big Horn Mountains, Wyoming, and wipe a raft of them out of existence—in 1876. That ended the fight, but it only commenced the howl about danger, and I ascertained to my own personal satisfaction that Dull Knife was not so much to blame. He had been tortured into defence by the settlers, and the moment he showed fight they cried: "Outbreak, send us troops; run the redskins out!" You know I got into the cattle business, and when my five years were up I was pretty well fixed. I have become identified with the settlers, and it is an unwritten law with them to move everything for getting the Indians moved.

The last "Ute outbreak" in Colorado was, after a careful investigation, shown to have been a murderous attack made by some white men upon the Indians in order to secure the Indians' property. I do not mean to say that the Indians are all lambs by any means; they unfortunately have their villainous characters whose depraved natures are intensified by the wild and savage life they lead. They are the shadowy fragments of a once numerous and powerful people, now cowed by a broken spirit, reduced to absolute submission and living in

misery and want. Under all this there remain with them two of their strongest characteristics, revenge and gratitude.

I have frequently heard their medicine-men, the sages and scholars of the tribe—relate those interesting legends in which virtue was extolled and vice was frowned upon, to their youth around the camp-fire and in the semi darkness of the *teepee*, in the soft cadences of their poetical language, that with a force steals upon you like a summer breeze, so full of gesticulation, and with a warmth and eloquence of feeling, denoting earnestness and conviction. Some of their imaginative pictures were startling in the vividness of their fancied reality. I had often thought how must those tales have acted upon the young listeners, whose hearts were filled with the romance of their tribal wars, and vibrated with the ambition to distinguish themselves. It is not difficult to understand how the Indian, who is sunk in ignorance and poverty, smarting under the humiliations and abuses that the white man has heaped upon him, can find it more agreeable to his natural instincts to preach that it is not only a great law giver who is to appear, but one who is also a great warrior, that will not only deliver his country but avenge his countrymen.

We who do so much for the Hindoos, the Chinese and others so far from us in every respect, might exercise a little of that charity that commences at home.

Tim Fagan.

The Single Tax.

HERE is no subject, in my opinion, so closely related to the interests of workingmen as the one which captions this article. Only a little while ago those who advocated the theory of the single tax as the basis of reform in our governmental affairs were stigmatized as communists and anarchists, but latterly a change of sentiment has been inaugurated and many of the deep and advanced thinkers of the times have adopted the views of Henry George as embodying absolutely the best principles for the equitable distribution of wealth, which means the emancipation from the thralldom of monopoly and oppression of the industrial classes.

In a late issue of the New York *Standard* there was reproduced from the Grand Rapids *Mich. Workman*, the following excellent article which, having special reference to trades unionists, I am persuaded will be of interest to your readers:

All men in the world trades unionists should study the principles of the single tax, for its application would accomplish permanently what even the strongest unions can only hope to accomplish partially and temporarily at most, and this only at great cost and sacrifice. Trades unionism resists the encroachments of employing capital by the organization of labor; it meets combination with combi-

nation, the monopoly of capital by the monopoly of labor—and it is only in so far as the labor market can be cornered and controlled by the unions that their battle against the encroachments of the monopoly of bossism is successful. When the labor "corner" is for any reason broken, the unions are practically at the mercy of their employers who, by the fierce strife of soulless competition, cannot show mercy except at the imminent risk of being driven into bankruptcy themselves.

Monopoly in its various forms is the root of the evil industrial conditions—but the monopoly which corners and controls the bounties of nature, which furnish the raw material for all production, is, as compared to all other monopolies combined, as a mountain to an ant hill. For it is in the monopoly by some men of these bounties of nature, which belong of right to all men that all the other great monopolies are chiefly based or buttressed.

These "bounties of nature" are defined by the term "land," which, used in its economic sense, includes land, water and all the natural elements. Wherever land is monopolized so that access can be had to it only at high cost, there will be found great wealth and gaunt poverty side by side. And wherever, in a civilized country, there is free and easy access by all to fertile lands, while there may be an absence of great wealth, there will also be an absence of that worst of all want—that poverty which in these days so often comes to men and women anxious to work, but who can find no work to do.

Look at it. Under kings, emperors, czars or presidents, under empires or under republics, the condition is practically the same. Wherever the price of land is high, over wealth and abject poverty exist side by side. Wherever land is plenty and to be had for little or nothing, there involuntary poverty has practically no existence. Why? Simply because everything that goes to support life—all the necessities, comforts, luxuries, even life itself—is in the ultimate drawn from the land, and land being free, or of easy access, men cannot be ground down in mills and factories, for they would swarm out on the land to make a living from the soil.

The labor problem, the world over, is the land problem; and the solution of the labor problem must come through the solution of the land problem—and no permanent solution of it is possible in any other way. The land is the inalienable heritage of the people, the whole people, and the landed system which permits the exclusion of the great mass of the people from the God given right of access to the land for the purpose of making a living by labor, is as economically rotten, immoral and destructive of real liberty as was the accursed system of black chattel slavery.

The single tax on unimproved land values offers a simple, easy, practical method for the abolition of that industrial slavery for which trades unionism at most can afford only partial and generally only temporary relief. As you love your families, fellow unionists, and would provide for those whom you leave behind, study this great land question and the single tax.

Do not understand me as belittling trades unions. No man recognizes their absolute necessity more than I do—nor their power within certain limits. Every effort should be made to extend and strengthen them. But while doing this do not forget the wiping out of land monopoly is an absolute necessary condition precedent to any permanent solution of the labor problem. Land monopoly can be wiped out by the single tax, and by that alone. "And don't you forget it."

That the single tax is a subject deserving the special consideration of workingmen there can be no doubt. It is a vital, fundamental proposition which has in view great and permanent reforms from which shall flow blessings such as the world has never seen.

As a matter of course it is opposed by the trust barons, the syndicate sovereigns and monopoly moguls. They perceive in the

single tax the beginning of the end of their rule. They comprehend that its mission is to level up and level down and inaugurate the reign of even-handed justice.

It is to be hoped that workmen, who are most vitally concerned in industrial reform, will give this subject such serious consideration as its importance demands.

W. P. Borland.

Bethlehem.

THE name Bethlehem, at this season of the year, is intimately associated with Him whose birth and advent we have just been commemorating, and takes us to the plains of Judea, where the angels sang and declared: "Glory to God; Peace and Good will to man." But it was not of Bethlehem of Judea and the Prince of Peace, but of Bethlehem of Pennsylvania and its war weapons we were about to write. We have often read of (and some of our readers may have felt) the "persuasive influence" of a gun in preserving peace, and if the words of Col. Hope as below given in a clipping from the *Machinist* be taken in their literal significance, we may paraphrase the words of the Prophet and make him say: "And thou Bethlehem, in the land of Penn, art not the least among the cities of Penn; for out of thee shall come a gun that shall defend my people:" Col. Hope, of the British army, is reported as saying:

I consider the Bethlehem gun plant to be superior to any gun plant in the world. Bethlehem is the realization of my dream of what a perfect gun establishment should be, and I believe it to be the only perfect establishment of its kind in the world. The gunshops of this place are prodigious in size, the capabilities of the establishment beyond the conception of any one who has not visited it, and the excellence of the material turned out unequalled in point of thoroughness. This I say without a shadow of exaggeration. I could only look and wonder, and I return to England firmly convinced that in America exists the greatest gun and steel-producing plant in the world.

This is a strong recommendation of an American plant by an Englishman, who has seen something of the capacity and production of European works of a similar character, and should thus be qualified to give an opinion on their merits. If the works at Bethlehem are really so "perfect" as to realize this officer's "dream of what a perfect gun establishment should be" and he "returns to England firmly convinced that in America exists the greatest gun and steel-producing plant in the world" and his words are believed in England, they ought to have a pacifying influence on the nation, for this plant at Bethlehem now becomes the principal supply for defensive armor and guns for the new navy of the United States. The logical conclusion of the whole matter is that if the American nation had sufficient sagacity to secure the services of

the most "perfect" gun and steel establishment of the world, they will also have sufficient acumen to make such use of the material furnished by the works to inspire a "persuasive influence" over otherwise aggressive nations, and thus preserve the peace.

The works at Bethlehem are located on the banks of the Lehigh, which at this point has secured a little wider river bottom than usual, and are at a distance from the supply of fuel and ore, and could not be made a mechanical or financial success without the help of the ever present and assisting railroad. In former years much of the ore used in the iron works of the Lehigh valley was mined in New Jersey, only 50 to 60 miles away, but of late the richer ores of West Virginia and the western part of Pennsylvania have been in use, so that now the ore used at the Bethlehem works is brought a distance of over 360 miles and smelted and worked with fuel brought from a distance of 330 miles; the only raw material found at hand being an inexhaustible supply of limestone from the river-bluffs.

Wm. Weiler.

The Folly of Exclusiveness.

HOW selfish and short sighted it is for men who have educated themselves up to the needs of organization to stand aloof from federation! There is strength and safety in united action; but you might as well expect the wheel, under the strain of a heavy load, to be kept together without a tire, as to suppose that separate labor organizations can hold their own against organized and federated capital. Organization is the birth of a new hope to labor; but the hope will never be realized unless crowned with the capstone of federation. The status of the laborer is immaterial to the needs of federation. As men feel the need of banding themselves together along the lines of their different occupations, contributions and benefits may be graded accordingly; but the most powerful trade organization invites disaster when, from a spirit of selfishness, it elects to stand alone.

These capitalistic fellows have a great pull on us workers. Necessity does not compel them to accept unjust conditions; they have more time to apply their mental powers to hatch out projects to oppress and fool the workers, with free access to the enormous power of the press in shaping public opinion.

We don't need taffy, but we want justice, and a fair divide on the profits of our industry. Capital is trying to keep our several organizations apart, that it may the more easily dominate us.

HESBON, Pa.

Stephen S. Brown.

The Top o' the Morning.

The bright morning's blush
That welcom'd the thrush,
When piping his lays in the dawning,
Nor Mercury's light,
Was ever as bright
As my colleen's sweet "top o' the morning."

O astore a-ma chree,
This heart beats for thee,
As the ark when the day is aborning
Kills the meadows among,
With his rapturous song,
Shure I hear but the "top o' the morning."

And the stars in their light,
Like the smiles of the night,
The grim of the darkness scouring:
So your eyes, my colleen,
Ever have been
My light from the top 'o the morning.

Then mayourneen astore,
I love you the more,
Since the cherub your knee is adorning,
That in every trace,
Is his mother's sweet face,
Ma bouchal, the top o' the morning!

Note—*Astore a-ma chree* means "love of my heart." *Mayourneen* means "my darling face." *Ma-bouchal* is "my boy," and my *colleen*, "my girl." I need hardly say that the "top o' the morning" is that old "top o' the morning" so popular in Ireland. There seems to be more warmth and sincerity in its tone than either "good morning" or "good day." It has a winning ring that makes the meaningless "how do you do" ashamed of itself.

Tim Fagan.

Ignorance vs. Knowledge.

IF it is not making too great a requisition upon your patience and consuming too much valuable space, I would be pleased to write something upon the subject of Ignorance vs. Knowledge.

I have had the pleasure of reading the celebrated address of Mr. R. H. Briggs, delivered at a meeting of the American Master Mechanics' Association, assembled at Old Point Comfort, Va. This address was probably copied by every labor organ in America, and commented upon more extensively and praised or eulogized more than any address delivered during the past year. The writer is happy to acknowledge the fact that he is serving under the jurisdiction of Mr. Briggs. In this gentleman's address he referred to the amount of information that could be had or obtained in mastering the profession in which we are apprentices, and stated that ignorance would be inexcusable when there was such a library of information to draw from. There was a day and time when the literary attainments of an engineer were not regarded as an advantage, nor was ignorance regarded as a disadvantage, in reaching the apex of his profession. But this age of enlightenment and refinement seems to be becoming more exacting in reference to this point than formerly. We do not pretend to say that men without education are unfit to become engineers, but we do say that those with good education and practical knowledge are the men who will attain the greatest proficiency and will do so in far less time than their less fortunate rivals or co-laborers.

When the mind has been trained and dis-

ciplined, its capabilities are enlarged; it becomes better equipped to grasp information of any character than a mind whose faculties have never been strengthened and enlarged; neither has it the power to retain as one which has been strengthened by thought and study.

The philosophers all concede the fact that mental development comes by mental exertion, just as physical development comes by physical exertion. Mr. Sinclair, who might be termed one of the best informed mechanics in the country, has written upon this subject, and he strongly advocates educated men being placed as apprentices for learning locomotive engine running, and he also considers the man who has learned the profession while firing, capable of giving the best satisfaction and showing the best results on the expense account.

The past twenty years have wrought a material change in the class of men who make up this profession, and the next twenty will show an improvement far out of proportion to the past march. This improvement has been largely due to the noble orders which these men have established for their social, moral and intellectual improvement.

We stand higher in the estimation of the public than we did twenty years ago, which arises from the fact that we have lifted ourselves to a higher moral and intellectual atmosphere than that through which we have groped in the past. The day is not far distant when "the oppressor's wrongs and the proud man's contumely" will be buried forever in the cemetery of oblivion. The lion and the lamb will lie down in peace together. Capital and labor will not stand arrayed against each other as malevolent foes. Justice will gather every drop that falls from labor's brow, place them in her scales, and they shall weigh as gold; and she will send the wives and daughters from the workshops and factories to adorn their homes—though they may be humble, they will nevertheless be the abodes of contentment and love. The hands upon the dial of human affairs are turning slowly but surely, until they shall register: "Ill will to none, justice to all." Labor has been groping through a long night of bondage and oppression, but the darkness is being dispelled and it shall soon behold the bright dawn of a happy day. Federation will sound her trumpet and marshal all the hosts of laboring men. Ah, what means this mighty throng! The Firemen, the Engineers, the Switchmen, the Brakesmen and Conductors and all classes and unions assembled in council together; no secrets to be kept from each other; no motive but self-protection and self-improvement. Not federated to injure capital, or intimidate it, but to protect themselves against the merciless

hands of aristocratic misers who would drive the laboring man's wife and child and himself to hunger in order to add to their coffers of gold, which are already full to overflowing.

All the wealth of our country, all things of art and husbandry, come from the hands of these uncomely knights of toil, yet how little of it do they enjoy! We hope that no one will do us the injustice to think we advocate communism, when we refer to a more equitable division of the fruits of labor. We only advocate that labor in all its branches shall receive a just proportion of the wealth it creates. There are many laboring men who receive a fair remuneration for their labor, but there are legions of others who receive hardly enough to enable them to live as becomes American citizens.

BIRMINGHAM, ALA.

J. G. Cary.

He Ran the Night Express.

I met a little girl, one day,
Beyond the railroad bridge,
With pail of berries she had picked
Along the bank's high ridge.

"Where do you live, my child," I said,
"And what may be your name?"
She looked at me with eyes askance,
And then her answer came:

"The house upon the bluff is ours;
They call me Bonnie Bess;
My father is an engineer,
And runs the night express."

A sparkle came into her face,
A dimple to her chin—
The father loved his little girl,
And she was proud of him.

Ten-forty-nine on schedule time
(Scarce e'er a minute late),
Around the curve his engine comes,
At quite a fearful rate.

"We watch the headlight thro' the gloom
Break like the dawn of day—
A roar, a flash, and then the train
Is miles upon its way.

A lamp in mamma's window burns,
Placed there alone for him;
His face lights up, for then he knows
That all is well within.

Sometimes a fog o'erhangs the gorge,
The light he cannot see,
Then twice he whistles for mamma,
And clangs the bell for me."

I said to her in cheery tones,
"God bless you, Bonnie Bess!
God bless your mother and the man
Who runs the night express."

James H. Daly.

JERSEY CITY, N. J.

The Union Pacific Scenic Route Across the Continent.

NO doubt, the saying, that "God made the country and man the city," is somewhat trite, but is not yet obsolete, and no matter from what city men go *via* the Union Pacific route across the continent, they are certain to repeat the hackneyed exclamation. To compare a city, ancient or modern, to the country, would be to liken the gush of a water plug to Niagara, an artificial frog pond to the ocean, a rocket to a comet, or, a bonfire to Vesuvius; and if there are those who desire to see how God builds a world, they should purchase a ticket, and take a palace car over the Union Pacific, and behold the wonderful works of the Creator.

As they are whirled along they will see much that man has done to challenge admiration. Why not? The "New Version" has it, "That man was made a little lower than God." And the tourist will discover triumphs of engineering skill which will occasionally absorb his attention and divide his astonishment. It will be but for a moment, for the architecture of the Creator is so wonderful, grand, sublime, so awe-inspiring, that man's triumphs sink into nothingness, compared with displays of the Creator's power.

But a few years ago, far within the memory's boundary of living men—

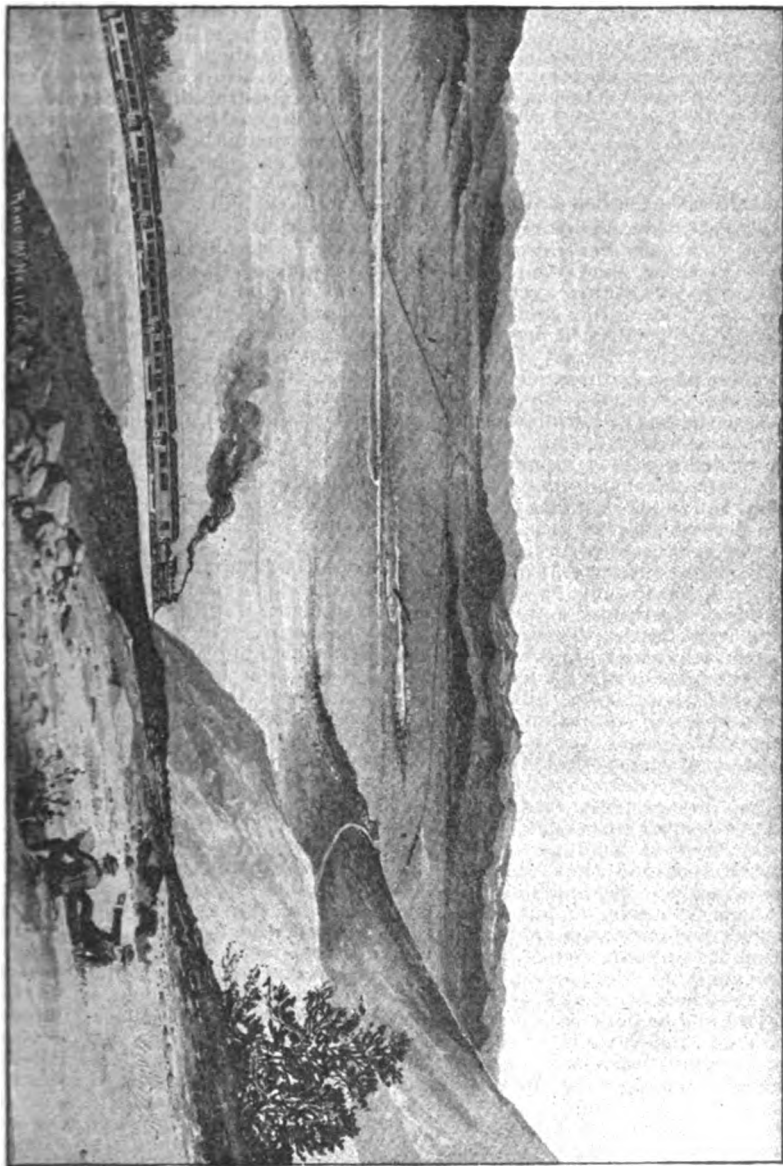

"That far, vast land that few behold,
And none beholding, understand"

was a *terra incognita*. Wild men and wild beasts possessed it. Money, science and labor grasped it in their mighty hands, blasted and tunnelled, and now *via* the Union Pacific, thousands and tens of thousands climb the elevations, goshkyward above the clouds, where Jove forges his thunderbolts and the lightning plays its fantastic pranks, and as they climb, they wonder; at every turn the panoramic pictures increase in beauty and sublimity. Man and all his works are forgotten. On the mountains God is supreme, and never till then did the tourist "dare to dream what grandeur is."

Among the splendid views to be had on the Union Pacific, is South Park from Kenosha Hill, Colorado, of which we present an excellent illustration.

Those who have had a view of South Park, pronounce the scenery of wonderful beauty. On one side the park is bordered by heavily timbered mountains, and being about fifty miles in length, the range of vision takes in the Snowy Range, and many of the highest

ROTTI PARK. From Kenosha Hill, Colorado on the Union Pacific R.R.

mountain peaks in Colorado, including the Mount of the Holy Cross, one of the wonders of this wonderland.

In closing this notice of the wonders to be seen on the Union Pacific, it only remains for us to say to those who have the cash and the leisure, to make the trip, and if there

are those who have the required funds but are *minus* leisure, we say take the time by force, and you will for all your remaining years have pictures in the halls of your memories, such as Raphael in his most inspired hours never dreamed of, and such as defy art's grandest achievements.

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the tenth day of each month.

American vs. English Railroads.

Our Transatlantic contemporary, *London Engineering*, is usually very slow to admit that any good thing should be found out or put in use in this country, yet in a recent article on the visit of the Iron and Steel Institute to this country, it has to admit that our American railroad system has some commendable features, of which we have a right to feel proud. The article goes on to say that the vast system of roads became a matter of necessity to our country in order to unite its widely separated states, and make commerce and intercourse possible. But the fact that during the 25 years since the close of the civil war, while the country was burdened with a debt of \$2,500,000,000, the South was "demoralized, impoverished, and to some extent depopulated," and the North had not yet had time to fully recover from the stagnation of her industries, and while high prices were still the rule, 130,000 miles of railroad were built at an expense of about seven billion dollars for construction and equipment, is regarded as "remarkable," and the adaptation of that "system of transportation to the requirements of the country" as "marvelous." The initial cost of these roads has been kept low, competing lines have been built, and new methods of handling freight have been introduced, and thus the average freight charges have been reduced, so that we now have "a system of low rates that has excited the envy and provoked the admiration of European traders."

In the study of the American railroad problem, the first fact that strikes the mind is, that they should be built so much cheaper per mile than English roads, when the fact that much higher wages have been paid in their construction is taken into account. The average cost per mile for our roads is only about one-fourth of the English average. In trying to account for this it is stated that the English roads had to buy all their rights of way, and sometimes at very high and even exorbitant prices; while not only the land, but much additional land, had been donated to American roads. This holds true of a few roads only, but the nearly universal rule is to exact full value from all railroads for all they get in the way of land, and hold them responsible for all damage done

to the remainder, so that this will hardly account for all the difference, but of course it will make some in the grand total. The fact that American roads are not hampered by restrictions as to the use of streets, and to crossing them and other roads at the same grade, also will help swell the saving, and it is also true that on a great many roads money is saved by a flimsy and unsubstantial construction of the road bed, the bridges, culverts, and embankments, and the use of single track. The main object of the American railroad builder is to get his road open for traffic as quick as possible, and to do this he calls to his aid all the labor saving inventions of the age, and in this will be found the key to the mystery of cheap railroad construction, and also the flimsy and unsubstantial character of some of the work, which in most all cases is replaced by better, after the road is opened and earning money. It thus happens that roads have been opened and used for years, which are not yet completed as designed by the engineer in charge, for a deep cut here, a bridge there, or a tunnel at some other point, may be needed to complete the line as surveyed, but as these are matters that take time, and Americans cannot wait, a loop is built around them if it is at all possible, and the road put to earning money even before it is finished.

The next item is the comparative low rates which prevail in this country for the transportation of freight, and the fact is pointed out that the cheapness of railway construction was not enough to account for the low freight rates, for it was shown that in 1868 it cost 42½ cents per bushel for wheat between New York and Chicago, but that at present the rate was only 13 cents, and this in spite of the fact that labor still continued to be better paid in America. The reason for this is given as the sharp competition for business, which our American system made possible, by giving any man or corporation a right to build railroads to compete with other lines, provided they had capital and chose to run the risk of the investment. As would appear by the article in *Engineering*, it is almost impossible to obtain a charter for a road which would compete with one already in existence, and hence the existing roads form monopolies, and have the public at their mercy, for they must pay the rates demanded, or do without the service, as there is no other one that can do it. Americans are usually only too ready to accuse our railway corporations of greed, but in the light of these statements, emanating from a source inclined to take the most favorable view of English affairs that it possibly can, we can congratulate the country on being in good hands, and hope that the system may still flourish and grow, until every hamlet shall be blessed

with its railway facilities, and till every valley, hill, and mountain shall have a chance to send the products of its fields, woods, or mines to a remunerative market, and receive from it in exchange the products of other sections and climes, which the advance of civilization has made necessary to our comfort and happiness.

Vulcan.

Pioneer Locomotives.

In January *Magazine* 1891, page 29, I gave what purports to be a photo-gravure of Oliver Evans' model locomotive of 1786, now in possession of the Franklin Institute, Philadelphia, Pa.

In a paper read at a state meeting of the Franklin Institute, December 17th, 1884, entitled, "Modern Railroad Facilities," by William Barnet Le Van, I find this reference to Oliver Evans:

"Eighty years ago, Oliver Evans, who deserves at this day all the honor that can be conferred on man as one of Philadelphia's noblest sons, made the first application in the streets of this city of steam to a carriage in America, and in fact, the first locomotive engine. This experiment was more successful than any that had preceded it.

About this time, Evans publicly stated that "the time will come when people would travel in stages moved by steam engines, from city to city, almost as fast as birds fly—fifteen or twenty miles an hour—passing through the air with such velocity, changing the scene in such rapid succession, and with the most exhilarating exercise. A steam carriage will set out from Washington in the morning—the passengers will breakfast in Baltimore—dine in Philadelphia, and sup in New York the same day."

[This journey is now performed in five hours, by the means predicted, and Oliver Evans' prophecy fulfilled.—W. E. L.]

"To accomplish this, two sets of railways will be required, laid so nearly level as not to deviate more than two degrees from a horizontal line—made of wood or iron, or smooth paths of broken stone or gravel, with a rail to guide the carriages so they may pass each other in different directions, and travel by night as well as day."

Says Mr. Le Van: It is a singular coincidence that Evans should have made one of the first experiments in propelling a carriage by steam in the very city destined to become in the course of fifty years afterwards, the head centre of one of the most important railroads in the world, "The Pennsylvania."

In connection with my article herein above referred to, I find that this is not the model locomotive which the late M. W. Baldwin saw at Peale's Museum. Although he may have seen the model referred to previous to this time, he having been one of the organizers of the Franklin Institute in 1824. In this connection I quote from a memorial of

Matthias W. Baldwin, by the Rev Wolcott Calkins, 1867, Page 48.

"In the fall of 1830, it was announced that the Camden and Amboy Railroad Company had imported a locomotive which was jealously guarded from public inspection, in a store house near Philadelphia. Mr. Baldwin repaired at once with a friend, and by various devices overcame the scruples of the man in charge of the wonderful curiosity. He carefully observed the various parts of the machine, made a few furtive measurements, and at last crept under the ponderous boiler. Here he remained in absorbing study for nearly half an hour. As he emerged from his retreat his face was glowing with enthusiasm, and he exclaimed: "I can make it!"

[This locomotive was the John Bull, now the property of the National Museum, Washington, D. C. and can be seen in the department of steam engineering. To the modern locomotive engineer, if he were to see it, the "ponderous boiler" would seem a big joke.—W. E. L.]

"His companion was Franklin Peale, Esq., manager of the Franklin Museum, who had felt so much confidence in his skill, that he had given him previously an order for a working model. With no other assistance than this hurried inspection, and such drawings as the scientific journals of the day were publishing he constructed a beautiful miniature locomotive, after the plan of Ericsson, since rendered famous by the Monitors. It was placed on a circular track in the museum April 25th, 1831, and attracted crowds of visitors. This model was no doubt constructed after the plans of "The Novelty," 1829, by Messrs Braithwaite & Ericsson, one of the four entered for the Manchester and Liverpool test, October 6th 1829, at which Stephenson's Rocket took the prize of £500, (\$2500). The names of the locomotives were The Rocket, the Perseverance, the Sanspareil, and the Novelty; full description with illustrations can be seen in Growth of the Steam Engine, by Professor R. H. Thurston.

In the trade catalogue of the Baldwin Locomotive works, Page 30, they say: "In May 1848, Mr. Baldwin filed a caveat for a four-cylinder locomotive, but never carried the design into execution." Through the kindly influence of the son-in-law of the late Mr. Baldwin, Francis T. F. Darley, Esq., and the sole surviving executor, Joseph B. Townsend, Esq., I was permitted to read this caveat; it was in Mr. Baldwin's own hand writing, dated May 8th, 1848, and seemed to relate solely to dispensing with the parallel rods, by applying a separate cylinder to each one of four driving wheels, and thus making a four cylinder locomotive.

William E. Lockwood.

◆ ◆ ◆

DURING the year 1888, nineteen railroads, embracing 1,600 miles of lines, and involving nearly \$8,000,000 in bonds and stocks, were sold for the benefit of the creditors.

Action of the Injector.

MR EDITOR:—As I understand it, the animus of this injector argument is simply to arrive at truth. I am not seeking to exploit any new theory; nor am I seeking to gratify any feeling of egotism. If it can be shown that my position is untenable, I will certainly abandon it, for be it understood, I have not accepted this theory simply because I find the weight of authority in its favor (I yield to no man in my opposition to the mere dogmatism of authority), but because by a train of independent reasoning I am *compelled* to accept it. "Vulcan" plainly admits that the action of the injector is a mystery to him. And with his present knowledge, if he were asked the origin of the force by which the injector is enabled to work, the only answer he could truthfully give would be, "I do not know." In view of this fact, I had a right to expect that "Vulcan's" opposition to this theory rested on good grounds; and that he would show up weak points in the theory which I, with my limited knowledge, had failed to discover. But I am gradually being forced to the conclusion that if "Vulcan" has any well defined ideas on the subject, he will not part with them. He has thus far failed to present one single argument that in any way touches the real point at issue. I have placed the issue before him fairly and squarely in language that could not be mistaken, yet he persistently avoids it, and seems to be aiming to force me into the discussion of side issues, the consideration of which could only result in confusion of thought and lead to no good end, as we might discuss them till doomsday without settling the point at issue. No person who fairly and honestly considers this theory can fail to be impressed by its logic. There is absolutely no escape from it. Placed in the form of a syllogism, it is simply perfect. The conclusion follows the premises as naturally as night follows day. This point being settled, the truth of the conclusion, therefore, depends entirely on the validity of the premises. There can be no question as to the reduction in bulk which steam suffers by condensation. The whole question, therefore, stands or falls upon the truth or falsity

velocity
while
I be
it is
tion
eam
an "
jug-
His
no-
duly
and
ex-
dis-

couraging to attempt to argue with one who treats an argument after this manner. My dear "Vulcan," the proposition supposed to be under discussion explains thoroughly "why it should be so," and as you have accepted the negative of that proposition, will you please tell us if you found any thing in Forney, Sinclair, or anywhere else, that explains why it *shouldn't be so*? I have searched diligently for something of this kind, thus far without result. "Vulcan" next attempts to score a point upon an if he has discovered in my article. How is it possible for him to ignore the fact that the sentence he lays such stress upon was not used as in any sense qualifying any statement of what I believe to be facts, but occurred merely as an incident of the ordinary explanation of an abstract principle. I refer him to another sentence in that article, which he evidently overlooked, viz: "The contention is that these conditions (meaning, of course, the conditions following the application of the principle), are all fulfilled in the case of the injector, by the extremely rapid condensation which takes place at the nozzle." His next sentence shows a total misconception of the question. There has never been any claim that steam allowed to condense under normal conditions retained its velocity in its new form. His comparison of an engine "working water" to this principle, is far-fetched, and is but another proof that the principle is not yet plain to him. The phenomena of an engine "working water," is not due to condensation under even normal conditions. *It is the effort of two bodies of like temperature and different densities, trying to occupy the same space at once, and does not touch the question under consideration.* If "Vulcan" wants a true test of this matter, let him lead a pipe from some cock on his boiler in such a manner as to give unimpeded flow of steam to atmosphere, then surround this pipe (leaving the opening to atmosphere free) with a body of water sufficiently large to give perfect condensation, then turn on steam at the boiler, and see whether the velocity of flow from the pipe will be that of water or steam. For his further satisfaction, let him, before condensing his column of steam, have it flow out against some obstruction, placed say 3 or 4 feet from and directly in front of pipe; let this obstruction be of sufficient stability so that the full force of the column of steam will just fail to remove it; then surround the pipe with water, and see if the same column of steam, when it flows out in its condensed form, won't knock the obstruction away into the middle of next week. Then let "Vulcan" use the facts thus obtained as a basis for some good, sound reasoning; and I am inclined to think he will arrive at the conclusion that he really never had any ob-

jections to this explanation; and if some person should ask him what makes the injector work, he could tell them. "Vulcan winds up his article as follows: "The question still is, while this velocity is generated outside, what is the water at the check doing? Is it devoid of all energy, and is it not as ready to come out as the other is to get in? and why don't it?" Now with all deference to "Vulcan's" judgment, I think I have sufficiently shown that this is *not the question at all*. There has never been any claim that the water at check was devoid of energy, nor is it necessary to the truth of this principle to consider any such question. To the question, why don't the water come out of the boiler when the check is opened? I would say that the existence of a force that opens the check, against the energy opposed to it, is sufficient answer to the question and exposes its absurdity. Now as I have always found "Vulcan" in search of truth before any other consideration, I hope he will see the necessity of confining his arguments to the issue as it has been presented to him, and unless he can find a flaw in the logic of the question (which I doubt), it is useless for him to attempt to force me into the discussion of any question not decisive of the point at issue, as I positively will not consider it, for such discussion can only lead to confusion of thoughts, and I can use the space the editor is so courteous as to allow me for a better purpose.

Vacuum.

Velocity of Steam.

"Vacuum," in the January *Magazine*, says that he is surprised to be obliged to explain his previous article for my benefit, but this is a world of surprises, and the unexpected is ever sure to happen. I stated before that I had not seen any tables on the velocity of steam, and in the article by Mr. Atkins, which "Vacuum" sent in for publication, I find that the velocity of steam is reasoned out by analogy to the velocity of water, and this is the point to which I wished to direct "Vacuum's" attention, for when I, in a previous article, advanced the idea of steam being subject to the same laws as water under pressure, the idea was rejected by "Vacuum," yet now he wishes to have rules that govern water applied to the calculations of the velocity of steam. Steam is so peculiar a gas that it is very difficult to study its characteristics, and I suppose there is no way as yet devised by which the speed of steam issuing from an orifice in a generator can be accurately measured, hence the methods resorted to by our friend "Vacuum" and Mr. Atkins. Taking the rule as given: Multiply the height of a water-column that would produce the given

pressure, by the ratio of the density of steam to that of water at such pressure, extract the square root of the product, and multiply by eight, to give the velocity of the steam as correct, and it would be about 482 per second at a pressure of only one pound to the inch, or at a rate of over 5½ miles per minute. This is a speed so far in excess of our conceptions of mechanical movements as to stagger our faith in the rule, but in applying the rule to a boiler with say 140 pounds of pressure, we find that the rule would make the velocity of the steam at that pressure 2180 feet per second, or about equal to the initial velocity of a cannon-ball at the muzzle of the gun. Every person who has seen a boiler explode, or has had a chance to view the wreck after the explosion, will be ready to admit that the force which tore the boiler and scattered the parts to such distances, and with such disastrous results to any objects in their path of flight, must have been equal to the power which sends the ball from the gun. That steam at one pound pressure should have a velocity of 482 feet per second does not appear possible until you compare it with air in motion, air being in several respects very much like steam. Now we find that air in motion is readily measured both in regard to its direction, its speed, and its power on objects in its path, and that it takes a storm with a velocity of 60 miles an hour to produce a pressure of 12 pounds per square foot, and that with hurricanes, whose velocity has been estimated at near 100 miles per hour, it has amounted to about 50 pounds per foot. In discussing boiler pressure we have ever used the term per square inch and as it takes 144 square inches to make one square foot we find that even a hurricane does not exert half as much pressure on an object as one pound per square inch. It would thus appear that air would have to move with a speed of over 250 miles per hour before it would have a pressure of one pound per inch, and this would be approaching the speed before calculated for steam under one pound of pressure with some degree of approximation. Having viewed the matter both from a high and a low pressure point, I cannot find any positive proof of error in the rule and must admit that it may be as near correct as the imperfect facilities at present in use can determine.

Vulcan.

On every road since railway trains to turn their wheels began, at every station you will see a solitary man. His brow is damp with beaded sweat, his heart with woe is cleft; most earnestly he wants to go, the man that's always left. If the train due at 1 P. M. should wait till half-past eight, there'd be one man come down to go just thirty seconds late.

Eccentric's Problems.

"Eccentric's" article in the January *Magazine* could not have had a better place assigned to it than the page opposite the illustration of the "Pioneer Locomotive," because most all of the problems can be answered by simply looking from one page to the other.

If we admit that our "modern locomotive is a most defective piece of mechanism," we can look over to the other page and console our hearts with the thought that it has been greatly improved since it was first put in use, and that no doubt still further improvements may be made when the proper amount of thought and study is directed to it.

The second question also answers itself, but probably not as "Eccentric" would have it, for if the piston moves through the cylinder both ways in this "Pioneer Locomotive," it will hold good for any other locomotive, even if it should be an "imperfect modern one" with its cylinders in an horizontal plane. As "Eccentric" says, the disturbance has not been measured yet, because no one seems to be inclined to spend money enough to demonstrate the "bad mechanism" of the locomotive.

Next we have a query, which ought to be published in some comic paper, for there is lots of fun in it if you read it carefully: *Is it true that the top of the wheel moves twice as fast as the bottom, and the bottom stands perfectly still?* Now if I understand "Eccentric" aright he has a mind to believe that the top of the wheel moves four times as fast. Would it be fair to ask, four times as fast as what? As the bottom of course! But the bottom stands *perfectly still!* It has no motion! Now what is the motion of the top if it is twice or even four times nothing? Nothing in my trouser pockets; twice as much in my vest and four times as much in my coatpockets would not be much of a fortune yet: would it? If "Eccentric" is satisfied that he can produce something by multiplying nothing ever so much it would be worth a fortune to him to demonstrate it, but if he can not, then of course Nos. 4 & 5 of his problems still lack confirmation and can not be accepted as proven.

If "Eccentric" has seen a "single valve operate two cylinders" presumably with their cranks at right angles to each other, I would not hesitate to take it as a fact even if I have not seen such a thing. Mr. Lockwood did answer the question in the affirmative and had an illustration of such a valve, but if my memory serves me, it was not what might with truth be called a single valve, for I think it had two moving parts, but at the same time it took its steam from one chest, and to that extent was a single valve.

It seems to me that there is lots of dis-

cussion and *proof* needed before these problems can be considered fully settled and I hope "Eccentric" will contribute his share of it for the general good.

Vulcan.

Causes of Broken Rails.

The following is from a St. Louis roadmaster to the *Railway Gazette*: I think the number of broken rails that we have every winter on railroads could be lessened a great deal if the cause of their breaking was better understood. The greater number of broken rails comes from the use of poor steel. Of 185 miles of steel put down in 1879, 1881, 1882 and 1883, 125 miles were of one brand and 60 miles of another. In the past three cold winters of 1883, 1884 and 1885 the following broken rails have been reported, only six of them broken at bolt holes: 1883 18 rails; 1884 17 rails, and 1885 22; 58 rails in all. Of this number the brand used on 60 miles has furnished 44, while the other brand, used on 125 miles, has only furnished 14 broken rails. The steel was all of the same weight per yard and the same height, and was laid on a well ballasted road-bed.

I think if railroads were a little more particular to buy good steel that the number of broken rails could be diminished at least one-half. The breaking quality of it could be easily determined by having a few rails of every lot received sent into some yard to be used in switches and on sharp curves. There is nothing that will test the breaking quality like cutting it and curving it with a big sledge or "Jim Crow." Good steel cuts well and can be curved with a sledge without breaking. Poor steel cuts hard and breaks when the sledge is used in trying to curve it. The sledge should not be used on a rail that is to be put on main track, as the blows weaken the rail, but in a yard, where no bad results come from a broken rail, the sledge is the best and quickest.

Another cause of rail breaking is flat wheels under loaded cars. A flat wheel strikes a tremendous blow, one that shakes even the road-bed under the train. It is a traveling sledge hammer and should not be run in cold weather when frost is in the rails and the road-bed frozen.

Another cause is trying to make a steel rail do service in main track after it is worn out. A steel rail that has given good satisfaction and done service for years under heavy traffic should be taken out when it commences to break at the bolt holes and to furnish an unusual number of broken rails. The rail may have worn smoothly and look good but the fibre of the rail is gone. It then commences to break at the end where it gets the most jarring. Previously to this state the splice bar does the breaking at this point.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's interests in educational, reformatory and domestic matters are requested

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the tenth day of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
INDIANAPOLIS, INDIANA.

WOMEN IN THE M. E. CONFERENCE.

An event of November in which all of the women of the country should have been interested in a greater or less degree, was the voting in the Methodist churches upon the question of the admission of women to the General Conference. Our readers will recall that at this great conference, held in New York in 1888, for the first time in the history of the church, five women appeared as delegates from various district conferences, among them Frances E. Willard. This General Conference, which meets every four years, is perhaps the largest body of the kind in the world, and has entire jurisdiction over matters temporal and spiritual in the Methodist church, with its millions of members. Formerly it was composed entirely of the clergy, but a number of years ago it was proposed to have a representation of the laymen of the church. The matter was hotly contested but was finally decided in the affirmative. In the natural progress of the age it was inevitable that women should come knocking at the doors for admission. They are usually at the end of the procession and have to wait until everybody else's claims have been satisfied; but, although compelled to bide their time, they make themselves heard when they believe that time has arrived.

The advent of five inoffensive women into this body of five hundred men produced something the effect of an earthquake. All they asked was the privilege of a quiet, little vote upon such matters pertaining to the church as should come up before the Conference for settlement. They had been legally selected by their home conferences to represent them at this meeting. In their own churches they were accustomed to vote upon the same terms as men; they filled various offices; they acted as Superintendents of Sunday Schools; they led the class and prayer meetings; but here in this great Christian Conference they were treated like pariahs. They were not permitted to speak in their own behalf; they were re-

fused a seat on the floor of the house during the discussion—these grand women, led by Frances E. Willard, who has done more for humanity than any minister who occupies a pulpit, the bishops not excepted. The fight raged for days. All the old stock arguments were brought forth. Woman's "sphere" was defined in the usual impertinent manner. The commands of St. Paul, uttered two thousand years ago to the heathen women of Corinth, were applied to the cultured Christian women of to-day. And above all the din and commotion could be heard the voice of Dr. Buckley, editor of the New York *Christian Advocate*, shouting out the true reason for the opposition, "Remember, brethren, every time you put a woman in you put a man out."

But the cause of the women was ably championed. Brave and honest men fought valiantly to secure justice and to vindicate what was so clearly a sacred right. Finally, the opposition, finding that they were losing ground and that the overwhelming sentiment of the public press was against them, took refuge in the argument that the constitution which governs the Conference was opposed to it. They managed their case very cleverly, and finally succeeded in convincing a majority of the delegates that the admission of these women would be illegal, although out of twenty-five judges and lawyers, who were delegates, only eight voted in favor of this proposition. The matter was temporarily settled by referring the question to a vote of the lay members in all the churches during October and November, 1890, and then to a vote of all the ministers at the annual conferences of 1891. The first part of this vote was concluded in November, all of the churches in the country voting as to whether or not women should serve as delegates to the General Conference. A majority of the votes cast decided the question in the affirmative. The matter now goes to all the annual conferences, which meet in February, 1891. Here it will be voted upon by the ministers, and it is by no means certain that they will indorse the decision of the laymen.

If they could be sure that this advancing movement would stop with admission to the General Conference, they might possibly give a majority vote in favor of it; but there is a lurking suspicion, if not, indeed, a positive conviction, that the next move on the part of the women will be an invasion of the pulpit. Having obtained all other privileges, they will demand this last and greatest. This is not the time for a discussion of this phase of the question. The point at issue is, whether women, who compose more than two-thirds of the church membership, who do nine-tenths of the work of the church, shall be entitled to any representation in its legislative councils. Shall they devote their

means and their time and their strength to the service of the church, and then be denied any voice in questions relating to its government? And when this matter comes right down to a serious consideration, how does it happen that men have this question all in their own hands? Who delegated to them all this authority which they have held with so firm a rein these many years? Where is the justice in permitting this question, affecting the rights of thousands of women, to rest entirely in the hands of men? And if they should decide by their votes in these annual conferences that no church shall be represented by a woman, what then? Will women keep right on raising the minister's salary by fairs and oyster suppers, making his slippers and dressing gowns, forming nearly three-fourths of his congregation and keeping the church alive by their zeal and devotion? Perhaps they will. It is no easy thing to throw off the subjugation of centuries, and women are accustomed to injustice. And yet we very greatly mistake the temper of the modern woman if she does not make it quite uncomfortable for her minister if he goes to his annual conference in February and votes against permitting women to represent their church in the General Conference. But if she would make her work effective she should interview him before he starts for the conference, and let him know what is expected of him. If there ever was a subject upon which women have a right to express themselves, it is this one, and they should not hesitate to demand official recognition from the Conference.

NEARLY eight thousand women voted at the recent school election in Boston. Not a single person was elected on the school board who was not nominated and supported by some organized body of women. Mrs. Emily A. Fitch, who was re-elected a member of the board, received the largest vote cast for any candidate. The *New York Mail and Express* pays a high compliment to the three women members of the school board in that city, Mrs. Agnew, Mrs. Powell and Mrs. Williams, for their excellent work, saying: "Several of the most important measures that have received attention by the board would have suffered greatly were it not for the official presence and action of these commissioners." The time will come when there will be a representation of women upon every school board in the country; it is imperatively demanded, let us hope it may not be long delayed.

THE question of adding an amendment to the constitution of South Dakota granting woman suffrage, was voted on in November, resulting in a majority of about two-thirds against the suffrage. Thirty thousand of

these votes were cast by foreigners, most of whom can neither read nor write the English language, and they voted almost solidly against the proposed amendment. The people of Dakota are largely in the power of these ignorant foreigners, whose votes are controlled by "bosses" that prepare their tickets for them. As the foreign population is mostly of the male sex, the men of Dakota, by enfranchising women, might almost wholly counteract this vote, but they are so blinded by prejudice they will not see it. How do the American-born women of this state enjoy being denied the right of suffrage by the votes of foreign-born men who have perhaps been in this country less than a year? But at the same election which refused to give the ballot to intelligent women, it was conferred upon the Indians by twenty thousand majority. In less than one month after the voters of Dakota had given the franchise to the Indians, they were petitioning Congress to send them military protection for their lives and property against the attacks of these newly enfranchised citizens.

OUR well-known correspondent, Mrs. Henry B. Jones, has been given supervision of a Woman's Department in the *American Federationist*, a new journal recently established at Mattoon, Ills. Mrs. Jones has had charge of a similar department in the *Brakemen's Journal* for the past three years. She has always something interesting to say and she says it in an entertaining manner. Her warm sympathy and appreciation have made for her many friends among railroad men. We wish her continued success in her new department.

THE Wellesley College girls have been measured and the average waist circumference of eleven hundred students was found to be a little over twenty-four inches. Physicians say that this is too small to insure health, but what an improvement it is upon the little, wasp-like, eighteen-inch waist that was formerly the ideal of beauty. We trust the next generation of girls will have a plump, healthful twenty-seven inch waist.

CORRESPONDENTS will please remember to send their names with their contributions.

LOUISVILLE, KY.

Editor Woman's Department:

While reading the *Magazine* I thought I would write a few lines, never seeing anything from Mayflower Lodge, No. 415, of which my husband is a member. It is composed of as fine a set of boys as can be found. We have got a new member in the form of a bright, blue-eyed baby boy of which Bro. John Mangel is the papa, and a prouder papa never was. It is a ten pound fireman. As Bro. Mangel's engine is in the back shops for repairs he is making a splendid nurse. When any of the boys of 415 get married, just call on Bro. Mangel for pointers.

Wishing success to the B. of L. F., I remain the firemen's friend,
Deacon.

HEROISM.

Bravery, valor, self-sacrifice, courage and intrepidity are distinguishing qualities of a hero. Courage is that quality of mind which enables one to encounter dangers and difficulties with firmness and without fear. Man has, in all ages, admired true courage. Carlyle says: "The worship of a hero is transcendent admiration of a great man." Alexander was worshiped in his time, and having reached the highest point of ambition, wept because he had no other world to conquer. Cæsar, Pompey, and Cicero are chief actors in the history of Rome. Joan of Arc is admired for her heroic courage, which she shows in the part she took in the defense of her country. In America, among hundreds of heroes, we often think of Hamilton, of the "never to be forgotten" Lincoln, of Grant, of Garfield, whose bravery and courage led him to the highest position a man may attain in our country. All countries, in all ages, have had their heroes. There are two kinds of heroism, recognized and unrecognized. Acts of true heroism are not always recorded on the rolls of fame. The great general who faces the foe with all the valor and courage of a lion may be wounded and die, but he has our sympathy when we know he sacrificed his life for a good cause. The sufferer from physical pain, who conceals his trials, to save loving friends from anxiety, is an unknown hero. Many a brave person occupies a lone and forgotten grave, who at one time fought and bled for his country, so that we may enjoy liberty. We never see a monument dedicated to the heroic engineer or fireman, who meets his death to save others, but in time he becomes an unknown hero. The fame of a warrior is glorious, the fame of an orator or actor may be known everywhere, but the fame of an unknown hero, there is never a word spoken to do him honor. We cannot be noble or have virtuous ambitions unless we are courageous, hence we draw a conclusion that a hero's life is always in danger, because he cannot be a hero unless he has the qualities of a courageous person, and such a person will always face the greatest dangers and risk his life and perhaps will lose it.

Christian heroes of ancient and modern times differ. Polycarp, because he refused to deny his Lord, was burned. Huss was burned on account of his doctrines. The martyred woman, Margaret Wilson, because she refused to abjure the covenant, was bound to a stake amid the flowing tides of Solway Sands. Her persecutors, thinking she would yet abjure, unbound her and once more tried her faith by asking, "Will you forswear the covenant?" "Never; I am Christ's; let me go," was the reply. She was at once plunged into the water and drowned.

John B. Gough was certainly a hero when he gave up the vice, Intemperance, in which he had indulged for years. Sin cannot be conquered or vice renounced without as much heroism as was required to enter the torture room of the Inquisition, or the arena of wild animals where the early Christian martyrs died for their faith. Wellington said, "The brave soldier is he who realizes the danger he is exposed to, and still does his duty." Again we quote from Shakespeare, "Some men are born great, some achieve greatness, while others gain greatness thrust upon them;" but we will never have true fame or true honor unless we achieve it. Every step toward it will be a sacrifice or some trial, but for the foundation we must have courage. Again, no idle person ever becomes great. Those who have achieved greatness in any way have not been idle or thriftless people. Therefore, true greatness is based on labor. Tennyson has said:

"The heights of great men reached and kept,
Were not attained by sudden flight.
But they, while their companions slept,
Were toiling upward in the night."

A person may be a hero in whatever he undertakes, whether in the workshop or on the field of battle. Fame seems more partial to successful aggression than to patriotic resistance, but the fame of Wallace and Washington will outlive those who tried to subdue the liberties of the people. Where is the Scotchman who is not proud of being the countryman of Wallace? Do not all the Americans extol

the name of Washington? Let these names be as a mirror to us to show us what we ought to be. Let us so work to achieve some good for mankind, let us never be a coward in our undertakings, but remember Shakespeare's words, "Cowards die many times before their death, the valiant die but once." We may never perform great acts of heroism, but if we would do our every day duty with promptness and willingness we would be heroes of peace and not of war and bloodshed.

"Honor and shame from no condition rise.
Act well your part, there all the honors lies."

KENT, O.

E. M. L.

KANSAS CITY, MO., Dec. 22, 1890.

Editor Woman's Department:

Notwithstanding your friendly and encouraging little "tip" in the December No. the advance sheets for January came to hand without a word over the signature of a male contributor touching the question of wife management. Therefore I have made up my mind to present some thoughts from a man's standpoint. But at the very outset, I am constrained to say in the language of Josh Billings; "You ask us too much." To undertake to explain even a few of the many devices for managing a wife, even when the kind of wife is stated is, in itself, a very fair day's work, but when the wife is an unknown quantity you need not wonder that men are reluctant to take up the subject. Again, whatever a man may say on the topic is pretty sure to be construed as reflecting his own domestic experience, and that is belief in many cases, that one does not like to have pass current. Another reason, I think, why the husbands have not appeared more conspicuously in the discussion of this question is, that nearly all the wives who are managed are subjected to a certain carefully and patiently devised plan worked out by the husband, known only to himself and possibly one or two bosom friends, and entirely unsuspected by the lady herself. He of course dislikes to give his scheme away. Of course he could dodge behind a *nom de plume*, as I do, but if his identity should by any mischance become known he would have to go out of the wife managing business, for let a woman once realize that she is being, or has been managed, and the game's up. Now Mrs. Harper if you will change the form of your question to "How would you manage So and So's or such and such a wife?" I think you would get more replies. Don't ask how I manage my wife for I'll never give that away unless it is to avoid a fine for contempt of court. Fearing, however, that my readers may feel disposed to infer that I don't know anything about managing a wife I will just say that there are two plans of general application that I have known being followed for the above purpose. One is: Tell her the truth and fight to a finish without gloves. The other is: Lie to her like a horse thief and stick to it as though it were a religious duty. It is surprising how much some women will forgive and how much others will believe.

In the August *Magazine* "Pearl S." asks a question which so far as I have noticed, has received no reply. The reason for this may be that all of the correspondents for this department were lucky enough to get married with very little delay after deciding to take that important step and hence do not feel qualified to give advice in the case. Having once been in a similar position I will offer a few suggestions, predicated of course on the supposition that the young man in question is constituted something like myself. In the first place, then Miss Pearl, you could not be too gushing to suit me provided you selected the proper occasions.

"Tell me you love me,
But not before pa pa"

Or any one else for that matter, expresses my idea on this point about as concisely as I could state it. I need hardly tell you, for the frankness of your question implies that you have sense, that there is nothing more sickening than a lavish display of affection between a young or old couple in the presence of third parties. A young lady, however, who thinks as much of a man as she should before accepting an offer of marriage cannot be blamed for showing her fondness for him by frequent and fearless demon-

strations of endearment, and no man who has regard enough for a woman to justify him in proposing to her, will feel anything but the most exalted delight in receiving them and returning them without hesitation or reserve. No, Pearl, you couldn't kiss me once too often or call me "the best boy in the world" one time too many if the case were mine. In society I should like you to treat me much as I would if you were a very sensible and much admired sister. At social gatherings I should prefer that you paid as much attention to the entertainment and enjoyment of other gentlemen present as you did to me and if anything a little more. If we were so situated that I could not frequently be your escort I should wish you to accept the company of other gentlemen to and from places of amusement and so forth, especially if our engagement were generally known or suspected. On such occasions I should wish you to feel that the more you enjoyed yourself the better I would be pleased. With this much I shall have to tear myself away as my letter is getting long. With "Mrs. L. H." I hope the time will come when no woman will feel disposed to marry for a living.

"Friar Tuck."

[We fear some of our more sedate readers will be somewhat shocked at the sentiments expressed in this letter, but as we believe them to outline the opinions of other men besides the writer we will put them in because of their honesty, and ask "Friar Tuck" to call again.—Ed.]

EAST ST. LOUIS, ILL., December 9, 1890.

Editor Woman's Department:

In reading the Woman's Department, asking the best way to manage our wives, I will give you an idea how I manage my wife, for indeed I have a wife that in my eyes, is simply perfect. We have been married seven years, during which time two children have been born—and buried, leaving us childless, so you see our path has not been all roses. Still, I did not despair and go to hard drinking, as is often the case, but tried to comfort my wife the best I could. I did not blame my wife with their sickness or their death, which I know to be the case with some of our near neighbors. If everything does not go just right. When you come in, if everything does not suit you, and after your wife has explained why they are not as they ought to be, don't get up on your high horse and scold her. Just make the best of it. If your dinner be a little late, you would not get it any quicker by raising a racket. Just tell her to be as quick as possible. If there be a child in the case, it will not hurt a man to hold it a few moments till she prepares the meal. When a man is on the road he is away from home so much he does not know what a woman has to do. As for changing, I would not change with my wife for \$25 per day difference.

A woman is never done, night or day. She is up all hours in the night with the baby while the man is sleeping; the first to rise in the morning, the last to bed at night. If a man would only stop and consider his home a little more, there would not be so much trouble in it. I have met men before now that would say, "Do you give your wife your money?" Well, I would like to see the woman I would give my month's pay to. She would spend it foolishly. How does he know unless he tries her. Show me a woman that would foolishly spend her husband's money when all the time that he is earning it his life is in danger. I do not fear giving my wife the money. If I want spending money I either keep an amount out or ask her for it, which I am sure to get. I never lie to my wife as to how much I draw every month. Fortunately I am at home every night and I see a great deal of my home. I never go out to saloons evenings but spend them at home. My wife in my eyes is prettier to-day than the day I married her. I have never seen her dirty and slovenly looking. She is always neat and tidy. I have often heard a woman could just as easily go neat as she could dirty, which I believe, for I never see her take any trouble with herself and she always

looks well, as also does the house throughout. She is always fixing something to make home pleasant. We have nothing fine in our house, still I don't think there is a prettier home in the city.

A woman can be managed if you will only use a little consideration and kindness. Don't undertake to drive a woman. It will harden her against every one. Always use kindness. Speaking of money matters, my idea is to let the woman handle the money just the same as yourself. They have all the buying to do—clothes for the family, and house in general, often yourself. If a wife be very young she may be a little careless at first, but any wife in a short time will learn how to manage, no matter how young. My wife was but fifteen years old when I married her, and to day there is no better manager, and I don't think there is a family has less trouble than we have. I hope those who give their wives so little privilege will see their mistake and mend it before it is too late. I manage my wife with kindness, love and respect; that is, all that is necessary.

I have never read an article from F. W. Arnold Lodge, No. 44.

As this is my first article, I will close.

Yours truly,

Edward Ames, a Fireman.

[The Woman's Department has never published a better letter than this. We hope to hear from some of the other husbands.—Ed.]

MAHONINGTOWN, December 9, 1890.

Editor Woman's Department:

I have been a constant reader of the Magazine for some time, and am always interested in its columns. Although the Radiant 416 has been very silent, and has never let the outside world know of its existence they are all, however, endeavoring to make a success of the order. If outside indications are true, The Brotherhood of Firemen is a grand and noble organization, composed of brave, true hearted fellows, who realize their danger and are always willing to help a fellow man whenever an opportunity is placed in their reach. The 416 is composed of just such men. Bro. Truesdale, the Master, is an all over Brotherhood man. He can always be heard advocating the good of the order. There are more in the 416 just like him. Bro. Churchfield has been on the sick list for some time but is able once more to take his place on the "Low Grade." Bro. McCallin is somewhat under the weather at present, but hope nothing serious may result. Bro. Holcomb's family has been increased by the addition of a baby girl. He wears a happy smile when purchasing paregoric.

Well, as this is rather lengthy for the first, I will close, wishing a bright future for the Brotherhood.

E. M. C.

For Woman's Department:

SHE KISSED THE DEAD.

She kissed the dead, while tears of grief
Rolled down her cheeks, so pale and fair,
Then softly whispered, "Darling speak
And soothe the grief of her who weeps
For thee, with sorrow few can bear."

She kissed the dead and bade him speak,
If only once, then she might know
That he yet lived for love's sweet sake,
Though sleeping, still he might awake,
And then her tears would cease to flow.

She kissed the dead, whose cold, pale lips
Would never enclose nor breathe a sigh
For her who bent in anguish deep
Above the bier where silent sleep
Held him enwrapped so peacefully.

She kissed the dead; in vain she strove
To win from him one fond caress;
With breaking heart she called his name,
But to her cry no answer came,
And then she knew that he was dead.

Mrs. Nellie Bloom.

WINT OAKLAND, CAL.

LETTER FROM MRS. JONES.

Editor Woman's Department:

The December number of the *Firemen's Magazine* is before me, and I am very much amused at "Nancy Lee's" letter. Poor Kicker! It is not my principle to kick a man when he is already on the floor—and, as in this case, most decidedly covered with bruises. In his letter I believe he threatened Mr. Debs unless the Woman's Department would be annihilated at the San Francisco convention. Well, I should think the knowledge that Mr. Debs was too thorough a gentleman to entertain such a thought for one moment, ought to be sufficient revenge meted out to Kicker. Indeed some of our jolly railroad boys insist that the Woman's Department is the brightest feature of the journal and, Mrs. Harper, you will know that whatever a woman finds to interest her, will also in time be an object of interest to her husband. What a woman discusses at home sooner or later attracts her husband also. I read the Woman's Department with pleasure. It is many years since I was first admitted into its circle, and if this letter goes to the W. B. I will have the consolation of knowing it to be the first that ever went that way. I have heard it said, if a letter is interesting, the writer must write just exactly as though she were talking. Well I am afraid were I to act upon that plan now, this would be a medley that few if any could understand, yet I think it is quite as bad to write on any subject in such a high flown strain that nine times out of ten none but the writer ever understands one third of it, and even he often uses words he never knows the meaning of. I was very much amused one time at one of our plain, honest, railroad boys. He came to see me with a book in his hand where there was printed a most elaborate article upon some subject, and said, in his blunt way, "Is this English or Latin?" I read it over and explained that it was English, of most fluent type and style. Then said he: "I'll quit taking this at once, for I want something I can understand in good, plain English." And he did quit for that reason alone. However in your department I often see letters in plain enough language for the veriest child to understand, and that is just what suits the home of the average railroad man. I also see the names of faithful old friends still writing for the department, and, as year by year rolls on, the tie of friendship grows stronger and stronger. The wheel of misfortune may run its round, or prosperity may clamor for admittance, it is just the same with faithful friends, nothing ever detracts from their regard. I see "Irene" asks me in the November *Magazine* to write upon the "Management of Husbands." My dear "Irene," there is quite as much difference in the disposition of husbands as there is in children, and what is good for some would be quite the contrary in others. I have read articles upon the training of children, and have, I must confess, laughed at the idea that any one should advise another how to train up his own child. While anyone who has, as I have, had experience in bringing up a family knows, that where one child can be coaxed or persuaded, another in the same family must be corrected. What is the use of my laying down a rule to govern another woman's husband; I am afraid I should be as much ridiculed as the writer of "how to train children." With good wishes to all, as ever,

Mrs. H. B. Jones.

EVANSVILLE IND., December 7, 1890.

Editor Woman's Department:

Having been a constant reader of the *Firemen's Magazine* for almost a year, and not seeing anything from C. J. Hepburn Lodge, No. 100, I thought perhaps I might say a few words in favor of the esteemed members of that lodge.

They are a set of gallant fellows, eager to lend a helping hand to any brother or friend in distress.

And as for the *Magazine*, it is one of the most interesting pamphlets I have ever read. I, being a lover of good elocution, find great pleasure in reading the many beautiful poetical selections in these books.

This being my first letter I will close, wishing the B. of L. F. good success.

Mamie Ryan, a Fireman's Daughter.

MY SWEETHEART.

Sparkling is a science; one that every man born into this world tries his hand at sometime in his life. It ought to be taught. A young man should not be left in ignorance on this all important subject. There should be some fixed rules for his guidance through the labyrinthine highways and byways of courtship. Many a man has lost a good wife because he didn't know how to court. A great many young men do an awful lot of sparking in such an unscientific way that the girl can't tell for the life of her whether the fellow is making love or trying to flirt with her. I had one of those untaught beaux when I was young. At first he entertained me with his antics; after awhile I was amused at his friskiness. I could not help laughing at him, both before and behind his back. Grandma said it was wicked to laugh at a young man's affections. But I really had to, they were the queerest lot of affections I ever saw. He followed me about like a dog. I used to walk and walk until I was all tired out just to see him follow. Then when I sat down he would seat himself as close to me as it was possible to get. When I would move away he came to me like magic. He wanted to hold both my hands all the time. His attentions became burdensome. He was forever at my elbows. If he called on me he never knew when to go. If he took me to a concert he expected me to stand the rest of the night at the gate. Oh, those courting days; they were the terror of my life. I was really thankful when they were over. I do hope I will never be a widow. I really do not think I could live through another attack. Now, if I was a man I would do my courting something after this style. I would never forget that I was a gentleman and if the girl was not a lady I would not court her. I wouldn't dog her steps; I wouldn't be too sweet, nor stay too late. When I took her home I would open the gate, let her in, bid her good night and immediately retrace my steps. I'd be afraid she would get consumption standing at the gate for an hour or two, and have the headache next day for want of rest. I wouldn't want to break her constitution down by exposure to frosty winds and dewy nights. I would try to say all that need be said before I reached the gate. If I loved her I would tell her so in a straightforward, manly way, and not be hanging on for years and years, keeping some other good fellow from marrying her. I wouldn't get too familiar. "Familiarity breeds contempt" even in love affairs. I would treat my sweetheart as if she were a delicate flower that too much handling withers. And if she be a wise and noble girl she will love you better for your carefulness of her.

MURPHYSBORO, TENN.

[If you should ever be a widow you will know how to bring him to the point without wasting any time.—En.]

BLOOMINGTON, Dec. 21, 1890.

Editor Woman's Department:

I have read the Woman's Department of the *Magazine* for some years, and with a great deal of pleasure and profit. Looking over the December number, for an answer to the question, "How to Manage a Wife?" I fail to find anything. Absolute silence reigns. Now, gentlemen, I don't think you are doing your duty, for you owe it to your fellow men (who are still single) as well as those who are married, to relate your experiences at least, if you cannot give an idea, just as much as you believe it to be your duty to give or exchange experiences and ideas of scouring. Now, for my part, I have no wife to manage, so I cannot tell how my ideas will work. There have been so many of the boys here who lately have taken unto themselves a wife, that I surely expected some of them to answer and say whether they preferred to manage or be managed.

If discretion is the better part of valor in this case, why don't some one say so? Mrs. Editor, I believe this question is like the one we had going the rounds of the press for a time: "Is Marriage a Failure?"—a great deal can be said on both sides. To my mind those who declare Marriage a Success, would be very apt to say, in answer to "The Best Way to

Manage a Husband or Wife: "Why, the idea!" he or she, as the case may be, "don't need any managing. We both work to make home, what to our minds, it should be."

Now my idea does not say to manage a wife, but to manage to find a young lady worthy to be your equal, helpmate—a wife; and if your equal, she certainly has as good a right to be a manager as the husband. If she should happen to be his superior, then let him strive to become her equal. If his inferior (let us hope he married for love), then let him strive by that love to raise her to his level, and in every case treat each other with consideration, respect, equality and love, and then the answers to such questions as "Is Marriage a Failure?" "How to Manage a Wife?" or "How to Manage a Husband?" would be: "No!" (capital N), and "We both manage." Now, again, if "How to Manage a Wife," means to carry the purse, and dole out, bit by bit, what she asks for to run the house, clothe herself and children, and act like a crazy man if it should be a little more than he thinks it should be, I think its meaning is wrong. If to tell how to do this or that about her work, or "how my mother did this or that," I say wrong again. If he wants everything done to his taste and views, why in the name of goodness, did he not stay single, and do it himself? For no man would put up with such managing as that, and certainly no woman will without rebelling. A woman is so much more sensitive than a man, that that fact alone ought to cause him to treat her kindly. Instead of saying, "Goodness, this cake is like lead," or, "This bread is sour," let him say, "Is the last coal we got any good?" "The butter must have been bad," or "The yeast poor"—anything rather than a reflection on her ability, and she will nine times out of ten, want to hug you.

I think, Mrs. Editor, I would better stop, or I'll weary you, but before I close, just let me say, God forbid that any of the members of the B. of L. F. should entertain such ideas of managing a wife as "Kicker" of Stevens Point. Again, to Mrs. Hinchcliff, in *October Magazine*, let me say, "Them's my sentiments exactly." Also to J. K. F., to W. I. F., in December issue, ditto. I would consider it a privilege and a pleasure to meet and shake hands with them, especially Mrs. H. If you will permit it and with your approval, I may come

Again.

[You may in welcome.—Ed.]

PALESTINE, TEXAS, DEC. 12, 1890.

Editor Woman's Department:

I have been a constant and devoted reader of your worthy *Magazine* for the past four years, and have not seen an "iota" from our dear Neches Lodge, No. 134 for I cannot tell how long, it seems a "century."

And to-day, while it is cold, bleak and dreary out of doors, I will, in my poor way, write a few lines. Neches Lodge is still prospering, as it always has, and God grant that it may still continue; we have many noble, generous, good-hearted boys in the lodge, but God has taken one of our noble men, Mr. A. J. Schnoor, from us, whom we laid to rest to-day. Last Tuesday morning, December 9th, the northbound passenger train left here at 7:30, which was derailed only about fourteen miles north of here. The engine left the track and turned over, killing the fireman, A. J. Schnoor, beneath the engine. He was a noble brother and greatly beloved by all who knew him; he leaves a wife and three children, father, mother, brothers and sisters to mourn their loss. They have the heart-felt sympathy of the brothers of the different lodges and his many friends, who will long remember this noble brother.

At the grave how grand it seemed to belong to such a grand order, each member seemed so noble and true-hearted. One can but notice it when seeing a brother drop in the grave his emblem and token of love and esteem, the arbor vitae and cross. Who could but feel proud to belong to that grand band of men, of whom my brother is one. May God bless the B. of L. F., and especially No. 134, with best regards and kindest wishes.

A Firman's Sister.

HOW TO MANAGE A WIFE.

Written at the request of Mrs. Ida A. Harper.

I confess that for once in my rollicking life,
I am nonplussed on how to begin
To express in a song how to manage a wife,
And avoid inclination to sin,
Punctuating my pauses in language profane
At the number of failures I've had;
Well, here goes for an hour in a dolorous strain,
'Mid the sighs which I belch mighty sad.

Since the day that I first clasped her beautiful shape
At the altar, o'erwhelm'd in bliss,
Just as awkward as any old African ape,
To implant the connubial kiss,
I have tried, and I failed, and had at her again,
But at last I gave up in despair,
The most heart-broken wretch to be found among
men,
Minus courage, conceit and some hair.

I have stood like a felon awaiting his doom
Many times fronting her I dare
As she raved like a maniac, armed with a broom,
To besmear my brains on the floor,
For some trivial thing she imagined I did,
Or some few foolish words which I said,
Till in terror I'd jump from the house like a kid,
To protect my unfortunate head.

I have heard men can manage some other men's
wives
More successful by far than their own,
And conceal all the sunshine which entered their
lives
From their stolen embraces alone;
Well, perhaps it is true, yet I'll venture to say
There are snags to be met on the course
Which they steer in the dark, and the devil's to pay
When the papers are served for divorce.

"How to manage a wife?" Give her ducats galore,
Give her jewels until she's ablaze;
Give her satins and silks to delight her heart's core,
Yet, her greed will your bosom amaze.
Give her all the earth, fence it in for her sake
When it smiles in the verdure of June,
But, alas! even then all our heartstrings will ache,
For she'll longingly look at the moon!

Man can manage battalions and lead them along
To the deadliest pit of the foe;
He can close up their ranks, and can right every
wrong,
By a word as to slaughter they go;
He can fire them with zeal for the cause they defend,
Till they yield up their last throbs of life;
But he'll cringe like a slave, and for mercy he'll
bend
On his knees when assailed by his wife!

Do you think if I could only manage my own
I'd be plagued with a brace of young twins?
Not at all, madam dear, for in anguish I groan
At their bawling and tigerish grins;
In their stead I would have a sweet dimple shin'd
boy,
Just as mild as the moon's mellow ray,
Who would look like myself, be my comfort and joy,
But, alas! my dear wife had her way.

Let some Solomon wiser than I am explain
How the difficult job may be done,
As for me, I'll no longer sit plowing my brain,
For I honestly swear it's no fun.
I can manage a vicious, ferocious, old bull,
When with devilish instincts he's rife,
But I never could get the right sort of a pull
On the checkrein to manage my wife.

Shady Manure.

[When the writers of the Woman's Department begin to express themselves on this letter, "Kicker" will get a rest. —Ed.]

CONNELLSVILLE, PA., December 10, 1890.

Editor Woman's Department:

"I am greatly interested in the *Magazine* because two of my dearest friends are firemen. One of them is my brother, and the other is somebody else's brother. I am in favor of "higher education of women." Why it would interfere with marrying I can not understand. Even if it did reduce the number of marriages, I think it would also reduce the number of divorce cases. In my estimation it would better fit women to fulfill the position which they *should* occupy in the home. By "higher education" I think we mean a thorough knowledge of cooking and housekeeping generally, as well as Latin, Greek, Geometry and "all the rest." The married men and women have been lectured long enough about their "failings;" now why don't some one lecture the young ladies and gentlemen? I think we need it sometimes, as well as the married folks.

O. Kee Kong, please send me that receipt for making rubber, *alias* angel cake, which you mentioned in the October number. We have a very constant visitor at our house. He always comes about meal time and he is exceedingly fond of cake. I think if we were to let him taste your cake it might have some effect upon his visits. If you will only send it I will be under lasting obligations to you.

With my very best wishes for the railroad boy,
I am
Olive.

STEVEN'S POINT, WIS., December 21, 1891.

Editor Woman's Department:

As there has been a great deal said about Mr. Kicker, I am just going to write a few lines in his behalf. In the December *Magazine* I read a letter signed "Nancy Lee." In her letter she writes what she knows about Mr. Kicker and his family. I am going to take the liberty to tell what I know about them. It seems to be the general opinion of every writer in the *Magazine* that this Mr. Kicker must be a tyrant. Well, now, I will say this much talked of "kicker" is a woman instead of a man, and she wrote that letter to create a sensation in the Woman's Department. I have been acquainted with Mrs. Kicker and her husband for nearly four years, and lived neighbor to them and fired opposite runs to him, and I have never seen anything of him at either end of the road that was not becoming to a gentleman, and as for having his *Magazines* come to the round house so his wife could not read them, it is false, as I positively know that none were sent there. "Nancy Lee" says that "Kicker" does not like fancy work. I have never been at his home but that it seemed pleasant and happy and it looked to me as if they had everything around them to make them happy. I have written this letter to let the readers of the *Magazine* know that there is no such man as Mr. Kicker.

Main Rod.

NEVADA, MO., December 4, 1890.

Editor Woman's Department:

To night, as my old fire boy is out on the road, I will try for the first time to write a word to the dear old *Magazine*. I take several magazines, but I think the B. of L. F. the nicest of all, for I sometimes think I have all the troubles, until I read some one else's. Poor "May's" letter in the June number is so sad! But how many of us could write the same, if we only would. But what is the use? None, only to let others see they are not the only ones, as I have said before. I write to tell "May" that I have almost such a husband, only he does not play at home; even if he did, indeed, I would play, too. But when he does come home, I have the children, the house and myself all nice, and meet him at the door with a kiss and smile. He will give us all one, then, maybe, say, "Go away; don't bother me: I'm tired;" and I don't doubt that he is. But how tired do you suppose I am—getting the children, the house, and the dinner or breakfast, ready for him. Why can't he—and a good portion of the men—come in and say, "What a nice breakfast!"—and my little children, how glad they are to see me!" or some-

thing like that? Some one will say, "She wants to be petted." No, indeed, I don't. But what is the use of a man going with a school girl seventeen years old, for four years, and true as steel to her all that time, going to school with her and after her at night; then when they are married, and their hands tied behind them with children, and the husband the only one that can by a nice, good word (one that has been said thousands of times before marriage), make her so light hearted, why don't he do it? And as "May" says, never ask you to go anywhere with them—they are always tired. I would rather live on bread alone, and have them at home more, where they would not get so tired. Indeed, they never get tired going before they are married.

Now, don't think I have a mean husband, for I have not. He is good to me in his way, and I just worship him, despite his odd ways. But I write to let "May" know she is not the only one. It seems to me woman has the hardest lot in life, any way. Now, no longer than last night, I sat up late, keeping a good fire, listening to every sound—thinking maybe he was coming. Finally I heard his dear, old whistle, and oh, I was so glad! and when he came to the house he said, "What are you up here for? Better be in bed asleep." Isn't that like a railroader? How do you suppose I felt? Could he not have said: "What a nice, good fire! It's nice to have a good home to come to," or something like that? But that's a man for you. Why not have the men write how they want the women to do?

I will cease, for I fear I have written too much already. With good wishes and a merry Christmas to all, good-night. A fireman's wife,

— Ruby.

[If the husband of this writer is a wise man, he will mend his ways. The wife will not always "worship" a neglectful, indifferent husband. Love dies hard, but such conduct as is described above finally kills it.—Ed.]

HARDINSBURGH, KY., December 8, 1890.

Editor Woman's Department:

I have had the pleasure of reading the third *Magazine* and am perfectly in love with them. I find them so very interesting, and through the kindness of a very dear friend of mine on the L., St. L. & T., I receive the *Magazine* monthly. I see some very good receipts in the Woman's Department how to manage a husband. So far I have no use for the receipt. I should think a husband would have to be managed altogether according to his disposition. As this is my first attempt to write I hope you will spare me a small space in your Department.

Wishing the B. of L. F. good success, I remain
Daisy.

THE HOME COMING.

Do you send your heart before you, dear,
When coming home at night,
That I feel your presence drawing near,
While still you're far from sight?

Does the soul out-run the body, dear,
That an echoing foot fall fleet,
Strikes on an inner listening ear
Before your own I greet?

Thy loving smile lights up the space
Of twilight darkening dawn;
I feel warm kisses on my face,
While still I sit alone.

Hasten to one whose happy fate
Is in thy care to dwell;
Hasten where love and duty wait,
Their greeting sweet to tell.

A manly step—quick, firm and light—
Rings out above the rest.
Ah, heart! you heard it and were right—
'Tis his whom we love best!

Celia P. Woolley, in *Good Housekeeping*.

What Women are Doing.

Mary B. Clay, a daughter of Cassius M. Clay, of Kentucky, and herself a successful practical farmer, contributes to the *Woman's Journal* this week an interesting article on farming as a business for women.

Miss Abbie M. White, supervisor of drawing in the public schools of Providence, R. I., holds one of the highest positions in education occupied by any woman in New England, having about 150 schools under her charge.

Mrs. Pering, of Silverdale township, Cowley county, is believed to be the first woman ever elected to the office of road overseer in Kansas. A local paper observes: "It is safe to say that the farmers' wives living in her district will be able to take their eggs to market this winter without breaking them in the basket."

Dr. Helen L. Betts has been delegated by the Woman's Medical College of Pennsylvania to visit the laboratory of Prof. Koch, in Berlin, and investigate his method of treating consumption. Dr. Betts is a graduate of the Pennsylvania College, now practicing in Boston, and is the first woman physician to go.

Mrs. Flora Tibbetts, now of Chicago, formerly of St. Louis, who graduated in law at the late commencement of Michigan University, made her first appearance as counsel in Judge Horton's court last week. The *Inter-Ocean* says of the young lady: "She handled her case in a manner that would have done credit to a much older practitioner."

What We Disfranchise.

Under our system of excluding the women entirely, as well as all others under twenty-one years of age we leave the elective franchise to about one-seventh of our people. The entire exclusion of the womanly will from our government is a monstrosity. It gives us the rule of the bachelor's den. State government itself is the completed growth of the plant which in its original is the family.

In all our governments we have severed ourselves entirely from this wise economist, this cautious counsellor, this independent actor, woman. She neither votes nor advises. She has less political influence here than in Turkey or Arabia. Moreover, under our party discipline, this one-seventh of us that do the voting is divided in two—a majority and a minority. The majority rules; that is, our pretended government of the people is really a government by about one-half of one-seventh of us—a government of the people by one-fourteenth of the people for various trusts, corporations and combinations. That is just what it is ordinarily. —*Woman's Tribune.*

Women in the Pulpit.

When a woman knows that she has a call to preach the Gospel to the heathen, and yet accepts the government of her church as perfect, or unalterable, like the laws of the Medes and Persians, there must be a continual warring against herself until the keen edge of conviction is dulled and apathy follows, the fatal slumber of the soul.

When a woman knows that she has a call to preach the Gospel and the church refuses to clothe her with authority to preach, the dilemma has three horns; either the Creator made a mistake in creating a woman instead of a man, or the Holy Spirit made a mistake when giving the call; or the discipline of the church makes a mistake in refusing ordination.

When a woman, alive and aglow with a zeal which absorbs and consumes every other earthly consideration; with that conviction which cries by day and by night "woe is me, if I preach not His Gospel" to my sister women who sit in darkness; with a heroism akin to that which fired the hearts and brains of the early christian martyrs; and with the immolation of self which says: "Here am I send me! send me!" it surely would seem that the church in the essence and spirit of the gospel, would run with outstretched hands and benediction and send the daughter forth from the parental home, armed and equipped with all the panoply of the authority of the church.

The New Gospel of Peace.

"I have never struck my two children," said a young American father the other day, "I have often been tempted strongly to do it, and sometimes would not have blamed any parent for doing so.

"I was thrashed so much by my own father, a good enough man too, that I always stood in fear of him, seldom told him the truth if I could help it, and never confided in him. Often I was whipped for errors I had committed with good intentions, and I remember the wild spirit of hatred that used to come over me at such times, when smarting under the blows I felt I did not deserve. I would get away by myself and swear silent but bitter oaths that would have opened the old gentleman's eyes to his folly, perhaps, if he could have heard them from so young a child.

"So I made a vow that I would never beat my own children. And now I feel sure that they do not stand in physical fear of me, I am pretty certain they tell me the truth, and I know they confide in me as a friend. And though they do not obey me nearly as implicitly as I did my father, and make themselves much more of a nuisance to me than I was to him, yet they don't regard me as a bully, and that is something."

GO HOME STRAIGHT, JOHN.

The dear little wife at home, John,
 With ever so much to do,
 Stitches to set, and babies to pet,
 And so many thoughts of you:
 The beautiful household fairy,
 Filling your home with light:
 Whatever you meet to-day, John,
 Go cheerily home to night.

For though you are worn and weary,
 You needn't be cross or curt;
 There are words like darts to gentle hearts,
 There are looks that wound and hurt.
 With the key in the latch at home, John,
 Drop the trouble out of sight;
 To the little wife who is waiting,
 Go cheerily home to night.

SUNRISE ON THE ALPS.

Hark! how the awakened echoes ring!
 The blaring of the Alpine horn
 From peak to peak goes quavering
 Through all the airy aisles of morn.
 The first faint line of sunrise fire
 Along the cloudy east is drawn,
 And one by one the stars expire
 As rings the anthem-peal of dawn.

Come forth, and taste the winery air
 While yet the dews are diamond-bright;
 Come forth, and speed with thankful prayer
 The shadow of the wings of night.
 Come forth, and watch the unswelled snows,
 Range after lofty range, expand;
 Come forth, and see the morning's rose
 Burst o'er the Bernese Oberland!

Swift-smitten by a transient ray.
 A lordly pinnacle of ice
 Becomes, in some mysterious way,
 A giant spray of edelweiss:
 And on the horizon's utmost bound
 From peak to cloud one may espy,
 Round rising over rainbow round,
 A Jacob's ladder scale the sky.

The west has felt a flush of flame
 That sets its forest heart astir,
 And breathes the radiant morning's name
 In symphonies of pine and fir.
 The lower mists are backward rolled,
 And, as the crowning splendors burn,
 They kindle into lambent gold
 The blue enamel of Lucerne.

Now every heaven aspiring height,
 From mountain pole to mountain pole,
 Reveals to the enraptured sight
 Its evanescent aureole.

The scars the breast of Nature wore
 Are thrown in such divine eclipse,
 The soul of man is dumb before
 The dawn's supreme apocalypse.

Dangers of Isolation.

If you want to see sickly sentimentality, an absurd ideal of "the gentleman," utterly false notions of love and marriage and life generally, go to a girl's seminary, where daughters and sisters are walled in and guarded as though their brothers were raging lions, seeking whom they might devour. Also, if you want to see immorality, bad habits, lowmindedness, and disrespect for women, go to a boy's school where the same policy is observed. Take note also of another point; this system of isolation keeps the young people's thought upon each other, leads, therefore, to clandestine correspondence and evils of many kinds.—*Inter Ocean*.

A Pathway, Not an Avenue.

"There are now so many avenues open to women." This statement is of frequent use and accepted belief; it speaks both truth and falsehood. The ways at present are numerous and constantly increasing by which a woman may labor and receive a money reward for such toil—but those ways are not "avenues." That word is misleading and is characteristic of the exaggerated verbiage of our times. "Avenue" suggests a broad, graded, smoothly-paved approach; shaded by green trees, or lined on either side by stately buildings and the bright-lighted windows of inviting homes. "Avenues" are surveyed, they are straight or of easy, graceful curves, open, ready, not difficult to find and with the dust well laid. The woman who would support herself must tread a crowded, vulgar roadway, rough, uneven; she must accept bruises, abrupt turns, uncertain direction, and breathe in and bear upon her outward self the soil of the journey. Any one is privileged to weight her with criticism or wound her by lack of courtesy, and the gentle woman who successfully and joyously walks the roadway either sacrifices to it the blush of her womanliness and has a sensibility more or less dulled or else each setting sun records for her in addition to salary a higher reward and an imperishable one.—*Eastern Star*.

The Glory of Motherhood.

It is as evident that women are meant to be mothers as that men are meant to be fathers. But under normal conditions a woman is not and does not consider herself a sacrifice and a martyr merely because she is a mother. On the contrary, she rejoices. If there are special sufferings involved in maternity, which the father is not called upon to endure, there are also special compensations which the father does not share. Every motherly-hearted woman whose children have turned out well would say that the joys of maternity far outweigh its pains. If the lives of most women are full of hardship and suffering—and, taking the world over, there is little doubt that this is the case—it is not owing to the will of God or to the necessities of nature, but to somebody's ignorance or sin.

KEEP your promises. If you agree to meet somebody at a certain time, not only your word and honor are at stake, but your integrity also. Be careful in making promises, but, when they are once made, keep them, even if you must go far out of your way and put yourself to great inconvenience to do this. Your word ought always to be as good as your bond. No man has a right to treat his own promises lightly, and as though it were only a slight matter to forget them or neglect them.—*Congregationalist*.

The Boy's Essay.

A boy, fourteen years old, handed in the following as a composition on "Breathing." The instruction was: "Tell all you can about breathing." He said:

"Breath is made of air. We breathe with our lungs, our lights, our liver and kidneys. If it wasn't for our breath we would die when we slept. Our breath keeps the life a-going through the nose when we are asleep. Boys that stay in a room all day should not breathe. They should wait till they get out doors. Boys in a room make bad, unwholesome air. They make carbonic acid. Carbonic acid is poisoner than mad dogs. A heap of soldiers was in a black hole in India, and a carbonic acid got in that there hole, and nearly killed every one afore morning. Girls kill the breath with corsets that squeeze the diaphragm. Girls can't holler or run like boys, because their diaphragm is squeezed too much. If I was a girl, I had rather be a boy, so I can run and holler and have a great big diaphragm."—*Exchange*.

What to Do With Our Girls.

The foundation of society rests on its homes. The success of our homes rests on the wives. Therefore, first of all, teach our girls how to be successful wives. Begin in their infancy to develop their characters. Teach them that jealousy is an immorality and gossip a vice. Train them to keep the smallest promise as sacredly as an oath, and to speak of people only as they would speak to them. Teach them to look for the best quality in every one they meet, and to notice other people's faults only to avoid them. Train them to do small things well and to delight in helping others, and instill constantly into their minds the necessity for sacrifice for others' pleasure as a means of soul development. Once given a firm foundation of character like this, which the poorest as well as the richest parents can give to their girls, and no matter what necessity arises they will be able to rise above it.—*Ellis Wheeler Wilcox*.

A Business Confidence.

Women who have not discovered that they are in possession of any talent worth cultivating, can immortalize and make of themselves a monument to happiness and all that is most desirable in a household by simply taking an interest in the affairs that fill the life of the over-worked husband. There are so many women who never know the value of money only as it is impossible for them to get it to gratify their ambitions. In receiving it for the asking, because it is placed at their disposal without question as to its expenditure or being asked to give an account of amounts received before, never a thought comes to her of the many weary hours of

business perplexities the husband struggles through. If perchance he should suggest that she wait a day or two, that he must meet some paper that is coming due, she immediately jumps at the conclusion that failure is staring him in the face, and adds to his already over-taxed strength by melting into tears and wondering what she has done to deserve so much trouble. Every wife should interest herself in the things that are of the most importance to her husband. She should understand and be in perfect sympathy with everything that goes to make up his life. If business cares bring lines into his face or weariness to the eyes, she should, by tact, encourage him to speak of them to her, and show that his interests are hers. His feeling that perfect sympathy awaits him at home will lighten burdens that seem more than he can endure, and will assist wonderfully in straightening out the most complicated tangles.—*Teresa H. Dean*.

A Partnership Affair.

It is a curious fact of history, that the bigot and the blackguard have been partners in opposing every forward movement of humanity. They united to mob abolitionists and were together at the crucifixion. They defeated equal suffrage in Nebraska but met their hopeless Waterloo among the mountains of Wyoming. The respectable remonstrant may delude himself with sophistry about the "oak and vine," the "angelic" theory, etc., but not so with his brother anti-suffragists—the tough and the rowdy. The latter reason too well. They know that equal suffrage means purity in politics and that is what they hate and fear. The brilliant young man who has sown wild oats and left the bitter harvest to be gathered by some broken-hearted girl, does not want his victim to have a ballot in her hand when he runs for office.—*Woman's Journal*.

Mrs. SHERIDAN has withdrawn almost entirely from the world. Within the walls of her beautiful home in Washington she lives in a quiet, unostentatious grief for her loved husband and in beautiful motherly devotion to her children.

On an up-town street in Philadelphia there are six houses adjoining each other in which the wives are all sisters. The last was married a month ago, and last week secured the house adjoining those of her sisters.

"I FELT so nervous, mamma," said a little girl, referring to an accident on the previous day. "What do you mean by 'nervous,' my dear?" "Why, mamma, it's just being in a hurry all over."—*Springfield Republican*.

THE MAGAZINE.

Rejected Manuscripts are not returned unless accompanied with required postage.

Subscriptions must begin with the January, April, July or October number, and expire with the year.

Changes of Addresses of subscribers should be reported to us promptly to insure the safe delivery of the Magazine.

Contributors are required in all cases to give their real names, not necessarily for publication, but as a guarantee of good faith.

Subscribers failing to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

THE POLICY OF THE MAGAZINE.

The receipt of the following communication serves a purpose, of how much consequence may be developed further along:

ELM CITY LODGE, No. 284 B. of L. F.,
NEW HAVEN, CONN., December 21, 1890. }

To the Editor and Manager of the Magazine:

DEAR SIR AND BRO.:—Your official circular No. 3, in regard to the *Magazine*, was read before this lodge at our regular meeting to-day, and we wish to reply and state that as members of the B. of L. F., we do not approve of the scurrilous articles that have for the last year appeared in the columns of the *Magazine*, attacking everybody in one way or another that has incurred the displeasure of the Editor, and perhaps a few hot heads of the order. It may afford some members of the order vast pleasure to read articles about *Russianized Serfs*, and *Czar Corbin*, and *Mephistopheles Depew*, and other such articles as have appeared in the *Magazine* for some time, but the members of this lodge are not in favor of this kind of talk and do not care to read it, much less to ask for subscriptions from outsiders who know nothing of our affairs. We also believe that it is injurious to the order, and if it is continued, that it will work far more injury to the order's fair name than it has taken years to establish, than can be repaired in years. And we say that when you say that the *Magazine* has voiced the sentiments of the order, that you have not voiced the sentiments of Lodge No. 284, and we will not solicit subscriptions for the *Magazine* under the present circumstances.

Yours fraternally,

EDWARD A. FERRILL, Sec'y.

Per order of lodge.

In the first place the foregoing communication affords us an opportunity to speak of the policy pursued by the *Magazine* under our management, which we embrace without hesitation.

This being true, Elm City Lodge, No. 284, has done us a favor, however foreign such a purpose was on the part of the lodge, which we appreciate.

The *Locomotive Firemen's Magazine* has been under our control for more than ten years. When we say that, we mean to be understood as saying that we have been from the first, all the time, in every issue, absolutely responsible for every utterance to be found in its pages—responsibilities having never been divided with any one.

To say that we are proud of the record *Magazine* has made under our manage-

ment, ought not to prompt any one to bring against us the charge of egotism, self-conceit, vanity, any purpose of self-laudation. We are not built that way.

The *Magazine* under our management has steadily increased in circulation. Its articles have found favor with men of large intellect, of culture and of varied attainments. They have subscribed and paid for the *Magazine*, and are with us to-day. They include men of the various learned professions—lawyers, physicians, clergymen, educators, scientists—men who consult the *Magazine* to note the trend of public sentiment upon labor topics, and who, were they members of Elm City Lodge, No. 284, would regard it as a duty and a pleasure to solicit subscribers for the *Magazine*.

It will be noticed that Bro. Ferrill, secretary of Elm City Lodge, No. 284, B. of L. F., refers to a circular "in regard to the *Magazine*." The circular in question was sent to all the lodges of the order. It set forth the claims of the *Magazine* upon the membership of the order, but the members of Elm City Lodge are so exasperated by the policy the *Magazine* has adopted and pursued, that it indignantly declines to do anything in the interest of the organ of the brotherhood, and for its refusal to either "cut bait or fish," "fight or hold the candle," says:

"We write to reply and state that, as members of the B. of L. F., we do not approve of the scurrilous articles that have for the past year appeared in the columns of the *Magazine*, attacking everybody in one way or another that has incurred the displeasure of the editor and perhaps a few hot heads of the order. It may afford some members of the order vast pleasure to read articles about *Russianized serfs* and *Czar Corbin* and *Mephistopheles Depew*, and other such articles as have appeared in the *Magazine* for some time, but the members of this lodge are not in favor of this kind of talk, and do not care to read it, much less to ask for subscriptions from outsiders who know nothing of our affairs."

Elm City Lodge, No. 284, labored after the fashion of the fabled mountain, and the foregoing is the mouse it brought forth. It is rather small for a mouse, but is probably a fair average for the Connecticut article. Connecticut is a small state, noted, we believe, for long neck clams and wooden nutmegs. But still Elm City Lodge, No. 284, existing, we will suppose, under the shadow of old Yale, ought to have brought forth a letter more complimentary to the independence and self respect of its members, more creditable to its brotherhood intelligence and fealty to principle, and less obnoxious to the charge of stupidity and a willingness to be very degenerate corporation parasites.

However deplorable it may be, it is nevertheless true, that the profoundest ignorance

is usually found in close proximity to a university: the most sickening exhibitions of mendicancy are most numerous near charity hospitals, and to the everlasting disgrace of the country, serfdom thrives best near old Independence Hall, in Philadelphia, where the Declaration of Independence was first read and a Nation of Freemen was born.

It is not a matter of surprise that Elm City Lodge has not been profited by being under the eaves of Yale college. It is not to be presumed that any of the professors in that world famed university could expand the intellectual vision of Brother Ferrill or the brothers for whom he writes. The trouble is, doubtless, that they have not been students of the *Magazine*, or if they have read it, their purpose has been to sneer rather than to cheer.

Such a conclusion is warranted by the extract we have made from their communication. We have italicized a few sentences because we desire the reader to fix his gaze upon them, and if his vision is defective we want him to use spectacles. Boiled down the charge is that the editor of the *Magazine* has assailed scurrilously everybody who has incurred his displeasure. That charge comes under the seal of Elm City Lodge, No. 284, B. of L. F. The particular scurrilous attacks are not specified. They have, it is charged, appeared some time during the "last year"—1890. Why not name one of them? When a charge is made under the seal of the lodge, there should be specific allegations. If we have attacked scurrilously, not "everybody," but anybody, because he or they have incurred our displeasure why not specify the article? Why make a charge at random as the old farmer sowed oats?

A word just here, parenthetically: At San Francisco in September last, the delegates of the B. of L. F., in convention assembled, without one word of solicitation on our part, elected us unanimously for the sixth time Editor and Manager of the *Magazine*. The convention was eminently representative of the brains, of the character, of the honor, integrity and high ambitions of the order. Not a word was uttered, not an intimation that the editor had scurrilously attacked anybody because anybody had incurred his displeasure, or for any other reason whatever. There were 275 delegates present—among them were men of courage and capacity, of high sense of honor, men of convictions, and the courage of convictions, and these men selected the editor to succeed himself without a dissenting vote or voice, a complete, comprehensive and absolute indorsement of our management of the *Magazine*. Now, then, we place this triumphant vindication of our course as Editor and Manager of the *Magazine* in juxtaposition with the communication of

Elm City Lodge, No. 284, B. of L. F. We have a right to do this very thing. Elm City Lodge, No. 284, makes a deliberately false and scandalous charge, writes a libelous accusation, without cause or provocation, becomes a calumniator, a traducer, a maligner of one, who never, in any way, directly or indirectly sought to do aught, but to promote its interests—and then with such impudence, perversity and stupidity as defies characterization, debauches the seal of the lodge to give currency and character to its defamation. But Brother Ferrill and Elm City Lodge, No. 284, disclose their sore toes. They tell where their pain is located. They diagnose their own case. They tell what is the matter with them. Hear them: We quote again: "It may afford some members of the order vast pleasure to read articles about Russianized Serfs, and Czar Corbin and Mephistopheles Depew, and other such articles as have appeared in the *Magazine* for some time, BUT THE MEMBERS OF THIS LODGE ARE NOT IN FAVOR OF THIS KIND OF TALK." There, you have it, dear reader—on the half shell—raw—served with all the salt and pepper Elm City Lodge could command. Permit us to premise somewhat: Messrs. Corbin, Depew, H. Walter Webb, Pinkerton, *et al*, never by any act personal to the Editor of the *Magazine*, incurred his displeasure. We write of them in their official relations to labor—to workmen. Mark Antony did not hesitate to say of Brutus and his gang of assassins who stabbed Cæsar to death, that they were "all honorable men," but he did not fail to exhibit Cæsar's mantle, and show "Cæsar's wounds, poor, poor dumb mouths, and bid them speak." We make no boast, but this we say: As best we could, we have shown to the world, not Cæsar's mantle, but the workman's blouse and pointed out the stab holes in it, made by such assassins as Corbin, H. Walter Webb and men of their ilk, who, by methods and practices that horrify humanity, have, in many localities, stabbed workmen, if not to death, to conditions that ought to make hell and heaven blush. Take Austin Corbin's rule on the Philadelphia & Reading Railroad, and you have an assassin who stabbed labor into a condition, that a congressional committee proclaimed to the world, had "Russianized" that portion of Pennsylvania where his rule extended—that is to say, he had reduced workmen to the condition of "serfs." He had wronged them in their wages. He had inaugurated poverty, destitution and starvation. He had ruled with such an iron hand, that white men, free men, American workmen, were prostrate beneath his steel clad hoofs, and he had trampled them into the dust and mud, until Pennsylvania became, in the opinion of a congressional committee, a Russia, and the *Firemen's Maga-*

zine, did what it could, little it may have been, to "put a tongue in every wound" that Corbin had inflicted, that would, were it possible "move the stones" of the old Keystone state "to rise in mutiny" against such infernalism. But the members of Elm City Lodge, No. 284, B. of L. F., are so pleased with Corbin's rule, with his Russianizing policy, that because the *Magazine* denounced it, they refuse to solicit subscriptions for it. They don't like "this kind of talk." The Russianizing policy of Corbin, among other things, took the form of an *ukase* against all labor organizations. No man who belonged to a labor organization could have work in Corbin's Russianized dominion. To obtain a job, the workman must first renounce all obligations to his order, to his lodge; must give up, surrender his rights, privileges and prerogatives as a free man, and swear fealty to Corbin before he would be permitted to earn an honest living in Corbin's realm. The *Magazine*, as best it could, arraigned Corbin and his policy, branded both as infamous, held czar and decree up to the unutterable scorn of every self-respecting workman. But Elm City Lodge, No. 284, B. of L. F., don't like "this kind of talk," so distasteful is it to the members of the lodge, that they indignantly decline to secure subscriptions to the *Magazine*.

Truth, it is said, is sometimes "stranger than fiction," and Elm City Lodge, No. 284, B. of L. F., furnishes an illustration of the truth of the aphorism. The members of the lodge seem to be infatuated with Corbin and his policy. True, if a member of the lodge were to ask for a job on the P. & R., he would have to renounce the B. of L. F., would be required to repudiate every obligation the order imposes, would have to forswear all allegiance to the order, and since they don't like to see Corbin arraigned, and are opposed to any criticism of Russianizing infernalism, it is to be presumed that, if circumstances were to force them into the dominion of the P. & R., they would at the first crack of the reigning Czar's whip, go down upon their knees, disrobe themselves of their Brotherhood badges and take upon themselves the insignia of degradation, as the reigning autocrat of the P. & R., might direct.

Such are the men who decline to solicit subscriptions for the *Magazine*, because it has denounced Corbin and his policy—by all the gods known to heathen mythology, the brothers of Elm City Lodge, No. 284, B. of L. F., have paid the *Magazine* a high compliment. But we are not done with the communication. It affords us an opportunity to re-write history. We champion the *Magazine*.

They refer to "Mephistopheles Depew," and they don't like our "talk" about this

horny-handed child of labor. In many regards we are an admirer of Chauncey, the new labor agitator, the "walking delegate" to the Pittsburgh Convention. Chauncey is the President of the New York Central railroad corporation, and we believe is a Director of the N. Y., N. H. & H. His salary is \$50,000 a year. If, as Mr. P. M. Arthur says, "a \$4.00 a day man and a \$1.00 a day man, have no interests in common," in the name of all the Vanderbilts, what interest "in common" has a \$136.00 a day man and men who get from \$1.00 to \$4.00 a day? But such questions, aside, we refer to Mephistopheles Depew as President of the N. Y. C. We care nothing for his salary, nor his elegant surroundings. That he can dress in purple and fine linen and have terrapin and frog legs every day, does not concern us. The policy of the N. Y. C. is what we discuss. President Depew is responsible for that policy. He shapes it. At any rate, he must approve of it. There are but two courses for him to pursue. He must endorse the policy of the corporation, or like an honorable man, protest against it—and, if his protest is unheeded, he must step down and out.

He does not step down and out, and hence the conclusion, he endorses the policy of the N. Y. C. And here we ask what is the policy of the New York Central railroad corporation?

Before answering the question, it is proper to say, that in August, 1890, there was a strike on the N. Y. C. The B. of L. F. was not directly involved. It was a strike of the great order of Knights of Labor, for rights—dear to every workman—and because it was a strike involving the interests of workmen, the Supreme Council of the Federated Orders of Railway Employés investigated the causes which led to the strike, and on August 25th, 1890, after mature deliberation, gave to the country their deliberate judgment of the matter, and arraigned the policy of the New York Central railroad, for which Mr. Chauncey M. Depew is responsible; his position as President making him responsible.

The Supreme Council, in its address "to all labor organizations," said:

That the policy of H. Walter Webb is despotic to an extent that outrages every principle of American citizenship, and if generally adopted would, if successful, reduce American workmen to the degraded condition of serfs.

That H. Walter Webb, by the employment of junksters, thieves, thugs and murderers, vile wretches from the slums and brothels of New York and other cities, to kill workmen because they dared to protest against his rule and strike for their rights, is a crime of such enormity as will associate the name of H. Walter Webb forever with those who, dressed in a little brief authority, have used their money to secure power to degrade their fellow men.

That the efforts now being put forth by H. Walter Webb to destroy the Knights of Labor would, were circumstances changed, in a like manner be made to destroy the organizations of engineers, firemen,

conductors, trainmen and switchmen, and if successful. It is only a question of time when a similar effort will be made to seal the fate of other labor organizations.

That H. Walter Webb, by the course he has pursued toward the Knights of Labor and the representatives of labor organizations, has shown a total disregard of those principles of citizen sovereignty dear to every American worthy of the name, and, considering only his money power and the corporate power of the company he represents, his acts, which speak louder than words, say, in the language of W. H. Vanderbilt, once the autocrat of the New York Central, "the public be damned."

H. Walter Webb seeks to support his arrogant attitude towards workmen and labor organizations by assuming that the New York Central & Hudson River Railroad is private property and that his acts in the treatment of his employees are in no sense a matter of public concern; that he can with impunity discharge men and remand them to idleness and poverty and render them homeless wanderers without giving them any reason or explanation whatever for his conduct, disregarding the fact that the corporation for which he plays autocrat is a thing created by laws, in the making of which the men he seeks to degrade have a voice, which, once united, will bring his corporation to the bar of justice where his millions and the other millions he represents will cease to be potential in deciding questions of right.

In the foregoing the name of H. Walter Webb is made conspicuous because he happened to be the tool of the corporation to carry out the policy of his superiors. And who, we ask, were his superiors? Webb was third Vice President, Chauncey M. Depew was President. Every word said arraigning Webb, in thunder tones arraigned Chauncey M. Depew. There is no escape from the conclusion. Chauncey M. Depew, the elegant gentleman, the renowned after-dinner orator, the man of culture and refinement, one of New York's 400 upper crust, indorsed the course pursued by H. Walter Webb, which the Supreme Council said, "if generally adopted would, if successful, reduce American workmen to serfs."

Chauncey M. Depew indorsed the course pursued by H. Walter Webb.

The Supreme Council said that "the employment of Pinkerton thieves, thugs and murderers to kill workmen, was a crime of infamous enormity."

Chauncey M. Depew, as President of the New York Central, indorsed the employment of Pinkerton murderers.

Has Chauncey M. Depew ever uttered a word of protest against the employment of Pinkerton thieves, thugs and murderers, by the New York Central, to kill workmen? When? Where? He has command of burning words. He wields a whip of flame. When did Chauncey M. Depew, President of the N. Y. C., protest against the employment of Pinkerton murderers to kill workmen?

The labor world waited, held its breath to hear Chauncey M. Depew utter his maledictions of the crime, listened for his execrations of the Pinkerton horror. They believed that he could formulate anathemas that would be key notes of a new dispensation. But Depew was silent—and has re-

mained silent. Had he protested, had he denounced the Pinkerton outrage perpetrated on the road of which he is President, workmen would have built him a monument broad based as Cheops and enduring as adamant.

The *Magazine*, as well as the Supreme Council, has denounced the policy of the New York Central, the policy of its President, directors and all the lesser lights in its management, and for this Elm City Lodge, No. 284, B. of L. F., will not solicit subscriptions. The members of the lodge don't like that sort of "talk." Was ever a labor publication so highly honored? With the exception of Elm City Lodge, No. 284, B. of L. F., is there one organization of workmen in the world which directly or by implication, would endorse the policy of Chauncey M. Depew, President of the N. Y. C.? We do not believe there is another organization so utterly debauched. Certainly, we never heard of one.

But we are not quite done with the policy of the N. Y. C., of which Chauncey Mephistopheles Depew is President. We desire, for the benefit of Elm City Lodge, to reproduce a little more history in which the B. of L. F. is specially interested, and in which Brother F. P. Sargent, Grand Master of the Brotherhood and President of the Supreme Council, talks. On page 805 of the September *Magazine*, will be found the following:

While in the city of New York, F. P. Sargent, Grand Master of the Brotherhood of Locomotive Firemen, in the course of an interview with H. Walter Webb, third Vice President of the New York Central, said to that official: Suppose a locomotive fireman, a member of the Brotherhood of Locomotive Firemen, was discharged by Mr. Buchanan, the Superintendent of Motive Power, and suppose the discharged fireman should endeavor to secure reinstatement, and not succeeding, a committee should take up his case in accordance with the laws of the Brotherhood, and the committee should also fail to secure the man's reinstatement, after which I, as the Grand Master of the Brotherhood, should be called upon to adjust the difficulty with Mr. Buchanan, and should also fail, do I understand you to say that if I called upon you you would not treat with me as the Chief Executive officer of the Brotherhood? To this pointed and important question, Mr. Webb replied: "These cases are all investigated by subordinate officers of the company, and no man is discharged without just cause."

The declaration of Grand Master Sargent is, that "Mr. Webb evaded the question and left the impression upon my mind that he would not recognize nor treat with me as the Chief Executive officer of the Brotherhood of Locomotive Firemen."

As a matter of course, the *Magazine* first, last and all the time, with such ability as it could command, has denounced such a policy, and while we have control of its pages will undeviatingly continue to castigate corporation officials high and low, who seek to degrade workmen or to treat organizations of workmen with supercilious insolence.

The editor of the *Magazine* has no personal quarrel with any corporation official. Not one of them ever "incurred" his "dis-

pleasure." We have written of some of them because of their injustice to employes. Of many of them we have written in complimentary terms because they sought to do justice by their employes, and recognized the rights and prerogatives of labor organizations.

Because this has been the policy of the *Magazine* Elm City Lodge, No. 284, assaults the *Magazine* and its editor. Wanting in capabilities it does not originate its charges, but reproduces some ancient chestnuts which, though decayed and worm-eaten, answer its purpose.

These charges place Elm City Lodge in the odious position of being the friend and champion of a policy which all honorable, independent and self-respecting workingmen abominate, and of being the enemy of the *Magazine* because it has defended the rights of workingmen and labor organizations.

There are, no doubt, a great many firemen under the autocratic rule of McLeod, the successor of Corbin, and Bonzano, his Dago lickspittle, who, like Elm City Lodge, No. 284, would not assist in circulating the *Locomotive Firemen's Magazine*. They would doubtless be told if they even read it they would be discharged. Who has ordered Elm City Lodge to play the role of the serfs on the P. & R.? We understand Chauncey Mephistopheles Depew's influence extends to New Haven. Has Elm City Lodge been Corbinized, Russianized? Do they bark at the *Magazine* because ordered to do so? We neither know nor care. We simply state that the communication we publish has served us a purpose. It has afforded us an opportunity to indicate the policy of the *Magazine*, a policy which combined with other influences, has given the Brotherhood whose interests it represents and defends, power and influence never so patent as to-day.

The hope of organized labor, like the star of empire, is in the West. At any rate, the hope of the Brotherhood of Locomotive Firemen does not center in Elm City Lodge any more than the intellectual growth of mankind centers in the institutions where the feeble minded are taught to go under shelter when it rains.

In closing, let us say that Elm City Lodge, No. 284, has not incurred our displeasure, but rather, has awakened our commiseration. It lacks spine. May its backbone be strengthened.

IRISH evictions, in the opinion of Mr. Gladstone, are equivalent to a death sentence. That is about the size of it, but the sentence, in numerous instances, inflicts such a death comes to the relief of the savagery without one

WHAT DO WORKINGMEN WANT IN THE WAY OF LEGISLATION.

The circulars herewith published, signed by T. V. Powderly, Esq., General Master Workman of the Knights of Labor, of which copies have been forwarded to the general officers of the several labor organizations, will explain themselves:

SCRANTON, PA., January 1, 1891.

DEAR SIR:—Accompanying this you will find a circular which explains why I presume to intrude upon you at this time. Will you have the kindness to let me know at your earliest convenience whether you favor the holding of such a conference as is outlined in the circular. To my mind the officers of the various industrial organizations should make up the conference, for they understand the wants and sentiments of the rank and file and are fully qualified to act.

It is not the intention to organize a third party at this conference, or to take partisan action in any way. The object is to bring together those who can speak for industry, and formulate a platform such as toolers will support at the polls.

For years we have been told, when appealing to existing parties, that we did not know what we wanted. Let us get together, take counsel from each other, prepare a document briefly expressing our desires and present it, not only to political parties, but to the people of the United States.

If the dates I have named do not please you, name another and indicate where this conference should be held.

Fraternally yours,

T. V. POWDERLY,
General Master Workman.

SCRANTON, PA., January 1, 1891.

To the Industrial Organizations of the United States,
Greeting:

At the session of the General Assembly of the Order of Knights of Labor which convened at Denver, Col., in November last, the General Master Workman was directed to correspond with the officers of other organizations with a view to the calling of an industrial conference to formulate a political platform such as industrialists could favor at the polls. The committee of the General Assembly having this matter in hand presented its report to the convention, and it was adopted, as follows:

To the General Master Workman and Delegates to the General Assembly:

Your Committee on Political Action begs to report as follows:

On the subject of that part of the General Master Workman's report which has been submitted to us, your committee desires to speak in terms of high approval. The historical portions are both interesting and valuable. The subject of the New York Central Railroad strike is fully and fairly treated; and although a failure in the narrow view of the case, yet, as a lesson teaching the men that the only true and effective place for the citizens of a free country to strike is at and through the ballot box, this strike ranks as one of the most successful strikes on record. We highly commend the action of the General Master Workman in impressing this view of the case on the minds of the men in the most public and solemn manner—at a great mass meeting of the men about the time that the strike was declared off.

On page 3 of the General Master Workman's report we find a most valuable suggestion reading substantially as follows:

"Half way measures and sectional schemes should not be advocated by our order, and in the future whoever represents this order in legislative matters should be required to work in close communion with the committee of the Farmers' Alliance on the great questions of land, currency and transportation reform."

As a further step in the line of fraternal and cooperative action, your committee hereby recommends a joint conference of the Knights of Labor,

the Farmers' Alliance, and every and all industrial and political organizations that can work together in favor of the St. Louis Conference Platform, adopted in December, 1889, upon which such glorious victories have lately been achieved.

Your committee would further recommend that said joint conference be held on the last Wednesday in July, 1891, in the city of Washington, D. C., and that the Congressmen recently elected on the St. Louis Platform in the several States be invited to be present in said joint conference, to occupy such status and to take part as delegates or otherwise as the conference may decide. The objects of said joint conference shall be to arrange plans and to perfect measures for aggressive educational and political work, preparatory for the national political campaign of 1892; which national campaign, in our opinion, should result in the election of a President, Vice President and Congress of the United States committed to the interests of the people of the United States, and hostile to those corporations, syndicates and monopolies, both home and foreign, which are rapidly absorbing to themselves the wealth of the nation and usurping control over the destinies of the American people.

Your committee further reports that it is a conceded fact by every thoughtful mind that most of the objects set forth in the Preamble of the Knights of Labor can only be secured by independent political action. Therefore your committee recommends that the General Master Workman correspond with the presidents or other chief officers of other industrial and reform organizations, with the view to the holding of a National Reform Industrial Conference, on the basis of the platform adopted at the St. Louis Conference of December, 1889, the conference, to be held at as early a date as possible, so that a solid and harmonious union of the industrial and reform forces of the country may be consummated that will enact the principles of our preamble into statute law.

Your committee further recommends that this General Assembly elect three fraternal delegates to the Supreme Council of the National Farmers' Alliance to be held at Ocala, Fla., on December 3 next, and instruct their delegates to present to that body a proposition to hold a National Reform Industrial Convention some time in the ensuing year.

And your committee further recommends that the General Assembly by the adoption of these resolutions puts itself upon record as desiring that the National Reform Convention shall formulate an independent political platform upon the principles of the Preamble of the Knights of Labor, so that this order shall give its indorsement and support to that at the ballot-box.

J. T. HENDRIX, *Chairman*.

A. P. STEVENS, *Secretary*.

L. J. GOETZ.

EDWIN PARKES.

STEPHEN A. CLEMENTS.

The above is my authority for what I am about to say and do. Various suggestions were offered as to the best time of holding this conference, and it was agreed that Washington's Birthday would be the most acceptable date and Washington City the best place to hold the conference. When the Farmers' Alliance held its convention at Ocala, Fla., in December, a call for a conference to organize a third party was circulated and signed by many of those who attended. That call fixed upon Cincinnati as the place to hold the session and February 23, 1891, as the date. At an informal conference of the officers of the Order of the Knights of Labor and many of those who signed the call at Ocala, it was agreed to postpone the Cincinnati Conference until after the Industrial Conference could meet and agree upon its platform of principles.

In accordance with the action of the General Assembly by which I was instructed to "correspond with the presidents or other chief officers of other industrial and reform organizations," I place this matter before you with request that you take action at once and notify me of the result. In view of the fact that nearly all organizations have recently held their annual conventions, it may be difficult to send delegates to another conference so soon, and I would suggest that the executive officers, or as many of them as can attend, make up this conference.

I suggest three dates on which to vote, and whichever receives a majority will fix the time of the assembling of this gathering: February 23, March 25, and July 29, the date recommended by committee of the General Assembly.

I shall vote for February 23, for the reason that we will be enabled to meet and confer with the newly-elected Congressmen who owe their elections to the laborers of the field and city.

This call for action will be sent to the president or secretary of every industrial organization whose address I can obtain, but those who may be overlooked will take action as soon as it is brought to their notice.

This is a very important matter, and should receive careful attention. Every organization should take action and be represented, for it is not intended to be a Knight of Labor gathering or a conference of those representing one idea or section alone. All are invited, and all should be represented. Vote on the date, and, when they are in, the call will go out with as many names attached to it as vote upon it.

Respectfully and gratefully submitted,

T. V. POWDERLY,

General Master Workman Knights of Labor.

The purpose in view is clearly set forth, and is worthy of profound consideration.

The Brotherhood of Locomotive Firemen will be represented at the proposed conference by F. P. Sargent, Grand Master, and two other members of the Grand Lodge to be named hereafter.

The conference bids fair to be a notable event in the political history of the times.

Politics is the science of government. In the proposed National Reform Industrial Conference, partisan politics is to be ignored. The one supreme purpose is, to ascertain what workingmen want in the way of legislation. Hitherto, workingmen have been ignored. The laws have been made to favor the capitalistic class, and under their operation labor has suffered wrongs for which the law provides no redress.

It is assumed, if all the representatives of labor can be induced to meet and confer with each other, that legislation can be suggested which, if secured, will result in revolutionizing laws and the practices of courts, and in securing justice to millions who have been and still are the victims of wrongs which are a standing disgrace to our boasted civilization.

But to bring about a reform, the country must know what is proposed—what new laws are to take the place of the old statutes, and this, we conclude, is the purpose of the conference proposed in the foregoing circular.

SEPTEMBER 1, as a statutory holiday, has been established in fourteen states, and the demand is growing steadily in emphasis. It is dedicated to labor and is known as "Labor Day."

THE working women are organizing. Toledo, Ohio, has three organizations. It is becoming fashionable and when Dame Fashion, the fickle goddess, comes to the rescue, the women will be as "terrible as an army with banners."

THE EDITOR IS RESPONSIBLE.

It should be understood, once for all, that the Editor of this *Magazine*, and no one else, is responsible for what appears in its columns. In several instances the Grand Master and other Grand Officers have been called to account for certain articles which have appeared in the *Magazine*. In other cases, certain railway officials and other persons have threatened vengeance upon members of the order on account of what has been published in these columns, and as neither the Grand Officers nor the members are in any regard responsible for such publications, we feel called upon to relieve them from all blame that may attach to any article which appears in this *Magazine*.

Under the rules of the Brotherhood, the Editor and Manager is placed in charge of the *Magazine*. He is expected to adopt and maintain a policy in consonance with the advanced position of the order, and to discuss, with such ability as he can command, all questions relating directly or remotely to the interests of labor; and in doing this he is supposed to exercise his best judgment, and in all regards faithfully and conscientiously, without fear or favor, discharge the duties his office imposes.

The Editor of this *Magazine* has positive convictions in reference to men and measures; and in so far as the interests of labor are involved, he proposes to express them. He will be frank and candid in what he may have to say; but he will never stoop to the level of some of his contemporaries, who, while they profess to refrain from publishing any article calculated to give offense, write personal letters and use their tongues in vituperative abuse of their victims, whom they have not the courage nor the manliness to assail in open print.

We have unmitigated contempt for the enemies of workingmen, particularly those within the ranks of organized labor who pose as its champions, and who, while drawing fat salaries, are really the emissaries of the corporation, and are everlastingly sowing the seeds of dissension and disunion by seeking to establish caste and aristocracy among labor organizations, than which nothing is better calculated to weaken and destroy them and subjugate and enslave their members.

In all such matters, the *Magazine* proposes to speak plainly and to the point, no matter whose antipathy may be aroused or whose vengeance may be threatened, nor will the Editor shirk the responsibility of his utterances.

If any one feels himself aggrieved against the *Magazine*, the Editor is the proper person to look to for redress, and if an injustice has been done, prompt and ample restitution will be made. We lay no claim to infallibility. We have no ambition to be

classed among perfectionists. We do not expect, nor do we desire to escape criticism, any more than we expect or desire the friendship and good will of all men. We have only pity for the man, especially if he be the editor of a labor journal, who can not credit himself with having made enemies as well as friends.

Having said this much, we shall hope that in future all adverse criticism and complaints relating to the *Magazine* will be directed to the Editor, who is alone responsible.

THE AMERICAN FEDERATION OF LABOR.

Hon. Samuel Gompers, president of the American Federation of Labor, makes the following announcement by circular:

To the Trade and Labor Unions of America:

FELLOW WORKMEN—GREETING: The official proceedings of the recent convention of the American Federation of Labor, held in Detroit, Mich., from December 8th to December 13th, inclusive, will be ready for sale in the course of a few days.

The convention is conceded from all quarters to have been the most intensely interesting of any labor convention ever held in the United States.

The reports of the president, secretary, the eight-hour committee and various other highly instructive documents are all contained in the proceedings, and should be in the hands of every trade and labor union in America, as well as every student of the labor problem, as showing the continual growth and beneficent effects of the trade-union movement and its influence upon the well being of our whole people.

Since the edition is limited it would be well for organizations to send in their orders as soon after the receipt of this notice as possible, in order that all may be furnished with the number they desire.

They will be sold at *ten cents per copy* or *\$9.00 per hundred copies*.

Send all orders with remittances for the same to Secretary Chris. Evans, 21 Clinton Place, New York, N. Y.

All who are interested in current history relating to labor organizations should secure a copy of the proceedings referred to.

The January issue of the *American Federationist* published at Mattoon, Ill., by Messrs. Johnson and Martin, is replete with matter at once interesting and instructive to railroad men. Current topics are treated in vigorous style, and the *Federationist*, by virtue of well directed ability and intelligent comprehension of the needs of workingmen, proves itself a valuable acquisition to the labor literature of the times.

Mrs. Henry B. Jones, of Washington, Ind., has been given editorial charge of the woman's department, which, under Mrs. Jones' able direction, will doubtless prove an attractive feature of the paper. The *Federationist* has our best wishes for its continued success.

PRINCE BISMARCK has an income of only \$175,000 a year. Old and infirm, compelled to be idle by the boy Emperor of the Hohenzollern breed, the future must look cheerless for the ex-chancellor. May the good Lord temper the wild winds to the shorn ram.

A MODEL MAGAZINE AGENT.

Chas. W. Maier, Magazine Agent of Great Western Lodge, No. 24, Parsons, Kan., recently secured one hundred (100) subscribers in *one day* for the *Magazine* for the year 1891. The incident is of special significance as demonstrating what can be done by an agent who has a proper conception of his duties, and the will and energy to perform them. The achievement of Bro. Maier is without parallel in the history of the *Magazine*, and we commend it to those agents (?), and they are by no means few in number, who can not, or do not, secure one subscriber in 100 days. What is wanted, and what *each lodge must have*, is an agent who has interest enough in the *Magazine* and the order it represents to "roll up his sleeves," and go out and "hustle" for subscribers. That is the way Bro. Maier secured them, and in the same way any other member can secure them. Such lodges as have *agents in name only*, petrified agents, who, if they were asked, would not know whether the *Magazine* was an air-ship or a powder-house, should fire them bodily, to use a phrase, and fill their places with men who are sufficiently alive and wide-awake to comprehend their duties and perform them. A Magazine Agent who does not secure a single subscriber during his entire term of office is not only a disgrace to his lodge, but has no business in a progressive organization such as the Brotherhood of Locomotive Firemen.

This year, above all others, we mean business, and every Magazine Agent in the order is expected to do his duty or make room for one who will. Let the work begin at once, and in earnest. There are thousands of persons who will cheerfully subscribe for the *Magazine* if only asked to do so, and if the agents of our 450 lodges will only half do their duty, our circulation will expand to 60,000 copies before the close of the year. We have more than 20,000 members on our rolls, and if each of them will secure but two subscribers the number above given will be reached.

Let the example of Chas. W. Maier, the model Magazine Agent, meet with universal emulation.

The capital involved in electric lighting plants in the United States already amounts to \$118,758,500, and there are now in the country 1,590,667 incandescent and 127,441 arc lights in use. Electricity is the coming light and the coming power.

In Pittsburg workmen continue to organize, and a firm engaged in building locomotives has voluntarily adopted a nine hour day with ten hours pay. "The world do move."

THE PRIZE WATCH.

We are in receipt of a letter from Brother S. W. Seelinger, of Salida, Col., acknowledging the receipt of his prize gold watch, a reward for having obtained the second largest list of *paid subscribers* for the *Magazine* during the year 1890. He likes it, a fact we are pleased to record. Brother Seelinger's good luck didn't stop with the watch; on the contrary, the members of Mt. Ouray Lodge, No. 140, seeing the *prize watch*, immediately presented Brother Seelinger with a handsome chain—which completed the outfit. They are a generous set of boys and are quick to recognize merit. Referring to the prize watch, the *Chaffee County Call*, of December 20th, published at Salida, Col., says:

S. W. Seelinger, the popular fireman, has just received an elegant gold watch worth \$140 as a present from the *Firemen's Magazine*, for his services to that journal. The present is an elegant one and worthily bestowed.

A NUMBER of papers are printing the pictures of Cornelius Vanderbilt, Chauncey M. Depew, and H. Walter Webb, with brief biographical sketches. They are all very rich, live in palaces and fare sumptuously every day. They are the men who decide to exile men from work, because they belong to a labor organization.

MR. JAY GOULD rises to remark that if the tariff on wool makes clothing cost more, a person will get along with one suit where he would otherwise have two. Mr. Gould, with an income of \$20,000,000 a year we presume, will be able to have two suits a year. We hope so. It makes us shudder to think that the mouse trap man might have to have his trousers patched.

It will be well for Protective Boards to go slow for the present in matters of grievances involving an increase of wages. The times are not propitious for large advances in wages such as are being demanded on some of our systems of railways. The money market is in a state of stringency almost to the verge of a panic. Banks, manufacturing establishments, mercantile houses and other enterprises are collapsing everywhere. Railroad companies in many instances are embarrassed in consequence of the general depression. It is to be hoped that this unfortunate condition of affairs will be of short duration and that with returning prosperity there will come relief to those who are now in "tight places." Where men are reasonably well paid there should be no disturbing elements at work among the employes. This *Magazine* is all the time and everywhere the advocate of good wages, but there are times, as above suggested, when it is well to go slow, and we are now passing through such a period. With the revival of business prosperity the work of increasing and adjusting wages can go forward with due promptness.

THE BROTHERHOOD OF RAILWAY CAR MEN.

Responding to the spirit of the times, something more than a year ago, the Railroad Car Builders and the Railroad Car Repairers organized, separately—the Car Builders at Minneapolis, and the Car Repairers at Cedar Rapids. It was a somewhat singular coincidence, and it was soon discovered that the work of the Builders and Repairers was, in many regards, identical. As a result, in September the two organizations consolidated at Topeka, Kansas, and formed the Brotherhood of Railroad Car Men.

Early in January last, the Supreme Lodge of the order met in Minneapolis to transact business of the order. There were present W. H. Ronemus, Grand Chief Carman, of Cedar Rapids, Iowa; S. Keliher, Grand Secretary and Treasurer, of Minneapolis; P. Kelly, Duluth; J. Wyman, Vinton, Iowa; Chas. Reach, Barnesville, and R. Hazelwood, Minneapolis, of the executive board, and much important business was transacted.

The report of the Grand Secretary was especially interesting and gratifying. It showed that since May last, twenty-two lodges had been organized, making twenty-five lodges now in line in the new order, having a membership of 1,600 and representing the builders and repairers in twenty-three states. The Grand Secretary also reported eight applications for charters for subordinate lodges, indicative of the cheering fact, that the order has a grand mission in the land. So clearly was this fact brought out, that Grand Vice Chief of the order, W. S. Missimer, of St. Joseph, Mo., will, in future, give his entire attention to the organization of new lodges and to the general welfare of the order.

That work in this direction is required, it was announced that there are at least forty thousand men employed in the various car building and car repairing shops of the country. These men see the importance of organization and are going into the noble work with commendable zeal.

Financially the order was pronounced sound as a dollar, and we note that an insurance department has been organized, which has fixed the policies at \$1,000.

It is also stated that the Brotherhood of Railway Car Men discussed protection in connection with the question of federating with the Federated Orders of Railway Employés, indicative of a purpose strictly in consonance with the prevailing sentiment abroad in the land.

The Grand Lodge, at the conclusion of its deliberations, attended a meeting of Lodge No. 1, of the order, and when the installation of officers was through with, a vote of thanks was tendered the Brotherhoods of Firemen, Trainmen, Switchmen and Rail-

way Conductors, for courtesies. We acknowledge the compliment for the Brotherhood of Firemen, and close this brief notice of the meeting of the Grand Lodge of B. R. C. M. with expressions of hearty good will and God speed. We desire that the new order shall have the largest possible growth in membership and influence. It has started out right, and in all ways that this *Magazine* can help it to achieve success, it is at the command of our brothers of the Brotherhood of Railway Car Men.

MAGAZINE PRIZES FOR 1891.

We invite attention to the following list of prizes to be awarded December 1, 1891, to Magazine Agents securing the first, second, and third largest list of PAID subscriptions.

The following prizes have been agreed on by the Grand Lodge for the year 1891, viz:

1st Prize—To the Magazine Agent having the largest number of *paid* subscriptions to his credit on the Grand Lodge books December 1, 1891, *Two hundred (\$200.00) dollars in cash.*

2d Prize—To the Magazine Agent having the second largest number of paid subscriptions to his credit, *One hundred (\$100.00) dollars in cash.*

3d Prize—To the Magazine Agent having the third largest number of paid subscriptions to his credit, *Fifty (\$50.00) dollars in cash.*

The prizes are well worth contending for and should, we think, awaken great activity. But aside from all money considerations, we appeal to the Brotherhood pride of the agents, to extend the circulation of the *Magazine*, and while the prizes go to agents, we indulge the hope that the *membership* will take hold of the matter and aid the agents to the utmost of their ability to obtain subscribers. If this is done, we feel certain, results will not only prove a great financial success, but the extended circulation of the *Magazine* will inure to the advantage of the Brotherhood in many ways.

On lines of thought, intimately connected with labor organizations, and particularly railroad employés, much earnest work is still to be done. The friends of *federation*, as established by the Supreme Council will be required to do some heroic fighting before the final victory is won. To keep abreast of the most advanced column is the ambition of the *Magazine*, and this will be done, however severe the task, and in doing our part of the work we shall be greatly cheered by knowing that our labors are appreciated by the entire membership. In this spirit we say, let the *pull* for a large subscription be a *long pull, a strong pull and a pull altogether.*

THE PRIZE PIANO.

In the January number of the *Magazine* we published the award of prizes to the two *Magazine* Agents who secured the two largest lists of paid-up subscribers during the year 1890. The piano was the first prize, and was awarded to C. W. Maier, of Parsons, Kansas, a city of about 7,000 population.

The instrument was an upright, superb-toned piano, manufactured by Messrs. Kranich & Bach, of New York, and was purchased through the agency of L. Küssner, proprietor of the Palace of Music, Terre Haute, Ind.

The purpose of the *Magazine* was to furnish the *Magazine* agent who secured the largest list of paid-up subscribers, with a piano that should be found upon trial as equal to the best on the market. Mr. L. Küssner, of Terre Haute, was commissioned to purchase the instrument. Being familiar with pianos, we had confidence in his judgment, a trust that was not misplaced. Mr. Küssner has been identified with the musical interests of the state since 1855, being himself an accomplished musician and a practical workman in the art, and as a result Brother Maier secured one of the best pianos ever sent to Kansas.

Letters received from Brother Maier say the instrument "has been thoroughly tested, and pronounced by all to meet every requirement."

In confirmation of Bro. Maier's statement, the Parsons (Kansas) *Daily Journal* of January 1st refers to a splendid reception given by Mr. and Mrs. Maier, December 31st, and says:

Mr. and Mrs. C. W. Maier entertained a number of their friends last evening, at their residence on Clark avenue. Among those present were E. B. Williams and wife, John Webster and wife, John Shone and wife, J. W. Terrell and wife, James Flynn, of Humboldt, and George Maier, brother of the host. The cause of the gathering was to allow Mr. Maier the opportunity of exhibiting to his friends the fine new piano recently awarded him by the publishers of the *Firemen's Magazine* for securing the largest number of subscribers in one year, the number secured being nearly 600. This, with a lodge of only 50 members in a town of 700 inhabitants, speaks volumes for the energy and enterprise of Mr. Maier, and shows the material of which the Firemen's Brotherhood is composed in the west. The one who stood second on the list had a membership of 300 at his back, and lived in the most thickly settled portion of the east, but the rowdy west proved too much for cultured east, and from the start Mr. Maier has made for the coming year, the hustlers will have to hustle if they outstrip him in the race. The instrument was thoroughly tested last evening by Mrs. Williams and Mrs. Webster and we feel arrant in saying, no finer instrument was ever brought to the city. It was furnished by L. Küssner & Son, music dealers of Terre Haute, Ind., one of the largest houses in the state, and is of the Kranich & Bach upright pattern. All who were present enjoyed a good time and left at a late hour with the feeling that the award was worthily bestowed and nobly earned. The *Journal* wishes Mr. Maier and wife many happy years, to enjoy its music, and trust the order of which Charlie is a prominent and active member may continue in the years to come to occupy the proud position it has attained at the head of industrial organizations in America.

The *Magazine* takes occasion, while felicitating Mr. and Mrs. Maier upon their good fortune, to say, that those wanting a superb piano cannot do better than to purchase an instrument manufactured by the great firm of Kranich & Bach, of New York, and should they require the services of our friend, L. Küssner, proprietor of the "Palace of Music," we do not hesitate to say, they will secure what they want and the very best there is in the market.

The splendid piano secured by Mr. Küssner for Brother Maier, gives assurance that those who patronize his establishment will be treated in a way to give entire satisfaction.

QUACK MEDICAL EXAMINERS.

It ought to be understood, and it is understood, that only men physically *sound* can become beneficiary members of the Brotherhood of Locomotive Firemen. The reason for this becomes apparent upon a moment's reflection.

As soon as a man becomes a beneficiary member of the B. of L. F. he takes out an insurance policy for \$1,500. This done, every member of the brotherhood is interested in his physical condition. If he is physically unsound, a fraud has been practiced upon the order, upon every member of the order.

To guard against such frauds and impositions, the laws of the order make it necessary for every applicant to undergo an examination. The intention is that this examination shall be thorough, and be conducted by a physician of unquestioned skill and experience. There is not a particle of sentiment in it. It must be *honest, truthful* and skillful. It involves hard earned dollars.

What is the tendency on the part of some of the lodges? It is this—To employ doctors(?) for examiners who are incompetent, because they are *cheap*. Quacks are always cheap in the first place, but they are the dearest of all doctors further along.

We will give one instance. It illustrates our proposition: A man joined the brotherhood. He was examined—was pronounced sound in body. He took out his policy—\$1,500. In *one month* he died of consumption. It cost the order \$1,500. Manifestly he was examined by a *quack* doctor, a *cheap* (?) doctor. Was he not a dear doctor?

Is more required than to call the attention of the lodges to this matter?

Is not the illustration we have given a sufficiently convincing argument? Could it be made stronger? We fail to comprehend in what way it could be made more cogent. Every member of the order is interested. The beneficiary department wants sound, strong, healthy men—none other, and the laws provide for *none other*. Cheap doctors, unskilled doctors, ignorant and inexper-

ienced doctors palm off upon the order men who should not become its members, and the healthy members pay the penalty.

We advise the lodges to secure for medical examiners men of recognized skill, competent and conscientious men. They are the really *cheap* men. They guard the order against impositions and save money for the members. Think of it, brothers.

THE IMPORTANCE OF PAYING DUES.

We are in receipt of a letter from West Virginia, well calculated to excite sympathy. It forcibly illustrates conditions and ought to serve as a warning to every member of the brotherhood.

A member of the order became delinquent in the payment of his dues. The law of the order is well understood in such cases. Prompt expulsion follows delinquency. Under certain provisions, a member can be carried by the lodge of which he is a member, but in such cases the law is imperative, and must be complied with. In the case under consideration, the laws were not complied with and the member, by the operation of the law, was expelled. Soon after, he met with an accident and lost his right arm at the elbow, and now appeals, through his father, for the payment of his policy. It is a sad case. Will it serve as a warning to others? We shall hope that it will. The man in question, was out of the order absolutely when he received his serious injury. It does not matter, in such cases what a brother member may say. The law points out just what is to be done. If in such cases the law is relaxed—then it were as well to have no law at all—in fact, the law becomes a dead letter, and confusion takes the place of order. If the law can be relaxed in one case, why not in all cases?

The simple way out of all such troubles is to obey the laws. Members who are sick or out of employment and unable to pay their dues are provided for, but in such cases, as we have intimated, the laws of the order must be complied with. In this connection we introduce section 166 of the constitution:

When a member in good standing through lack of employment, sickness or other disability shall be unable to pay his dues or assessments and such fact is presented to the lodge in writing and certified to by the Board of Relief, the lodge shall authorize the Receiver to advance a sufficient sum to prevent said member from becoming expelled, and the Secretary shall draw an order on the Receiver for the sum thus allowed; provided, that said member, if absent, shall correspond with his lodge at least once in every thirty days; and provided further, that he shall furnish satisfactory proof as to his condition and need.

In the case in question it is claimed that the member was out of employment at the time he became delinquent. Admitting this to be true, it avails nothing as the law above quoted, providing for such cases, was

not complied with. The brother did not present his case to the lodge in *writing* or otherwise and as a consequence expulsion followed. The conclusion is that if a member expects his policy to be paid in case of death or disability he must *stand square on the books*.

HELP FOR ALABAMA MINERS.

In the circular which follows and which has the official endorsement of Samuel Gompers, president of the American Federation of Labor, and J. B. Rae, president of the United Mine Workers of America, it will be observed that the condition of the miners of Alabama is such as to appeal for the support, financial and otherwise, of all men who believe in the right of workingmen to organize and demand fair pay and fair play. The circular referred to is as follows:

BIRMINGHAM, ALA., December 25, 1890.

To Organized Labor Everywhere, Greeting:

The rapidity with which Alabama is becoming one of the largest coal producing states in the union and the interest of the craft making it necessary for the general welfare that the wages of the miners should be placed on equality in order to prevent the misery that results from insane competition in the coal trade, in June last the Alabama miners, in convention assembled, after carefully comparing prices paid for mining in the several coal producing states, found that the coal operators of Alabama could afford to pay their miners an advance of at least five cents per ton without detriment to their interest.

Desiring to avoid any action which would result in industrial warfare, the representatives of the miners respectfully requested the operators to meet them in joint convention to discuss the situation. The operators refused all overtures for a peaceful settlement of the question. Knowing that our miners were unprepared for a struggle at that time, we were reluctantly compelled to advise them to return to work until a more propitious occasion. Acting under the advice of the officers of the United Mine Workers, on the 1st of December we demanded the scale drafted in last June. Again the operators refused to pay the price, and had our executive board arrested on the trumped up charge of trespassing.

The miners of Alabama are worse treated than those of any other section of the country. Not only have we to compete with the curse of convict labor in our mines, but we are worse treated than the convicts we are compelled to work beside, as they have mining laws to see that they are protected in health and limb, and a means of escape by having two openings to all mines where they are employed, while the free miners are practically at the tender mercy of the representatives of corporations and monopolies, the shareholders of which reside in Great Britain and have only interest in the mines to the amount of dividend they receive, caring little for the lives and welfare of those employed therein. A large number of our miners, owing to the smallness of their earnings, were unable to become attached to their organization. They are now standing shoulder to shoulder with their organized brethren. If we are to be successful these men must get assistance. To you we appeal for aid. This is a struggle not only for wages, but for the right to organize. Help us to win this victory, and organization is an assured success in the South. If the time ever comes that you will be engaged in a like struggle we will remember you with something more substantial than gratitude. Signed on behalf of the committee.

SAMUEL LYNCH,
G. W. WARD,
J. H. WHALING,
W. L. PHILLIPS.

J. L. CONLEY, *President*.
JOHN HARKIN, *Secretary*.

Executive Board, Dist. 20, U. M. W. of A.

NEW YORK, December 29, 1890.

The above appeal is hereby approved.

SAMUEL GOMPERS, *Pres't U. M. W. of A.*
CHRIS. EVANS, *Secretary.*

COLUMBUS, O., December 31, 1890.

The above appeal is hereby officially approved.

J. B. RAE, *Pres't U. M. W. of A.*
ROBERT WATCHORN, *Secy. Treas.*

P. S. Send all contributions to
SEAL: ROBERT WATCHORN, 58 Clinton Building, Columbus, Ohio.

Our readings, and information otherwise obtained, convince us that the coal miners of the United States have suffered a larger share of oppression than has befallen any other class of workmen in the country. We had supposed that Corbin's rule in the anthracite coal regions of Pennsylvania was so infernally cruel and revolting that other mine owners and operators would not seek to parallel such conditions elsewhere. In this, however, we were mistaken. Ohio, Illinois and Indiana have given proof of a purpose to degrade miners, to rob them and to keep them everlastingly on the ragged edge of starvation, and now Alabama sends forth a wail for help. Be assured the millionaires of the country will not respond. The Astors, the Vanderbilts, the Goulds, will not contribute a farthing. Who will respond? If workmen do not, then the case of the Alabama miners is hopeless, and they are crushed. If all the organized workmen in the country would contribute as they *have ability*, the miners of Alabama, who are treated worse than convicts, would win a victory. By all means, let help go forward as requested in the foregoing circular.

THE RIGHTS OF WOMAN.

May women vote? That's the question. It is a question that appeals to the chivalrous men of America, and workmen are as gallant as their neighbors who dress "in purple and fine linen." More so, we opine, since it will be seen by the following circular and form of petition that workmen have inaugurated a movement designed to bring the subject to the attention of all organized workmen. We reproduce the documents in the *Magazine* with pleasure, and call special attention to them. Let the matter come before the American people, and let the people decide the question.

Some men are opposed to woman suffrage. Some are in favor of it. Who are in the majority? No one knows. Let it be determined. This can be done only as suggested in Mr. Gompers' circulars, which are as follows:

AMERICAN FEDERATION OF LABOR,)
NEW YORK, January 2, 1891.)

To the Trade and Labor Unions of America, Greeting:

FELLOW WORKERS—Inclosed you will find a petition addressed to Congress, for your consideration.

Under resolution of the American Federation of

Labor, adopted at the Convention held December 8-13, 1890, at Detroit, Mich., this petition is to be sent to every union in the United States.

Before both houses of Congress there are now resolutions, already favorably reported by the proper committees, proposing amendments to the Constitution of the United States extending the right of suffrage to women. Congress, in proposing this amendment, does not pass on the merits of the question. Its only authority is to submit it to the people. And, therefore, your endorsement of this petition does not place your union on record for or against woman suffrage; but only assists in bringing the question before the people in the way provided in the Constitution, that they may have an opportunity to express their judgment legally for or against extending the right of suffrage to women.

I earnestly hope that you will give this matter early and favorable attention. I would ask you to fill out and return the accompanying petition to this office, duly signed by your president and secretary, with the seal of your union affixed.

Fraternally yours,

SAMUEL GOMPERS,
Pres't. American Federation of Labor.

Attest:

CHRIS. EVANS, Secretary.

To the Senate and House of Representatives, in Congress Assembled:

We, your petitioners, workmen of the State of . . . and voters under the laws of the United States, respectfully request your honorable bodies to pass the resolutions already favorably reported by your proper committees, proposing an amendment to the National Constitution securing to the women of the United States the exercise of the right of suffrage, that the question may go before the people of the United States to be rejected or ratified by them through the action of either their legislatures or conventions, "as the one or the other mode of ratification may be proposed by Congress."

The . . . Union . . . of the County of . . . and State of . . . a union numbering . . . members, at a regular meeting thereof, have approved of the above petition, and directed the secretary of our union to certify this fact under seal.

In witness whereof, we, the president and secretary of said union, do this . . . day of . . . in the year 1891, append our official signature and seal.

.....
President.
.....
Secretary.

[SEAL]

All that is asked is the privilege of voting upon the question, and that privilege ought to be granted. If a majority of the voters of the United States are in favor of woman suffrage, the fact ought to be known. To ascertain the fact there is but one method, and that is to vote upon it. With the ballot in the hands of woman her emancipation is complete. The movement set forth in the foregoing documents is in the right direction and ought to exert commanding influence.

Each lodge will receive copies of the circular and petition which appear above, and it is to be hoped that the decision in every instance will be favorable to the matter therein set forth.

It will only be a little while until a man will be regarded as a relic of a past age who does not consider woman at least the equal of man in all things.

A QUESTION OF VERACITY.

The caption we have selected for what we may choose to write, might have been changed to, A question of Mendacity—or, we could have captioned this article, Veracity Questioned. Our purpose is to find the truth. The truth always makes men free—a lie enslaves its author—and it is said that “a poor man is better than a liar”—that is to say, a poor man who dares tell the truth, who won't equivocate, but whose words are equivalent to an oath, with the “so help me God” attachment, is better than one who does not hesitate to quibble, cavil, dodge and evade the truth, though he be a thousand times a millionaire.

A truthful man is always a courageous man, while a liar is always and everywhere a coward—a spineless creature. And it might be said with equal force, if Satan's dominion was a paint pot and his forked tail a brush, he could not paint a picture as hideous as a lie. If he were to try it on, he would at last exclaim: “It beats the devil”—and for once at least, the head of the devil would be exceedingly level.

But to our task, “A question of veracity.” What is the question?

A question of veracity is always an important question. Admiral Porter said, “A pin is worth fighting for, if it involves a principle.” A question of veracity always involves a principle and therefore becomes an important question.

It is well known that for more than two years the Brotherhood of Locomotive Engineers has been wrestling with the question of “federation.” It is well known that the votes of the divisions of the order have been taken and that, within a few hundred votes, there were as many in favor of *general federation* as there were opposed to it. The *Engineers' Journal* has been invited to state that division vote in its columns, but it does not do it. It *lacks the courage*. To give that vote would knock the *Journal* higher than Gilroy's kite. True, the figures would not upset its arguments on federation, because it never had any, but they would expose its jugglery, its double dealing, and would show, as we have said, that of those who voted, the opposition to *general federation* in about 15,000 votes cast was but a small majority—both sides of the question having more than 7,000 votes, and neither side having 8,000 votes.

But the question of veracity does not hinge upon that statement, but upon other statements.

In the December number of this Magazine appeared an article captioned “270 vs. 168,” page 1116, from which we take the following:

At Richmond federation had few advocates in the convention. At Denver the number was largely increased, and now comes Pittsburg—total number of delegates voting on federation, 438; the number voting for federation, 270; the number voting against

federation, 168; majority in favor of federation, 102. Two-thirds of 438 is 292. Those voting for federation, 270, or within 22 votes of a two-thirds majority.

This explains the caption of this article, “270 vs. 168.” It was a splendid victory for federation. It could only have been more resplendent by securing twenty-two more votes. In due time they will come. Come, because federation is right, because it meets the demand in the highest degree of the organizations of railway employes.

The statement made by this Magazine with regard to the vote is *delegate* information absolutely corroborated by a member of the B. of L. E., who was present when the vote was taken, and who avers that it was upon *GENERAL Federation*, 270 for and 168 against.

The *Switchmen's Journal* for December contained the following upon the subject:

THE PITTSBURG CONVENTION.

The committee on federation reported in favor of national federation. The vote upon the acceptance of the report was 270 in favor and 168 against. The majority of the delegates were in favor of applying for admission to the Federated Orders of Railway Employes, but it seems that the question required a two thirds vote, which could not be obtained, as Mr. Arthur opposed the proposition. It was therefore laid on the table. During the last week of the convention another plan was reported by the committee and accepted by the convention. This was the same old “system federation,” and is the *first official recognition of anything in the way of federation*. The plan adopted has been shorn of many of the inequalities that characterized some of the other “system” plans, but is still cumbersome, costly and entirely impracticable, being but a shadow of a substance.

Now comes the question of veracity. The *Switchmen's Journal* and the *Firemen's Magazine* aver that upon the straight out proposition of “general federation” in the Pittsburg convention of the B. of L. E., 270 votes were cast in favor of its adoption and only 168 votes against it. And this averment is based upon statements made by delegates who participated in the deliberations of the convention, and upon statements made by a member of the B. of L. E. who was present and who was an eye and ear witness to the proceedings.

Such testimony is of the highest possible character; for has it not been written “that in the mouth of two or three witnesses every word may be established.” We have more than “two or three witnesses,” and all of them are members of the B. of L. E., and they say 270 votes were cast for GENERAL FEDERATION and only 168 votes were cast against it, giving a clear majority in favor of general federation of 102, lacking only 22 votes of a clear two thirds majority.

Having written this much we are prepared to introduce the utterances of the B. of L. E. *Journal* of December upon the subject, as follows:

The complexion of the Pittsburg convention was one of general conservatism throughout the entire sitting. It was a noticeable fact and in direct contrast to the Richmond and Denver sittings. General Federation had but few advocates and was considered but three times during the sitting. It was seemingly a dead issue. In the entire delegation of 406 members present not over thirty-five were in favor of general federation as proposed at the two previous con-

ventions. Many delegates who favored and were extremists in their ideas as to general federation at the Richmond and Denver sittings were also representatives at the Pittsburg convention. They were opposed to any form of federation of a general character. Neither did they hesitate to place themselves on record, whenever an opportunity presented itself, as advocates directly the opposite of that which they consistently thought their duty at the Richmond and Denver sittings.

The italics in the foregoing are introduced for the purpose of discussing intelligently the question of veracity.

Now, let it be understood, right here, that at least three delegates to the Pittsburg Convention, and one member of the B. of L. E., who was present, aver that 270 votes were cast for general federation. The B. of L. E. Journal says, "In the entire delegation of 406 members present, not over thirty-five were in favor of general federation."

In these declarations, there is a discrepancy of 235 votes. Four men aver that 270 votes were cast for general federation. They were on the ground. The B. of L. E. Journal avers there were but "thirty-five" delegates who "were in favor of general federation"—a difference of 235.

The B. of L. E. Journal from first to last had been blindly opposed to general federation, or, for that matter to any federation. What is the legitimate inference? This, that its overwhelming defeat upon the subject of federation completely demoralized it—upset its moral perceptions, rendered it so oblivious of the vivid line which separates veracity from mendacity, that, regardless of all proprieties, to use no harsher word, it sought by juggling to impose upon its readers a mendacious statement, the purpose of the imposition being, doubtless, to modify the stinging humiliation which the truth would have brought upon it.

To still further juggle with the subject, it will be noticed that the B. of L. E. Journal says: "It (general federation) was seemingly a dead issue." Indeed! More than 7,000 engineers voted for it when the question was submitted to a vote of the divisions. Is it not a shameful perversion of the truth to say general federation was "seemingly a dead issue," when 270 delegates, in convention, voted for it; a clear majority of 102 over those who voted against it?

Is it not an outrage upon the decencies which the truth always imposes, to intimate that general federation had become odious to the Brotherhood of Locomotive Engineers, when in convention 270 delegates voted to establish it, to 168 voting against it, a clear majority of 102?

Our purpose is accomplished. A deliberate falsehood has been published. The publications involved are the *Switchmen's Journal*, the *Firemen's Magazine* and the B. of L. E. Journal.

The *Switchmen's Journal* says its information in regard to the vote in the B. of L. E. convention upon the subject of general fed-

eration was obtained from two delegates who were present. This Magazine's information is from sources equally reliable. The B. of L. E. Journal, therefore, stands convicted of misrepresentation and falsehood unless it produces incontrovertible proof that our informants are falsifiers, and their statements vicious and misleading.

We suggest to our esteemed contemporary that by publishing the truth some modification of the sentence may be obtained. At any rate, the 50,000 members under the jurisdiction of the Supreme Council of the United Orders of Railway Employes (a "dead issue," if you please, according to the Journal) are getting there, and don't you forget it.

NEW YORK RAILROAD LEGISLATION.

The following is an associated press dispatch from the capital of the Empire state:

ALBANY, N. Y., January 14.—The State Board of Arbitration, in a special report to the Legislature on the late Central Hudson railroad strike, makes several suggestions for legislation. The board urges that entrance into railway service should be by enlistment for a definite period, upon satisfactory examination as to mental and physical qualifications, with oath of fidelity to the people and to the corporation. Resignation or dismissal from such service to be permitted for cause, to be stated in writing and filed with some designated authority, and to take effect after the lapse of a reasonable and fixed period.

Any combination of two or more persons to embarrass or prevent the operation of a railroad in the service of the people a misdemeanor.

It will be well for railroad employes to read it, if for no other purpose than to note the depths of idocy to which the State Board of Arbitration has descended. The proposition that railroad employes shall take an "OATH OF FIDELITY" to a corporation of any kind is an exhibition of "dampfoolism" that beggars description, and forces the inquiry: Who owns, who purchased the State Board of Arbitration of New York?

It was a favorite remark of Jay Gould, that "when he wanted a Legislature he purchased it." Did the New York Central purchase the New York State Board of Arbitration? Does it not look that way?

Again, does the proposition to undergo physical and mental qualifications include the Vanderbilts, Depews, Webbs and the rest of the gang who control the New York Central? Are they to take an "oath of fidelity" to the employes? Why not? Legislation is required to emancipate workmen, not to enslave them.

BACK NUMBERS.

It should be understood by Magazine agents and others that we have had a sufficient number of *Magazines* printed, beginning with January, to supply back numbers for all orders that may be received during the year. Let all orders begin with the January number, so that subscribers will have the numbers for the year complete.

LIVING ISSUES.

We have before us, as we write, No. 1, Vol. I, of *Living Issues*, published in Boston, Mass., with Rev. W. D. P. Bliss, as editor, 383 Washington street.

The *Living Issues*, we take it, is not a Nationalist paper, nor a Single Tax Advocate, not a Democratic, nor a Republican organ, but the *Avant-Courier* of a new party—the Farmers' Alliance party—and it must be said that *Living Issues* has a fair prospect of having a good sized party behind it at no distant day. Brother Bliss asks, "Must history repeat itself? Must America have a French Revolution?" and adds "People are talking of liberty and justice and equality: is anything being done? Nationalists discuss their theories; Single Taxers theirs; the Farmers' Alliance has its platform; Trades Unionists have theirs; is anything being done? Are we to have a United States of talk? Will talk save us? *Living Issues* believes that the time has come for reformers to unite, for less of discussion and more of working together, for less of talk and more united political action. *Living Issues* is started to work for the creation of a new political party."

It will be observed, that Bro. Bliss proposes to do some *talking* himself. He wants a new political party. If he succeeds, the Lord help him to get up one in all regards superior to the assortment we now have on the market. We welcome with great heartiness *Living Issues* to our *sanctum*. We shall look for it. There is in its columns, even now, stray food for thought. Brother Bliss hews to the line regardless of where the chips fly or whom they hit. The time has come for rugged journalism and for new issues, and we extend the right hand of fellowship to the new candidate for public favor.

A NEW DICTIONARY.

We have on our table, a prospectus and sample pages, of Messrs. Funk & Wagnalls' Standard Dictionary of the English language. We have read the prospectus, with more care than we usually bestow upon such subjects. In noting the numerous reforms proposed, we are free to say, without any attempt at philological criticism, that the common sense views of the publishers strike us as being just what the average man needs, and the average man is vastly in the majority in this country.

We note with special satisfaction the arrangement by which the etymology is given after the definition of a word—and it is singular that the reform has never been thought of before by publishers of unabridged dictionaries. Few, who consult dictionaries, care for the history of words, they want the orthography of the word, and its clearest meaning, the rest is for the

philologist—the scientific student. Messrs. Funk & Wagnalls ask for suggestions—we will venture one. Let the great work, for such we think it will be, contain a full list of synonyms, not a work like Crabb's English Synonyms, but more in the style of Soule's. Thousands of writers and talkers want synonyms, and words of opposite meaning. Such a feature would make the new book popular, and give it a wider sale than it otherwise would have.

All the reforms suggested are prudent and show that the publishers are awake to the needs of the people, and in this eminently practical age, dictionaries need reforming quite as much as geographies and other books of reference which could be easily named. We bespeak for the publishers deserved success.

F. THOROLD ROGERS, a member of the British Parliament says: "I at one time looked upon labor unions with suspicion, but a long study of the history of labor has convinced me that not only are they the best friends of the workingman, but the best agency for the employer and the public, and to the extension of these associations, statesmen and political economists must look for the solution of some of the most pressing and difficult problems of our time." Such testimony ought to pierce the rhinoceros hides of such men as Vanderbilt, Depew and H. Walter Webb. But some men never examine their locks and bolts till their treasures are gone.

"GETTYSBURG and the Railroads" captions an article in which it is shown that the number of persons killed and injured on the railroads during the past year, is almost exactly equal to the loss in killed and wounded at the battle of Gettysburg, on both sides. And still railroads are pleased when organizations resolve, "It has pleased God to remove," etc.

LOVE'S HOMAGE.

"Loved one! though lost to human sight

I feel thy spirit lingering near;

As softly as I feel the light,

That trembles through the atmosphere.

"I wonder if this cold, sweet breeze,

Hath touched thy lip and fanned thy brow;

For all my spirit hears and sees

Recalls thee to my memory now.

"For every hour I breathe apart

Will but increase—if that can be,

The love that fills this lonely heart

Already filled so full of thee.

"Yet many a tear these eyes must weep,

And many a sin must be forgiven;

Ere these pale lids shall sink to sleep

And you and I shall meet in heaven."

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the *fifteenth day* of each month.

Reminiscent.

On the 2d of September, through the courtesy of the Chicago, Rock Island & Pacific management, the special train containing the delegates to the San Francisco convention, pulled out of Chicago. It consisted of five sleepers and one baggage car, and was under the control of John J. Hannahan from its departure till its return.

Mr. Allen, assistant General Manager of the Rock Island, proceeded to Kansas City in advance of the train, and from there made all arrangements for meals over that system as far west as Denver. At Davenport, Iowa, an interesting episode took place: Sitting Bull, from Philadelphia, received the White Hat, a relic of his ancestors from pre-historic Cape Town. This ceremony was accompanied by much pomp and beating of tom-toms. Each tribe took up the chorus and passed it along, till the inspiring music reached the camp of the warriors on the Rose Bud, from here it spread like a prairie fire to the bosom of every brave from the Yellowstone to the Colorado, its wild song and fantastic gestures awaking the echoes in the cañons of the Big Horn range and dying in the roar of the surf that beat the crags on Vancouver's island; but alas for the degeneracy of the pale face, who saw not the sublimity and immensity of its origin, but in the fear of his superstition he called it the "Ghost Dance," and so it will pass into history. We feel that the great member from the Albany gun club, on reading this sad intelligence will shed a tear and hit a schooner, for he is a power in naval warfare, having a carrying capacity that would sink a dozen crafts. At one time while passing through Kansas, he caused great alarm on the train by his disappearance, but his discovery, like the finding of Moses, was the source of much rejoicing, and the ladies who made the find presented him a bouquet of sun flowers, and an original package. This was significant of fidelity and poetry, and was greatly appreciated by the recipient, who in turn made a neat speech of thanks.

On the arrival of the train at Denver, the delegates did justice to a good breakfast that was well served, after which they were entertained by the members of the Denver lodges, 77 and 273. The train remained here five hours which gave general satisfaction. Late the next evening we arrived in the

Mormon capital, where several hours were spent visiting the endowment house, the tithing house, the temple and the tabernacle. Elaborate preparations had been made here to give the delegates such a reception as would have made it memorable, but the train was so delayed that all idea of the contemplated entertainment had to be abandoned. However, the members of the Salt Lake and Ogden lodges were very kind in showing the delegates and their ladies the many places of interest and otherwise making their visit pleasant and entertaining.

On the following Sunday morning breakfast was partaken of on the summit of the Sierra Nevada mountains. It was a quite easy slide from here down to the city of Sacramento where a delegation met the train to welcome their eastern brothers to the city near the Golden Gate. During that same week the Native Sons of the Golden West with the pioneers of '49, were celebrating the fortieth anniversary of the admission of California to the union and they kindly invited the representatives of the Brotherhood to participate in the festivities, which was accepted. San Francisco was looking its best in the gayety of its hilarity, and its citizens joyous in the memories of their fathers' pluck and endurance, sang

"In the days of old, in the days of gold, in the days of '49."

The bear flag of the old Republic was displayed on every corner; and as for Bruin himself he was there in effigy and in the flesh, black, cinnamon and grizzly, walking in the parade and carrying his characteristic smile with the indifference of a menagerie elephant.

While in the city the delegates were given a complimentary excursion, by the Southern Pacific Co., to the world famous Monterey. This was a treat that was very much enjoyed by the members and their wives. On our arrival at Pacific Grove, two miles from Monterey, the home of the gentle, the refined and the cultured, we were royally entertained by the brothers of the California lodges. A delicious lunch was spread on rustic tables temporarily constructed under the tall pines in the soft open air that had the smell of the sea upon it. During the repast a band discoursed good music, while the wives and daughters of the villagers served the guests with a courtesy and politeness that gave the whole the sweets and charm of home comforts. On each of the dainty wooden plates were buttonieres and Japanese napkins; the latter had printed across the centre: "Complimentary to the Brotherhood of Locomotive Firemen, on the occasion of their visit to Pacific Grove, California, Tuesday, Sept. 16th, 1890." Along the tables were colossal bouquets, from which the ladies partook generously. Those wooden plates were put to unique and novel uses,

the most popular of which was the autograph album. This very interesting occupation was monopolized by the ladies, who approached the gentlemen in that graceful manner and bewitching smile holding their plate in one hand and pencil in the other, saying: "Have I your autograph?" It reminded one very forcibly of a scene at a church fair. I have since seen these plates hung with a dainty piece of blue ribbon make pleasing bric-a-brac. Frequently afterwards in car No. 2, we had the whole thing rehearsed, for the amusement of the occupants, having the wits O'Reilly of Nogalwosces and McCarthy of Lasvegas-losangeles, taking the leading parts. Dee-Gan, one of the heavy men, took the roll of gallant, in which he was ably assisted by Cleary of Concord; the chorus from car No. 1 was well rendered, and left little else to be heard after they "went on." On our return trip Mrs. Nellie Bloom, one of the bright singers of the *Magazine*, gave us the charm of her company to Los Angeles.

The Monterey excursion train was in charge of Mr. McCabe, the passenger agent, a young man, but one who assisted very materially in making the trip pleasant and agreeable.

The first night on our return home from San Francisco, Mr. Detrick, division superintendent, side tracked the train at Fresno, a kindness that will not be soon forgotten. In the bright beauty of the morning he directed us to the hotel where an excellent breakfast was served, and from that hour the most pleasant astonishments began to roll in on us till 5 P. M. The citizens of that thriving, enterprising city placed their buggies, hacks and carriages at our disposal that we might have an opportunity to visit the vineyards and see the transformation of the grape to the raisin, the wine press in operation, and the winery bursting in the abundance of its colossal casks. It was my good fortune to be thrown in company with a party of twelve who occupied a huge coach drawn by four beautiful sorrel horses, the property of Judge Grady, who had with that characteristic generosity for which he is well known throughout southern California, given us the best horse flesh in his stud. The Judge himself took a seat on the box next to the driver, then turning to the nine dusters that sat behind, he asked, with his arm resting on the back of the seat: "Well boys are you all ready?" In reply he received a timid "yes sir," for we had not yet felt satisfied, that is some of us, that all this luxury and enjoyment was for us, then settling himself in his seat he said to the driver, "let them go Johnny!" and Johnny giving a chirp, similar to the caress that a lady gives her pet canary, away dashed the sorrels like a seven-foot wheel with the pay car. After passing through an immense

vineyard, where the pickers were busy, our first stop was made at the club house of the race track. It was here that we were formally introduced to our genial host who proved the very embodiment of good fellowship. He is an attorney by profession and a gentleman and a scholar by education, as natural and unaffected as a sunset's glow. Then we went down the road through the shadows of the pomegranate, fig and odorous magnolia, turned into a narrow lane bordered by ripening olives and giant oleanders and stood before a large winery where the press was active and unloading grapes kept moving to the huge receiver. We were soon joined by other parties of our delegation that had come from other directions. It was here, standing with a tiny glass between his fingers that Reilly from New York sang:

"And does not a meeting like this make amends," to which the ladies added much music in their clear sweet voices. Judge Grady made a clever speech, John Hannahan told a story, and Dan Barry the champion of the poetic standard, gave the following toast, while holding high from where he stood on the end of the table, a generous tankard of old port:

On nectar fed,
Of old 'tis said,
Their Junos, Joves Apollos:
But man may brew
His nectar too,
The rich receipt as follows:
Take wine like this,
Let looks of bliss
Around it well be blended,
Then bring wit's beam
(pointing to McCarthy)
To warm the stream,
And there's your nectar splendid."

Thereupon the entire party took up the chorus:

"Come wreath the bowl
With flowers of soul,
The brightest wit can find us;
We'll take a flight,
Towards heaven to-night,
And leave dull earth behind us.

I will not mention the many magnificent specimens of fruit, such as peaches, grapes, apricots, raisins, &c., that the good people of Fresno prevailed upon us to accept as souvenirs of our visit to their city. Some of this fruit was in long, graceful-necked bottles, and labelled Angelica and other strange devices of which it was difficult to learn without looking inside. The pleasant memories of Fresno are destined to remain with those who were fortunate enough to be "wid us," as long as life will permit those ennobling qualities of our humanity to exist, our sense of appreciation and gratitude.

It is meet that in taking our leave of the big-hearted Californians it should be conducted by the angels. Our reception at Los Angeles was a compliment to this brotherhood that deeply impressed itself upon every member who was present. It was

held under the auspices of the Chamber of Commerce, and presided over by the mayor of the city. Before our departure, each delegate and wife was presented with a sample bottle of the Los Angeles product.

Among the many entertainments that the brothers located at Los Angeles had provided, was an opportunity to luxuriate in the surf of the Pacific that washed the white, soft sandy beach at Redonda. Such an abandon, such unadulterated fun, such rollicking sport! All were boys and girls again. Children in the amusement of their wildest fancy. O happy moments of our school days, how vividly did your memories return, surrounded with a halo of blissful innocence! But alas the sweetest moments are soonest gone.

It is but a step from the paradise of the Republic to the desert of Mojave. Our last glimpse of California was caught as the sun lit up in its setting grandeur the beauty and extent of the orange groves at Riverside. It was here that those pioneers of our organization, Jack and Dick Dodge, bid us farewell and returned to their home in San Diego. They clung to that friendly clasp whose thrill they had not felt for years, and indeed in all probability they would never feel again. Well, no matter, we will dream and sing of our meeting and forget that we ever had parted. It was here also that Brundage dropped out, who 200 years ago had smiled when first he beheld the Mount of the Holy Cross and was rewarded by having it made perpetual, not only the cross but the smile.

May it never decay, while on earth he will stay,
Till it change for the smile of the blest on the very
last day.

Around the little stations that dot the barren wastes of the Mojave, were picturesque groups of Indians of both sexes carrying their papooses; a fee of ten cents was required to peep at the little ones who were wrapped in furs and strapped to a board in that peculiar Indian custom. The males were tall, stately fellows, many of them worked on the section, while others cultivated little patches of ground bordering the Colorado and other streams. A prominent feature of their dress was its scarcity; of this they were as indifferent as they were to the burning rays of an Arizona sun. At Needles, a place that holds the distinction of running the mercury higher than any other spot on this side of Fiddlers Green, we were honored by a foot race, between four of the Mojaves and two of our party, the latter were represented by the tall "happy" man from Cincinnati and "I-move-to-concur," from the Windy City. The Indians were it seemed bedecked and painted for the occasion, they stood in their place awaiting the signal with an air of confidence that was taunting. The excitement grew to fever heat when the word "go" rang out from a feathery

chief who stood on a cracker box near the last sleeper. Ye gods, how they moved!—but let us throw the mantle of charity over the prostrated form of the humiliated Red, who lay with his nose in the ground and swore that he never stumbled before. "Wisha thin if you didn't," cried Madigan, "begor yo' stumbled behind, for be me sowl, I-move-to-concur, was there in the dust o' yer heels." I have since learned that the Mojaves are restless and enthusiastic ghost dancers.

A day or two after, we entered the country of the Pueblos. These Indians are short in stature, having remarkably small feet—this is not sarcasm—and anxious to sell anything they have got. Agates, topaz, turquois and native pottery whose antique qualities could not be questioned, were offered. Many availed themselves of the opportunity thus afforded to secure relics of these strange people, but that which was purchased by the Sheriff from Iowa, was far the most remarkable. It was the sweetest little copper-colored baby that could be found; he bought it for thirty-five cents and a plug of tobacco. Howell declared that he intended the baby for Norion in San Antonio, and at the same time dropped some very suggestive inferences. Two days after we arrived in Chicago, making the complete circuit without the slightest accident. Everything went like clock work, harmonious and jolly. Before closing I wish to express what a great many have, that we are all indebted to T. J. Roberts, of Oakland, for his kind, gentlemanly attention during our stay in San Francisco. His position was a very difficult one but he filled it with credit to himself and the organization.

Tim Fagan.

Loyalty vs. Servility.

SANTA ROSA, CAL., January 15, 1891.

MR. EDITOR:—Some time before the assembling of the firemen in convention at San Francisco I was invited by their committee of arrangements to deliver an address at their opening meeting. The invitation was declined on the ground of incompetency, but, being urged, I reluctantly consented. Later on I was notified by the secretary of my division, No. 283, that the members wished me to extend a greeting to the firemen in their behalf. The secretary informed me that the division thought it might be well for me to draw up and present a set of resolutions, but added, "*there are no particular instructions. You are left free to follow your own judgment.*" Following my own judgment, I dispensed with resolutions and conveyed an expression of the good will of the members of Division No. 283 to the delegates in a few words as well chosen as my limited ability afforded.

Having spoken these few words of welcome in behalf of the members of my division, my duty to them was discharged. My address, which was delivered at the same time, voiced *my own views and sentiments*, and was delivered, as before stated, on the invitation of the firemen and not of the engineers of Division No. 283.

I make this explanation because I am charged by the editor of the *Engineers' Journal* with being "recreant to my trust" on the occasion. I deny that I was recreant to my trust on that or any other occasion when I have been commissioned to perform duties for my fellow engineers. Some half dozen members of Division No. 283, out of a total membership of seventy, seemed to think it necessary to purge the division of any responsibility for my remarks, and they passed condemnatory resolutions. I care nothing about that; if it relieved their minds, and was any solace to the wounded feelings of the Grand Chief, it is well. My address is referred to in the January *Journal* as a "*Miserable effort*." I admit that it did not amount to much, but then it was my first effort; my maiden speech, and the editor of the *Journal* shouldn't be hard on a beginner. You did me the honor of publishing it, Mr. Editor, and I declare, when I saw it in the *Magazine*, with your introductory remarks and foot notes, it reminded me of a poorly-dressed person decked off with a silk hat and feathers and patent leather boots. But, "*miserable*" as it was, I am vain enough to believe that it interested my audience as much as some of the productions of the editorial corps of the *Journal* interest its readers. The effort of the *poetical editor* for instance in the last issue; for this "*doggerel*" we pay a hundred and fifty or seventy-five dollars a month. The editor of the *Journal* intimates that I am unfit for companionship. Well, I am not dying for the companionship of any one other than my wife and dog, but that I am not to be forsaken on account of anything I have said seems probable from the tone of many letters I have received in the last few months. Here, for instance, are a few extracts from one written by one of the most prominent brotherhood men on the coast, and an officer of Division No. 283: "*The resolutions are absurd.*" * * * "*This is another of 283's freaks.*" * * * "*I believe that you expressed publicly the private opinion of a majority of the B. of L. E. men in this State; you did mine at least.*"

There is a difference between *loyalty* and *servility*. I claim to be a loyal member of the Brotherhood of Locomotive Engineers, but I am servile to no man, not even Grand Chief Arthur. He may feel that he is too great and too good to be criticized, but he is only human, and must take his medicine like the rest of us. I hold that a man may

consistently be a loyal member of the B. of L. E. and at the same time be a friend of the firemen and of their organization. I claim to be both.

There will be a brotherhood, or at least an alliance of all men engaged in the train service, in spite of the opposition of Grand Chief Arthur and the President of the New York Central Railroad Company.

Yours fraternally,
D. J. Brown.

The Fatal "Thirteen."

MR. EDITOR:—I desire to record a peculiar accident which occurred here recently, and which may be of interest to the readers of the *Magazine*:

On the 13th of November last, at 7:13 A. M., a construction train with engine 213 left the gravel pit with a train of gravel, and at 9:13 A. M. collided with an opposing train on bridge 13, wrecking 13 cars, both crews consisting of 13 men, all escaping injury except the fireman, who was slightly injured by jumping through the cab window. It is rumored that he jumped 13 feet, but this is not confirmed.

Yours truly,
MISSOULA, MONT. E. W. G.

THE CHRISTMAS TREE.

To the Boys of Banner Lodge, No. 56.

The church was crowded to the door,
In front the merry children waited
To see the joy, the treasured store
With which the bending tree was freighted.
What mirth was in each sparkling eye!
What music in the cheerful voices!
For who could ask a child to try
To quench the heart that so rejoices?
While looking o'er that happy throng,
I sat in silent meditation;
My heart was touched that night with song
And by the earnest invocation.
The same old picture there was drawn,
The oft-repeated, old, old story,
Proclaiming to our world the dawn
Of that bright day that ends in glory.
To see each little face light up,
To note how thrilled each little being
For candy, nuts, or china cup,
Was something really worth the seeing.
I, too, was but a child that night,
And, as I caught their inspiration,
My eyes were dazzled with a sight
That far surpassed my expectation.
"The Boys of Number Fifty-six"
Had come to over me completely.
They're up to just such clever tricks,
So kindly, friendly and discreetly.
Their gift was placed within my hand,
A purse with "legal tender" in it;
And something—do you understand?
Bedimmed my wondering eyes a minute.
But dearer than the glittering coin,
The genial, kind appreciation,
Which like a golden cord shall join
Our hearts in loving federation.
"Tis said, 'More blest are they who give
A gift than he who may receive it.'
I hope 'tis true; but as I live,
In this one case I don't believe it.

Geo. W. Hall.

STANBERRY, MO., JAN. 8, 1891.

W. S. Carter Remembered.

In the *Denver News* of December 28th there appears an account of a presentation highly complimentary to Bro. W. S. Carter, late of Alamo Lodge, No. 284, Taylor, Tex., but now located at Denver, Col., and a member of Rocky Mountain Lodge, No. 77. We quote as follows:

On last Thursday evening, Christmas day, at the regular meeting of Rocky Mountain Lodge, No. 77, Brotherhood of Locomotive Firemen, a most agreeable surprise was given to W. S. Carter, a new member of the lodge, but an old and prominent member in the organization. Mr. Carter was formerly a member of Alamo Lodge, 283, Taylor, Tex., and its representative at the last convention of the Brotherhood held in San Francisco. He has since moved with his family to Denver. His old lodge, recognizing his worth, had sent to No. 77 for presentation, a very handsome badge as an expression of their appreciation of his abilities and great services. It is of their own design and made of heavy gold beautifully engraved. The occasion was particularly gratifying to Lodge 77, among whose members Mr. Carter is very popular. The presentation was made on the evening of the tenth anniversary of Mr. Carter's marriage—his tin wedding.

The *Railroad Trainmen's Journal* in its new dress is a thing of beauty as well as a joy forever. Brother Rogers has done himself proud. The title page is artistic and expressive. The contents from cover to cover invite to careful perusal. In literary excellence, arrangement, variety and scope of matter the January issue is equal in all regards to the best there is in the market. The portrait of Grand Secretary and Treasurer, W. A. Sheahan, that prince of gentlemen, is the subject of the frontispiece. Best of all, the *Journal* is printed in its own office and by its own type and presses, which speaks trumpet-tongued for the energy and pluck of the organization it represents. The *Magazine* is in the happiest mood for felicitations and the *Journal* has them in round and overflowing measure.

Acknowledgments.

ST. THOMAS, CANADA, December 20, 1890.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—This is to certify that I have this day received from Charity Lodge, No. 5, a draft for the sum of fifteen hundred dollars, the full amount due me on the policy held by my late son, Geo. Cheesborough, for which please accept my sincere thanks. Yours respectfully, MRS. L. CHEESBOROUGH.

BRADFORD, PA., January 11, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I desire to express my sincere thanks to the Brotherhood of Locomotive Firemen for the draft of fifteen hundred dollars, (\$1,500) the insurance due me on the death of my dear son Frank Wood, who was taken from us September 29th, 1890. With the best wishes for the welfare of your order, I am Truly yours, MRS. A. P. WOOD.

FOEBURG, PA., December 28, 1890.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I desire to express my sincere thanks to the Brotherhood of Locomotive Firemen for the prompt payment of \$1,500 due me on the policy of my dear son, Silas L. Elder, through Mr. J. E. Dunlap, Receiver. I also desire to express my sincere thanks for the beautiful flowers presented by Thanksgiving Lodge, No. 406, and also to those who accompanied the remains and who so kindly assisted at the funeral. May God ever bless and protect your noble Brotherhood is the sincere wish of

MRS. CATHARINE ELDER.

PITTSFORD, N. Y., December 2, 1890.

W. P. Couch, Esq., Sec'y. of Lodge No. 99, B. of L. F.:

DEAR SIR:—Please allow me to present to your association through you an acknowledgment of thankfulness for the kindness shown me by the association. Your resolutions of sympathy were duly received and were helpful in lightening the burden of sorrow which came to me by the sudden death of my son, and your associate, George Lighthouse, and I can only wish that all who have so freely tendered their sympathy, both by word and act, may be spared such a sudden and painful death as was the lot of my son. I herewith also acknowledge the receipt of \$1,500.00 from your association, for the prompt remittance of which please accept the thanks of the sorrowing mother of George Lighthouse.

Yours truly,

ELIZA OTT.

LOUISVILLE, KY., December 23, 1890.

To the Officers and Members of the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I hereby acknowledge the receipt of a draft for fifteen hundred dollars, (\$1,500) the amount of insurance due me on the death of my son Martin J. Conniff. I desire to return my sincere thanks to the Brotherhood for the money and I also wish to express my appreciation of the kindness and attention shown my beloved son, and the respect shown him after death. Words fail to express the gratitude I feel toward your noble order. I also tender my heartfelt thanks to the members of the Louisville lodge. With best wishes for the prosperity of the Brotherhood, I remain,

Your sincere friend,

MRS. DELIA CONNIFF.

STANBERRY, MO., January 15, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I wish to thank you for the payment of fifteen hundred (\$1,500) dollars insurance due me and my children on the policy held by my late husband, J. H. Burk. I also wish to thank the officers and members of Banner Lodge, No. 56, for the respect and kind feeling shown to my dear husband after his death, and for their kindness to me. If we had better laws for the protection of railroad men while in the discharge of their dangerous duties, there wouldn't be so many empty seats at the bedside, and lonely homes. With best wishes for the B. of L. F. everywhere, I remain

Your friend,

JOSE S. BURK.

DENVER, COLO., December 26, 1890.

To the Members of Denver Lodge, No. 273:

DEAR FRIENDS:—This is to certify that I have this day received through the representative of the B. of L. F. the sum of fifteen hundred dollars (\$1,500.00) on the insurance policy held by my late husband, Christian F. Fogel. I wish also to extend my heartfelt thanks to the members of the brotherhood for their kindness and sympathy at the time of my husband's death, also for their beautiful floral decorations. Hoping that God will protect and prosper your noble order, I remain,

Yours respectfully,

AUGUSTA J. FOGEL.

HINDALE, N. Y., December 9, 1890.

Mr. W. F. Couch, Sec'y. Rochester Lodge, No. 99, B. of L. F.:

DEAR SIR:—Will you kindly convey our sincere thanks to the members of your lodge for the floral tribute and the kindness shown us in our late bereavement; also kindly express our thanks to the members who accompanied the remains of our son and brother home. The promptness with which the insurance was paid denotes the magnificent working system and benefits of your order. It is our hope and desire that the members of your order may never be overtaken by any accident or misfortune.

Yours respectfully,

MRS. WM. COLLOPY.

COLUMBIA, PA., December 30, 1890.

To the Brotherhood of Locomotive Firemen :

GENTLEMEN—I have just received, through Mr. Martin M. Hinkle, a draft for \$1,500, on the policy held by my beloved husband, Christian P. Rost. Please accept my heartfelt thanks for the prompt adjustment of the same. I also wish to return thanks for the beautiful floral design to my husband. I sincerely thank the members of Columbia Lodge, No. 252, B. of L. F., for their kindness to me during my trouble. May God, in His goodness and mercy, prosper your order and be the protection of its members throughout the land, is my earnest prayer.

Yours truly,

MRS. MARY E. ROST.

BELLEVILLE, ONT., January 7, 1891.

To the Officers and Members of the Brotherhood of Locomotive Firemen :

GENTLEMEN—I have received from W. J. Logue, Financier of Challenge Lodge, No. 66, a draft for the sum of \$1,500, due me on the policy held by my deceased husband, George Andrews. Allow me to tender my sincere thanks also to lodge No. 66 for their many acts of kindness during my late husband's sickness and on the day of his funeral. Permit me to express the hope that prosperity may attend the Brotherhood, and may it long continue a blessing to the members and their families.

Gratefully yours,

MARGARET ANDREWS.

AUGUSTA, GA., December 4, 1890.

To the Members of Stone Mountain Lodge No. 332, B. of L. F.

GENTLEMEN:—I desire to return my sincere thanks for the prompt payment of fifteen hundred (\$1500.00) dollars, the insurance due me on the policy of my late husband Charles S. Harrell, who was killed at Marton station, S. C., June. I also wish to express my appreciation of the kindness and attention shown him at his burial. I have not words to express the gratitude I feel towards your Order. May the blessings of God rest upon your noble Order, one and all, is the prayer of his bereaved widow.

MRS. KATIE E. HARRELL.

GALION, O., January 2, 1891.

To the Brotherhood of Locomotive Firemen :

GENTLEMEN:—We received this day, through C. D. Hoyt, Receiver of Eclipse Lodge, No. 107, a draft for fifteen hundred dollars, in full payment of policy held by our late son, W. E. Wemple, for which we wish to express many thanks, also for the interest and sympathy shown us through the illness and at the funeral of our son. Long may you and your order live to prosper.

Most truly yours,

MRS. MAGGIE WEMPLE,
J. D. WEMPLE.*To the Officers and Members of the Brotherhood of Locomotive Firemen :*

GENTLEMEN:—I desire to acknowledge the receipt of a draft for (\$750) seven hundred and fifty dollars, granted me at your late convention. I also desire to thank Bro. Debs for his kind attention to my claim. Hoping that the Brotherhood may ever prosper, I remain,

Yours truly,

MRS. ELIZA MACK.

APPLICANT—I ask for the hand of your daughter.

Parent—Have you any prospects for the future?

"None whatever."

"She hasn't any either. Take her, my boy, and be happy. God bless you both."

Literary Notes.

CATECHISM OF THE LOCOMOTIVE.

We have before us a copy of the revised edition of this work, which has just been issued from the press of the *Railroad Gazette*, 73 Broadway, New York. "Forney's Catechism" has for seventeen years been the standard book of reference on the intricate mechanism of the locomotive, and has gained a more than national reputation among railroad men, as the numerous editions which were required to fill the demand abundantly testify. Our old book bears the date 1883, and is part of the 26th thousand issued in the ten years since it first appeared in 1873, and the new book of the revised edition of 1890 is part of the 37th thousand, thus proving the great popularity of the book. A great many changes and improvements have been made in locomotives in seventeen years of railroad development, and to keep pace with the onward march of progress it has become necessary to revise and enlarge the book, and thus we find the new volume to contain 100 more pages than the old, and each page of the new book is nearly one and one-half times as large, so that the new book would make over 1,000 pages of the old. Several new chapters have been added, and most of the others had to be revised and enlarged and new engravings introduced to illustrate recent improvements. A large chart printed in colors to illustrate the air brake, is one of the best things in print on that subject and is worthy of special mention. The book can be obtained from the publishers as above at \$3.50, postage prepaid, to any address in the country, or will be sent at the same price by Wm. Weller, Port Morris, N. J., or in combination with the valve motion model for \$7.00, all postage prepaid.

HOW CAN WE DO IT?

Wood's Natural History of Mammalia. 500 illustrations, 800 pages, weight over six pounds. The standard work on the subject. Interesting alike to old and young. This edition cannot be bought for less than \$6.00.

"The Lion at Home." Picture in oil of Rosa Bonheur's great \$50,000 painting. Size 13½x20. This painting should be in every home in the land. It cannot be bought at the art stores for less than \$4.00.

TWENTIETH CENTURY, the weekly magazine devoted to human rights, for one year, \$2.00.

Total \$12.00.

Our price for all, \$3.80. Do not delay. Send your order now. This offer cannot last long. Send for sample copy of *Twentieth Century*. We pay express charges.

TWENTIETH CENTURY Pub. Co.,

4 Warren St., New York.

The January *Arena* contains a symposium on Helen Gardner's new novel, "Is this your Son, Mr. Lord?" by the following well-known thinkers: Moncure D. Conway, Prof. Joseph Rodas Buchanan, Elizabeth Cady Stanton, Matilda Joselyn Gage (President of the National Women's Liberal Union), Donn Platt and Robert C. Adams (President of the Canadian Secular Union). Helen Gardner's novel has already passed into its second edition of five thousand copies. The last edition contains a strong preface, by the author, in which she reviews some of her critics.

"A TALE OF THE WORLD'S FAIR," published by F. T. Neely, 323 Dearborn St., Chicago, is a sensation. It is a fanciful picture of that great event, and the work rises to the magnitude and possibilities of the great occasion. From a work of such uniform excellence it is difficult to select any particular features; yet we would mention the perforation of Mr. Depew's opening address "Soldiers Dead at the Fair" and the fire scene. The last is a picture of terror and desolation unsurpassed in the English language. Mr. T. R. Burch, general agent of the Phenix Ins. Co., purchased 50,000 copies of the first edition for gratuitous distribution among friends, co-laborers, and policy holders, thus manifesting an appreciation for the book that has never been given any other publication.

His Female Relations.

[San Francisco Argonaut.]

The brakeman paused; he reached his hand deep down in the side pocket of his coat and produced a slab of black plug tobacco. After turning it about a few times in his fingers to find a favorable spot, he thrust it into his mouth and took a large and artistic bite. The dispatcher and the agent declined. Then the brakeman restored the slab to his pocket, hoisted his feet a little higher against the stove, and continued:

"Well, that's all right. If a man wants to monkey with that kind of thing, he can do it—but for me, I ain't in it. See? Ever since Jim Rittler got so balled up through havin' too many of 'em, I've considered that I was let out entirely. Bein' as Jim was my side partner, you may say, at the time, of course I had the whole story straight from him. You've heard it often enough, I reckon, so I don't need ter—"

The dispatcher and the agent said that they knew Jim Rittler, but they had never heard the story.

"Say, that's funny. I thought everybody about the road knew it. The general superintendent heard it, and Jim was expecting every day for a long time to have a dance on the carpet. You ought to get Jim himself to tell it, and if he ever gets transferred back to this division you jest ask him how all his female relations is gettin' along. He'll ketch right on, and probably give you the whole story.

"Well, if you know Jim there ain't no use in my sayin' much about him. He was as popular and as well-liked as any of the boys that was breakin' on this division at that time. But you probably couldn't tell, no more'n I can, why the girls was so stuck on him, for he wa'n't particularly good-lookin', and he didn't put on any amount of tog, either. However, he was a pretty good single-hand talker, and probably that was what counted. My, but he was a lightning striker with the women! Why, sir, I have seen him cut right in and jest naturally walk off with the coufiding affections of some young creature before you or I or any other man would have managed to get introduced to her. And for the number of 'em! Well, I hope to croak, if there wasn't one at every stop along the line, and in the big places two or three—and in the city, oh, Lord! There they were thick! The boys was all onto it, and they used to say that if we laid up on a siding right out in the desert all the Indian squaws would be around askin' for Jim Rittler. Everybody seemed to think that he was a very lucky fellow, but I always suspicioned that things would get balled up some day. If you keep putting on more trains you have to keep

changin' the schedule, and the first you know the thing is too complicated to manage and then there are wrecks. Now, that's the way it was with him.

"Do you remember about two years ago, when I3 was ditched jest this side of White's? Well, Jim got hurt there—not much—jest enough to lay him up in the hospital for awhile. Of course the news went all up and down the line, and at every station you would see some girl wringin' her hands and askin' about Jim. Naturally the boys told 'em jest how it was—that Jim wa'n't hurt much, but was sidetracked at the hospital. And what do you think? Why, every one of them bloomin' girls allowed they would go right down to the city for to nuss him. They was unanimously of the idea that if they didn't, poor Jim wouldn't have no one to take care of him—for, of course, there wasn't one of them that suspicioned the existence of the other, and Jim, he always made a point of tellin' 'em all how he was an offun and alone in the world.

"But we assured 'em all—leastwise I did them that spoke to me—that the sisters of hope, who was running the hospital then, would take good care of Jim, and they needn't worry. Still there was some of 'em that wasn't satisfied, and they allowed they would go down anyway, jest to visit him. When I got in from the run that night, I went around to see Jim myself, and I told him to be on the look-out, or he'd get jacked up. But he was feelin' pretty perky, and said he reckoned it was all right—that he had put up a kind of a schedule they could all run on, and there wa'n't no danger of anything happenin'.

"Tom Bixby was sittin' by the bed at the time, and when Jim spoke he winks at Tom, and Tom he grins. You know Tom; he used to be news butcher on 19, and now he's runnin' a store in the city. Well, he'd been jammed up in a collision some time before, and was now about recovered, only lame; so that he went stumpin' along like a flat-wheeler. To give him something to do, the sisters had put him in charge of the door, to show visitors in and around.

"I've told Tom about it," says Jim to me, 'and if one of them comes while another is here he will keep her back by sayin' that they are fixin' to dissect me—or something like that.'

"Saw your leg off," says Tom, grinnin' some more.

"And we have got it all put up about the different degrees of relationship," Jim goes on, winkin' ag'in. But I didn't understand the signals, and I told him so.

"The sisters of hope has a rule," says he, 'that a man can't have no ladies visit him unless they are akin to him.'

"Well," says I, 'much as I know about

this hospital, I never heard no such rule as that.'

"Tom told me," says Jim.

"And Tom, he spoke up perfectly solemn and said: 'That's right, what he says. I ought to know, being as I am doorkeeper, and have to turn gals away every day.'

"'We've got a reg'lar list,' Jim says, 'of just how many will go of each kind of relation, because it wouldn't do for a man to have nineteen sisters or twenty-three cousins, or anything like that, for fear the public would ketch on. See?'

"'The first lot will be sisters,' says Tom, very quick; 'and then comes cousins, and sisters-in-law, and then aunts, and —'

"'That'll be enough,' says Jim.

"'But if it ain't,' Tom goes on, grinnin' like he had just struck a jay-hawker with an armful of prize packages, 'there is plenty of other kinds of female relatives; wives and mothers—course those ain't available more than onct—and great-aunts and grand-mothers, and mothers-in-law —'

"'And daughters,' says I, joinin' in, 'cause I thought it was just a kind of a game to keep Jim's spirits up; and Jim he laughed and was very chipper about it.

"Then I come away. But I heard afterward how the scheme turned out.

"You see Tom was puttin' the thing up on Jim. There wasn't no rule about lady visitors like what he said, but he had made it up jest to put Jim in the hole.

"Pretty soon the girls begun to come—first those that lived in the city, and afterward those from the country—and Tom would take 'em confidentially into the waiting-room and tell 'em how glad Jim would be, only they must pretend to be some relative of his, else the sisters wouldn't let 'em in. Of course they was all willin' enough—it's my opinion that a woman really likes to have a good chance to tell a lie—and when they came to where Jim was he would introjooce them to any of the sisters of hope that was about as his cousins or sisters or whatever relation was down for that number on the list. I have an idea that them sisters of hope must have been thinkin' that Jim's ancestry run a long way back for him to scare up such a nailin' fine lot of female relatives on such short notice.

"Well, as I was saying, the scheme that Tom put up was this: As each girl came down, after seein' Jim, he would stop 'em, and, takin' 'em to one side, would tell how Jim had said a lot of nice things about them, and how he had been hoping they would come, and all that. Then he would ask if they expected to call again—for Jim would be very lonesome. Of course, they all allowed they would. Then he told 'em that there was a new rule, and visiting relatives could only come on certain days and at certain hours. One way and another he

fixed it up, so they was all agreed to come back to see Jim at exactly the same time on the same day.

"And Jim, of course, he was never suspicioning nothing, no more'n a man comin' round a curve in a cut with a wild train bearin' down on him.

"Well, come the day that Tom had set, the girls began to arrive—some of 'em ahead of the schedule. The butcher takes 'em into the waitin'-room, grinnin' like only a butcher can grin, and tells 'em that Jim will be ready to see 'em in a minute. When he thinks they are all in—some dozen or fifteen, there was, altogether—Tom calls out, 'Step this way, ladies, please!' and leads 'em off all in a line upstairs.

"Now it just so happened that there was quite a crowd around Jim's bed. There was a couple of the sisters of hope, and the assistant-surgeon of the line (Doc what's-his-name? I forget), and several patients that was able to get about, and Jim he was givin' 'em some of his remarkable experiences on the road—for he could lie against any man I ever knew—and the audience was gettin' properly excited—when all of a sudden Tom looms up, pullin' that train of girls along behind him.

"'Here's your female relatives, Jim,' he calls out.

"Say, but it must have been a sight. There was Jim, with no chance to jump for his life. There was the sisters of hope and the others around the bed, who had already been quite uneasy about the surprisin' number of Jim's female relatives, and now was paralyzed to see 'em all at onct. And there was the girls themselves—O Lord! Fust he looks at Tom, to see what he means, then they stares at one another, beginnin' to take it in, and then they all unanimously glares at poor Jim, who was lyin' still in the bed utterly flabbergasted.

"And the silence was so thick and hard that you couldn't have got through it with a rotary.

"At last one of the sisters of hope spoke up and says: 'Why, it's quite a family reunion yous do be havin' to-day, Mr. Rittler.'

"'Yes,' says Jim, very faint, like a kid that expects to git belted.

"'What!' says the doctor, 'are all these here ladies relatives of yourn?' and he begun a squintin' down the line. Some was short and some tall, some fat and some lean, and one was red-headed. 'Really,' he says, 'it is a very remarkable family likeness. Are they all sisters?'

"'Four sisters,' answers Tom Bixby, consultin' a piece of paper which he held up to look at plainer, 'five cousins, three sisters-in-law, two aunts—and a mother, mother-in-law, and great aunt, if needed.'

"By this time Jim was beginning to get his wind again, and he puts his hand out ot

the nearest girl, and says: 'Howdy do, Sister Emma? I am glad to see you.' And to the next one: 'How are you, Cousin Mary —?' and was goin' down the line, thinkin' perhaps he could make each one of 'em believe that all the others was real relatives. But it wouldn't work; before he had gone any distance one of his 'sisters' points to another 'sister,' right alongside of her, and says, in a loud voice: 'Jim Rittler, who is this person? I insist upon knowin'.' The other answers back, and then they all begins to talk at onct. Some of 'em turns on Jim, and I tell you they give it to him raw; but most of 'em keeps right on jawin' at one another. At last the doctor and the sisters had to interfere. They rounded 'em up and led 'em away downstairs. Even when they came out in the street there was two that very nearly had a fight, and they kept a-goin' on as long as any of 'em was together.

"The moment the girls was out of the way, Jim he began to look for Tom Bixby, but the news butcher had just naturally and off, and before Jim was able to get about he had left the hospital for good.

"After that Jim was hardly ever at rest for the joshin' he got about his female relations. The next time I went up to see him two of the doctors that was passin' along stopped to ask why his mother had never introjosed his sisters to one another when they was little, and how it happened that his great-aunt was such a bloomin' young woman—and everything like that. It's my idea that the scrape kinder had a good effect on Jim, leastwise to the extent that he is now trvin' to centralize his affections on one girl instead of disseminatin' them all along the line. And I shouldn't be surprised if before long that one girl and Jim was to —"

"There's 17's whistle!" cried the agent; "she is on time for once," and they all sprung up and went out on the platform.

THE products of labor constitute the only fund out of which the wages of labor can be paid. Seven-tenths of these products are consumed by laborers and must be paid for out of the wages they receive for creating these products. If the wages received by labor are not sufficient to purchase its full proportion of these products, then they will remain unsold and there will be a correspondingly smaller demand for labor. The larger the profit and the smaller the wages, the less will be the demand and the smaller the profit to the employer of labor. Thus low wages to the workman inevitably reacts upon the employer who feels it in the shape of smaller profits. Such a policy in effect locks up the surplus capital of the country, reduces circulation and injures the employer as well as the employed.

STORY OF A POEM.

Now Republished, After Being Carried
Five Years in a Banker's Pocket.

Luther Laffin Mills, whom the New York *Sun* gracefully dubbed the "Cicero of Chicago," deserves the title for other reasons than his gift of classic oratory. Cicero was a poet, and a lover of poets and poesy. So is Mr. Mills. While the lawyer was in New York last, George Morgan, of the firm of Drexel & Morgan, bankers, presented the Chicagoan with a poem which has an interesting history. Years ago Mr. Morgan saw the verses in an obscure little country paper and clipped them. He carried them for five years in his pocket, and on suitable occasions read them to his friends, who always admired them. Finally, Mr. Morgan had so many requests for the verses that he had copies of them printed. Here is the poem as it appears in the copy presented to Mr. Mills. The verses are certainly beautiful, and their being published at this late day should encourage all obscure but earnest singers. No real heart song is ever lost:

A SERMON IN RHYME.

If you have a friend worth loving,
Love him. Yes, and let him know
That you love him, ere life's evening
Tinge his brow with sunset glow.
Why should good words ne'er be said
Of a friend—till he is dead?

If you hear a song that thrills you,
Sung by any child of song,
Praise it. Do not let the singer
Wait deserved praises long.
Why should one who thrills your heart
Lack the joy you may impart?

If you hear a prayer that moves you,
By its humble, pleading tone,
Join it. Do not let the seeker
Bow before his God alone.
Why should not your brother share
The strength of "two or three" in prayer?

If you see the hot tears falling
From a brother's weeping eyes,
Share them. And by kindly sharing
Own your kinship with the skies.
Why should any one be glad
When a brother's heart is sad?

If a silvery laugh goes rippling
Through the sunshine on his face,
Share it. 'Tis the wise man's saying—
For both grief and joy a place.
There's health and goodness in the mirth
In which an honest laugh has birth.

If your work is made more easy
By a friendly, helping hand,
Say so. Speak out brave and truly,
Ere the darkness veil the land.
Should a brother workman dear
Falter for a word of cheer?

Scatter thus your seeds of kindness,
All enriching as you go—
Leave them. Trust the Harvest Giver,
He will make each seed to grow.
So, until its happy end,
Your life shall never lack a friend.

I WONDER WHY 'TIS SO!

Most joyous time of all the year,
Glad Christmas Carols' ringing clear,
But hark! beneath each joyous tone,
There comes in muffled monotone,
Sad, cheerless voices making moan,
I wonder why 'tis so!

I look, and 'round me can espy,
Dark, shadowy forms, lurking nigh;
Hardship, and cold, and bitter pain,
Grim toll, gaunt hunger, manhood slain
By sordid lust of power and gain;
And wonder why 'tis so!

They move the tollers path across,
And work him many a bitter loss;
They follow to the very door,
They move unbidden o'er the floor
And vex his spirit more and more;
I wonder why 'tis so!

And childish faces, too, I see
Bowed down with want and poverty;
Arrayed in garment worn and old,
Untaught, half fed, like chattels sold
To heap more high the rich man's gold;
I wonder why 'tis so!

Their masters sit in sordid state
Convinced that they alone are great;
Look on the poor with careless eye,
Or negligently pass them by,
And care not if they live or die;
I wonder why 'tis so!

The erring sister, poorly fed,
The husks of sin her daily bread,
Receives the sharp, un pitying thrust,
From her whose wealth makes all things just;
For gold can gild its owner's lust;
I wonder why 'tis so!

The preachers preach a righteous God,
But tell us we must kiss the rod,
The rich must rule by right divine,
The poor must serve nor dare repine,
Though fed on husks and housed like swine;
I wonder if 'tis so!

I wonder will these horrors last,
Can we judge the future by the past?
I wonder most that such things be
In this our land of liberty
The birth place of the brave and free;
I wonder why 'tis so!

T. J. Walsh.

A Queer Freak of Lightning.

Lightning plays some wonderful freaks once in awhile. The countenance of a German employed on the farm of Patrick O'Connell in Perry township was evidence of this fact. During one of the electrical storms last week, this farm hand and O'Connell's young son were engaged in arranging the harness on a couple of plough mules, standing at the time in the center of a field. Suddenly a terrific bolt of lightning descended toward them, and they both fell senseless to the ground, while the two animals were instantly killed. The man and the boy soon returned to consciousness, but there was a startling change in the farmer's facial appearance. The electrical current had shaved the whiskers off of one side of his face as completely as if it had been scraped by a keen-edged razor in the hands of a skillful tonsorial artist. He is too much engrossed in congratulating himself over his narrow escape from death to mind a little thing like this however. The boy was uninjured.

Colored Proverbs.

Wakkin' on 'nother man's farm at night is er short cut to jail.

Waitin' fer good times is like tryin' ter scratch matches in de well-buckit.

Red lick'er mighty quiet in de jug, but mighty noisy in de nigger.

Dese trus's dat's gwine roun' de country don' trus' de po' man much.

Some womin like umbrellers; yo, can't keep 'em at home no how.

Mighty hard ter manage seegyar an' grubbin' hoe at de same time.

No use ter ax how de man is w'en you see his galluses wraped roun' de muel's hin' laigs.

Preachers' coat tails gwine be mighty pop'ler on jedgmint day.

Some folks seem ter think de lord don' want nothin' bigger'n copper cents.

Forks in de road don' bother de wil' goose.

Mighty lucky turky dat ain' got much appetite fo' thanksgivin'.

W'en you gits er chance ter vote fer honis' men, take it.

De deafes' nigger kin always hyear de dinner horn.

Crabgrass an' barcer wurrums don' wait fer nobody.

Pullin' suckers in de barcer lot pays bet-tern ketchin' suckers in de creek.

De bull calf wonder w'at de milk pail's fer.

Silver cream pot don' sweeten sour milk.

IMATE Teuton (to stranger, who had stepped on his toe)—Himmel! mine fren't, I know mine veet vas meant to be walked on, but dot privilege he belongs to me.

THE Peacemaker—"Don't you know it is very wrong to fight, little boy? What does the Good Book say?" Tommy (who has just polished off the class bully)—"I dunno. I ain't read it no further than David an' Gerlire."

THE Earl and Countess of Aberdeen who were passengers on a train which was derailed while crossing the Rocky Mountains, have left an order with a jeweler at Hamilton, Ont., for a gold watch and a gold locket for the engineer and fireman of the train. The watch for James Brownlee, the engineer, has engraved on the case a scene of the wreck surrounded by the words "faithful unto death," and in the inside an appropriate inscription. Engraved on the gold locket for the fireman, John Perry, is an inscription giving the names of the donors and the reason of the presentation.

Clean Business.

[Australian.]

We need not specify, but some late revelations in the law courts make one the very reverse of optimistic as to the average conscience. The specially sinister element is the cool and apparently knowing assumption on the part of experts that slimy methods in business are, of course, the rule. But, after all, this is no new thing. The old time divine who said he was too poor to keep a conscience was neither a sinner nor a fool. He was, in fact, much nearer being a philosopher and a saint. Neither was he entirely a satirist or a jester in saying that. It was far more likely that he spoke out of the bitterness of his heart. He only blurted out what ten thousand felt—and feel. Are we any nearer the demonstration of the truth of the highly proper, but disappointing proverb that "Honesty is the best policy"? It is very doubtful. Here and there a man seems to prosper through sheer honesty, but it is not so much his honesty that pays as the good article that he sells. Let that fall off, and who will stick to him for his mere honesty? No; it is plate glass that pays, the flare of lights, rowdy advertisements, impudent assertion, and fooling and flattering the queer thing called public "taste." There are exceptions; but the man who will only do clean business, and stick to it, is in financial danger—at all events for a time. He must be prepared to say, in the spirit of the old Hebrew, "Better is a dry morsel with a good conscience than a house full of feasting with shame."

One of the most unclean and corrupting sides of modern business is the altogether pernicious system of giving tips, presents and bribes. The master who allows his servants to take discounts and tips from tradespeople is simply teaching them to cheat him. He is possibly conniving at a double fraud. The commercial traveler who paves his way with pianos ought to be suspected. He has got to cheat somebody in order to make that pay; or, if he is not a tricky seller, he is, anyhow, a mean competitor, who introduces into what should be straightforward business the spirit of the man who would win a race by doctoring an opponent's horse. A good story comes from America, which we hope is true. A pushing manufacturer calls upon a government official about the supply of certain stores, and, on concluding the interview, quietly puts on the table, in an off-hand way, a bill for a handsome sum. "Ah! and what is this for?" asked the cheery official. "Oh, that's nothing!—a trifling matter for some cigars for your young people." "Oh, then, I suppose you are in favor of the weed?" "Yes, I like a good cigar as well as anyone." "Then let me offer you one," said the wary official, handing him a box.

The briber took one. "Now let me offer you a light," said the other quietly, rolling up the precious piece of paper into a pipe-light. Deliberately lighting it, with a smiling face, under the eyes of the briber, who, seeing the day of judgment had come, had just sufficient presence of mind to light his cigar at the blazing bill and bolt. That was a gay and light-hearted American way of washing one's hands of a briber. Here is a story with a different mood in it, illustrating the British bull-dog way of treating the same matter. A certain man occupied a post of great responsibility and influence as manager of one of the largest companies in England. One day a merchant called upon him and was anxious to sell some steel. He very quietly set down before him a roll of notes amounting to £500. "What are these?" asked the manager, taking them up. "Oh," exclaimed the merchant in an under tone, "you will be good enough to accept them with the compliments of the firm." Then it flashed upon the man that it was a bribe. Crumpling the notes together, as if they were so much waste paper, he flung them out of the office door and said indignantly, "Sir, if you are not gone after them in one minute, I will kick you there." Such men are priceless; and, whether they simply shame their man or kick him out, is only a matter of detail. They are the very salt of the earth who keep it from rottenness.

The Decay of Monarchies.

[From Texas Sitings.]

Those who study the signs of the times can not fail to perceive that hereditary monarchy must go, or rather that it is going very fast. It is highly probable that some members of the royal families do not believe that their days are numbered, but it is a fact nevertheless. It is not so strange, perhaps, after all, that the royal invalids do not perceive that their power is waning, for there are some classes of sick people, who never realize their true condition and are hopeful of recovery to the last. Monarchical institutions are kept alive by stimulants given in heroic doses, which is the usual treatment for a hopelessly broken-down constitution.

A very aged lady annoyed her doctors exceedingly by her never-ceasing complaints. After he had exhausted all his remedies to no purpose he asked her to tell him candidly how old she really was, and then she coyly owned up to 96 summers.

"That, Madam," exclaimed the physician, "explains your weakness. You ought not to be alive at all. Do you expect to live always?"

Royalty is pretty much in the same condition as the old lady. It is almost a miracle that it exists at all at this late hour in the afternoon of the nineteenth century.

Our Vast Internal Commerce.

Statistics of foreign trade are easily obtainable, but it is a more difficult matter to estimate the volume of a great nation's domestic commerce, and hence it happens in every country that its home trade is not appreciated as it ought to be. Particularly is this true of the United States of America. A correspondent of the *Tribune* presents some striking illustrations of the enormous value of the home trade of our land. In 1889, according to Henry V. Poor, author of the *Railway Manual*, the railroads of the United States carried 619,137,237 tons of freight. Deducting 25 per cent. for duplication this leaves 468,352,928 tons of merchandise. At an average of \$30 per ton, this merchandise would reach the enormous aggregate value of \$13,930,587,840. This takes no account of the huge amount of water-borne freight on our lakes or rivers, or of other methods of domestic transportation, and thus gives only an inadequate idea of the real dimensions of our domestic commerce. The aggregate imports in 1888 of Great Britain, France, Germany, Russia, Austro-Hungary, Spain, Belgium, Portugal, Italy, Turkey, Switzerland, Denmark, Greece, Norway and Sweden and the Netherlands were \$6,171,735,643. Adding to this the imports of Mexico, Bolivia, Brazil, Chili, China, Japan, Ecuador, Paraguay, Uruguay, Venezuela, Peru, Guatemala, Corea, Hayti, Hawaii, Morocco and Nicaragua (\$538,742,766), we have a total of \$6,710,468,409 as the value of the "markets of the world." Deducting from this our own exports to these countries, which amount to about \$60,000,000, we have a balance of \$6,650,468,409, or about 45 per cent. of that portion of our domestic commerce that is carried on the railroads of the United States. Here is another fact that patriotic Americans will make a note of—a single one of our trunk lines, the Pennsylvania railroad, moved on its system west of Philadelphia last year merchandise that in value amounted to more than double the whole exports of England. Verily, Americans are justified in boasting that theirs is a great country.

A Modern Need for Sleep.

There is not one man or woman in ten thousand who can afford to do without seven or eight hours' sleep. All those stories written about great men and women who slept only three or four hours a night make very interesting reading; but I tell you, my readers, no man or woman ever yet kept healthy in body and mind for a number of years with less than seven hours' sleep. Americans need more sleep than they are getting. This lack makes them so nervous and the insane asylums so popu-

lous. If you cannot get to bed till late, then rise late. It may be as Christian for one man to rise at eight as it is for another to rise at five. I counsel my readers to get up when they are rested. But let the rousing bell be rung at least thirty minutes before you make your public appearance. Physicians say that a sudden jump out of bed gives irregular motion to the pulse. It takes hours to get over a too sudden rising. Give us time, after you call us, to roll over and gaze at the world full in the face and look before we leap.

An excruciatingly funny incident occurred recently in a St. Paul, Minn., railroad depot. The *Pioneer Press* of the city mentioned is responsible for the facts in the case, and presents the story in this wise:

"You don't seem to understand how to manage a baby," said a Union depot official to a young man who was holding a six months' old infant as though it were a bunch of lath.

"I ain't entered the baby-holding race by a jugful," replied the young man wearily. "I don't aspire to no championship in this line, and if my style of holding this kid don't suit you, I'll give it to you and make you jump it awlile."

"Make me jump it! Can't do that, you know. I ain't jumping other people's children for my health."

"Nor I, either. Perhaps its mother will get back soon. She's been gone an age. I wonder what her name is?"

"Why, ain't that your kid?"

"I should say not. I can't indulge in no such luxuries on \$9 a week."

"Did its mother give it to you to hold?"

"Yes; said she'd step into the restaurant and eat a bite. Had ridden three days and three nights on the cars, and was almost beat out."

The railway official took a squint into the restaurant. It was empty. He reported to the young man, whose knees began immediately to knock together. A still hunt for the mother proved fruitless. Lady passengers gathered around commiseratingly. They tootsie-wootsied the babe, and at one time a wild light came into the young man's eyes as though he were meditating a break for liberty. An hour passed. The youth considered his doom sealed. The mother appeared in the room, somewhat flushed, but profuse in apologies.

"Yes," she explained, "after eating I just ran up town to look at the spring hats and summer goods combination in the shop windows. Haven't had a chance in four days. Stayed too long, but I'm a thousand times obliged to you, sir."

"Don't mention it," replied the young man, with a kind of "Listen to my tale of woe" inflection in his voice.

THE SWEET GIRL GRADUATE.

She has wrestled with the sages of the dim historic ages, she has studied declamation from Demosthenes to Burke;

She has sounded Schopenhauer and been under Dante's power, and can giggle in all languages from English down to Turk.

She can argue in the isms, knows the history of the schisms, and will go way back to Adam to elucidate her views;

She can bring up illustrations she's obtained from divers nations on the somewhat strained relations of the Christians and the Jews.

From old Socrates to Spenser she has read and read and hence her intellectual adornments are a wonder to be seen;

In the angles she's a terror and in art she makes no error, and she knows the mental value of the hackneyed Boston bean.

She can show that old man Pliny was in some respects a ninny; she has sneered at Archimedes and brought Tacitus to task;

She's revised the laws of Solon, knows the value of a colon, and can calculate the contents of the Dutchman's famous sack.

She has studied up on diction, has explored the realms of fiction, knows the views of Hobbes and Beason and of Paley and their crews;

She can quote from Peppy's diary and knows Pope (so small and wiry), and has fathomed Billy Shakespeare and read Burton on the blues.

There is not a branch of knowledge that this girl so fresh from college has not made herself familiar with, from Plato down to pie;

But it isn't for her learning that she fills us men with yearning—it's because she's a woman, and that's just the reason why.

Tom Masson.

The Noble Red Man.

[Theo. Brown in Tid Bits.]

You can trust an Indian as far as you can see him; the further you see him the better you can trust him.

You have seen my escapes under various noms de plume in the border stories. My principal business has been escaping. Many a time I've left scores of bloody red skins on the plains—with a fast horse.

The Indian does not want much. His grandfathers once owned this country, and all he wants is the United States. He feels that he has been imposed upon by real estate agents too much.

One of the peculiarities of the Indian race is their method of dealing with their neighbors. Instead of throwing tin cans and dead cats over into their yards, they go and wipe them out, and that seems to end all further controversy—on the part of the neighbors, at least.

Owing to the scarcity of the buffalo it is no more than natural that the Indian should sport with the cattle on the borders. He must have some fun or he can't laugh. The Indian has rights which a white man is bound to respect. Now, there is Geronimo—an ill-treated man, if ever there was one—I don't think that he ever killed more than 200 or 300 whites in his life, and here they send him to Florida! They don't want to offend him by hanging him or sending him to the penitentiary.

Good and Evil in the World.

[Rev. Phillips Brooks.]

Some day and age must come when the sorrows and the joys of life will blend and make for us a better existence than we have ever had before. Looking even at the past character of our own century, it seems as if we could already feel the coming of that richer time.

When it comes, the world will be at once less gay and less despairing—it will be a healthy and a wholesome world to live in.

"Sons of the world, oh, speed those years!
But while we wait, allow our tears!"

That which we see Jesus to have been, we must try ourselves to become. First, we will never shut our eyes and say that all is right, when overmuch is wrong. Second, we will never let the two sides of life be separate—riches and poverty, sorrow and happiness—but these shall be parts of one life, ever feeling each other's presence, all happiness earnest with pity, all unhappiness brave with hope. Finally, the evil shall not have an equal chance with the good, but a divine power shall keep the good and the happy always in the place of advantage, and master in the field.

The Labor Problem.

[The Union.]

The term workingmen has, by general usage, come to be applied to those who toil many hours daily at hard physical labor and usually for other individuals or companies of men, who are commonly termed capitalists. Now, every man should be a workingman, and also a capitalist, in a true sense, and would be, could the regulations of society rest on equal and exact justice, on natural right, and were all men possessed of correct ideas as to what is due their bodies as well as minds. It is a violation of the laws of nature to endeavor to escape a certain amount of labor to develop muscular power to preserve health, and a "drone" is a libel upon the face of sterling manhood. It is the violation of the laws of nature for a man to over-tax his brain, with mental occupation, neglecting muscular exercise, and it is no excuse for him, if he be an oppressor of his fellowman, to allege that he works just as hard as the ill-requited laborer, only in a different form. If he has been endowed with a superior intellect to his fellows, he owes it to the Author of his being that he preserves his powers of observance of all the requirements of a correct life and that he use that intellect to relieve the burdens which fall upon those whose advantages and circumstances have been less fortunate. It is also a violation of the laws of nature for men to work at hard work, in shop or field, so many hours as to unfit them for the cultivation of the higher and nobler qualities of a manly existence. In this latter case it is

only, too often the fault of self-aggrandizing mercenary men, claiming a sort of lordship and ownership of men, that brings the latter into a condition where they are unwilling violators of nature's decrees and enactments. Enough, however, has been said and written upon this oppression, this neglect, this indifference. But let us briefly ask if all shall be laid at the doors of greedy "capitalists," and whether workingmen themselves are really blameless for much of the injustice and inequality which exists? Have they swept clean their own apartments, so that they may the more readily exclaim as to the dirt and dross of the others, their supposed—and undoubtedly frequent—antagonists?

What do workingmen owe to themselves? Very many things; hard as may be their lot, they can, if they will, march in the right direction, even if they fail to reach the desired goal. Certainly if they march in the wrong direction, they will not only not reach it, but are quite likely to bring up at a place where their shackles will be more firmly riveted, and they will be more easily overcome by any system of tyranny the basest of men may invent or establish. The workingmen owe it to themselves to be readers and thinkers—not upon one side of a question—but upon all sides of the great subjects of thought in this pregnant age. If they settle down to be slaves of party, of cliques, of prejudice, they will eternally be in collision one with another. They should be the most careful students of political economy, of social ethics, and of natural law, of all men. Locked up in these sciences is bread, raiment, comfort, independence, if they could but unitedly get the store-house and wield the weapons therein contained. Workingmen should learn to be coöperative in their movements. There are few trades that thoughtful, intelligent men herein engaged, might not just as well carry on, as to stand merely the tide-waiters of somebody else, who reap the profits of the concern, leaving them little save a subsistence. The last counsel leads us to the injunction that workingmen should cease to be jealous of each other; they must learn to have confidence in one another. This can be done by studying correct business principles, and in their combinations of labor, conduct the same on such principles. "Capitalists," (as we term) in arranging their companies or confederations, have their legal articles of agreements and bonds of union prepared and adjusted and it is an insult to workingmen to suppose that they cannot devise some measures whereby they can secure the performance of proper and legitimate duties from one another. But if Tom goes into society or partnership with Joe hastily arranged, lacking both forethought and mature consideration, and suffers the envious timid in his nature to crop out, he might as

well have staid behind under some intellectual taskmaster, about whom he grumbles aside, but whom he nevertheless too servilely obeys. Workingmen owe it to themselves to sustain one another. Men of different occupations should, things being equal in point of honor and justice, sustain men of their kind in other occupations who stand upon their platform of natural right and for the elevation of labor. This applies in every department of toil, or politics, of education and of morals. Lastly, workingmen must neither be demagogues themselves, nor the tools of demagogues. A righteous cause can afford to place itself in true colors before the world.

"The good it can afford to wait,
The evil cannot brook delay."

Origin of the Professional Tramp.

[From Senator Bates' Tariff Speech.]

It should not be forgotten, when weighing the results of tariffs upon labor and the welfare of the people, that it was under a high protective tariff that the word "tramp" was invented to express the actual condition of a large class of our people—that homeless, thriftless, wandering gypsy population which from year to year lead the life of beggary and destitution. Was that, as the author of this bill says, a "condition of independence and prosperity, the like of which has never been witnessed in any other period in the history of our country?" Under a high tariff, tramps began and continued their weary wandering, begging from door to door for daily sustenance. I do not find in Mr. McKinley's fanciful and imaginary picture of "independence and prosperity," the figures and facts which establish that condition of affairs which brought forth that army of tramps. The data nevertheless exist, and, though overlooked and omitted by the framer of this bill, yet can easily be traced in the changes and revolutions produced and brought about under the transition from a low to a high tariff.

In the last twenty years of protection not only was tramping developed into a trade or profession, but strikes, lockouts, discontent, degradation and misery were fruits which grew alongside of the protection tree. Western railroads were destroyed, Mollie Maguires rioted in Pennsylvania, tramps wandered all over the land, and panic in business, gambling in corners and futures were some of the new features of American history and society unknown under a tariff for revenue. When next the advocates of protection shall imitate Mr. McKinley and show "what protection has done," let them not forget to include a chapter on tramps and tramping, and the fungi that have grown upon the stocks of American trade and business under the protective system.

THE DISCOURAGED FARMER.

The summer winds is sniffin' round the bloomin' locus trees;
 And the clover in the pastur' is a big-day fer the bees,
 And they been a swingin' honey, above board and on the sly.
 Till they stutler in their buzzin', and stagger as they fly.
 The flicker on the fence rail 'pears to jest spit on his wings
 And roll up his feathers, by the sassy way he sings.
 And the homs fly is a whettin' up his fore legs for biz.
 And the off mare is a switchin' all of her tail they is!

You can bear the blackbirds jawin' as they foller up the plow—
 Oh, they're bound to get their breakfast and they're not a carlin' how;
 So they quarrel in the furries, and they quarrel on the wing—
 But they are peaceabler in pot pies than any other thing.
 And it's when I get my shot gun drawn up in stoddy rest,
 She's as full of tribbulation as a yaller jacket's nest;
 And a few shots before dinner, when the sun's a-shinin' right,
 Seem to kinder sorto sharpen up a feller's appetite!
 They's been a heap o' rain, but the sun's out to-day.
 And the clouds of the wet spell is all cleared away,
 And the woods is all the greener, and the grass is greener still;
 It may rain again tomorry, but I don't think it will.
 Some say the crops is ruined, and the corn's drowned out.
 And prophasy the wheat will be a failure without doubt;
 But the kind Providence that has never failed us yet,
 Will be on hand onc't more at the 'leventh hour I bet!

Does the medder lark complain, as he swims high and dry
 Through the waves of the wind and the blue of the sky?
 Does the quail set up and whistle in a disappointed way,
 Er hang his head in silence, and sorrow all the day?
 Is the chipmuck's health a-fallin'? Does he walk or does he run?
 Don't the buzzards ooze around up there jest like they've allus done?
 Is there anything the matter with rooster's lungs er voice?
 Ort a mortal be complainin' when dumb animals rejoice?

Then let us one and all, be contented with our lot;
 The June is here this morning, and the sun is shinin' hot.
 Oh! let us fill our hearts up with the glory of the day,
 And banish ev'ry doubt and care and sorrow far away!
 Whatever be your station, with Providence fer guide,
 Such fine circumstances ort to make us satisfied,
 For the world is full of roses, and the roses full of dew.
 And the dew is full of heavenly love that drips for me and you.

James Whitcomb Riley.

Rather Wearing.

[Puck]

"Why don't you go to work? Why do you waste your time begging?"

"Did you ever beg?"

"No, of course not."

"Den you don't know what work is."

Shooting Big Guns.

[Mechanical News.]

Look at it whichever way you will, there is nothing so wasteful as war. It has been calculated that the cost of a single discharge of a 110-ton gun, including wear and tear of gun, is about \$1,700; and as the piece is used up after it has been fired a hundred times or less—ninety-five we believe is the precise number—the cost of one such gun, by the time it has finished its career, is something like \$160,000. Now let us cipher a little. Suppose two enlightened nations fall out about a boundary or a fishing ground or the title to an island; and suppose that instead of resorting to 110-ton guns, they each appoint two arbitrators, and the four thus chosen appoint a fifth. Assume that these five accomplished statesmen take a year to arrange the dispute, and each receive \$25,000 for his trouble. This would make \$125,000, and there would still remain, out of the cost of one gun, \$35,000 for wine, cigars and room-rent for the five commissioners, who would probably be gentlemen accustomed to luxurious living. And this, mind you, takes no account of the fact that the firing of the 110-ton gun, irrespective of its cost, is in itself a huge disaster—and is meant to be—the more tremendous and far-reaching the better. Furthermore, a war, to be successfully prosecuted, requires not one gun only, but several.

Curious And Convenient.

Occasions arise now and then with almost every one when it is desirable to know on what day of the week some past date fell—often some date of a former year, for which no almanac can readily be found. A quick and easy method of arriving at the desired fact is described as follows by the *Providence Telegram*. It may not be new, but we doubt if it is generally known.

Take the last two figures of the year, add a quarter of this, disregarding the fraction; add the date of the month and to this add the figure in the following list, one figure standing for each month, 3-6-6-2-4-0-2-5-1-3-6-1. Divide the sum by seven and the remainder will give the number of the day in the week, and when there is no remainder the day will be Saturday.

For example: suppose it is asked, what day of the week was Aug. 16, 1887? Take 87, add to it 21 (obtained by deviding 87 by 4 and dropping the fraction) and the sum is 108; add to this 16, the day of the month, making 124; add to this 5, the eighth figure in the series above given (August being the eighth month) and the total is 129. Divide by 7, and there is a remainder of 3. The third day of the week is Tuesday, and Aug. 16, 1887, fell on Tuesday.

This formula has stood the test of many applications, and appears to be practically reliable.

WHY MARRIAGE WAS A FAILURE.

The wash-lady played at the musical club
 And the cook-lady "niver did washin'."
 And the scrub-lady never would put in a rub,
 For that was quite out of the fashion;
 And the cook-lady left all the dinner to spoil,
 To read to the wash-lady's daughter
 From the latest "Ouida" (to lighten her toll),
 That the foot-gentleman had just bought her.

And the fair lady who at the table did wait,
 Spilled the consomme over the missus,
 While bothering her pretty and erudite pate
 O'er the fate of valiant Ulysses;
 And the darn-lady, too, had forgotten her care
 While social redemption discussing,
 So the man of the house had no stockings to wear
 And he made the air smoke with his cussing.

And the dish-washer-lady was off on a "tower,"
 So they had no clean dishes for dinner.
 And the wife of the man of the house had no power
 To rule all these ladies—'t wain't in her;
 And so there occurred, as a matter of course,
 In this house many blustering "pow-wows,"
 And the man of the house went and got a divorce
 And the woman, she went to "bow-wows."

Steel Statistics.

(Pittsburg Chronicle.)

The census statistics as to steel production, just made public, afford nothing startlingly new in regard to that great interest.

They serve, however, to call attention afresh to our wonderful industrial growth, as illustrated by this particular branch of it.

A few years ago steel manufacture in the United States was insignificant, yet now we lead the world in one of its departments, that of steel rail making, and are almost as rapidly progressing in other forms.

The improvement has been not alone in quantity. We are now producing the best tool steel in the world, and competing successfully with English steel in most of the Old World markets.

All this is due to the beneficent effect of our national policy of protection to home industry.

According to the reports of the census experts, the total production of steel in the United States during the year ending June 30, 1890, was 4,466,926 tons of 2,000 pounds, as compared with 1,145,711 tons produced during the year ending May 31, 1880, an increase of 3,321,215 tons, or 290 per cent. In the ten years from 1880 to 1890 the production of Bessemer steel ingots and direct castings has increased from 985,208 tons to 2,778,552 tons; open-hearth steel from 84,302 tons to 504,351 tons, and crucible steel from 76,201 tons to 85,536 tons. No Clapp-Griffiths or Robert Bessemer steel was made in the census year 1880, as there were no works in existence in this country at that time. During the year ended June 30, 1890, the production of Clapp-Griffiths steel in the United States was 83,963 tons and the production of Robert Bessemer steel was 4,505 tons.

The output of Bessemer steel rails during

the year ended June 30, 1890, amounted to 2,036,654 tons; an increase of 1,295,179 tons over the production of the year ended May 31, 1880. In the manufacture of Basic steel this country has made a promising beginning, the production of this kind of steel during the year ended June 30, 1890, amounting to 62,173 tons.

Pennsylvania holds her own, and more too, in the matter of steel production. In 1880 we had 57 per cent. of the total output, and this year we have 62 per cent. The percentage of Illinois is reduced over 4 per cent., and in Ohio there is a slight increase, less than $\frac{1}{2}$ per cent.

Over 75 per cent. of the ingots made in 1880 were rolled into rails, while in 1890 the percentage of rails made to ingots produced was only 53 per cent. This, in the face of the huge increase in the steel business, is the most remarkable fact shown by the census work.

Decidedly Rough on Rats.

A method of destroying rats is recommended by an English publication and described as follows by the *Roller Mill*, which justly characterizes it as exceeding in diabolical ingenuity anything that has hitherto been proposed. The person whose premises are infested by the troublesome rodents is advised to secure a number of tubs proportionate to the number of rats it is desired to destroy, and to place in each tub a brick on end. The bottom of the tubs should be covered with water up to within one inch of the top of the brick, which will itself be hid from view by a piece of stout brown paper. The latter will support the bait in the shape of bacon rind or other dainty beloved of rats, but the food, whatever it be, must not be of a bulk or weight likely to injure its bed of brown paper. A spring-board will afford the rats sufficient facility for visiting the tubs, and after the rodents have been fooled for some nights "to the top of their bent," a nice large hole may be made in the brown paper. The first rat who then arrives at the scene of his former banquet will be incontinently pitched into the water, in which the brick will appear to him a haven of refuge. He will clamber on this cruel imitation of dry land and there squeal against the bad faith of the biped who has so grossly abused his confidence. Now there seems to be sufficient solidarity among rats to ensure these cries bringing a whole colony of companions to the spot, so that within a short time the treacherous tub is likely to be full of rodents fighting and jostling for the delusive security of the brick. It is said that when this trap was tried in a city warehouse a few years ago it resulted in the destruction of more than 3,000 rats in a single night.

IF WE SHOULD PART.

If we should part, the sun would still throw out its gleam of gold,
The trees still sigh, the birds still sing sweet melodies untold,
The stream still run, as it does to-day, down to the moaning sea,
The flowers bloom for lovers true, and still we'd parted be.

If we should part, the world would be as gay as 'tis to day,
And faithful hearts would beat with joy and sing the hours away;
The lilies in their green-gold beds would toss their heads as free
As they do now and smile at us, and still we'd parted be.

If we should part, the knell of doom would find more hearts than one,
Forgiving words would seek in vain to call back what was done;
The wind would still laugh in its glee, but at a broken heart;
And I would know no more of rest, if we should part.
N. Y. Picayune.

A Root's Remarkable Journey for Water.

[San Diego Union.]

A story of one of the most interesting freaks of vegetable life is told by Ellwood Cooper of Santa Barbara. As coming from him the story cannot be anything but strictly in accordance with the facts. Through Mr. Cooper's garden there ran, some years ago, a sewer made of redwood timber. This sewer was again cased by an outside sewer. Across the sewer there was built a brick wall many feet high, and in such a way that it was pierced by the inner sewer, which it enclosed, tightly, while the outside sewer ended abruptly against the wall. The outside sewer casing had in course of time decayed, and a eucalyptus tree standing some sixty feet away had taken advantage of this and sent one of its roots to the coveted spot in as direct a line as possible. Here the root entered the outside sewer and followed its course as far as it could. At last it came to the wall which shut off its course, and it could go no farther, the inside sewer being perfectly tight.

But on the other side of the wall the sewer and its double casing continued, and this eucalyptus tree evidently knew how to get there. Some three feet high in the brick wall there was a hole an inch or two in diameter, and this the eucalyptus tree was aware of, as its big root began to climb the dry wall and face the sun and wind until it found the hole, through which it descended on the other side and entered the sewer again, and followed it along as formerly. How did the tree know of the hole in the wall? How did it know that the sewer was on the other side? Did it smell, and if it did how could it direct the root to go and find the place with such precision? The roots of any plant grow always and unerringly in the direction of its food just as the eucalyptus tree did.

Mr. Depew Masquerading as a Friend of Labor.

[American Spectator.]

One of the most unjust imputations that has recently sullied the lips of a prominent American, was uttered on October 16, by Chauncey Depew, in an oration at Pittsburgh, Pa. In an address to the Brotherhood of Locomotive Engineers, he employed the following language:

To close a line like the New York Central and inflict the attendant hardships upon hundreds of thousands of people, and the enormous losses upon business men and wage earners alike, is so great a calamity and so near a crime that those who are responsible and in the wrong are bound to suffer.

The speech of course was aimed as a thrust at the Knights of Labor, who, by inference, are made responsible for the Central strike, when none knows better than Mr. Depew, that it was not until his lieutenant, the arrogant Mr. Webb, refused to confer with the representatives of the Knights of Labor, and refused to submit their grievance to the State Board of Arbitration, that there was any danger of a strike. The Vanderbilts felt rich enough to crush to serfdom their employes, who asked for nothing more than a hearing before the state-appointed arbitrators. Mr. Depew, it is remembered, indorsed the inhuman brutality of Mr. Webb. It will also be remembered that Mr. Depew was one of the directors in the infamous Spring Valley Coal Co., so graphically described by Mr. Lloyd in the "Strike of the Millionaires against the Miners." Mr. Depew assuming the role of friend of the working people is about as ludicrous as the picture of the devil bathing in holy water, in the hope of passing for a saint. Hypocrisy is one of the commonest and most revolting sins of our age.

SPRING VALLEY AGAIN.

Speaking of Spring Valley reminds me of a recent ghastly disclosure made by the Chicago Herald, and noticed editorially by Mr. Pentecost in the following clipping from the Twentieth Century of October 16th:

The men are averaging about twenty-five dollars a month in wages, and the Chicago Herald says that things have come to such a pass that a miner with a good looking wife can get a position when others can not. The Herald gravely reports that the managers of the miners are now habitually taking advantage of the poverty of the miners to use the most attractive of the wives for lustful purposes. Precisely this state of things was the last phase of social enormity preceding the French Revolution.

First these poor miners were robbed of their homes, then reduced to practical slavery, being defenseless, and now it seems that the sanctity of their homes is being invaded. If ever the hour were ripe for the pulpit, the press and the rostrum to unite in a demand for justice to the poor, and the encouragement of practical measures that will give all men a chance, that hour is striking now.

REVERIE OF A KANSAS GIRL.

How loose round my waist
 Were the clothes of my childhood.
 As my doubled up corsets
 Reminds me with pain,
 The slips that I wore—
 When I used to chop stove wood—
 Had more real enjoyment
 Than bustle or train.
 The bustle, I know, is a thing highly treasured
 By ladies built on the mocking bird style,
 But give me the garment
 With looseness unmeasured.
 The old Mother Hubbard that weak men revile!
 The dear Mother Hubbard!
 The loose Mother Hubbard!
 The honored Mother Hubbard!
 Which beats any style! (?)

Gerald Massey.

[B. O. Flower, in American Spectator.]

From a letter written by Miss Christabel Massey I am informed that her father, Gerald Massey, is in a critical condition; so ill is he, she informs me, that there is no probability of his being able to engage in any literary work for some time to come. I most sincerely trust that this grandly fearless champion of the oppressed, this ideal poet of the people, is not nearing the mystic vale. The earth never needed Gerald Massey more than it needs him to-day. Bold in defense of the people, brave in his search for truth, tender and sympathetic in every thought and word, while the exhilaration of hope, the inspiration of an abiding faith in the ultimate triumph of right and truth permeate his poems and oftentimes thrill the readers, as in olden times the words of prophets and sages were wont to rouse a multitude to action, he is peculiarly the poet of the people. He loves the great toiling army whom the supercilious call "the mob." His whole soul goes out to the people in their want, in their need, and distress; in this respect he greatly resembles Victor Hugo. Next to his love for humanity, and especially oppressed humanity, is discernible his quenchless love for truth and his abiding faith in a glorious to-morrow for the human race. He has reached the altitude above the miasma of doubt, as will be seen in the following lines written a year or two ago:—

"My faith in our future life is founded upon facts in nature and realities of my own personal experience, not upon any falsification of natural fact. These facts have been more or less known to me personally during forty years of familiar face-to-face acquaintanceship, therefore my certitude is not premature; they have given me the proof palpable that our very own human identity and intelligence do persist after the blind of darkness has been drawn down in death. He who has plumbed the void of death as I have, touches the solid ground of fact, has established a faith that can neither be undermined nor overthrown. He has done with the poetry of desolation and despair, the sighs of unavailing regret, and all the pas-

sionate wailing of unfruitful pain. He cannot be bereaved in soul! And I have had ample testimony that my poems have done welcome work, if only in helping to destroy the tyranny of death, which has made so many mental slaves afraid to live."

Here, too, in his "Life Beyond," he sings in all that lofty strain of perfect faith which is all the sweeter in that it comes to us in an age of almost universal doubt, and it must be remembered that Mr. Massey, too, has passed through the vale of doubt, the tunnel of uncertainty from the old time belief into the light of a broader faith.

THE LIFE BEYOND.

Although its features fade in light of unimagined bliss,
 We have shadowy revealings of the Better World in this.

A little glimpse, when Spring unveils her face and opens her eyes,
 Of the sleeping Beauty in the soul that wakes in Paradise.

A little drop of Heaven in each diamond of the shower.
 A breath of the Eternal in the fragrance of each flower!

A little springlet welling from the fountain-head above,
 That takes its earthly way to find the ocean of all love!

A little silver shiver in the ripple of the river
 Caught from the light that knows no night forever and forever.

A little hidden likeness, often faded or defiled,
 Of the great, the good All-father, in His poorest human child!

Although the best be lost in light of unimagined bliss,
 We have shadowy revealings of the Better World in this.

Many of Mr. Massey's poems might most fitly be classed among the battle songs of the people; strong, hopeful, and inspiring, as for example the following:

IT WILL END IN THE RIGHT.

Never despair! O my comrades in sorrow,
 I know that our morning is ended not. Yet,
 Shall the vanquished to day be the victors to-morrow.

Our star shall shine on in the tyrant's sunset.
 Hold on! though they spurn thee, for whom thou art living.

A life only cheered by the lamp of its love:
 Hold on! Freedom's hope to the bounden ones giving.

Green spots in the waste wait the worn spirit dove.
 Hold on,—still hold on,—in the world's despite.
 Nurse the faith in thy heart, keep the lamps of truth bright.

And, my life for thine! It shall end in the right.

What, though the martyrs and prophets have perished!

The angel of life rolls the stone from their graves:
 Immortals the faith and the freedom they cherished.
 Their lone triumph cry stirs the spirits of slaves

They are gone,—but a glory is left in our life,
 Like the day-god's last kiss on the darkness of even—

Gone down on the desolate seas of their strife,
 To climb as star beacons up liberty's heaven.
 Hold on,—still hold on,—in the world's despite.
 Nurse the faith in thy heart, keep the lamp of truth bright.

And, my life for thine! It shall end in the right.

Think of the wrongs that have ground us for ages,

Think of the wrongs we have still to endure!

Think of our blood, red on history's pages:

Then work, that our reck'ning be speedy and sure.

Slaves cry to their gods! but be our God revealed.

In our lives, in our works, in our warfare for man;

And bearing—or borne upon—victory's shield,

Let us fight battle harness-ed, and fall in the van.

Hold on,—still hold on,—in the world's despite,

Nurse the faith in thy heart, keep the lamp of truth

bright.

And, my life for thine! It shall end in the right.

If we except his "Tale of Eternity," which, to my mind, is his best creation, containing as it does a world of truth as well as poetry, and "Babe Christabel," a most exquisite creation, I think Gerald Massey appears nowhere to better advantage than when his soul burns with indignation at the wrongs which the poor are constantly suffering at the hands of the rich—such outrages as that so recently perpetrated by the New York Central Railroad against the Knights of Labor, and the still more infamous action of the capitalist, who, at the Spring Valley coal mines, robbed the honest, hard-working miners of homes, of all earthly possessions, and in some instances of life itself. In the presence of all such wrongs, the poet's voice is heard in tones that stir the heart and moisten the eye. The following is a fair example of this class of his poems:

A CRY OF THE UNEMPLOYED.

'Tis hard to be a wanderer through this bright world of ours,

Beneath a sky of smiling blue, on fragrant paths of flowers,

With music in the woods, as there were nought but pleasure known.

Or angels walked earth's solitudes, and yet with want to groan:

To see no beauty in the stars, nor in earth's welcome smile,

To wander cursed with misery! willing, but cannot toil.

With burning sickness at my heart, I sink down famished:

God of the wretched, hear my prayer, I would that I were dead!

Heaven droppeth down with manna still in many a golden shower,

And feeds the leaves with fragrant breath, with all-
ver dew the flower,

Honey and fruit for bee and bird, with bloom laughs out the tree:

And food for all God's happy things, but none gives food to me.

Earth, wearing plenty for a crown, smiles on my aching eye,

The purse proud,—swathed in luxury,—disdainful pass me by:

I've willing hands, an eager heart, but may not work for bread!

God of the wretched, hear my prayer; I would that I were dead!

Gold, art thou not a blessed thing, a charm above all other.

To shut up hearts to Nature's cry, when brother pleads with brother?

Hast thou a music sweeter than the voice of loving kindness?

No, curse thee! thou'rt a mist 'twixt God and men in outer blindness.

"Father, come back!" my children cry, their voices, once so sweet,

Now pierce and quiver in my heart: I cannot, dare not meet

The look that makes the brain go mad, for dear ones asking bread,—

God of the wretched, hear my prayer: I would that I were dead!

Lord, what right have the poor to wed? Love's for the gilded great.

Are they not formed of nobler clay who dine off golden plate?

'Tis the worst curse of poverty to have a feeling heart.

Why can I not with iron grasp choke out the tender part?

I cannot slave in yon Bastille! I think 'twere bitterer pain

To wear the pauper's iron within, than drag the convict's chain.

I'd work, but cannot, starve I may, but will not beg for bread:

God of the wretched, hear my prayer; I would that I were dead!

Here is an excellent specimen of Mr. Massey's songs for the people, heart throbs which carry with them noble aspirations and hints that point heavenward.

THE WORLD IS FULL OF BEAUTY.

There lives a voice within me—a guest angel of my heart.

And its bird-like warbles win me, till the tears a-tremble start;

Up evermore it springeth, like some magic melody,

And evermore it singeth this sweet song of songs to me—

"This world is full of beauty, as other worlds above;

And, if we did our duty, it might be as full of love."

If faith, and hope, and kindness passed, as coin,

'twixt heart and heart.

Up through the eye's tear-blindness, how the sudden soul should start!

The dreary, dim, and desolate, would wear a sunny bloom,

And love should spring from buried hate like flowers from winter's tomb.

This world is full of beauty, as other worlds above;

And, if we did our duty, it might be as full of love.

Were truth our uttered language spirits might talk with men.

And God illumined earth should see the Golden Age again:

The burthened heart should soar in mirth like morn's young prophet-lark.

And misery's last tear wept on earth quench hell's last cunning spark!

This world is full of beauty, as other worlds above;

And, if we did our duty, it might be as full of love.

We hear the cry for bread with plenty smiling all around;

Hill and valley in their bounty blush for man with fruitage crowned.

What a merry world it might be, opulent for all and aye.

With its lands that ask for labor, and its wealth that wastes away!

This world is full of beauty, as other world's above;

And, if we did our duty, it might be as full of love.

They Moved.

A Hartford gentleman traveling in Colorado found tacked upon one of the poles of an abandoned house the following notice, which tells the whole story of the discomfort of living upon government land and the joy of securing (by fair means or foul) Eastern capital upon which to retire:

"600 miles to wood.

"6,000 miles to water.

"6 inches to hell.

"God bless our little home. We have negotiated a loan and gone home to live with our wife's folks."

A Committee of Safety.

[Locomotive Engineer.]

Grievance committees of labor organizations, especially railroad organizations, are formed as a sort of legislative committee to look after the interests of the whole body, especially in the matter of the dealings of the order with the company. The duties they are designed to perform are necessary, perhaps, and certainly time-saving and economical to the body; but the duties they often do not perform cause endless trouble and turmoil.

The protection of individual members from wrong and injustice is laudable and right, and cannot be carried too far where justice is given to others as well as demanded for the members.

There seems to be a great unworked field open to the orders in protecting the members and in providing for the widows and orphans of men who meet their deaths on the road. We refer to the power of the organizations to collect data concerning the condition of the road and its appliances on which they are employed, to be used as evidence where members are prosecuted for manslaughter, when accidents occur for the want of proper safeguards. How often it happens that when a man is killed the blame of the accident is laid at his door, and a cheap settlement is made with his family on the basis of his being to blame. Evidence to refute these charges, in the hands of a good committee, would prevent the cheating of widows and orphans, and lighten the load of sorrow on their minds in clearing the name of the victim of some open draw without a signal, or break-in-two, where no automatic brake was in use.

Suppose the grievance committee of every lodge of engineers and firemen in the land would prepare a certified statement of the condition of each division of every road on which its members ran, stating the present conditions of signals, switches, track, bridges, etc., the engines and cars, and state what modern appliances for safety were needed and wanting.

With it well known that this committee had such facts and figures at its finger ends, and would present them before any court, or in any press, to defend its members from wrong, there are few railroad officers who would dare to constitute themselves judge, jury and executioner, to condemn men as they do now.

If a bad system of train dispatching was practiced, how easy to collect evidence and demand a reform.

Is there a low bridge or a dangerous obstruction on the road? What would be the result if the superintendent were informed by an authorized committee of its existence and danger, and that the order or orders would hold the road responsible in case of

accident to employees? The obstruction would be removed, or other means employed to avoid accident from the cause stated.

With such data in the hands of the men, railroad commissions could easily find dangerous practices and appliances, and demand reforms on lines in the right direction. Such data would not hurt honest managements who were really trying to furnish the best service possible, and it would prevent a lot of injustice and oppression now borne by employees.

Then, if the committee could go a little further, and report to the lodge, or the officials of the road, for punishment, all men who knowingly disobeyed rules of safety—these fellows who won't stop at grade crossings and drawbridges, who cut off and run for water, leaving the train to follow; the men who neglect to whistle for road crossings, forget to look at the bulletin board, don't examine their engines at the end of runs, and test the brake when they want to stop first, instead of before they leave terminals. We need men who look out for these things just as bad as we need signals, safety switches, brakes or protected draws, and just as bad as the trainmen need automatic couplers.

What would be the matter with a "committee of safety," who would hunt for every fault that threatened the safety of train and enginemen, and their passengers, and demanded a remedy for that fault, be it what it may, and counting the faults of the men just as dangerous and as badly in need of reform as the faults of the management? Would not such a plan be of equal benefit to the men, the company and the public?

Didn't Want to Wait for His Friends.

[New York Star.]

A good story is told of Mark Twain, that has not yet been printed. It appears that last winter, having to fill a lecturing engagement at a western city, the humorist boarded a train that is noted for its slowness and is always avoided by regular travelers. But the lecturing committee had written to the humorist agreeing to meet him at the depot upon the arrival of this train, and so he had no alternative. Two hours' traveling, however, served to put Mark out of patience. Stopping the conductor as he passed through the car, Mark asked as civilly as he could: "Why don't you people run this train faster?" The conductor, ignorant who his questioner was, rejoined: "It runs fast enough to suit us. If you don't like this rate of speed why don't you get out and walk?" "Well, I would," returned Mark, settling back in his seat, "but that some friends won't come to meet me until the train arrives, and I don't want to be waiting around the depot for two or three hours."

Woman as a Wealth Producer.

[Living Issue.]

Of all the great minds that have made the labor problem a study, there is not one to-day that will not admit that woman has become a factor in all the affairs of the world, and that she is in a greater degree than man a wealth producer, and should, therefore, be entitled to her full share of the gains and honors of advancing civilization. We say greater because, according to the definition given by one that "wealth is all that money over and above the necessities of life," she, by working for smaller wages, certainly increases the wealth of her employer faster than a man, who is paid a more equitable share for his labor. The reasoning and thinking minds of the age have also come to see clearly the truth that with equal privileges woman will be man's equal in any and all vocations of life. Therefore it is very apparent to those who have labor's cause at heart that we cannot longer afford to allow our women to toil without recompense or be driven to lives of shame. We ask only that woman may be given an equal chance with man in every way, and not be obliged, as now, to rob him of his honestly-earned loaf that she may have a crust.

Five and Forty Years Ago.

[Omaha Bee.]

There were twenty-seven States in the Union.

The total population was about 20,000,000.

James K. Polk was President.

John C. Calhoun was Secretary of State.

George Bancroft was Secretary of the Navy, and was preparing plans for a naval academy.

Webster, Benton and Cass were in the Senate.

Texas was admitted to the Union.

California was a Mexican province.

Expenditures of the United States government were \$21,895,370.

There were 14,183 postoffices in the United States.

Abraham Lincoln was practicing law at Springfield, Ill. Wm. H. Seward was practicing law at Auburn, N. Y. Henry Ward Beecher was preaching at Indianapolis.

Ulysses S. Grant was a lieutenant in the Fourth United States Infantry.

Wm. T. Sherman was a lieutenant in the Third United States Artillery.

Jefferson Davis was a representative in Congress.

Robert E. Lee was Captain of Engineers.

J. L. Motley was Secretary of the American Legation at St. Petersburg.

Horace Greeley was editor of the four-year-old *Tribune*.

W. C. Bryant was editor of the *Evening Post*.

James Gordon Bennett was editor of the *Herald*.

James G. Blaine was in Washington College, Pennsylvania.

Benjamin Harrison, Jas. A. Garfield and Grover Cleveland were boys under 15 years of age.

San Francisco had 500 inhabitants, Omaha and Denver none; Minneapolis, St. Paul and Kansas City a few hundred; Chicago, about 10,000.

There were 4,633 miles of railroad in the United States.

There were passenger packets on the canals.

The first telegram was sent a year before. Thomas Edison was not born.

Whale oil lamps and tallow candles were the chief illuminators.

Wood was the chief reliance for heating. Sewing machines were not in common use.

Mowers and reapers were in experimental stages.

Rubber shoes were coming into use. R. M. Hoe was thinking of a "rotary printing press."

Quill pens were still much used.

Genesee flour was the standard.

Hand fire engines were the best made.

State banks furnished the currency.

Shillings and sixpences were the silver change.

Gold product of the United States was \$1,008,327.

There were no telephones, electric lights, steam elevators, sleeping cars or typewriters.

A Tibetan Account of the Origin of the World.

At a recent meeting of the Asiatic Society of Bengal, Babu Saratchandra Das exhibited some very curious Tibetan relics, amongst them being carved ornaments, of soap-stone, giving the Tibetan signs of the zodiac and a description of the origin of the world. Translating this, the exhibitor found that, in the beginning, what existed from eternity, in nothingness, was called the tortoise. The Buddhas of the past, present, and future sprang out of him. The three worlds, and all the animal beings also, originated from the eternal tortoise. Time, without the distinction of past, present, and future, was in him, and the whole universe rested between his head and tail. From the vapor of his mouth rose the seven atmospheric strata which encompass the earth, and gradually the sphere of azure space, and thereafter "Swastika," the emblem of the divine cross, was formed. From the saliva of this primeval tortoise sprang forth the oceans, and from his flesh were formed the lofty mountains, the islands, and the great continents, having trees for their hair. His head pointed to the south, his tail to the

north, and his four limbs stretched towards the four corners of the world. His white back shaped the old father heaven, called "Khen," wherein rested the celestial regions with the mansions of the gods, Mahadeva, Brahma, and angels of pure habits, who possessed the fourfold organs of sense. The celestial regions were formed above, and "Rirab," the sublime mountain, stood below, holding the mansions of the thirty-three "Devas," and of the gods of the "Paranirmanarataya" on its top. On the flanks of "Rirab" resided the four guardian spirit kings of the world, together with the sun and moon, the planets and stars. The sun and moon sprang from the eyes of the great tortoise. From the sound of his throat issued the dragon's peal of thunder, and from his outstretched tongue flashed forth lightning which produced thunderbolts and hailstorms. From his breath originated the wind, the five internal essences, and the five physical elements; and when he shook his body there was earthquake.

Anecdotes of "Tom" Potter.

In one of the small towns on the Burlington road in Iowa about three weeks ago a druggist got a most unmerciful whipping from a young man who appeared in every way thrice a match for him. The druggist was a man past fifty years of age and kept a drug store in Burlington ten or twelve years ago. The young man was tall, erect and straight as an arrow, and could strike a blow that would warp the crown sheet of a locomotive engine. He was a young engineer on one of the Iowa lines of the Chicago, Burlington & Quincy, and when he committed this trouncing act had on his blue overalls and a blouse. The story, as told by Ed Phelps, of the White Breast Fuel Company, is an interesting one. Mr. Phelps lived at Burlington at that time and was private secretary to Tom Potter, general superintendent of the "Q." One of the rules of the company was that whenever an employé was garnisheed for debt he should be discharged. There was a boy working as an apprentice in the company's shops at Burlington. This lad was the only means of support of a sick mother and sister, and had contracted a bill at the drug store for medicines. His pay was small and the druggist was a hog. The boy couldn't pay the bill fast enough and the druggist garnisheed his wages. As a result the lad was dismissed by the foreman, who had no other alternative. The rules were made to keep. They, like everything else about the shops, were cast-iron and couldn't be broken. The boy left the shop crying. An engineer stood beside his engine at the turntable. He asked the boy what had happened, and when he heard his story advised him to go down town and see Tom

Potter. Every employé on the road called him Tom then. The boy was timid and the old engineer went with him. He stood outside the half-open door and listened to the conversation. This is what he heard:

"How much did you owe the druggist?"

"Thirteen dollars, sir."

"Will you make me a promise and carry it out if I put you back to work?"

"Yes, sir."

"Very well. Keep track of this drug man, and when you get big enough give him a — of a thrashing. Will you do that?"

"Yes, sir."

"Take this note to the foreman and he'll put you to work again."

The Longest Tunnel in the World.

[Scientific American.]

An engineering work that has taken over a century to construct can hardly fail to offer some points of interest in its history, and illustrate the march of events during the years of its progress. An instance of this kind is to be found in a tunnel not long since completed, but which was commenced over a hundred years ago. This tunnel, or adit, as it should be more strictly termed, is at Schemnitz, in Hungary. Its construction was agreed upon in 1782, the object being to carry off the water from the Schemnitz mines to the lowest part of the Gran Valley. The work is now complete, and according to the *Bauzeitung für Ungarn*, it forms the longest tunnel in the world, being 10.27 miles long, or about 1 mile longer than St. Gotthard, and 2½ miles longer than Mt. Cenis. The height is 9 feet 10 inches and the breadth 5 feet 3 inches.

This tunnel, which has taken so long in making, has cost very nearly a million sterling, but the money appears to have been well spent; at least, the present generation has no reason to grumble, for the saving from being able to do away with water-raising appliances amounts to £15,000 a year. There is one further point, however, worth notice, for if we have the advantage of our great-grandfathers in the matter of mechanical appliances, they certainly were better off in the price of labor. The original contract for the tunnel, made in 1782, was that it should be completed in thirty years, and should cost £7 per yard run. For eleven years the work was done at this price, but the French revolution enhanced the cost of labor and materials to such an extent that for thirty years little progress was made. For ten years following much progress was made, and then the work dropped for twenty years more, until the water threatened to drown the mines out altogether. Finally, the tunnel was completed, in 1878, the remaining part costing £22 a yard, or more than three times as much as the original contract rate.

THE OMEN MOON.

The evening, ma, was beautiful,
The stars shone warm and bright,
The zephyrs whispered stealthily—
Ah, 'twas a lovely sight;
But yet my heart will not be still,
Its thrubbings and its ache,
And much I fear some coming ill
At last will make it break.

Dear Willie loves me just as well
As in the days gone by—
Oh, no, he ne'er will trifle, ma,
And leave me here to die.
'Tis not the doubt of Willie's truth
That makes my heart thus swell,
For he's the same he ever was,
And loves me just as well.

He told me so again to night,
While sitting on the stile,
And I am sure he told the truth,
For Willie knows no guile.
But oh, just then I saw the moon,
And was of joy bereft.
For, though its halo circled him,
'Twas shining o'er my left.

W. Scott Abbott.

Heart-Love Makes Home Happy.

I never saw a garment too fine for a man or a maid; there never was a chair too good for a cobbler or a cooper or a king to sit in; never a house too fine to shelter a human head. These elements about us—the glorious sun, the imperial moon—are not too good for the human race. Elegance fits man; but do we not value these tools a little more than they are worth, and sometimes mortgage a house for the mahogany we bring into it? I would rather eat my dinner off the head of a barrel, or dress after the fashion of John the Baptist in the wilderness, or sit on a block all my life, than to consume all myself before I got a home, and take so much pains with the outside when the inside was as hollow as an empty nut. Beauty is a great thing; but beauty of garment, house and furniture are tawdry ornaments compared with domestic love. All the elegance in the world will not make a home; and I would give more for a spoonful of real heart-love than for whole shiploads of furniture and all the gorgeoussness all the upholsterers in the world can gather.

—[Oliver W. Holmes.

The Pinkerton Fraud Bill.

[Paterson Labor Standard.]

Efforts have been made for several years to prohibit by law the employment of irresponsible persons in this State as police officers. The irresponsible persons referred to are generally known as Pinkerton thugs. In recent years, while the editor of this paper was chairman of the State legislative committee, the anti Pinkerton bills were defeated, always, in our state senate, through the combined efforts of Republican and Democratic senators—misrepresentatives. At the last session of the legislature the anti-Pinkerton bill was again introduced. It passed the house through the efforts of As-

semblyman Thomas McCane, and went to the senate, where it was detained until the final day of the session, when in the hurry and flurry of the final adjournment its senatorial opponents killed it by tacking on a provision to the effect that the law would not be operative in times of riot or public disturbance. The trick was a smart one but it would have been discovered and defeated if the organizations of the state had contributed enough to keep their legislative committee in constant attendance in the state house. It now remains for the senators who voted for this most iniquitous provision in the anti-Pinkerton bill to explain their votes, and it is in order for Leon Abbett, Governor of New Jersey, to tell the people of New Jersey why he signed a bill legalizing the employment of mercenary assassins in New Jersey. Away with assassins! Away with those who legalize them.

Women and Boxing.

[New York Sun.]

One of the things that it is declared fashionable for women to do nowadays is to box. But boxing and singing base are things not to be predicted for the average woman, who might go on taking lessons in the noble art until her locks were white without developing the least aptitude in hitting or warding.

For, you see, women can't box. This much she can do: She can put on the gloves and learn to square off, and she can learn to stand up and pummel a bag or a ball that is obliging enough to hang there and let itself be pommeled. But when her vis-a-vis develops a live force of its own, and manifests a tendency to pommel back, then the sum of her acquirements is at an end.

For in the first place, she can't take a blow from the gloves as a man does, squarely in the chest. Aside from knocking the wind so completely out of her body that she could never get it back again, the chances are that it would break her collar-bone. And in the second place, she couldn't ward or fend from an ordinary blow without danger of breaking her wrist or her forearm.

Make Money.

[Western Railway.]

The *General Manager* for June is a red hot issue. On the back cover is a page cartoon showing Kate Sheeley climbing out on a tottering bridge to flag a Chicago & Northwestern train which was about to dash into the rushing river. It also pictures the manager giving the heroic Kate a \$100 bill for saving the train. It shows the Chicago *Tribune's* contribution box, which was the means of paying the mortgage on the woman's farm. Worst of all, though, is a two-page cartoon, "The Sinking Ship." This ship is the "Q," and as she sinks, Paul Mor-

ton steps aboard a coal barge. H. B. Stone glides away on a neat little boat called "The Telephone," while Mr. Ripley is rowed silently away from the wreck on a slick looking ship, upon whose banner we read, "Chicago, Milwaukee & St. Paul." This cartoon speaks volumes and shows, as we said at the time, that the great strike, even at this late date, must have had something to do with the resignation of these three officials who are among the brightest in the land.

Revenge is sweet, and we have little doubt that each and every train and engine man, who was interested in the late strike, would gladly give up 10 cents for this cartoon. Here is a golden opportunity for some "Q" man out of employment. Get as many copies of the *General Manager* for June, as you can go amongst railway employees and sell them. You can make money.

Destitution in Our Great Cities.

[R. O. Flower in November Arena.]

One of the most humiliating features of our modern civilization is the poverty and destitution found in all our great cities. He who has eye and ear open to the needs of his fellow men is constantly brought face to face with sickening illustrations of misery, induced by our defective social system and man's weakness, or brought about by circumstances over which the victims have no control. To remedy this great evil is one of the herculean tasks before the earnest and thoughtful workers of the present. The subject must be so generally agitated as to awaken the moral sentiment of the people. We must find the great root causes of this giant evil, and then direct our efforts against them. It will not do to say that poverty has always existed, and therefore always must exist. What satisfied a more brutal and inhuman civilization in the past, can no longer be tolerated by the humane spirit of the present, for we are rising into the light. The very fact that we are becoming so keenly sensitive to the great evils that everywhere bring misery to our fellow men, emphasizes the truth that we are moving up from the cellar of selfishness and sensuality into the light of a higher civilization.

There are certain great evils that lie at the root of the major part of the destitution and vice in our great cities. When our people are morally developed sufficiently to comprehend that it is cheaper, as well as wiser, to prevent poverty and crime, than to take care of paupers and criminals, measures will be devised which will go far toward abolishing poverty. At the head of the great feeders of human want and misery, in our large cities, stands the saloon, the menace alike of individual comfort, and national integrity, and prosperity. Side by

side with this evil stand the great, overcrowded, filthy tenement houses, where people are huddled together in herds; where vile odors permeate the air; where filth is omnipresent, and where, instead of the mystic charm of home, there is nothing present to elevate, or to give the inmates *courage and hope*, and it should be remembered that when these great motive powers are taken from man, he has lost the weapons which make him invincible in the presence of temptation. Keeping a man in the atmosphere of degradation, with the window of hope closed and barred, is one of the surest methods of dragging him to the level of a beast. This is one of the results of life in the overcrowded tenement house. It would doubtless be cheaper, in the long run, if the city purchased land in its suburbs, divided it into little plots, and sold it on very easy terms and long time, to those who live in the tenement-house districts, and who are struggling to be free. If the city owned the means of transportation, which sooner or later it surely will, a low rate could be charged to all laborers, who received less than a certain amount of wages, they being furnished with check cards stamped and registered. Thus, at the cost of two or three cents, the poor man could come to his work and return to his home in the suburbs. Of course, these are only hints of what might be accomplished if society was awake to its duties. Agitation of this great problem is imperative. We must not be satisfied with what has been done, or what is being done; our ideal must contemplate the abolition of poverty, and toward the consummation of this lofty purpose we must incessantly direct our efforts. We who are more fortunate than others are our brothers' keepers.

HIS DIVINITY.

She's as graceful and free as a fairy,
As down to the footlights she trips,
Her great eyes like big twin stars a gleaming,
And the ghost of a smile on those lips.
That are redder than any red rose is
Where the belted bee honey-dew sips.

Tho' 'tis true that her skirts they are scanty
(They don't reach half down to her knee),
As she pirouettes there, or on tip-toe
Stands apoloise like a butterfly, she
Mayn't have dropped from the sky, but I'll swear
that
She looks like an angel to me!

And I watch her with heart that grows hungry
And famished and foolish and faint.
Then flames fiery with jealous mad passion
Of love—You may say she's no saint,
But I worship fore'er at her shrine—spite
Of padding and powder and paint!

But, tho' hope springs sometimes on a sudden
Like a flower, in the drought it soon droops;
Tho' her fair face, alas! is my heaven,
The star to the earth never stoops,
For Oh, she is the queen of the ballet,
While I'm the tag-end of the supes!

M. N. B., in Boston Globe.

THE OUTCAST.

Ragged? So ragged a dog would sniff
At his tatters! And yet he sets there as if
He may have known some day, back in the past,
Before he became what he is—"outcast"—
Some such place, that he called his home,
Where a mother listened to hear him come,
As the dusk drew on, to the fireside where
She gathered her jewels—and he was there!

Hungry? Yes, for a sup of rum
And the cheer such as he may find in a slum;
But hungering, too, with a dull, strange smart
At the bottom of what was once a heart,
For a sight of the group about the blaze
On the hearth he sat by—in other days!

Cold? The colder for thinking how warm
He used to be in there, safe from the storm
Which has so often frozen his finger-ends
That he and the sleet have at last become friends.
Cold? There's a shiver that numbs the blood
Even in veins that might well flow—mud,
When the ice of memory breaks, and the rift
Shows a guiltless childhood's sunny drift
One moment, and is then frozen again,
While the shiverer, thinking of now and then,

Wonders if he, and his like, are the men
Who were boys like that?

And the picture—
What is it that brings that back when all else is a
blot

In memory's maze? Can he see thro' the gloom
Where it hangs on the wall of the sitting room
The face of a boy with innocent eyes,
Ignorant yet of deceit and lies;
A mother-boy, who is not yet too old
To be kept, like a lamb, in the mother's fold!

He shivers again and the shadows pass
From the mirror of time; see, it comes in the glass—
This face of his own lost youth;

Shall he knock?
No, were she alive such an awful shock
Might kill that mother, whose loving hand
Cared him—"the finest boy in the land!"

The shadows gather; upon his ear
The rush of a current sounds strangely near
And soft as the plash of waters falling,
He hears with a shudder, a wild voice calling—
The river, the river!

For all who are cold
And weary and homeless, whose hearts are old—
For all who are tired of the strife,
The pang and perils that we call life—
It calls in the twilight:

"The echoless shores"
Will know him to-morrow as "only one more!"
New York World.

Rich Dead Beats.

[From the Macon (Ga.) Telegraph.]

One of the provocations and excuses of the communistic element in this country is found in the fact that there are men of large wealth who do not bear their reasonable and legitimate share of the burdens of the government. When the masses of the people know that a man of wealth is shirking his duty to the commonwealth, dodging taxes and dead beating his way through generally, so far as public affairs are concerned, it is quite natural that their opinion of property holders should fall, and that they should favor legislation to abridge their privileges. We have had some striking instances in this country of the way in

which rich men dodge their just dues to the community. It was discovered after the death of William H. Vanderbilt that he had not been paying taxes on a large amount of property that he owned in New York. In other words, he was taxed on much less property than he really possessed and enjoyed. His son, Cornelius Vanderbilt, seems to be playing the same sneak game, for his taxable property in New York is rated at only \$200,000, when he is known to be worth about \$100,000,000. Mr. Jay Gould is taxed on only \$500,000 in New York city. It is possible that these multi-millionaires comply with the letter of the law and save the bulk of their property from taxation by putting it in non-taxable securities, but this does not lessen the degree of injustice which they perpetrate on the community. Their money is drawing interest wherever it is, and it is simple justice that they should be made to pay for the support of the government in proportion to their means. There is no other fair theory of a democratic government. It is nothing less than an outrage that a man worth \$100,000,000 should pay taxes on \$200,000, when a man worth \$10,000 or \$1,000 pays on the full amount of his possessions. This sort of thing can not continue. An income tax, strictly enforced, or some other plan, must be devised to make the rich deadbeats pay what they owe the government.

CONSOLATION FOR BALD HEADS.

BY H. C. DODGE.

A head that's bald does not imply
That he who owns it must be old;
For instance, look at William Nye,
Whose youth and beauty is extolled.

Oh, no! It is no sign of age,
For babies so are often born;
In countries, too, the handsome stage
Is only reached when heads are shorn.

Bald heads may come from air-tight hats
We slaves of fashion have to wear,
Or from those matrimonial spats
When lady fingers clutch the hair.

Or from the stiff and starchy shirt
Jerked on and off four times a day,
Which makes a friction that must hurt
And wear and tear the hair away.

Then barbers (whom you can't resist),
Alive to "blz," shampoo you well
And rub the hair off ere it's missed,
So hair renewers they can sell.

Reclining in a high-backed chair
Or sleeping on too short a bed
Without a night-cap scrapes the hair
And puts a polish on the head.

Red-headed men are never bald,
Nor dudes nor idiots, you know,
Nor women wearing hats—so called—
As big as wafers for a show.

But men of brains who have to scratch
Ideas from out their teeming pates,
Unconsciously rub off the thatch
That nature needlessly creates.

Corporations are Destitute of Souls.

The Cable & Western Railroad Company of St. Louis is doing all it can to deprive itself of sympathy on the part of a just public opinion in any controversy which may hereafter arise between its managers and its men.

The road has adopted a rule which allows its conductors and grip men a scant ten minutes during the shifting of their cars in which to run to their boarding houses or lunch baskets, eat their dinners and get back to their places, and the same with respect to breakfast. If they are late by a single minute the company punishes the dereliction by suspending them from work and wages for six days.

This rule is simply inhuman. It needs only the barest statement to emphasize its cruelty. Brute beasts are more humanely considered. The worst driving overseers on the old cotton plantations allowed the negro hands their hour for dinner. The corporation which makes such a rule and enforces it deserves to have its charter annulled. It will have no claim upon the sympathy of just men even should grave wrong be done to it in the strike which its course must sooner or later provoke.

Greed could hardly go farther in indifference to its human tools. The rule assumes that as men are constantly pressing for work it is cheaper to work them to death and hire fresh supplies from time to time than to consider them as beings possessed of a right to live. The most grasping economy treats mules better than that.

A New Way of Doing It.

[Chicago Tribune.]

The two men who had been sitting together in the seat near the door of the car became engaged in an animated controversy, and their loud voices attracted the attention of all the other passengers. Suddenly one of them rose up and said:

"Ladies and gentlemen, I appeal to you to decide a disputed point. My friend here insists that not more than three persons out of five believe they have souls. I take a more cheerful view of humanity than that. Will all of you who believe you have souls raise your right hand?"

Every right hand in the car went up.

"Thank you," he said with a smile. "Keep them up just a moment. Now will all of you who believe in a hereafter please raise your left hand also."

Every left hand in the car went up.

"Thank you again," he said. "Now while all of you have your hands raised," he continued, drawing a pair of revolvers and leveling them, "my friend here will go down the aisle and relieve you of whatever valuables you may happen to have. Lively now, Jim."

CASTLES IN THE AIR.

The smoke goes curling round and round my head,
As tho' to imitate the clouds afar.
How fast the minutes speed! how they have sped
While I have smoked my afternoon cigar.

While I have built my castles in the air
Of fabrics frailer than this smoke, alas!
While I have looked aback upon each year,
Reliving all the moments as they pass.

While I have conjured up a vision based
On large, dark eyes and wind-toasted, gold-ringed
hair,
My arm has stolen round her slender waist—
Oh, sweetest, frailest castle in the air!

Her head has rested on my shoulders here—
One coat still bears a tiny shiny spot
Where her gold head did rest for just one year.
I have it still—by her 'tis quite forgot.

I have it still, and it is laid amid
A glove, a lock of hair, a ribbon blue;
No tale of broken heart therein is hid,
For she was five, and I—was sixty-two.

Corra Farbrt.

Chicago's First Railroad.

The first railroad built out of Chicago was the Galena & Chicago Union, says the *Chicago Evening Post*. It was chartered January 16, 1836. Galena in those days being considered a more important place than Chicago. The commissioners appointed to receive subscriptions of stock were E. D. Taylor, Jesse B. Thomas, Jr., Peter Temple, Thomas Drummmond, J. C. Goodhue, William Bennett and J. W. Turner. The capital stock was placed at \$100,000, but could be increased to \$1,000,000, and it was provided that the incorporators might operate the road either by horse or steam power. Just fancy the Northwestern railroad system of to-day, which has grown out of that Galena & Chicago Union Road, being operated by horses. In 1837 the survey of the road was commenced, but it only continued for a few months, when the men employed on it were all discharged, and it was not till the next year that work was resumed. It had not progressed far when the whole scheme collapsed, and it was not till ten years afterward that the project was placed on a successful footing. In 1846 the scheme was revived by a convention held at Rockford.

THE Sultan of Turkey has granted to an English company a concession for a railway from the ancient City of Damascus to Acre on the Mediterranean. Several branch lines are also conceded. The main line will be 127 miles long, and will open up to the commerce of the world the most ancient, interesting and one of the most fertile regions on the globe. The harbor of Acre is said to be one of the best on the Syrian coast. This railroad, and the one now in process of construction from Joppa to Jerusalem, one or both of which will, no doubt, soon be continued to the Lower Euphrates Valley and the Indian Ocean, will make a close connection between ancient and modern centers of civilization.

A New Danger Signal.

Ed M. Burt, of this city, received this week from Washington letters patent for an electric danger and safety signal for railroads. His invention relates to improvements in electric danger and safety signals for railroads, bridges, and points where there is danger of collision; and the objects of his improvements are: (1) To provide a signal that is carried in the cab of the locomotive and to be operated while the train is in motion; (2) to provide a signal that will notify the engineer of a misplaced bridge, and (3) to provide a signal that will notify the engineer of approaching locomotives. Upon the outer sides of the track rails are arranged the signal rails, said rails being connected with the ground, and insulated from the track rails and arranged a certain distance from the same to prevent the truck wheels contacting with the signal rails. Then to the outer sides of the two front wheels of the locomotive is attached a wheel separating them from the locomotive wheels by an insulator. These extensions of the locomotive wheels run on the insulated signal rails and have a journal on them which runs in a box, and from these two boxes two insulated wires lead to the cab of the locomotive, where they are attached to the battery and signalling instruments. Another improvement on the original patent is that the wheel has a double flange and the journal has some play in the boxes, so that the wheel will adjust itself to the side pressure, the springs adjusting the pressure in other directions.

These signalling instruments may be an electric bell or dial showing the presence of a current by the deflection of a needle, and in case communication is desired between trains a telegraph instrument may be used. Where these signal rails are used in dangerous places, as soon as the wheel touches the signal rail the engineer knows there is no danger if the bell rings. A complete circuit is formed. If the bell does not ring the bridge is out of place. On curves and in other places where the engineers are unable to see each other, the signal rails extend a considerable distance and are insulated from the ground and each other, and the current, passing from one locomotive to another, makes a complete circuit and operates both signals, thus notifying them of their nearness to each other. In case a locomotive is approaching the rear end of a train from which the locomotive is detached and out of communicating distance, a collision may be avoided by connecting the insulated rails with a bar, which every train should carry, thus making a circuit and giving the engineer of the approaching locomotive notice of danger. The signals can be used at any distance apart, according to the strength of the batteries used.

Causes and Remedies for Foaming in Boilers.

The following is taken from the new Engine Catalogue of The James Leffel & Co.:

When boilers are new and first used, they are liable to foam in consequence of grease or oil left in them during their manufacture. The simplest remedy for this is to put from one half to one pound of common washing soda in the boiler when first filled with water. After steam has been raised and the soda has neutralized the oil and grease, draw the fires, and when the pressure of steam has become reduced to not exceeding five pounds, blow out the boiler; then fill with fresh water, adding a very small quantity of soda to neutralize any grease remaining within the boiler. After all the grease and foreign matter have been removed, the general cause of boilers foaming is using the steam faster than the fires are generating it, as any boiler can be caused to foam by drawing the steam from it faster than it is being generated. The remedy in this case is to close the throttle so as to reduce the quantity of steam discharged in proportion to the amount being produced by the fire, increase the fire so as to make more steam, and the quantity available for service will be in accordance without danger of foaming. The steam gauge is a valuable guide in this matter. The more dirty the water becomes, the greater the necessity of attention to the fire, as dirty water will not produce steam as rapidly as clean water, and consequently is more liable to foam, as less steam is produced with the same fire.

It was So Nice.

They stood on the American shore and gazed in wonder struck silence at the majesty and beauty of Niagara. The personification of feminine grace and tenderness, she leaned confidently on the arm of her husband—her ideal of manly strength and chivalry. The glowing sunbeams danced in the spray that rose like fair mountains before their eyes, radiant with the gorgeous hues of the rainbow, and the falling waters sounded their eternal monotone in the ears of their listeners, whose hearts beat responsive to its deep pulsations. Nature's own voice spoke to them and stirred the profoundest depths of their being.

The young husband pressed the little hand that lay confidently on his arm and smiled on the sweet face upturned to his.

"Gwendolen," he said, the rapture of his emotions thrilling his voice and shining out through his dark eyes, "does it stack up to your expectations?"

"Launcelot"—and her eyes seemed about to overflow with excess of pent up feeling—"it's just the cutest thing I ever struck!"

The Rail as a Social Factor.

[Kate Field's Washington.]

For some unknown reason most people look upon a railway journey as a task. A sail on a boat, a carriage drive—in fact, almost every other method of locomotion is sometimes a means of pleasure, but we still regard a journey by rail as something well done only when it is done as quickly as possible.

Now, this idea is all a matter of association. It is partly a relic of the days when a railroad was really a good agent for disciplining the flesh; and a journey on one meant hours of jolting over badly ballasted roadbeds, in cars whose springs left much for engineering science to accomplish. The rest of the prejudice comes from the fact that railroad trips are usually taken with a sordid business in view, or else they are only an irritating delay to some pleasure which we look forward to at the destination. Once rid of the prejudice caused by these two associations, we find that the railway journey, as it is now possible on some of the best modern roads, may be in itself a source of keen enjoyment.

The Royal Blue Line broke the record and made the journey from Washington to Jersey City in four hours and a quarter a few days ago, when the Baltimore and Ohio Company gave their excursion to the press; but it was not the actual reduction of time in hours and minutes which made the journey seem so short. It was the freedom from the idea of something to be accomplished, the sense not of having so much time to kill but so much to enjoy. Mechanical skill has done its utmost in the construction of the new rolling stock which the road was proudly showing off to its guests, and there was hardly any sense of motion, except as the flying landscape showed that very fast time was being made.

Traveling at a mile a minute need no longer interfere with one's creature comfort, nor give a choice only between starvation and indigestible ten-minute luncheons. With the buffet-car all things are possible.

Railroads cannot offer the exact comfort of home, except as they encourage the setting up of private cars with all their dainties, though miniature, domestic arrangements, but they have managed to reproduce on their best trains all the luxuriousness of a hotel or yacht, and to that extent have revolutionized traveling. It is no longer a sufficient excuse for a demolished toilet and a woe-begone expression to say that one has recently finished a journey.

Such excursions as the one just mentioned show the possibilities of the railroad as a means of social enjoyment. It takes a great many miles from the number to be traveled when, instead of being surrounded by pre-

occupied strangers, one's neighbors are all friends, or at least are known to share some common interest. Who knows but that railway parties may in time become as popular as theatre parties or cruises in steam yachts! In fact, something has already been done in this direction. The commuters from a certain suburban town on the New Jersey Central have discovered that their daily trip to New York need not be a burden unless they make it so. They have organized a club, keep their own car, and make the time spent in going to and from business the jolliest hour of the day.

WEDDING RINGS.

They are of Ancient Origin, and Signify Good Faith and Fidelity.

"You want to know why the ring is used as a matrimonial pledge?" said a learned Smithsonian curator to a Washington *Star* writer. "The reason is very well known. It is employed as a token of good faith because the ring was originally and primarily a seal. In ancient Babylon, 4,000 years ago, all documents were attested by seals, as they are now, and the merchants very usually wore their seals on their finger rings of gold and other metals. With these signets they impressed their own private and particular devices upon the agreements and contracts of all sorts, thus making them good and binding. Documents in those days were not written upon paper, but with a wooden stylus upon moist clay, which was subsequently hardened by baking.

"From this source the seal has come down through the more modern civilization of Greece and Rome to the present day as a sign of good faith. It is with that significance that it is placed upon the third finger of the bride's left hand to seal the contract between herself and her newly made husband. Also it is surmised that the ring is intended to remind the wife of the fidelity she owes. Furthermore, the circle is the emblem of eternity. But why, you ask, does the bride choose the third finger of the left hand to wear her ring on? Simply because the ancients supposed that a nerve ran directly from that finger to the heart. I need hardly say that the researches of modern anatomists have shown this to be an error, but the custom survives. The courtesans of Rome used to wear their rings upon their thumbs, because the thumb was sacred to Venus.

"Hebrews regard the ring in the ceremony of marriage as of extraordinary importance. It must be of a certain value, certified to by the officiating rabbi, and it must be absolutely the groom's own property—not obtained by gift or purchased on credit. There are a number of curious superstitions about wedding rings. If one is broken it signifies to the wife that she is going to lose

her husband. I really think that a majority of women never take off their wedding rings, believing that to do so would occasion misfortune.

"The most extraordinary custom relating to wedlock that I know of prevailed in England about the year 1800 and before, particularly in Lincolnshire, and was called marriage en chemise. A woman with some means of her own, marrying a man who was embarrassed financially, would go to the altar with nothing on but her smock, having been previously undressed to that primitive garment by her bride-maids. This was considered to signify that the wife brought the husband nothing, and that therefore his creditors could have no hold upon her property for his debts. Sometimes a sheet was worn merely for the same purpose. Hence comes the expression, sometimes employed by uncompromising papas in the old days: 'If you want my daughter, sir, you must take her in her smock.' This implied that she would have no fortune."

Chinese Methods in Agriculture.

[Providence Journal.]

We are to-day confronted in America with a serious shrinkage in farm values, and at the East especially, with the abandonment of these lands, since they produce no longer satisfactory material results. It is just here that the despised Chinaman offers a valuable lesson with a suggestion which we would do well to heed. We seem to have been induced to prodigality almost from the very start by the comparative richness of our American soil. Where the earth had but to be scratched in preparation for a crop, and artificial stimulants were altogether unknown, we forgot in part our common heritage of hard and persistent labor, and fondly imagined that the land would never, or only at some remote period, "run out" in productivity. As a result, the natural exhaustion of the soil resultant from constant employment drives us to sheer despair, and the older farms are deserted for others which in turn must share an identical fate. We do little for the land's improvement. Its exhaustion is the fact forced upon us, and we flee rather than face the problem. But the Chinaman does nothing of the sort. In his native country he would be deprived of his farm or his garden if he refused to cultivate it, and instead of abandoning his possessions, which would prove, indeed, suicidal there, with the crowded conditions of population, he sets himself to the work of making the most of what he has. Everything of possible use in fertilization is scrupulously saved, every rice stalk is planted as seed and replanted by hand in water; rain water is held universally in ponds or in holes for purposes of irrigation, and in these reservoirs fish are invariably grown. Where

human labor is vastly cheap and cattle and beasts of burden are considered costly carriers and producers, it is natural that human labor should be employed for almost everything. It is said that there is practically no plant weeds visible in the most thickly populated parts of the empire, since there is no room for them, and since they are destroyed in a country which examines even the roots of plants to remove or kill insects or grubs. All sorts of methods to induce the rich growth of seeds are employed, and fertilizers are applied to the roots of plants directly rather than at the surface of the ground, where evaporation and diffusion would result in waste. This seems peculiar to farmers in America, where the total loss from sheer wastefulness in the course of a year is something upon which a Celestial would look with woe; but it is only the extreme practice of economy which the American agriculturist needs to learn. Indeed, this same principle of economy has become a distinctive feature of our higher grade farms, and the most advanced farmer will be found rendering available material and space which the old-style producer would let go to waste. It is an unpleasant spectacle which the Chinese agriculturist presents in his means and methods, without question, but is scarcely less pleasant than that of some short-sighted American farmers, whose improvident habits and heri- tage carry them to the other extreme.

How to Eat a Watermelon.

[Atlanta Constitution.]

It is said in Florida that the way to eat an orange is to put your nose in it. This advice applies to the watermelon in the most emphatic manner. There is nothing fit to eat in the melon but the heart, and that should be torn out and devoured bodily, and if the juices should run down the neck and into the sleeves, so much the better. Sweets to the sweet—and nothing could be sweeter than these juices, which embody the fruition of the year, and all that is best in the seasons. The knife is a deadly weapon. It destroys the flavor and has a deadly effect on the fruit. People who understand their business never use a knife, but go at it like pugilists, and the more barbarous the attack the finer the feast.

THERE are now two American built locomotives running on the Tokio-Kioto Railroad in Japan in competition with two similar English locomotives, all doing the same amount of work, on a mountain grade of 132 feet per mile for ten miles of the distance. The American machines are of the Baldwin make; the English from the shops of Nasmyth, Wilson & Co. They are running in competition to prove their respective merits.

Following the Leader.

[Locomotive Engineer.]

For some reason best known to themselves, a flock of sheep will follow anywhere a bell-wether will lead—even into a lake—but that is no reason why sane human beings should do so—unless we confess that they have no more brains than the average head of mutton—which we do not.

Wherever we look back into the history of the human race we find little or no progress where the people simply followed leaders; progress has always been made where people ignored their leaders and did a little thinking and judging for themselves. The high priests of many a nation have kept its people in bondage simply because the people have blindly accepted what the priests have said, without bothering themselves whether their teachings were correct, and for their own good.

What was all right for the ancients will not do for us—if it would, we would be wearing breech-clouts instead of coats, pants and vests. Everything has changed, even religion has been modified a great deal to adapt it to the wants of this age; but still we find plenty of laboring men who have set up in their hearts leader idols, and they blindly accept what they say as the law and gospel.

One man believes in a certain party, he is a politician of the regular ward school; whatever the party leader or the party organ does or says is so with him; its simply so, no ifs nor ands about it—this is following the leader.

Here is another man that follows the same line of reasoning in regard to business transactions, in religion, in love and marriage, or—in worst of all—labor orders, here is where there is more blind leader worship than in any other place.

We do not object to men loving and honoring their brainy men or those who represent them before the public, nor to the maintenance of these men of brains in exalted positions; we object to such as worship their acts without knowing anything about the acts, and to the leaders who think that the way to lead is to force the rank and file to believe and do as they do.

The safety of the people, of labor organizations, of churches, of nations, lies in the masses thinking about the questions of the hour—especially true of labor organizations.

Then the man who pretends to lead his fellows by organizing a great body guard that come and go at his beck and call, who applaud his acts and shout down and denounce those who, by word or deed, differ from him, is no leader at all. He is a curse, a false idol.

The true leader of laboring men will not try to have the members of his order do as

he does, or think as he thinks; that is not his mission, and he knows it. His whole aim is to induce the individual members of his order to think for themselves, to debate each and every topic that comes up in the affairs of the order. His is an arduous task, and he spends no time in seeking a re-election. He knows full well that it is the average intelligence of the members that will keep him and his order off the rocks, so he simply does and says things to make his men think and study the problems for themselves; he is careful to express no decided opinion on a new and complex subject until he has put the case before his constituents and heard it discussed, then he gets a consensus of opinion that is far safer for him to follow than an idea of his own, perhaps biased in some way almost unknown to himself.

Always hear both sides of any case before deciding anything about it, then go quietly off by yourself and forget who or what you are. Put yourself in the place of the parties on both sides, look at the subject from every point of view, and try and decide the case as you would wish it decided if you were in either place; if they differ, split the difference, come to some decision in the case as near fair as you are capable of deciding, and then express your convictions, regardless of who frowns or who smiles. Be honest, be just.

Have ideas and opinions of your own, but do not confound opinions with crotchets and hobbies; think, reason; forget the results to yourself, and think of the results to the majority of your fellows—what is best for the majority is usually a good thing to have—even though it hurts some one.

When you find a man who goes to the front, and is counted a leader, see if he seeks to enlighten, if he reasons with his fellows, if he seeks their aid and council, if he presents arguments instead of statements, if he denounces no one who differs with him. If he is this kind of a man he is safe enough to follow, for he simply calls your attention to an important subject, gives you his reasons, and leaves you thinking on the subject—he has done good, if it never again comes up.

If, on the other hand, he simply announces so and says so, if he pats all those who are with him, and slaps at those who differ, he is the leader *not* to follow. He is sure to jump into oblivion some day—don't be too close behind.

Read books, hear lectures, sermons and speeches, not to adopt or renounce the arguments or theories advanced, but to aid you in your research in the matter, to help you form some opinion of your own—to help you think.

The best labor leader in the world—and he never pretends to lead at all—is the man who *thinks*. He promotes discussion and

argument, he educates, he builds on sure foundations, for he puts into the individual members of his followers the reasoning power; each is an excellent factor, reasoning for himself; in a combination of such men there is little danger of the majority making very bad decisions in cases of trouble—every man is a leader.

The worst labor leader in the world—and he is a self-acknowledged one—is the leader who does all the thinking for his crowd; they are the force in his hands—he rules by force, he crushes the individual thinker with his frown, he usually rides rough-shod over opposition, nurses favorites, and rings of heelers. He is the brains—his followers the hands and feet. The combination won't work, it don't balance. Nature furnished one set of brains for every pair of hands and feet, and never intended that men should form themselves into associations, where one pair of hands kept still, and one brain worked, and a thousand other brains kept still, while four thousand feet and hands pawed gravel.

The Potato.

[American Rural Home.]

The potato is one of the most important of cultivated plants, and in universal cultivation in temperate parts of the globe. It is a native of mountain districts of tropical and sub-tropical America, probably from Chili to Mexico, but there is some question as to where it is really indigenous. Humboldt doubted if it had ever been found truly wild, but subsequent travelers of high scientific reputation, expressed themselves as thoroughly satisfied. Maize and potatoes are the two greatest gifts which America has given to the rest of the world.

The potato has been cultivated in America and its tubers used for food from times long anterior to the discovery of America by Europeans. It seems to have been first brought to Europe by the Spaniards from the neighborhood of Quito in the seventeenth century. No more important event of its kind has ever taken place than the introduction of potato culture into Great Britain and other European countries. It was long called "Batatas," or sweet potato, which is the tuber or plant meant by English writers down to the middle of the seventeenth century. It appears to have been brought to "Ireland from Virginia, by Hawkins in 1665," "and to England by Sir Francis Drake in 1623."

BUTCHER—What can I send you up to-day, Mrs. Styles?

Mrs. Styles—Send me a leg of mutton, and be sure it is from a black sheep.

Butcher—A black sheep!

Mrs. Styles—Yes; we are in mourning, you know.

Hints Worth Heeding.

[Adapted from Maher's "Practical Hints."]

When a man has his business in perfect working order, and knows that, just then, a little more or a little less effort on his part will be answered by increased or decreased profits, it is hard for him to believe it wise for him to leave his duties for an hour, even though he is overworked. But one of the highest duties a man owes himself is to give his brain an occasional rest. There is a good deal more in life than simply adding to one's bank account. There is more honor in being a good citizen than in simply growing rich. It is poor policy to be thoroughly posted in all that concerns your business and be out of all knowledge of the great world. A man wants to forget his business occasionally—ought never to carry his cares beyond his store door. A night's respite from business cares will send you back to them with renewed strength and a clearer head.

Do not imagine that your business will go to the dogs if you leave it for a day or two. If you have been thorough with your men—if you have faithful and interested employes—the machine will jog along smoothly enough until you return. We are all apt to flatter ourselves that we are doing what no other person could do; but, not infrequently, something happens to show us that we are not nearly as indispensable as we imagined—in fact, that a division of labor in our business would be vastly to its advantage. Our subordinates, if left in charge, occasionally will have a chance to carry out some ideas of their own, and these, in a majority of cases, are decided improvements. The man who repulses suggestions from those under him—gives his men no credit for knowing anything beyond the steady routine of their employment—loses much that would be of assistance to him, falls into a rut and stays there, much to his detriment. The man who cannot learn something from contact with other men, whether employes or outsiders, is not a healthy man.

Business is a master that soon makes abject slaves of us if we will; but, with a well established trade, one should be master of his business. With probity, industry, and economy, almost any man, by well directed effort, may be prosperous. Whatever progress is made without this foundation is deceptive.

STRANGER—Can you tell me what that sound is?

Policeman—I'm slightly deaf, and don't hear it. What is it like?

"Like a drove of horses on a trot, but I don't see any."

"It's the Young Ladies' Seminary out walking. Here they come 'round the corner."

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

FEBRUARY, 1891.

Assessment Notice for February.

OFFICE OF GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., February 1, 1891. }

ASSESSMENT No. 18, \$2.00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death of the following members entitled to all the benefits of the order, viz:

CLAIM No. 360. Samuel Beattie, of Triumphant Lodge, No. 47, died of Typhoid Fever, June 23, 1890.

CLAIM No. 361. Sidney Vaughan, of Dominion Lodge, No. 67, died of Tuberculosis, October 8, 1890.

CLAIM No. 362. James L. Hill, of Northern Light Lodge, No. 127, died from injuries received in a Railroad Accident, October 12, 1890.

CLAIM No. 363. Henry D. Creasey, of Trinity Lodge, No. 83, died of Smallpox, November 13, 1890.

CLAIM No. 364. Daniel Callen, of Arbitration Lodge, No. 320, died of Consumption, November 22, 1890.

CLAIM No. 365. W. J. Williams, of Lake Erie Lodge, No. 241, was killed by Falling Under Train, November 25, 1890.

CLAIM No. 366. John Wilson, of Steptoe Butte Lodge, No. 419, was killed by Railway Accident, November 28, 1890.

CLAIM No. 367. Peter Lanser, of Maple City Lodge, No. 198, died of Typhoid Fever, December 9, 1890.

CLAIM No. 368. Andrew J. Schnorr, of Neches Lodge, No. 156, was killed by Railway Accident, December 9, 1890.

CLAIM No. 369. George H. Dunn, of Faith Lodge, No. 200, was killed by Falling Under Train, December 10, 1890.

CLAIM No. 370. Frederick Kerns, of Lake Erie Lodge, No. 241, died of Heart Failure, December 13, 1890.

CLAIM No. 371. William Morton, of Overland Lodge, No. 123, died from injuries received by Falling Under Train, December 14, 1890.

CLAIM No. 372. Jerry Curtin, of Buckeye Lodge, No. 239, died of Typhoid Fever, December 16, 1890.

CLAIM No. 373. Albert J. Ebersol, of Red River Lodge, No. 8, died from injuries received in a Wreck, December 18, 1890.

CLAIM No. 374. John L. West, of Adair Lodge, No. 100, was killed by Collision, December 18, 1890.

CLAIM No. 375. Fred R. Jennings, of Violet Lodge, No. 365, was killed by Collision, December 26, 1890.

CLAIM No. 376. Dominick Philbin, of S. S. Merrill Lodge, No. 188, died of Consumption, December 28, 1890.

CLAIM No. 377. James McNamara, of Central Ohio Lodge, No. 299, died of Hemorrhage of Lungs, December 30, 1890.

CLAIM No. 378. John Clair, of Enterprise Lodge, No. 75, died of Paralysis, December 30, 1890.

CLAIM No. 379. Dewitt Kemmerer, of Just In Time Lodge, No. 149, died from injuries received in a Collision, January 2, 1891.

CLAIM No. 380. Alfred T. Hove, of Falls City Lodge, No. 103, was killed by an accidental Pistol Shot Wound, January 7, 1891.

CLAIM No. 381. Charles H. Spath, of Frontier City Lodge, No. 92, died of Asthma, January 16, 1891.

An assessment of Two DOLLARS (\$2.00) has been levied for the payment of the above claims, and you are required to forward said amount for each member whose name appears on the rolls of membership FEBRUARY 1ST, 1891, said remittance to reach the Grand Lodge not later than FEBRUARY 20TH, 1891, as provided in Section 50 of the Constitution. Any lodge failing to make returns as above provided will stand suspended from all the benefits of the order, as per Section 52 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M. }

EUGENE V. DEBS, G. S. and T.

Addresses Wanted.

CHAS. H. THEWS—A member of Hercules Lodge, No. 63; when last heard from he was at Danville, Va. Anyone knowing his whereabouts will please correspond with the Secretary or Collector of Hercules Lodge, No. 63, Danville, Ill.

J. CAHILL—Was at one time a member of Fortune Lodge, No. 120, Syracuse, N. Y., and left there on or about September 11, 1888. He was last heard from in Chicago in November of the same year. Information is anxiously desired by his wife, Mrs. J. Cahill, House of Providence, Syracuse, N. Y.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER,
TERRILL HAUPT, IND., January 1, 1891.

To Subordinate Lodges:

SIRS AND BROTHERS: The following is a statement of the Beneficiary Fund for the month of December, 1890:

Lodge No.	Amount.	Lodge No.	Amount.	Lodge No.	Amount.	Lodge No.	Amount.	Lodge No.	Amount.

Magazine Agents ATTENTION!

PRIZES FOR 1891!

\$350.00

In Cash Prizes.

The following prizes will be awarded by the Grand Lodge for the year 1891, viz.:

1ST PRIZE.

To the Magazine Agent having the largest number of paid subscribers to his credit on the Grand Lodge books December 1st, 1891, Two Hundred (\$200.00) Dollars in Cash.

2ND PRIZE.

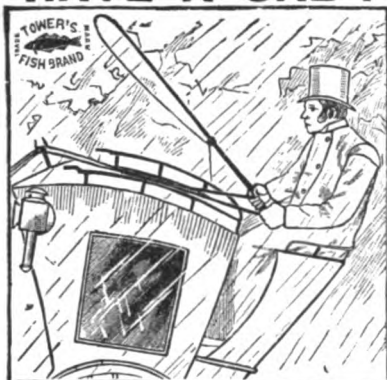

To the Magazine Agent having the second largest number of paid subscriptions to his credit, One Hundred (\$100.00) Dollars in Cash.

3RD PRIZE.

To the Magazine Agent having the third largest number of paid subscriptions to his credit, Fifty (\$50.00) Dollars in Cash.

The foregoing cash prizes should prove an incentive to every Magazine Agent in the order to roll up his sleeves and enter the competition.

HAVE A CAB ?

When you are addressed as above, your first impulse is to look at the driver. If the day be stormy and the driver is a wise man, you will find that he wears a "Fish Brand Slicker," and he will tell you that he is as comfortable on the box as his passenger in the cab, and that for his business this coat is invaluable. When you get once inside a "Fish Brand Slicker," there's no such thing as weather for you. It doesn't make the smallest difference whether it rains, hails, sleets, snows, or blows. You are absolutely and solidly comfortable. Get one at once. No danger of your not liking it afterwards. It is a waste of money to buy any other waterproof coat. They are worthless after a few weeks of hard usage. Beware of worthless imitations, every garment stamped with the "Fish Brand" Trade Mark. Don't accept any inferior coat when you can have the "Fish Brand Slicker" delivered without extra cost. Particulars and illustrated catalogue free.

A. J. TOWER. - Boston, Mass.

TO
BOYS
AND
GIRLS
UNDER
18
YEARS
OF AGE.

If any boy or girl under 18 years of age wants a strictly first-class Safety Bicycle without paying one cent of money for it, they can obtain it by sending us their name and address, as we shall give away 1000 or more on very easy conditions for advertising purposes. We have both boys' and girls' styles. Address, with stamp, Western Pearl Co., 308 Dearborn St., Chicago, Ill. Mention the name of this paper when you write.

A FEW FIRST-CLASS AGENTS WANTED IN THE BROTHERHOOD.

VARIABLE EXHAUST DAMPER, FOR LOCOMOTIVES.

PATENTED NOVEMBER 10, 1885.

The use of the Damper, placed under control of the Fireman, assists him in the performance of his duties, so that, according to his testimony, the difference is as day and night, as compared with an engine without the Stack Damper.

RESULTS:

TO THE FIREMAN.—Less labor, no coal gas in the cab, no blowing of cinders and sparks into the front of the cab when open, and easy control of the fire and steam pressure.

TO THE R. R. CO.—In most cases large saving of fuel, also preservation of the flue joints and firebox, and safety against fire from sparks.

TO THE PUBLIC.—Cleanliness and noiselessness.

SIDE BY SIDE.

**TWO HEROES, speeding toward their homes where Wife and Little Ones
await them, MEET THEIR DEATH while at
the POST OF DUTY.**

On Friday evening, October 3, 1890, a freight train, rushing down a heavy grade at full speed to the entrance of a tunnel, plunged into a land-slide which had completely blocked the entrance, burying the engine and piling up the cars in a heap of ruins. To add to the horror the wreck took fire. The Engineer and his Fireman were covered in the debris. The Fireman, **GEORGE KNUCKLES**, was caught by the arm, and was not released until about daylight the next morning, while **ENGINEER MCCOY** was literally buried beneath the pile of wreckage. With his head terribly crushed and his body almost cooked by steam and water, he finally succeeded, after more than an hour, in crawling out more dead than alive.

Both men were insured in the **RAILWAY OFFICIALS' AND CONDUCTORS' ACCIDENT ASSOCIATION**, and the history of their case is interesting.

ENGINEER JAMES B. MCCOY, Of Atlanta, Georgia,

was insured in the Railway Officials' and Conductors' Accident Association for \$1,000 at death and \$5 weekly indemnity. He was in a wreck on August 12th, being badly scalded and bruised. On August 16th, the Association sent him, while laid up, his first week's indemnity, and on Monday the 24th, the morning of his death, had sent him the balance of his indemnity for seven weeks. His first run after his recovery was that in which he was killed, on October 3d. He lingered in awful agony until three o'clock Saturday morning, when his brave soul went out from his poor, maimed body. At nine o'clock that morning the Association in Indianapolis learned of his death, by telegraph. Before ten o'clock they telegraphed to his widow \$250 Funeral Benefit, and it reached her four hours and a half before the remains of her husband were brought home. Saturday afternoon's mail carried the balance of his death indemnity, which was paid over to Mrs. McCoy, and her receipt in full obtained on October 8th, just five days after his death. The following acknowledgment was received October 10th:

ATLANTA, GA., October 8th, 1890.

W. E. BELLIS, Secretary Railway Officials' and Conductors' Accident Association, Indianapolis, Ind.:

DEAR SIR:—I have this day received from J. D. Collins, your agent,

the sum of \$1,000, being the full amount due me on policy held by my late husband, J. B. McCoy, who was killed at Little Tunnel, E. T. V. & G. R. R., October 4th, by running into a land-slide. I wish to extend my heartfelt thanks to the noble Accident Association. The \$750 funeral benefit was paid to me in six hours after my husband's death occurred. The full amount of \$1,000 was settled in five days after date of death.

I remain, truly yours,

Mrs. MELBAH McCoy.

FIREMAN GEORGE KNUCKLES, Of Atlanta, Georgia,

had his arm badly crushed and burned, but the Association did not learn of his being in the wreck until Monday evening, October 6th. He was insured for \$2,000 death and \$10 weekly benefit. On Tuesday the Association sent him his first weekly indemnity. On Thursday they were notified that his arm had been amputated on the night of October 6th, at the hospital in Dalton. The same day, October 9th, they telegraphed to him the sum of \$250, and sent by mail the balance, \$750, due him as *Half Benefit for loss of one limb*. On Saturday morning, the 11th, they were notified that he had died from his injuries on the night of Tuesday, October 7th, and the same day (October 11th) sent to their agent in Atlanta the remaining \$1,000 having settled the full claim of \$2,000 in five days from the first information received of his injury, and within four days of his death.

CELEBRATED

Pocahontas Semi-Bituminous Coal

1 Broadway, New York. 308 Walnut St., Philadelphia.
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all Railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,800,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

A MILLION TESTIMONIALS TO PROVE IT

Sold by Druggists in all parts of the World.

OFFICES AND LABORATORIES:

London, Melbourne, Frankfort, Paris, Toronto, Ont., Rochester, N. Y.

A conductor on a Western Express is the marvel of those who have been let into his secret. Although having had both of his feet amputated, he is a conductor of extraordinary ability.

He passes through his train going at the rate of fifty miles an hour. The car jolts, hitches, sways, and he retains his balance without the least awkwardness.

At stations he alights with agility, watches his passengers and gives signals. boards his train and walks the passageway with the steadiness of one possessing his natural legs.

Day after day for three years he has performed this round of duty, and not a soul has had occasion to suspect that he operates on a pair of artificial legs with rubber feet, and only those to whom he voluntarily reveals his condition ever know of his dependence on artificial extremities.

All this is made possible by the virtues of rubber, which largely composes the feet; the old methods of artificial limbs, with wooden feet and mechanical joints, would render this man unsafe, tottish, unsteady and unfit for a position that requires sound footing. The engraving represents Mr. Wade operating on his artificials in his chosen profession.

Conductors, engineers, firemen, brakemen, and men of all trades, who have met with the loss of either extremities, have been restored, and enabled to resume their labors by the use of artificial limbs with rubber hands and feet of the MARKS Patent.

Subjects can remain at home and have artificials made, with fit guaranteed. One-half the legs and arms are made from measurements and profiles, without the presence of the wearer. Indorsed by the United States Government, the eminent surgeons in the country and over 11,000 men, women and children who wear them, residing in all parts of the world.

A treatise of 400 pages, with 200 illustrations, and 1,000 testimonials, sent free of charge.

Address,

A. A. MARKS, 701 Broadway, New York City.

**EXICAN
USTANG
Liniment.**

IT IS

for **MAN** and
BEAST.

Penetrates Muscle,
Membrane and Tissue
to the very Bone Itself.

THIS NO SUBSTITUTE WILL DO!

LOCOMOTIVE

FIREMEN

**YOU WISH PROMOTION. HEALTH
MEANS ADVANCEMENT.**

YOU ARE AMBITIOUS TO BECOME AN ENGINEER.
Preserve your Muscular Strength by a timely application of

M.M.L. **MEXICAN MUSTANG
LINIMENT,** which gives immediate relief and speedy cure

to Rheumatism, Sciatica, Lame Back, Pains between the Shoulders, Facial Neuralgia, Sore Throat, Toothache, Bites, Bruises, Bunions, Corns, Burns, Scalds, Cuts and ALL OLD SORES.

As Sunshine, Rainstorm and Snowstorm are mingled in the honest service of all Trainmen, the Faithful **MUSTANG** is constantly needed to cure **CHILBLAINS, FROST BITES** and all **INFLAMMATION** arising from exposure to severe weather in climbing over the mountains and plowing through Snow Blockades.

Mustang Liniment discounts all "lay-offs" from **LUMBAGO** or **PNEUMONIA**, if applied in time and **WELL RUBBED IN!** The **FIREMEN** who "handle the scoops," "shine the brasses," "clean the jackets" and "oil the bearings;" the **ENGINEERS** who hold on to the "Throttles;" the **BRAKEMEN**, whose lives and limbs are in constant danger for want of more and better "automatic car couplers;" the **TRAINMEN**, climbing over "Icy Freight Cars;"—in truth, the **CONDUCTORS, SWITCHMEN, YARDMEN, SECTIONMEN, FREIGHTHANDLERS, BAGGAGE-MASTERS** and all Railroad men need

—MEXICAN MUSTANG LINIMENT.—

Apply it **VIGOROUSLY!** It will achieve the *Climax of results!* 'Tis the *Acme of Reliable Remedies!* It is not a new, untried article. For nearly half a century it has been sold all over the civilized, progressive world, and has cured *millions* of both **MAN** and **BEAST!**

No Mechanic wants to be a candidate for an "ambulance" or a "shutter;"—hence all should keep the **Mustang Liniment** in Shop, Stable, Factory, Kitchen, Round House, Toolchest, Engine Cab. All Superintendents and General Managers of Railways should see that a good stock is kept among their stores.

To **FIREMEN** and all **R.R.** men we say: Let the "heal-light" of intelligence burn in your brains, devotion to duty warm your hearts, and the glow of **MUSTANG LINIMENT** run up and down your Spinal Column, and you'll be all O K for work. If promotion is to be had, you'll "get there" sure! Whether you win your way on a six, eight or "ten wheeler" makes no difference.

LYON MANUFACTURING CO., 59 FIFTH AVE., New York City. (SOLD BY ALL DRUGGISTS.)

READ WHAT IT HAS DONE!

Office of the City Auditor,
Richmond, Va., Nov. 15th, 1884.)
Messrs. LYON & CO., New York.

Gentlemen: On Saturday last, November 8th, my son, a youth or seventeen years, was badly burned on the hands and face by an explosion of powder while assisting in firing a salute in honor of the election of Cleveland and Hendricks.

I at once commenced the use of your **MEXICAN MUSTANG LINIMENT**, and to-day, Saturday, November 15th, he is almost entirely well. His hands and face were nearly roasted. I have used about 10 bottles, 25-cent size, and it has completely healed the burns without leaving a scar. I have no doubt you have any number of testimonials as to the efficacy of your Liniment, but I cannot refrain from adding my testimonial with my heartfelt thanks for the great benefit my son has derived from its use.

I trust you will continue its manufacture, that all suffering humanity may be benefited. It is worth its weight many, many times in gold.

I may add that no doctor was called in or consulted at any time since the accident.

The **MEXICAN MUSTANG LINIMENT** did the work entirely.

Respectfully yours,
W. J. GENTRY, Secretary,
Richmond City Gas Works.

ALL GENERAL MANAGERS OF RAILWAYS should see that **MUSTANG LINIMENT** is kept in the Shops and carried on all the Freight and Passenger Trains. It is as necessary as Axle Grease for your Trucks, or Oil for Locomotives. Its timely use would save great suffering, much expense and many lives.

Every loving, devoted wife will see that her husband has **Mexican MUSTANG LINIMENT** always kept in his Kit!

If you have Diseases of Skin, Ulcerated or Swollen Glands, Abscesses or Sore Leg, Carbuncles or Boils, Hip Disease, White Swelling, King's Evil, Sore Eyes of Scrofulous Origin, Kidney and Liver Diseases, Headache and Neuralgia, Bowel or Stomach Trouble, or acquired Blood Disease,

THE CACTUS BLOOD CURE WILL CURE YOU.

MEXICAN NATIONAL ENGINEERS SPEAK.

We, the undersigned, engineers of the Mexican National Railway, and members of the Brotherhood of Locomotive Engineers of Mexico, certify that we have used the CACTUS BLOOD CURE for blood diseases, and we can truthfully say that with ourselves as well as with our acquaintances the remedy has effected a perfect cure when other medicines have failed.

Please use this certificate for the benefit of our brother engineers and the general public.

W. M. DAVIS,
J. O. CASKEY,
JAMES THOMPSON.

GRAND SPECIAL SALE

—OF THE—

RAILWAY MEN'S FAVORITE WATCH.

We are making a strenuous effort to introduce our goods among railway men throughout the United States, and in order to attain our object we are well aware that it is necessary to offer you the best goods, at prices so low that you cannot afford to buy elsewhere. **BEST IN THE WORLD.**

The Dueber-Hampden Watch!
Cheapest House in America.

The John C. Dueber movement, made by the Hampden Watch Co., is suitable to the railway service in every respect. It is solid nickel, handsomely damasked, full ruby jeweled (4 pairs in gold settings), chronometer balance, patent pinion and escapement, Breguet hair spring, patent regulator, and accurately adjusted to heat, cold and position. This movement is specially guaranteed by the manufacturers to be the best time-keeper in the world. It will not make any noticeable variation of time, and is, consequently, almost indispensable to railroad men.

We quote the John C. Dueber movement in Silverine, Coin Silver and Gold filled cases. Silverine cases are guaranteed to retain their color equal to coin silver. Our Coin Silver cases are of full standard value. The Gold Filled cases are made of two heavy plates of solid 14 K Gold over fine composition metal, and are warranted to wear 20 years.

ALL OUR GOODS ARE WARRANTED.

LOCOMOTIVE FIREMEN'S MAGAZINE.

VOL. XV.

MARCH, 1891.

No. 3.

OFFICIAL ORGAN OF THE
Brotherhood of Locomotive Firemen.

Entered at Terre Haute Postoffice as second-class matter.

PUBLISHED ON THE FIRST DAY OF EACH MONTH AT
TERRE HAUTE, INDIANA.

TERMS:—ONE DOLLAR PER YEAR IN ADVANCE.

ADVERTISING RATES given on application to
W. N. GATES, SOLE AGENT,
29 Euclid Ave., Cleveland, Ohio.

COMMUNICATIONS should be addressed to
LOCOMOTIVE FIREMEN'S MAGAZINE,
TERRE HAUTE, INDIANA.

EUGENE V. DEBS, . . . *Editor and Manager.*

SELF PROTECTION.

Manifestly, workingmen, by organizing, are actuated by a purpose to protect themselves, as far as possible, against rapine, which, regardless of law, is ceaselessly going forward.

The methods adopted by the plunderers of workingmen, are many and various, often shrewdly concocted and occasionally, open, bold and impudent. To resist the ceaseless assaults, is one of the purposes of organization. There is nothing covert about it. It is not war upon capital, nor in fact upon capitalists *per se*—but it is a war against wrong and injustice, regardless of authors—and the more honest men study the subject the more pronounced is the verdict, that the purpose of labor, in organizing for protection, is wise and proper.

In their deliberations, workingmen say that capitalists wrong them, and that it is the next thing to an impossibility to obtain

a redress through the courts, that poverty has no show when pitted against wealth and that the laws are so framed, and the practice of the courts is so vicious, that money can always find a way of escape for those who have it.

When such declarations are found in an organ of labor a hue and cry is raised, and charges of socialism, anarchism, or some other ism, are preferred against those who assert that the administration of the laws, is, all too often, a stupendous sham and fraud, and public sentiment is manufactured which decries labor organizations, and corporations seek to crush them out of existence.

But occasionally, the administration of laws is so flagrantly one sided, so flamingly outrageous, that the press of the country feels called upon to point out its glaring defects, and demand that a remedy shall be found and applied.

In this line we reproduce an editorial article in the *Chicago Times* of December 20, captioned "Law-encouraged Rascality," as follows:

Crimes against commerce are serious and far-reaching. They stab confidence, which is the basis of all business activities. The forger of a warehouse receipt, the officer of a corporation who over-issues stock, the banker who takes deposits and does not return them, are all responsible for mischief beyond that which they themselves see. They are impairing confidence. If every time a bank discounted a warehouse receipt or a certificate of stock, or every time a depositor brought money to a bank, it would be necessary to pause while inquiry was made as to the sufficiency of the receipt or the certificate or the solvency of the bank, rapid movement of commerce

would be impossible. Confidence is the very life-blood of commerce. Destroy it and the volume of business will be reduced to actual cash transactions, wherein each piece of money will be tested. Impair it and many laudable enterprises that would be profitable come to naught. Confidence is 90 per cent. of present business operations rapidly conducted. Credits, not money, pass. Panic is a result of loss of confidence, a paralysis of activities. A doubting money world becomes stagnant. Men with money hoard it. Men without money but possessing aptitude for the profitable employment of it are denied opportunity. Everybody is skeptical about everybody else.

Guided by the law of self-preservation the commercial world ought to guard itself with vigilance against assassins of credit. Every faithless banker, every utterer of forged negotiable paper, every over-issuor of stock, is in commerce what the footpad, the thug, the bully, and the assassin are in the human family. The laws of society are aimed against all of these, but it is a great misfortune that the law is not faithfully executed, and fails, therefore, as a salutary deterrent. Men convicted in Cook county of crimes against commerce walk the streets of Chicago spared from condign punishment because some quibble of the law is made to overshadow the plain fact of guilt and to give freedom to rogues. Assassins of credit are usually shrewd fellows, who count carefully the cost of their operations. They may succeed and be enriched. They may fail and stand in peril of the penitentiary. But is that peril great? When they will have looked over the field of repeated failure to consign men of their stamp to the infamy of stripes, they are reassured. They retain sufficient plunder to secure the services of lawyers who are mighty in the splitting of hairs. They care nothing about the substantial merits of a case. Their search is for the potent technicality, and the record is that the finding of this assures freedom to any client who has the means wherewith to fight justice. Technicalities paralyze courts. They are the sure refuge of sinners. Confidence in their potency nerves many an aspiring criminal to pursue a reckless career of felony. He may lose repute. He will never taste the bitterness of penal servitude.

Within the last few weeks no less than three private banking establishments of Chicago have gone to the wall. An honest failure is possible but improbable. Arrests have been made in two cases upon the charge that the accused had taken deposits after their insolvent condition was known to themselves, an act which the statute makes a felony. Apparently the purpose is to prosecute these offenders. Conviction may be possible as the result of the zeal of the local prosecutor dealing with easily established criminal facts, but a conviction is far from implying punishment. With the money of innocent depositors defraying the expense the case is carried up on the inevitable technicality. There have been many bank failures in Chicago during the last twenty years. Does anyone recall that a single responsible officer of the delinquent concerns has gone to the penitentiary? That crimes against commerce are not adequately punished is no fault of the criminal code. The statute aims to cover every possible contingent.

It will be noticed that the *Times* writer starts out with the declaration that "crimes against commerce are serious and far-reaching"—but crimes against labor are far more serious and far-reaching. The burglar, who robs a bank, if caught, is certain to go to prison, but the bank president may rob a bank, and, as in Chicago and a hundred other cities, may walk the streets unmolested and their *entree* to uppercrust society is not forfeited.

To rob workingmen is to rob commerce at its fountain head, to cripple it at its birth. It is doubtless true, that "confidence is the very life blood of commerce," that is to say, there must be confidence in the integrity of men, so strong that from A to the end of the alphabet, every one has an abiding faith in the other, that they will not steal, cheat, commit neither perjury nor forgery, and when such confidence prevails business proceeds.

When workingmen have confidence in their employers, industries proceed, the forges flame and the anvils ring, and it is because such confidence does not exist and because the courts afford little or no protection, that workingmen are organizing for protection.

The article which we reproduce from the *Times* is worthy of the most careful perusal. It says: "Guided by the law of self-preservation the commercial world ought to guard itself with vigilance against assassins of credit." If this is true, is it not equally true, that workingmen should be guided by the law of self-preservation to guard their interests against methods which are devised expressly to rob, impoverish and degrade them? This is sought to be accomplished through organization.

The stale remark, that the courts are "open to all," and that "all are equal before the law," excites universal contempt, and the *Times* article brings the matter into the boldest prominence. The assassins of credit, like the robbers of labor, have "sufficient plunder to secure the services of lawyers who are mighty in the splitting of hairs;" as a result, the assassins and robbers go free. Workingmen who have been robbed have no money to secure "hair splitting" lawyers, nor lawyers of any class, and as a result they

seek to guard their interests as best they can, through organization.

It is practicable to organize, and it is practicable for organizations to federate, and if this is done workmen will have little use for courts.

CRIPPLED RAILROADS.

The *Railway Age* of January 3, 1891, publishes three tables relating to railroads sold by foreclosure in 1890, and for fifteen years, from 1876 to 1890 inclusive, also of roads placed in receivers' hands in 1890. These tables form a highly interesting study. The *Railway Age* says:

We compile the following list showing railways in operation (not including several partly built lines on which much money has been spent) which were sold under foreclosure during 1890, with their mileage and the amount of capital which they apparently represent.

ROADS SOLD BY FORECLOSURE IN 1890.

Road.	Mile.	Funded Debt.	Capital Stock.
Ft. Mad. & N.W. (N.G.)	45	\$220,000	\$15,000
Scioto Valley	131	2,287,000	2,033,000
Ind. & Ill. Southern	91	1,229,000	1,400,000
St. Louis, Ft. Scott & Wich.	233	4,777,000	6,615,000
St. Louis & Chicago (breh)	8	100,000	100,000
Ohio, Indiana & Western	341	10,841,000	13,325,000
Columbia & Port Deposit	40	2,940,000	497,000
Kanawha & Ohio	129	1,154,000	12,200,000
Ohio & North-Western	129	1,785,000	2,010,000
Sheff. & B. Coal, Iron & Ry	42	3,565,000	7,200,000
Tavares, Apopka & Gulf	29	385,000	620,000
Oregonian Ry. (N.G.)	152	1,000,000	900,000
Oakland & State Line	17	34,000	31,000
Columbus & Mayaville	19	200,000	850,000
Cleveland, St. Louis & K. C.	10	500,000	210,000
Jacks nville S'uth-Eastern	128	1,667,000	1,000,000
American Midland	23	460,000	460,000
H'ust'n E. & W. Tex. (N.G.)	192	2,091,000	1,920,000
Shreveport & H'ust'n (N.G.)	40	400,000	400,000
Peach Bottom (N.G.)	20	200,000	200,000
St. Louis Cable & Western	16	600,000	1,000,000
Harrisburg & Potomac	28	507,000	331,000
Chicago & Atlantic	247	9,798,000	9,543,000
Danville & New Riv. (N.G.)	75	700,000	398,000
Senandoah Valley	255	9,476,000	3,696,000
St. Louis, Arkansas & Tex.	122	34,784,000	23,083,000
Watahah, Griffin & N. A.	60	500,000	1,011,000
Wilmington & Holmesburg	4	50,000	100,000
Wilmington & Glastonbury	9	150,000	150,000
Total 29 roads	3285	\$90,851,000	\$91,654,000
Total debt and stock			182,455,000

It will be observed that the funded debt, or bonded debt, was practically the same as the amount of capital stock, the difference being only \$403,000—taking the two items—and it will be seen that the twenty-nine roads averaged \$47,770 per mile. It is well understood that the actual investment to build and equip the roads did not cost half that amount; probably the amount repre-

sented by their capital stock, \$91,654,000, built and equipped the roads. This done, the roads were bonded for about their cost, and then came the effort to pay dividends, on double the cost of the roads—upon capital stock and bonds. As this could not be done, the outcome was sale, and the bondholders got the property and the stockholders lost \$91,654,000.

Some very curious facts occasionally come to the surface relating to railroad building. It should be understood that all stockholders are not snowed under when a railroad is sold under foreclosure; only the "gudgeons," those who think everything is straight. It is said by those who know, that capitalists are solicited to take stock, but in taking stock in the road they take no stock in estimates of earnings. They will put in their money, but will have security for it in some shape, and the "ground floor" business proceeds about as follows: A takes stock to the amount of \$50,000. To make him secure, and provide, possibly, for a very good thing, A in the first place gets certificates of stock to the amount of \$50,000. To secure him against final loss he is given first mortgage bonds to the amount of \$50,000; and to make the investment unquestionably good, he is given \$50,000 in second mortgage bonds. In this case, for \$50,000 he gets securities amounting to \$150,000. Tabulated as follows:

Capital stock	\$50,000
First mortgage bonds	50,000
Second mortgage bonds	50,000

Total \$150,000

In this way, certain parties who are "up to snuff" get the railroads built. The effort is to make it a good thing and pay dividends on cash and water. If the fortunate investor gets dividends on his stock he is O. K.; if the road is exceptionally prosperous he may not only get dividends on his capital stock, but interest on his first and second mortgage bonds. If the road is a failure, then he is safe, because his first mortgage bonds represent his investment, and with other bondholders he takes the road.

But there is still another phase of this transaction. Suppose an effort is made, by hook or by crook, to pay dividends on the

stock, then the holder of the \$50,000 capital stock is enabled to sell at par, and gets back all that he put in, and still holds \$100,000 first and second mortgage bonds. If the speculation looks favorable, or is made to appear a good thing, the second mortgage bonds may be floated at say 50 per cent, in which case he gets \$25,000 and is \$75,000 ahead, and still holds his first mortgage bonds. If, after this a foreclosure becomes necessary, the man is happy; he has \$75,000, and with others equally fortunate, takes the road. The lambs who have been shorn bleat for awhile, and then all is still. The press shows that railroad building is an unsafe business, but the building goes on. Those who manipulate things know how to make money, and they make it every time.

If all the facts could be known which the corporations know, and conceal, the world would stand amazed at the stupendous adroitness, the consummate skill, the splendid ability displayed in building, running and wrecking railroads. It is evidently one of the learned professions.

The *Railway Age* has the records of railroad wrecks during the last fifteen years, and the sum total of apparent loss is amazingly large, but if the real loss could be known the reader, we do not doubt, would have less difficulty in catching his breath. Here are the figures as furnished by the *Age*:

SUMMARY OF FORECLOSURE SALES FOR FIFTEEN YEARS.

Year—	No. roads.	Mileage.	Capital stock and bonded debt.
1876	30	3,840	\$217,848,000
1877	54	3,875	198,984,000
1878	48	3,906	311,631,000
1879	65	4,909	243,288,000
1880	31	3,775	263,882,000
1881	29	2,617	127,923,000
1882	16	867	65,426,000
1883	18	1,354	37,100,000
1884	15	710	23,504,000
1885	22	3,156	278,494,000
1886	45	7,687	374,109,000
1887	31	5,478	328,181,000
1888	19	1,596	64,555,000
1889	25	2,930	137,815,000
1890	29	3,825	182,495,000
Total in 15 years	477	50,525	\$2,865,235,000

It is seen that the capital stock and bonded debt of the roads which were wrecked and sold during the past fifteen years, represented a cost per mile of \$56,709, which is at least \$30,000 per mile more than their actual cost, the difference representing the amazing miracle, not of changing water into

wine, but into bonds and stocks upon which it was attempted to compel a gullible public to pay dividends, and since that could not be done for any length of time without great and serious inconveniences, the bondholders took the roads at say \$1,432,617,500, about what they cost. The water was unceremoniously squeezed out, the shorn lambs bleated for awhile, and then all was silent and serene.

The *Railway Age* furnishes still another table of "twenty-six companies, representing nearly 3,000 miles of lines and over \$105,000,000 as insolvent" and in the hands of receivers, as follows:

ROADS PLACED IN RECEIVERS' HANDS IN 1890.

Road.	Miles	Funded Debt.	Capital Stock.
*Jacksonville & S. E.	128	\$1,667,000	\$1,000,000
*Shreveport & H. (N. G.)	40	400,000	400,000
East Line & Red R. (N. G.)	121	861,000	615,000
Mobile & Girard	85	1,000,000	1,277,000
Florida Southern (N. G.)	307	3,000,000	2,595,000
Kansas City, W. & N. W.	259	4,400,000	2,773,000
Trinity & Sabine	66	1,340,000	
New Orleans & Gulf	68	1,000,000	241,000
Toledo & S. Haven (N. G.)	37	216,000	250,000
San Antonio & Aransas P.	560	11,445,000	5,000,000
Chautauqua Lake	23	513,000	600,000
Green Bay, Win. & St. P.	216	4,661,090	10,000,000
South Atlantic & Ohio	40	1,000,000	600,000
Covington & Macon	107	1,284,000	1,284,000
Lackawanna & S. W.	90	800,000	2,800,000
Zanesville, Mt. Ver. & M.	5	300,000	300,000
St. Louis, Alton & Sprg'd.	85	1,000,000	1,500,000
Oregon Pacific	166	4,500,000	5,000,000
Decatur, Chesap'k & N. O.	34	3,000,000	3,000,000
Columbia & Pug. S. (N. G.)	31	446,000	1,000,000
Pacific Coast (N. G.)	73	1,370,000	1,370,000
Empire & Dublin	32	120,000	320,000
Charleston, Cin. & Chic.	175	6,567,000	6,567,000
Chesapeake & Nashville	35	875,000	1,050,000
Pacific Short Line	130	2,600,000	3,000,000
Choctaw Coal & Railway	64	1,600,000	1,600,000
Total 26 roads	2963	\$50,885,000	\$54,142,000
Total bonds and stock			105,007,000

In the foregoing the indebtedness represents a cost per mile of \$35,438—at least \$10,000 per mile more than their actual cash cost, which, as compared with the tables preceding, indicates something rather favorable than otherwise, since it is manifest that less water has been used and it is quite probable that under judicious management of the receivers the roads will be again on their feet, and the stockholders, who unsuspectingly invested their cash, may not lose all they put in.

Take the entire mileage of roads sold and in the hands of receivers for the past fifteen years (53,488 miles), and it will be seen that it represents approximately about

one-third of the entire mileage of the country. Such a showing at the first glance is startling, but when it is considered that the roads were in numerous instances *bubble roads*, under *kite-flying* managements, there is really nothing amazing about it.

It is always to be deplored, when credulous and easily-duped people are caught and "done up." It does not matter whether the sharp practice is of the "gold brick," "bunko," or "stock watering" pattern, the victims always elicit sympathy, except perhaps in Wall street, where lamb shearing is conducted by such experts as Jay Gould and others. There the victims meet their fate by hundreds, and in the midst of the hubbub, few hear the rattle in their pockets as they hand in their checks and go down to their financial death.

When the roads are wrecked, the bondholders take them in, reorganization takes place, there is little water to require dividends, and their business can be transacted on a solid and sound basis.

There is nothing alarming in the tables furnished by the *Railway Age*; indeed it might be said that a few more first class railroad funerals could be celebrated, resulting beneficially to the public and emphasizing the adage, "Honesty is the best policy."

A MAN who was once a tramp recently died at Portland, Oregon, and bequeathed \$15,000 to a woman in Sacramento who years ago, when he was hungry, fed him. Some tramps, like some bankers, are mean men, and will steal, but some are honestly looking for work, and the discrimination should be made when writing of such unfortunates.

CARL SCHURZ says the trusts laugh at and ridicule the law passed by Congress to suppress trusts. The fun of the thing appears when it is known that about half of the members of the U. S. Senate are members of some sort of a trust.

AN Irishman, hearing that a switchman had been killed by being caught by a frog, remarked, "Be jabbers, he should take his shillalah with him the next toime."

THE FARMERS' ALLIANCE.

We have not studied critically the motives that have prompted the farmers of the country to organize what is called the "Farmers' Alliance." In a general way, we understand that they demand some legislation which, as they "feed all," shall, if possible, save themselves from starvation.

The farmers would, if they could, do away with National banks. That is to say, they would do away with National bank bills or currency, whereby the banks can, and do, expand or contract the circulating medium of the country at will, thereby giving them power to inflict untold evils upon the country.

The farmers, doubtless, believe it to be a stupendous wrong, to use no harsher term, for corporations to have the power to levy tribute upon the American people to pay dividends on *water*, and we assume that the farmers believe if railroads were content to pay dividends on honest investments they could reduce their rates and make as much or more money than at present. But the *Railway Age* takes a different view of the subject, and in a recent issue says:

The organized war against the railways of this country which has evidently been determined upon by the Farmers' Alliance in State and National gatherings, for the avowed purpose of compelling further reductions in the already low rates of transportation on farm products and merchandise, is a matter of most serious importance to railway employes, as well as to the owners of railway securities and to the manufacturers of railway supplies.

We do not suppose that the farmers ever dreamed of doing anything to injure "railway employes," nor do we see in what way the free coinage of silver or the issue of government "promises to pay" to take the place of National bank bills would result in the injury of men who operate the railroads of the country, and it is to be presumed that "railway employes" will in the future, as in the past, vote pretty much as they please, unless their employers shall find ways and means to intimidate them and squeeze their manhood out of them. The *Railway Age*, in pursuing the subject, injects into its article the following remarkable utterances:

Hitherto railway men, as such, have taken very little part in political campaigns. Left free by their employing companies to vote as they please, they have

followed their personal preferences and selected their candidates, often, without any regard to the attitude of the latter toward railway interests: not unfrequently, strange to say, they have voted for legislators and other officers on avowedly anti-railway tickets.

"Hitherto," says the *Age*, "'railway men' have been 'LEFT FREE BY THEIR EMPLOYING COMPANIES TO VOTE AS THEY PLEASE,' and having been 'left free to vote as they please,' have voted 'ANTI-RAILWAY TICKETS.'" The intimation is that in future railway employes will not be "left free to vote as they please." "Their employing companies" are to discipline them and keep them from perpetrating what the *Age* deems it proper to stigmatize as "supreme folly." We do not remember to have seen anything in print of recent date more repulsive, more insulting to the intelligence and independence of railway employes than the intimation that since *hitherto their employing companies have left them free to vote as they please*, a change of programme in this regard may be adopted when the railroad employes will not be left free to vote as they please. This form of intimidation has been carried quite far enough in the United States, and the *Railway Age* has only to brush away the coverts behind which it now writes and formulate its platform in honest words to learn that railway employes will vote as they please quite independent of "their employing companies."

The *Age's* form of intimidation has had its day. Railway employes are neither the live stock nor the rolling stock of railway corporations, but citizens who know their rights, and are quite as capable of casting an intelligent vote as the editor of the *Railway Age*.

The fact that a railway employé (?) writes in the interest of railway corporations is not remarkable. Such letters could be multiplied indefinitely. The old dodge of wreck and ruin has been played until it no longer frightens. This thing of tying railway employes, body and soul, to the corporation has been done, may be done again, but not to the extent the *Railway Age* evidently anticipates, or to the extent the "Railway Employé in Dakota" outlines.

The Dakota man's scheme is simply immense. Indeed, that term scarcely defines

its sweep. It would be highly interesting to know in what department of railroad service the Dakota correspondent of the *Railway Age* is employed. He talks like a President, or a Vice President, or a General Manager; and still he may be merely a switchman or a hostler; since in these, as in other departments of the railroad service, there are men who are eminently capable, when occasion requires it, to take either side of an important question and discuss it intelligently.

This Dakota employé wants to organize what "might be called 'The National Railway Employes' Protective Association,' to which should be eligible every person employed on railroads, every stock and bondholder, all interested bankers, car, locomotive or other railway supply manufacturers and their employes; in fact there are few, if any, who are engaged in the manufacturing or mining industries who should not be eligible to become members of this organization if they are the least interested in the success and prosperity of the railways of the country." This railroad employé of Dakota is "convinced, after a careful study of the subject, that in order to protect the capital invested in the railways of the United States and in all those industries intimately connected therewith; to prevent the further reduction of the wages of the men employed in these industries; to give capital confidence enough to push forward the development of the country; to stimulate the manufactures which have declined since the decline of railroad construction; to enable the railways to employ a sufficient force for each department; to prevent hostile or unjust legislation against the railroads, and to preserve all the railway properties at a proper standard of excellence, the most effectual remedy at the present and for all time to come would be a thorough organization of all the employes and others interested." The Dakota employé, who writes like a stockholder or a bondholder, says that "the object of such an association would be to cause its members to vote at every election only for such Representatives or Senatorial candidates, State or National, as would be pledged to do all in their power to promote the welfare of

all concerned, and at all times to oppose with their vote and influence any legislation which proposed to reduce the income of the capitalist below a just and reasonable profit on his investment, or which would have a tendency to reduce the wages of employes below what could be considered a liberal allowance for their services." Here we have outlined a great railroad party, all to be members of "The National Railway Employes' Protective Association," and all to vote straight railroad tickets at every election—vote for men opposed to the reduction of the income of capitalists. It would be sad, indeed, if the income of Mr. Jay Gould should be reduced a few millions, or if the Vanderbilts should be so cramped that they could not pay more than \$5,000 a year for a *chef*. The Rothchilds would doubtless weep over such destitution; and the point is made that all railway employes should join in with stockholders and bondholders to maintain rates, so that wages may not be reduced, which suggests the inquiry, when did the corporation come forward and say to their employes, "Our road is now making money 'hand over fist,' and your wages are to be advanced?"

We are inclined to the opinion that the Dakota employe's scheme won't work. His plea for the capitalist is too top heavy. It is not built on the plan of the pyramids. His great solicitude for the capitalist is by far too pronounced, and the "employe" dodge is "too thin." He is a master of verbal ledgerdom. His word jugglery may be as the Yankees say, "smart." Never did spider sing more sweetly to the fly; never were pussy's paws more velvety. Some flies may go into the "parlor," some mice may be caught, but the great body of railway employes won't "tumble" to the Dakota idea immediately. A great many railway employes are giving all subjects relating to work and wages, earnings and dividends, careful study, and the conclusion is that a very large per cent. of their earnings go to enrich capitalists, and they want a fair deal. They may not get it. They have been defeated in the past, and the future may have grievous disappointments in store for them, but to ask them to join with stockholders and bondholders

and stock waterers, and bankers and millionaires to increase the incomes of the rich that the crumbs which fall from their tables may not decrease in size nor quantity, is really carrying the joke too far by half. Old things are passing away. There are hopes of a new regime, and workingmen are not going to vote against its coming.

SOME one has interviewed a number of French authors upon the subject of cremation, with the following result: Zola said, "Leave the thing to the decision of the loved ones we leave behind." Daudet—"Either one would be disagreeable to me." François Coppée—"I will go to sleep in the cemetery." Henri de Bornier—"Hang you! you spoiled my dinner!" Leconte de Lisle—"I desire neither the one nor the other." Sylvestre—"I prefer the ground, from which flowers spring for lovers." Sarcey—"If I die in Paris I will be cremated there." Jules Simon—"My children will choose the method which will give them the least horror." Sardou—"Burned! burned! It will afford me great pleasure to be burned!" Some object to cremation because they apprehend some difficulty on resurrection day in finding the lost particles of their physical organism as it existed before death. They seem to think that fire will so mix them up with the atmosphere that even an omnipotent Creator will not be able to get them together again. Evidently they are of the opinion that these mortal bodies are the ones that are to inherit "eternal life." This reverence for the human body after death is unadulterated paganism—a puny effort to evade physical laws. Cremation does in an hour what inhumation does in years, by processes, every stage of which is a horror. Besides, burying the dead creates the foulest pollution, which endangers the life of the living, and has been, and is still, the cause of the most fatal epidemics. To be buried that "flowers may grow," is an idea that has the smell of manure.

THE Rockafellers, of the Standard Oil Trust, have gained control of the Northern Pacific. They are just the sort of *fellers*, if they take to railroading, who will make Jay Gould speculate as to future events with profound anxiety.

RAILROAD PRESIDENTS AS PRIVATE INDIVIDUALS AND AS OFFICIALS.

The following article, captioned "Railroad Morality and Ordinary Morality," is from the *Manufacturer* of January 1, 1891, published in Philadelphia. It is of such a remarkable character that we print it in full:

It was currently reported that the following language was addressed to the railroad presidents who assembled in New York a fortnight ago, by Mr. Stickney of the Chicago, St. Paul & Kansas City Railroad Company.

"I believe that all the presidents here are honorable gentlemen, and, as private individuals, I would trust them with any amount of money. But as heads of railroads they are a lot of scoundrels, and I wouldn't believe them under oath; neither would I trust them with a cent out of my sight."

The fact that this vigorous statement appears to have excited no resentment in the persons to whom it was addressed, may possibly be accepted as in the nature of evidence that it makes a close approximation to truth. Those persons who have studiously observed the methods commonly employed in the conduct of American railroads will have no difficulty in reconciling the observations of Mr. Stickney with their own conclusions. It is probably not extravagant to assert in a broad, general way, that the history of railroading in this country is a history of crime. It is a record of the robbery of original stockholders, of the filching of valuable property from its rightful owners, of lawless and destructive discrimination against persons and places, of broken pledges, of corruption of the press, debauchery of the courts of justice and bribery of legislators. It is hardly possible to name any crime excepting, possibly, murder and adultery, which has not been perpetrated by individuals who have controlled and who now control the railroad properties of the United States.

In many cases, perhaps in a majority of cases, these men have been citizens of fairly good repute in private life. Some of them are actually professors of the Christian religion, who, after six days' engagement in felonious actions, sit in church on Sunday pretending to worship a just God, and contributing money to the work of converting the human race to righteousness. Few things are more curious than the readiness with which such men are able to separate their individual responsibility from their official responsibility; and to persuade themselves that a railroad president may be a conscienceless scoundrel during office hours, and, at other times, a man deserving of respect. Excepting the destruction of human life, hardly any crime can be committed against society more heinous than the corruption by a corporation of a judge or a lawmaker; but it is notorious that this very offence is the common practice of American railroad corporations. When such a company gives a secret cut-rate to one shipper and compels his rivals to pay full rates, the latter are victims of robbery of a far more offensive kind than ordinary pocket-picking; but it was because this practice had become so frequent as to hurt the rail-

roads themselves that the presidents' meeting, above referred to, was held. These very men, a short time ago, held a similar meeting for a similar purpose, and they made what they facetiously called "a gentlemen's agreement" to stop playing the rascal. They then adjourned to continue in their old evil courses; and it was the memory of this fact which provoked the utterance of Stickney, recorded above. He knew his men and what he was talking about.

The investment of money in railroads is probably the largest single investment in this country. We have one-half the total railway mileage of the world. The business of transportation touches every commercial interest in the land at a vital point. Commerce, in fact, is chiefly transportation. The railroad companies, far more than any other influence, determine values. They can build up or they can destroy. They can annihilate any business or any business man that may be chosen as a victim. They have enormous wealth, and the power of direct action which belongs only to compact organization, with which to corrupt a legislative body. They may, if they please, meddle with politics in such a manner as to defeat the will of the unorganized and unsuspecting people. This vast power is, if Stickney speaks truthfully, held and wielded by "a lot of scoundrels" of whom a man who knows them declares that he "would not believe them under oath." This great property is in the hands of men of whom he says he would not trust them with a cent out of his sight.

The distinction drawn by him between the president as a man and as a railroad officer, is considerably too fine either for the ordinary citizen or the moralist. It is a distinction which cannot be allowed to exist. No code of morals known to the human race recognizes it. A railroad president, who, in that capacity, violates the truth, is indisputably in all his aspects, public or private, a liar. A railroad president who permits his favorites to have secret low rates, which are denied to other shippers, is beyond all question, a thief. A railroad president who employs illicit means of any kind, whether they be divert payments of money or the issue of passes, to direct a representative of the people in councils or in the legislatures from protection of the interests of the people, is a corruptionist whose rightful place is in the penitentiary. The railroad president who sets a gang of workmen to fighting in the streets with another gang of workmen over a piece of property in dispute between two companies, is as much a lawless ruffian as if he had himself engaged wantonly in a street brawl. A railroad president who puts his company, by use of illicit means, which alone are possible, into the position of master of a community for which it was created to be the servant, is a public enemy, who deserves forfeit of the respect of all honest men. The railroad president who does these things is a man whose moral nature is so depraved that if he were in a position of poverty and obscurity, he would probably put himself ultimately among the class recognized as criminal.

The impression is widely prevalent that these evil practices are necessary to the successful conduct of railroad business. If this were true either the railroad business would be intrinsically pernicious, or the laws which hold society together would be open

to condemnation as based upon wrong principles. But it is not true. There is absolutely no reason why the transportation business of the country should not be successfully conducted upon a basis of decency and righteousness and the ten commandments. The proof of this lies in the wreck and disaster that have befallen so many companies whose affairs have been dishonestly administered. It lies in the present failure of many other railroads, existing under most promising conditions, to pay dividends or to meet their engagements. It lies in the very fact that the presidents have been compelled to meet twice within two years to try to avert calamity by agreeing to try the novel experiment of behaving like honest men. Beyond all dispute, the right and safe and wise way to run a railroad is to confine the operations of the company solely to the business of transportation, to refrain from meddling in politics and to give to everybody absolutely fair play, such as a shipper may obtain upon a navigable stream. There is a widely prevalent belief that American railroad men are almost supernaturally "smart;" but the smartest man is always, in the long run, the man who does right; not the man who shuffles and lies and cheats.

We doubt if such an arraignment of railroad officials was ever made before in any land.

The attention of the reader will be arrested by the language of Mr. Stickney, of the Chicago, St. Paul & Kansas City Railroad Company.

It should be remembered that railroad employes have only business relations with railroad presidents.

Railroad presidents control the business policy of railroad corporations, not vice presidents, general managers, general superintendents, division superintendents, etc.

Engineers, firemen, conductors, switchmen, brakemen, telegraphers, all trainmen's interests are in the hands of the railroad president. He is the corporation. His word is law. He is the court of appeals. His decision is final.

If justice, truth, honor, integrity, do not govern the railroad presidents, the railroad employe's case is hopeless. He must submit or fight.

It avails the railroad employe nothing to know or to say the railroad president is an "honorable gentleman," as an individual—in private affairs—in the social circle.

The railroad employe knows nothing of a railroad president, except as an officer of the railroad corporation—as the "head" of the road where he works. In the capacity of supreme official, the employe has a right

to know as much as possible about the railroad president.

Mr. Stickney says, as such officials, railroad presidents are "a lot of scoundrels." He says he would not "believe them under oath." He says he would not "trust them with a cent out of his sight."

The English language supplies a number of synonyms of the term "scoundrel." A scoundrel is a "knave," a "rogue," a "villain," a "rascal," a "scamp," a "cheat," a "trickster," a "swindler," a "sharper," a "scapegrace," a "cattiff," a "vile wretch," a "miscreant." A scoundrel answers for any of these synonyms. One of them is all of them.

Mr. Stickney told a large number of these railroad presidents to their teeth that they were a "lot of scoundrels."

Upon this text the *Manufacturer*, a publication controlled by the Manufacturers' Club of Philadelphia, comments, and because of the text and the comments, we make room for both in the *Magazine*.

The question arises, is there anything more to be said upon the subject? Did not Mr. Stickney exhaust it?

If railroad presidents, as such, are scoundrels, incapable of telling the truth, even under oath, so utterly depraved, that a cent of another man's money in their custody is not safe, then in the name of all the painters at once, how can their character be made blacker?

Here again we state that it is with such men, that the great army of railroad employes are required to deal, and here we ask, did any man of character or no character, in public or in private, orally or in print, ever make such a charge against railroad employes as Mr. Stickney made in New York against railroad presidents as such?

We can well afford to permit the *Manufacturer* to discuss the ethical phases of Mr. Stickney's arraignment, as it has shown itself eminently qualified for the task. Our purpose is to write on a different line of thought.

The great interest of railroad employes is to secure honest wages for honest work, honorable treatment, fair play—a recognition of their work as men and as citizens. Such things have been denied them in the

past, are denied now. Why? Mr. Stickney explains the difficulty. He says railroad presidents are "a lot of scoundrels;" that he would not "believe them under oath," nor trust them with a cent of his money "out of his sight."

Does that explain why railroad employes have been unjustly treated? Does that explain why strikes have occurred? Why there is constant unrest in the ranks of railroad employes?

Is it to be presumed, that while railroad presidents are a "lot of scoundrels," that the subordinate officials are honest men? In such matters does the stream rise higher than the fountain? So far, Mr. Stickney is not on record with estimates of subordinate officials, but is it to be presumed that a "lot of scoundrels" would select honest men to carry forward a scoundrelly policy?

What, we ask, could be more natural than for a railroad president, to select subordinate officials fully in sympathy with his policy? And, how long, we ask, could a subordinate hold his position who was opposed to the president's policy? And, if Mr. Stickney is right in saying railroad presidents as such "are scoundrels," is it not fair to assume their subordinates as officials, are also scoundrels, in which case, does not scoundrelism extend all along the line until the employe is reached? and being reached, is it just to assume that he becomes a victim of scoundrelism?

Railroad employes often complain of wrongs and injustice. They say that their pay is not just, that they are required to work too many hours, that they are subjected to numerous humiliations, etc. Their grievances are numerous, and grievance committees are constantly at work seeking relief. With rare exceptions, railroad officials treat such complaints with cold indifference, and grant relief reluctantly, if at all.

In addition to this, charges are brought against organizations of railroad employes and an effort is made to bring such organizations into disrepute, and if possible destroy them. They are charged with fomenting strife between capital and labor, between employer and employe, of making unjust demands, etc. But now comes Mr. Stickney, who openly declares that railroad

presidents as officials, "are a lot of scoundrels," that they are incapable of telling the truth, under oath, and it is, let it be remembered, as officials, that the railway employe has to deal with them.

If Mr. Stickney tells the truth, that railroad presidents, as officials, are "a lot of scoundrels," the public will, we think, conclude that the grievances of railroad employes ought to be treated with great consideration. Reasonable men will say, "If railroad employes shall be able to cope in any degree with such railroad presidents, it will be by organization and federation; nothing less will answer the demand;" and when charges are made that strikes are unnecessary, reasonable men will be likely to say, "If railroad presidents, as officials, were honest men, instead, as Mr. Stickney says, 'a lot of scoundrels,' strikes and commotions would be unnecessary, peace would reign all along the lines, but while in their official capacity railroad presidents are 'scoundrels'—grievances will continue and multiply, and strikes will occur."

The *Manufacturer* says that it is probably not extravagant to assert in a broad general way, that the history of railroading in this country is a history of crime. It is a record of robbery of original stockholders; of the filching of valuable property from its rightful owners; of lawless and destructive discriminations against persons and places, of broken pledges, of corruption of the press, debauchery of the courts of justice and bribery of legislators." Such language is severe, but it is justified by the declaration of Mr. Stickney, that "railroad presidents, as heads of railroads, are a lot of scoundrels."

It is not to be presumed that while railroads have been robbing stockholders, corrupting the press and bribing legislators and debauching courts, that they have dealt honestly with their employes—and that the employes have suffered more than any other class of victims, it would be easy to demonstrate. At any rate, the declaration of Mr. Stickney and the comments of the *Manufacturer*, if they could have as wide and as careful a reading as they deserve, the effect would be to create universal sympathy for railroad employes, who, against mighty odds are seeking through organization and fed-

eration to restrain the rapacity of railroads, whose presidents, as their heads, are, Mr. Stickney says, "a lot of scoundrels."

HUNKADORA.

Everybody is interested in the millennial era, and whenever some favored mortal, from the highland of vision, discovers symptoms of its dawning, or hears the far-away harbinger notes of its coming, everybody wants to hear him talk. He can secure a big audience at the tap of a drum. "The world, the flesh and the devil" have had their way all too much from the beginning. A change is desirable. Bellamy's book, "Looking Backward," has had and is still having a world-wide reading, and Henry George's "Progress and Poverty" has a still firmer hold upon the minds of thinkers. It does not matter much whether the reformer is logical or fanciful. If he predicts the long prayed for "good time coming" he has listeners. We confess to a liking still for "Robinson Crusoe" and the veracious exploits of Munchausen. The splendidly embellished fiction of the Arabian Nights still captivates us, and Don Quixote is a joy forever. Necessarily, we admire the far-reaching fancies of Eugene Zimmerman, Esq., Vice President of the C., H. & D., the Cincinnati, Hamilton & Dayton R. R. corporation. The Cincinnati *Enquirer* refers to him as a "noted financier" and a "railroad magnate," and as a "silent man." The interview to which we refer occurred some months ago, when the Knights of Labor on the N. Y. C. were fighting Webb, Depew and the Pinkertons. Mr. Zimmerman had been taking his outing by the shores of the "sounding sea"—had been listening to what the "wild waves say." He had basked in old Ocean's billows, had seen them toss high the white caps and roll in upon the pebbly beach. He had a good time generally. He seemed to be "at peace with the world and the rest of mankind," including railroad employes. Mr. Zimmerman deplored the strike on the N. Y. C., and exclaimed: "Think of the immense number of men out of work, families suffering, and all the attendant evils." Such remarks are emi-

nently creditable to the head and the heart of Mr. Zimmerman. We wish he had referred to the causes which led to that strike. It would have been most gratifying to have had the views of the "financier," the "R. R. magnate" and the "silent man" touching the subject of discharging men because they belong to a labor organization. It would have been refreshing to have had his views upon the Russianizing policy of Austin Corbin and his dago, Bonzano, but we have nothing of that sort in the interview in question. Mr. Zimmerman was of the opinion that there is a way to put a stop to strikes, as "both parties generally lose by them." In reply to the inquiry relating to the interest railroad officials take in strikes, he expressed the opinion that there "is nothing which is so continuous a subject of discussion among them. If no strike is on there is always the fear of one, and the question of keeping from having one is discussed. Leading officials rarely meet in important sessions that the interrogatories are not: How are your men? Do you suspect any trouble? &c. It is a most mortal topic in railway management."

The foregoing illustrates the power of labor organizations. Railway employes, as a general proposition, make no unjust demands. Their grievances are generally honest and entitled to consideration, and as the railroads don't want a strike the men are receiving constantly better treatment.

It was Mr. Zimmerman's opinion that railroad officials generally, as a remedy for strikes, were in favor of "one great organization, with all employes as members." They want it to "extend all over the country and start lodges in different sections." By this arrangement Mr. Zimmerman thought the Knights of Labor would disappear. True enough, and not only Knights of Labor, but every other organization of railroad employes. All would be merged into one great overshadowing organization. Just here we will reproduce Mr. Zimmerman's ideas as he outlined them to the *Enquirer* representative. He said:

I am confident that the moment the men get rid of the idea of labor versus capital their cause becomes very strong. I am sure that if all the numerous orders, brotherhoods, &c., were united, and the large

sums paid out to officers, &c., were turned into a general fund for this one grand body, the benefits accruing to the *laboring classes* would be *incalculable*. This could be made general in its ideas, comprising those of *insurance*, relief and protection. The trouble with most of the present bodies is that they are not properly represented. The committees who go to the railway officials frequently have their own petty grievances and their personal grudges to vent, and they *rarely* present the men's desires in a thoroughly business way. The bodies often select men with no *practical experience* in general business, men who are too prone to become rattled, and men who too often imagine that these great (?) magnates want to squelch them ignominiously. They forget that most of the big officers rose from the ranks themselves, and are with the men in their hearts, but, representing large corporations, must go easy. Why, supposing these men should select as the grand head of their order a man like *Grover Cleveland*, who is in sympathy with them. How much quicker could men like the ex-President win victories for them than the *easily excited* and inexperienced people they too often select. Of course, there would have to be the *Committees on Grievances*, which should be carefully chosen and be representative. It isn't to be expected that a man who has been a switchman, an engineer, a brakeman or a freight handler all his life will be able to cope with *officials* whose years have been devoted to fighting *other big officials on technicalities*. Of course, I assume that the strikers at all times have a just cause, but it must also be assumed as well that the railroad company must be given an opportunity to thoroughly investigate demands made on it before acting. *Cool-headed arbitration* is much more effective than hasty and ill advised strikes. The people are with the employes as long as they conduct themselves properly, and the tendency of the *laboring classes* is in that direction, unless they are stirred up by hot-headed leaders, who are anxious to air their own superiority and vent their ambition to cut a big figure before the public.

How could this be supported?

Why, the men should be assessed according to their wages, and the railroads should contribute to the treasury in accordance with the number of men employed. This would create a fund that could be devoted to helping injured or sick members, and for the payment of a stipulated sum at death. In matters of dispute a well selected committee of men, known to be cool-headed and experienced, would gain all the benefits to be secured by arbitration, the only solution of disagreements between employer and employé. I believe every railroad will indorse this idea.

The foregoing is from a "financier," a "magnate" and a "silent man." It is singularly incoherent and practically an impossibility. One big order representing all the railroad employes is not good dreaming. It does not show the "silent man" to be a close thinker, nor a thinker at all, in its best sense, of the wants of railroad employes.

Take, for instance, this: "The moment the men get rid of the idea of labor *versus* capital their cause becomes very strong."

Now, then "*versus*" means "against, or in opposition." In what way is labor against or in opposition to capital? What is the character of the opposition? Does labor want to crush, exile, annihilate capital? Manifestly, to talk about "labor *versus* capital," if not idiocy, is nonsense. Labor has been and is opposed to the absorption of capital by capitalists, absorption by corporations, trusts, syndicates, millionaires, by methods that have been pronounced, not only in labor organizations, but in Legislatures and in Congress, robbery. "Labor *versus* capital" is a favorite expression of capitalists. It shields them and enables them to create a false issue to divert public attention from the true case, which is labor *versus* capitalists—such capitalists as rob labor. *Capital* does not and never did stand for capitalist. And yet, strange to say, there are labor organs which are so stupidly obtuse as not to see the difference, and to conduct their arguments in a way that plays directly into the hands of the men who rob labor.

Mr. Zimmerman acknowledges that labor has become so consequential that railroad magnates regard strikes as a "most mortal topic." Is this so, and if so, wherefore? If it is true, it is because railway employes, by the fiat of organization, have moved steadily to advanced positions of power, and this they have done in the face of opposition emanating always from capitalists; and now, when the sun of victory makes helmet and shield resplendently bright, financiers and magnates suggest a change of programme.

And yet, Mr. Zimmerman, the "silent man," has said some things which are eminently suggestive of a course of action which thousands and tens of thousands of railroad employes have adopted. He wants one great organization. The railway employes say, "Not that;" but, rather, let the various organizations *federate*; let their motto be MANY IN ONE. This gives the big organization; this meets the demand; this fills the bill; this is the *ne plus ultra* of organization. It is independent of the "financiers," the magnates, the capitalists.

It is self-reliant. It is Labor, in its imperial power, shaping its destiny and protecting its interests. If the "magnates" have fears, it is because of *federation*.

There need be no solicitude on the part of the "magnates" about the honesty and capability of officers to cope with them. Mr. Zimmerman may at once dismiss his solicitude on that head. There are in the ranks of labor as capable men as were ever promoted from the ranks to be "magnates." They do not get rattled when they seek a redress of grievances. Plain, blunt men they may be, but they know what they want, and know how to state their wants in plain English, besides. Mr. Zimmerman and the rest of the "magnates" should know that in the ranks of labor there are men, scores of them, who can discuss practical financiering in a way which would make many a "magnate" a "silent man."

The suggestion to have one big organization and make ex-President Grover Cleveland its president, is as peculiar as it is grand. We do not doubt that Mr. Cleveland would esteem it an honor to be president of an organization such as Mr. Zimmerman has in mind. We know by what splendid leaps and bounds Grover Cleveland went from obscurity into the fierce blaze of great power and responsibility; but railway employes will *promote* from the ranks, and so far have had such success in that line as to give assurance that their resources are equal to any emergency.

Railroad employes are not in favor of strikes, as has been said a thousand times, except as a last resort; and to make them as few and as far between as possible, is the supreme idea of the Supreme Council of the Federated Orders.

Arbitration is the watchword, and an amicable adjustment upon a basis of justice is clearly announced. To be independent of railway officials, in the same sense as railway officials are independent of employes, is the requirement.

Let railroads have their equipments—their tracks and depots, engines and cars; but while the rivers run to the sea, never let their equipments include men. Men must not be attachments. Men must be free—free to act, and to speak and decide—

always as free as the "magnates." For this, the outlook is cheerful, particularly in the great West, the seat of empire. That it is not true on the Philadelphia & Reading railroad and some others that could be named, is one of the dark spots on our much boasted intelligence, independence and civilization.

THE price of aluminium, which has been \$5.00 a pound has been reduced to \$1.00 a pound, and by processes soon to be put in operation will be still further reduced to 10 cents a pound. A company has been formed with a capital of \$10,000,000, and one of the company, Mr. Franklin Babcock, in an interview said that the utility of aluminium has been demonstrated a long time. Its abundance is a matter of every day knowledge. All that is needed is a cheap process of reduction. We believe we have it. We know we can reduce it at a cost of not more than 10c a pound. The thing yet to be determined is how much cheaper than 10c a pound it can be produced. We believe it will be a good deal less than that figure. The experiments so far have been conducted on kaolin and corundum. Kaolin is a white clay containing about 50 per cent. of metallic aluminium. It is found extensively in Missouri, Georgia and North Carolina and in other States. Corundum contains about 70 per cent. of aluminium. It is the substance of which emery wheels are made, and in its colored crystalline forms it constitutes amethysts and other precious stones. It is found in abundance in many parts of the country. Whether we shall finally locate the works in Chicago or near where our raw material is found remains to be determined. Of the process itself I know very little except that it is a smelting process. Such things tell in no uncertain way what science is doing for the world.

THE Chicago, Milwaukee & St. Paul Railroad Company has pulled out from the Pullman Sleeping Car Company, and for the future will run its own sleepers. Those who pretend to know say the change is the result of the Vanderbilt interest in the C., M. & St. P., and that as soon as contemplated deals are perfected, the Wagner sleepers will be on the road.

Mission of the Single Tax.

THE essence of slavery, in whatever form, is the appropriation by one man of the results of another man's labor. To-day, with our knowledge of the arts and sciences, handed down from generation to generation, we are capable of producing a superabundance of the things we need to eat, wear and use. Yet, right in the teeth of this plain fact, we know that a large majority of the people of this great and rich country go without sufficient nourishment, clothing or shelter. The results of their labor are appropriated by others—indirectly appropriated, it is true, yet appropriated nevertheless. They exist in slavery. The indirect appropriation goes on in various ways, such as through the operation of the tariff, and through the exactions made by railroad and land speculators, etc. Who are the Cæsars of our land? The tariff barons, the railroad kings and the land-owners.

But how is it that strong men, liberty-loving men, are compelled to submit to these exactions? How is it that the men who possess the genius that creates the wealth of the world are compelled to accept but a pittance in return for their labor? This is the key to the question: men are dependent on other men; they cannot rely upon their own exertions, but they must first ask a fellow-being for the privilege of working. In other words, since all material upon which labor is engaged lies originally in the earth, men are obliged to inquire of their fellow-beings if they may be granted the privilege of toiling upon the earth, to which all men have an equal right, the same as they have an equal right to breathe. One man has to beg of another man the privilege of enjoying his own birthright. The right to life implies the right to the sources whence life is sustained. But men must first ask a fellow-man for the privilege of working; they must compete with one another for that privilege; the lowest bidder gets it. How is this? Can it be possible that a bountiful Creator left the earth in such a state that it affords insufficient opportunities for labor? No; it is not so. There is no natural scarcity of chances for profitable human endeavor. But there is an artificial scarcity, and it is this artificial scarcity that must be overcome, if we would prevent man's inhumanity to man. If I have the power to hold land out of use, if I have the power to lock up God's storehouse of wealth and refuse to surrender the key, I can by so much lessen the aggregate amount of production, since all production depends originally upon access to Mother Earth. So much land is being withheld from use to-day—the dog takes up such a large portion of the manger—that the aggregate of production in this country to-day is but a small

fraction of what it might be. As a result of "land speculation," there is not enough work to go around. Hence there is waged a cut-throat competition among workers for the chance to work.

The Single Tax is the only effective remedy for this state of things. It will bring Liberty; it will bring Justice. It is not a quack remedy. It is the only possible way in which justice can be secured.

The Single Tax means just this: That hereafter the community shall collect fair payment for the privileges and benefits that it gives. A fair trade is no robbery. Payment for these identical benefits, created by the community, is to-day and has long been appropriated by land-owners, in the form of "rent," or payment for the use of land. But, probing a little deeper, we find that *nobody pays anything for the use of land*. What is paid for is the benefits that accrue by the common activity of the people in a community. Otherwise, land would be as valuable in the middle of a trackless prairie as in the heart of a city. Let us come to a clear understanding of this point. A little reflection will clear away the fog.

In the hope of profiting largely by the future growth of the community, people are induced to get possession of land, which they hold idle until somebody is obliged to pay them a big profit for letting it go. Suppose A goes to a city and sees a fine chance to open business. He immediately selects a suitable location. What does he find blocking his path? Why, since he is obliged to build his store upon land, he finds that the man who owns the land is indisputably in position to exact from him payment in full for all the benefits he has been expecting to obtain by settling in that city. In other words, A pays B (an outside party) for the privilege of trading with C, D, E, F, etc. That is wrong. B should have nothing to do with it, no part in the transaction. It is but simple justice that A, when he pays for his benefits, should pay C, D, E and F, who create the benefits. (A great and valuable benefit is created by the simple fact of men clustering upon a single spot; that is to say, that spot becomes a valuable place upon which to do business.) Since A is going to pay for the privilege of enjoying the trade of the various members of a community, he should pay the community; not an outside person, and not any person in that community, but the community as a whole.

That would be the Single Tax. Hence it is not in fact a tax, although it would necessarily have the form of a tax. It means the abolition of all tax. It means that the hundreds of millions of dollars paid annually by people to land-owners, and paid for nothing else except the privilege of trading with one another and living with one another, shall

be paid into the various public treasuries, which is manifestly the only proper recipient of these vast sums.

Under the Single Tax, no valuable land would be held idle and unproductive. All valuable land would be put to its fullest use. Wealth is a good thing, and the production of wealth should be encouraged. The holders of idle land should pay into the public treasury fully as much as the holder of land of equal value that he puts into use, because the benefits created by the community are unavoidably locked up in the buildings sites. The man who owns a site, and who therefore possesses all the benefits that attach to that site, should pay therefor to the community that creates the benefits; he should not escape payment because he does not avail himself of the benefits. If A makes a coat, and B takes it and locks it up in his safe, he is not excused from paying A for the coat on the ground that he is not using it.

The Single Tax, therefore, will restore to the people the use of the earth, which is rightfully theirs to use. Opportunities for the profitable employment of capital in industrial pursuits will be very plentiful; and since capital cannot gather profits without first employing labor, there will inevitably be such a demand for labor that wages will rise to their normal level, and tend ever upwards. *B. C. Stickney.*

BROOKLYN, N. Y.

The Single Tax.

ASK the editor of the *Magazine* to reproduce the following from the *Standard* of December 24th, because the views of Mr. S. D. GUION are fully indorsed by the *Standard*:

A Mr. Connolly, United States consul to New Zealand, has been discussing the politico-economic condition of that country in the *Brooklyn Eagle*. In regard to the single tax agitation now going on in New Zealand he says:

"There is considerable agitation in the colony at present as to the merits and demerits of a single land tax. But as the farmer, upon whom the burden must ultimately fall, has to contend with the many trials and vicissitudes which beset the farmers of other lands it is difficult to thoroughly understand how he is to survive and prosper under the additional taxation which must naturally follow the adoption of the single land tax system."

All of which goes to show that Mr. Connolly doesn't know what he is talking about. But Mr. S. D. Guion is determined that the readers of the *Eagle* shall not be misled by Mr. Connolly's specious reasoning, so he explains to them, and explains at Mr. Connolly, what the single tax theory really is and how it would really operate. It is to be hoped that the *Eagle's* readers, especially Mr. Connolly, have read and inwardly digested the following, which appeared in that paper lately:

"It is the single tax, is not a tax on land, but on the value of land, on the value of bare land without improvements as a vacant lot in a city. It is not a tax on area, but on value. There is but little value on the bare land of a farm of 100 acres that would sell for \$5,000. I have in mind one farm of 100 acres that would sell for \$5,000, the owner of which computed the value of the improvements, the clearing, so as to

fit it to be convenient and easy to cultivate, fencing, ditching, digging well, planting orchards, etc., house, barns and outhouses to be \$5,300, leaving the value of the bare land but \$700. His state and county tax was \$46. Under the single tax it would have been \$35. The profit made from using land is what gives it its value; the larger the profit the greater the value. From using some city lots a profit of thousands of dollars can be made. From some farms of a thousand times the area of the city lot, no profit can be made. Some city lots have great value. Some farms have only an improvement, but no land value. The greater the service the owner or user of land receives from the government, the larger his profit can be. If he receives no such service he can make no profit. The service of government is as to the size and density of the community. The larger and more dense the community the greater the service of government. Each should pay a tax in proportion to the service he receives from government. The owner of a city lot from the use of which he can make a profit of thousands of dollars annually, receives from government all the service possible, while the service that the owner of a farm of 100 acres, the land value of which is but \$700, receives is trivial. Therefore, a tax on the value of land would be equitable. Each would pay exactly in proportion to the value of the land he was using. The farmer would be relieved of a great burden and not only survive, but would become prosperous under the conditions which would naturally follow the adoption of the single tax on the value of land. It is quite a mystery to me how any one can find it difficult to understand so simple a problem. Mr. Connolly, United States consul to New Zealand, undoubtedly has given the subject considerable thought. He recognizes results, but ascribes them to causes from which they do not and cannot naturally and logically in the first instance proceed. If Mr. Connolly will study the subject, argue it along the line of logical sequences, he will find that the evils of which he speaks and all the evils that affect the general interest of the people of New Zealand or any other country are caused by inequitable taxation and that the single tax is the remedy, because it is equitable."

I apprehend that Mr. Guion is a master in the discussion of the "single tax," otherwise the land tax.

At the outset, a statement is made which is in the line of confusion, rather than elucidation. Here it is:

"It (the single tax) is not a tax on land, but on the value of land, on the value of bare land without improvement, as a vacant lot in a city."

I fail to see any explanation whatever in Mr. Guion's explanation. It is a distinction without a difference, and can be permitted to pass without further notice; the fact remaining that the single tax is a land tax, or a tax on land, just as a tax on wool is a tax on wool value, without reference to how the value is ascertained.

It will be noticed that Mr. Guion says that the single tax "is not a tax on area, but on value," and he illustrates the proposition by "a farm of 100 acres that would sell for \$5,000." Deducting improvements, \$5,300, the land is found to be worth \$700, that is its single tax value \$7.00 an acre. The owner of the farm, as it stands with all of the improvements, is taxed \$46.00, but after deducting \$5,300 from the value, the single tax would be \$35.00, a gain to the owner and a loss to the State of \$11.00. Under the \$46.00 tax, the owner paid 76 cents and 6

mills on the \$100. Under the single tax he would pay \$5.00 on the \$100—or, under existing methods he would pay a fraction over $\frac{1}{2}$ of one per cent. on \$6,000, and on the single tax proposition he would pay 5 per cent. on \$700.

Just here the question arises how does Mr. Guion arrive at the tax value of the land, the "bare" land? I do not remember to have read any concise explanation, except that "the profits made from using land is what gives it value, and the larger the profit the greater the value." Here then we have it that tax is on profits—profits on production, and hence as production is the result of labor, the single tax, by Mr. Guion's reasoning, is a tax on labor—necessarily and inevitably.

I note again, that "from using some city lots a profit of thousands of dollars can be made." I ask how? Suppose the answer is by building a factory and employing men to make articles of universal necessity, like shoes, hats, clothing, furniture, etc. The single tax, be it remembered, according to Mr. Guion's theory, is a tax on land value. Before the buildings were erected and the machinery put in and men set to work, the land had no value. Now it has a value, because of labor, and now the tax is levied upon that value. Does it not follow, logically, that the single tax is on the product of labor? To say you do not tax the building and the machinery, but a value given to the land because of the building and machinery, is word jugglery. Turn it as you will, it is finally a tax on labor, comes out of the profits of labor and must be paid by labor—and just here comes into view, not an objection *per se* to the single tax, but to the assumption that some how, by hook or by crook, labor is to be benefited by the single tax on land values. How? No one has yet explained, because, I assume, there is no explanation.

If it could be shown, and perhaps it can be shown, that the country can get along with less revenue, and therefore, that taxation can be reduced, I should favor the movement, because as labor pays all, the burden would be less. But, my readings lead me to conclude that single tax theorists believe that under the single tax regime, revenues will be very considerably augmented. If in this I am in error, some single tax advocate can correct me, or can point out how, with increased revenues, labor can escape increased taxation.

But I am not yet done with Mr. S. D. Guion's explanation of "what the single tax theory really is, and how it would really operate."

Mr. Guion says, "From using some city lots a profit of thousands of dollars can be made." How? By building upon them, I suppose—certainly, not otherwise. There

can be no profit arising on a "bare" city lot, any more than a profit can be calculated on "bare" land, and Mr. Guion says "there is but little value on the bare land of the farm." Hence, I assume, if values are dependent upon profits, there must be improvements. Improvements are the result of labor, and hence a tax levied upon land values is levied upon the product of labor. If not, why not? The subject is worthy of further analysis.

A and B own adjoining city lots for which they paid each \$10,000. They are "bare" lots. They are not used, hence they pay no profits. They have a value, but it is not predicated upon use. The single tax is levied. Upon what principle of valuation? Not upon use, because they are not used; not upon profits, because, not being used, no profits accrue. I will suppose that adjoining the "bare" lots of A and B, C and D own lots for which they paid each \$10,000, and erected upon them buildings costing each \$100,000, and for which they receive annual rents of \$10,000 each. Now, then, I inquire, what is the taxable value of these four city lots, two of which are "bare" lots, and two splendidly improved, and paying their owners \$10,000 a year? Have the improved lots, paying \$10,000 a year, more value than the unimproved lots? In the case of the improved or used lots, they show a cash investment of \$110,000 each, and each rents for \$10,000. The unimproved or "bare" lots show an investment of \$10,000 each and no profits from rent or otherwise. Now, then, what is their taxable value? Is it assumed that A and B should each erect buildings costing \$100,000 each on their lots, so that they too could receive each \$10,000 a year rent, in which case all could be taxed alike, but since two are "bare" and pay no profits, and two are improved and pay \$10,000 a year each, upon what valuation is the single tax levied?

Is it the theory of the single tax advocates that the "bare" lots have the same taxable value as the improved? If so, then what becomes of the talk about "use" and "profits?" Still, the bare lots must be taxed the same as the improved lots, else the tax will be levied upon improvements. But I am not done with this attempt to illustrate the single tax on "bare" and improved city lots. Suppose A and B concluded to build on their \$10,000 lots, but are able to erect buildings worth only \$50,000 each, and can obtain only \$5,000 each annually for rent. In that case, what would be the single tax value of A's and B's lots, compared with those of C's and D's? A and B put their lots to the same use as C and D, but derive but half the profits. If the tax is levied upon profits, then C and D will pay more than A and B, and if that is the case, then they will pay more because they expended

more in improvements, in which case, say what we will, improvements and not land values are taxed.

Mr. Duval boldly asserts that the "profit made from using land is what gives it its value" and that "some farms have only an improvement but no land value." Necessarily, only farms out of which profits are made have any land value, and since the single tax is levied only upon profits, all such farms escape taxation entirely.

Upon what principle does Mr. Duval propose to estimate profits so that he can get at the value of the land? Thousands and tens of thousands of farmers will tell him that instead of making profits they have lost money. Are they to be believed? These farmers would willingly show their books and convince Mr. Duval that their statements are honest, and yet, I am persuaded, the demand for revenue would be so exacting that such farms as make no profits, and hence, according to Mr. Duval have no value but improvements, would be taxed—in fact, there would be no escape except in government bankruptcy.

Mr. Duval upbraids Mr. Connolly gently, because he does not comprehend so simple a problem as the single tax submits for solution. To tax land and nothing but land, is a proposition not difficult to comprehend, but to tax land values, land profits, is quite another thing, which Mr. Duval should take an early opportunity to explain.

What I should like to see inaugurated is a system of taxation that would, with as little delay as possible, tax the wealth of the country. If Mr. Jay Gould insists upon collecting dividends on \$90,000,000 of Western Union stocks, I would have the \$40,000,000 cost and the \$50,000,000 water all taxed. If the railroads of this country will insist upon collecting dividends on \$8,500,000,000 investments, of which \$4,500,000,000 is water, then I would tax all—water and cost, and so on throughout the list. If this was done taxes would bear less heavily upon labor, and this could be done if workingmen should resolve to have it done. Let millionaires tell the truth under oath about their possessions, and if they commit perjury send them to prison like any other felons. This done, multiplied millions would be uncovered, and a reign of righteousness would dawn upon the land. *Charles Marshall.*

TWAS THE NIGHT AFTER CHRISTMAS.

He dreamed that nineteen raging bulls,
Each forty feet at least in height,
Were chasing him—the crazy fools!—
And out he jumped into the night!
His bed was on the fourthly floor;
The pavement it was very hard;
Christmas nights no more he'll snore;
He sleeps the sleep no bulls retard.

Socrates.

SOCRATES is considered by some authorities as the most celebrated philosopher of all antiquity. He was born in Athens, in the year 469, B. C. His father, Sophroniskos, was a sculptor, and he followed the same profession in the early part of his life. His mother, Phaenarete, was a midwife, to which avocation he was wont to compare his peculiar method of conversational teaching. His family was respectable in descent, but humble in point of means. His physical constitution was robust to an extraordinary degree; his ordinary diet was simple and abstemious. He had the usual education of an Athenian citizen, which included not only a knowledge of the mother-tongue, and readings in the Greek poets, but also the elements of arithmetic, geometry and astronomy, as then known. As a young man he frequented the society of the physical philosophers, Archelaus and Anaxagoras, who laid the foundation of that exemplary virtue which succeeding ages have ever loved and venerated. Parmenides, who was the first to teach of the rotundity of the earth, was also an associate of Socrates.

In the army he served his country as an ordinary foot soldier; he fought with boldness and intrepidity, and to his courage two of his friends and disciples, Xenophon and Alcibiades, owed the preservation of their life. Though as a warrior, his bravery and endurance were highly extolled, it is as a philosopher and moralist that the character of Socrates is best known.

On two memorable occasions he stood forward in political life. After the battle of Arginusea, in 406, the ten generals in command were publicly arraigned for neglecting to obtain the bodies of the killed to receive the rites of interment. The clamor for their condemnation was so great that the court wished to proceed in violation of the legal forms; but Socrates, as the presiding judge, firmly refused to put the question. The other occasion was during the tyranny of the Thirty, who took up the policy of compelling a number of influential citizens to take a part in their illegal murders and confiscations; but Socrates withstood them at the peril of his own life. He spoke with freedom on every subject, religious as well as civil, and had the courage to condemn the violence of his countrymen without fear of the torrent of their resentment. He was fond of labor, and injured himself to suffer hardships. He acquired that serenity of mind and firmness of countenance which the most alarming dangers could never destroy, or the most sudden calamities alter. If he was poor, it was from choice, and not the effects of vanity, or the wish of appearing singular. He bore injuries with patience, and the insults that malice or jealousy would

inspire, he not only treated with contempt, but even received with a mind that expressed some concern, and felt compassion for the depravity of human nature. So singular and so venerable a character was greatly admired by the most enlightened of the Athenians. Socrates was attended by a number of illustrious pupils, whom he instructed by his exemplary life, as well as by his doctrines. He had no particular place where to deliver his lectures; early in the morning he frequented the public walks, the gymnasia, and the schools where youths were receiving instruction; again in the market places and public squares. What must be the beauty and sublimity of this great man's teaching, who counted among his disciples such minds as Plato, Xenophon, Alcibiades and Euclid. Euclid on several occasions, had, in the disguise of a woman, risked his life that he might enjoy the discourses of Socrates. Rollin, in his ancient history, calls Socrates the Prince of Philosophers. Cicero says he could never read the description of his death in Plato without tears. It is to Plato and Xenophon, more than any of the ancients, that we are indebted for our knowledge of Socrates, and particularly Plato, who had been an eyewitness to all the circumstances that led to his condemnation and death. Socrates himself left nothing in writing.

The peculiar austerity of his life did not render him gloomy and morose. In company and conversation he was always gay and facetious, and the life and soul of the entertainment. Though he was very poor, he piqued himself upon the neatness of his person and house, and could not endure the ridiculous affectation of Antishenes, who always wore dirty and ragged clothes. He told him once, that through the holes in his cloak, and the rest of his tatters, abundance of vanity might be discerned.

He generously refused the offers and presents of Archelaus, King of Macedonia, who was desirous of having him at his court, though we find in Xenophon's Economics, that his whole estate did not amount to the value of five minae, or about sixty dollars. The richest persons of Athens were among his friends, who could never prevail upon him to accept any share of their wealth. When he was in want of anything he was not ashamed to declare it: "If I had money," said he one day in an assembly of his friends, "I should buy me a cloak." He did not address himself to anybody in particular, but contented himself with that general information. His listeners at once sought the honor of making him this small present, upon which Seneca remarks, a celebrated philosopher of the 1st century, that their own observation ought to have anticipated both the want and the demand.

Socrates was naturally hasty and passion-

ate, which he made great efforts to subdue and correct. At one time, finding himself much exasperated against a slave, he said, "I would beat you, if I were not angry."

This introduction of moral philosophy, by which mankind was induced to consider themselves, their passions, opinions, duties, actions and faculties, gave rise to the exclamation that Socrates drew down philosophy from heaven. When Plato was on the point of death, he blessed and thanked God for three things: that He had endowed him with a rational soul, that he was born a Greek, and not a barbarian, and that He had placed his birth in the lifetime of Socrates.

Chaerophon, a zealous disciple of Socrates, happening to be at Delphi, demanded of the oracle whether there was a wiser man than Socrates in the world; the priestess replied there was none, a declaration that contributed much to the inflaming of envy and stirring up of enemies against him. The answer puzzled Socrates extremely, and he could scarce comprehend the meaning of it. However, his interpretation, as related in the Apology, is a charming bit of wisdom that bears a most modern application. Socrates well knew, as he said of himself, that there was no knowledge in him, neither little or great; yet, he could not suspect the oracle of falsehood. He therefore considered it attentively, and took great pains to penetrate the meaning of it. At first he applied himself to a powerful citizen, a statesman, and a great politician, who passed for one of the wisest men of the city, and who was himself still more convinced of his own merit than others. Socrates found by this man's conversation that he knew nothing, and insinuated as much to him in terms sufficiently intelligible, which made him extremely odious to that citizen, and all who were present. He did the same to several others of the same profession, and all the fruit of his inquiry was to draw upon himself a greater number of enemies. From the statesmen he addressed himself to the poets, whom he found still more egotistical, but really more void of knowledge and wisdom. He pursued his inquiries to the artisans, and could not meet with one, who, because he succeeded in his own art, did not believe himself very capable and fully informed in all other points of the greatest consequence; which presumption was the almost universal failing of the Athenians. As they had naturally abundance of wit, they pretended to know everything, and believed themselves capable of pronouncing upon all matters. His inquiries among strangers were not more successful.

Socrates afterwards entered into comparing himself with all those he had questioned, and discovered that the difference between him and them was, that they all believed they knew what they did not know,

and that, for his part, he sincerely avowed his ignorance. From thence, he concluded that God alone is truly wise, and that the true meaning of his oracle was to signify that all human wisdom was no great matter after all. "As to the oracle naming me," he continued, "it no doubt did so by way of setting me up for an example, as if it intended to declare to all men, the wisest among you is he who knows, like Socrates, how ignorant he is."

Without going out of his own house he found sufficient to exercise his patience to its fullest extent. Nantippe, his wife, put it to the severest proofs by her capricious, passionate and violent disposition. In Xenophon we read, that never was a woman of so violent and fantastical a spirit and so bad a temper. There was no kind of abuse or insult that she had not heaped upon him. She would sometimes be transported with such an excess of rage as to tear off his cloak in the open street, but Socrates always accepted this treatment with kindness and forbearance, which had the effect of adding fuel to fire. One day, after having vented all the reproaches her fury could suggest, by an unusually prolonged tirade of abuse, using the vilest epithets, and offering him the grossest insults, without evoking from him a single complaint, she finally dashed a vessel of dirty water upon him, at which he simply laughed and wiping his face he remarked: "That after so much thunder, one ought naturally to expect a shower."

Tim Fagan.

[To be continued.]

Labor Organizations as Political Factors.

It has been remarked, by those who are supposed to be well informed, that "politics" is destructive to labor organizations—i. e., political discussions if permitted in the lodge room will cause dissensions among the members of the local branches of the order, which in turn result disastrously to the organization at large. That this is a fact has not been often denied; and by the average thinking laboring man is greatly deplored. But is such actually the case? Is it "politics" that is the irritable cause?

What is politics? Webster says that it is "the science of government." If this is the correct definition—and Mr. Webster is good authority—it is a pity that labor organizations can not consider questions pertaining to the government without causing their own destruction. There is no class as numerous or as deeply affected by the government as the laboring class; then why should they, of all others, be unable to discuss the points of merit that arise in the course of political events? Why should they not examine into matters concerning the government,

which directly affect their interests, without quarreling among themselves?

The reason is easily given. By analyzing the subject one can readily discern the cause. Mr. Webster defines the word "partisan" as "one who is violently and passionately devoted to a party or interest." The average laboring man has as yet been unable to detect the difference between "politics" and "partisanship." He thinks that he is discussing the former, when in reality it is the latter. He does not allow his usually good judgment to prevail upon these occasions and thereby decide which is the best for himself, but he immediately takes the position that *his party* has assigned him. He is positive that his party is right, and defends its policy as his own, although this same policy may be making a slave of him.

That there is a favorable change taking place in the minds of workmen within recent years, has created considerable alarm in the ranks of those who still boast of the "glories" of *their party*. Only a short while ago, should the question of the "tariff" come up between a group of laboring men, two sides were immediately formed, not because any argument had been made that would produce such a result, but because they had already enlisted in the ranks of one of the two great parties. They defended that party's principles (?) without giving them a thought. The "arguments," if they can be called such, of one side, were shouts of "Monopoly!" "Trusts!" "War tax!" while the other side responded with the cries of "Protection to American labor!" "Free trade!" "Pauper labor." Probably not one of this group of laboring men had allowed himself to consider whether any of the above "arguments" were correct, but the "discussion" closed by ill feelings on all sides.

The day is not far distant when members of labor organizations can discuss all political questions without fear of injury to the order, not because "politics" is changing but because the members are beginning to see that to vote intelligently they must individually examine into all economic questions and not depend upon or bear allegiance to any party or boss. The only danger lies in the ever present demagogue who in his desire to save the "dear" laboring man will lead him into new parties, which will be as rotten as either of the old ones. By holding aloof from all party ties labor will have the balance of power. "Partisanship" should be avoided in any form and all "political" questions should be thoroughly debated in the lodge room and through the columns of their official organ, and then each voter cast his ballot for the candidate that he believes will support legislation favorable to the workman.

What does it matter to the member of a labor organization to what party a candidate

belongs so long as he is pledged to use his influence to have an "anti-Pinkerton" law enacted by the legislature of which he will become a member if elected? If an aspirant for office will use every endeavor to advance legislation which will enable an employé to recover damages from a railway company the same as a passenger in case of injury, does it make any difference to the railway employé by which party this candidate is nominated?

Why does not each laborer try to solve for himself the question, "Who is protected by protection?" Why not work out the problem, "When foreign shoemakers are imported free of duty, what benefit is a tariff on foreign shoes to American shoemakers?" Or labor organizations might be able to decide, "What benefit is a tariff on iron ore to American miners when our mines are operated with Hungarians, Italians and Poles?"

These and all other questions pertaining to "politics" should be discussed by labor organizations, but not from a "partisan" standpoint.

W. S. Carter.

DENVER, COLO.

KITTY O'SHEA.

WITH COMPLIMENTS TO E. V. DEBS.

Alas! that I ever should feel as I'm feeling;
My heart is as heavy with anguish as lead,
My eyes all around are abstractedly reeling,
In fact I'm in grief from my heels to my head,
All because that my hero Parnell was caught erring,
And drove all the hopes of a nation away;
For the next twenty years they're as dead as a herring,
And who can we blame but sweet Kitty O'Shea?

I thought I'd be soon o'er the creamy waves bounding
Before a delightful and favoring gale,
To hear the blithe trumpets and guns gaily sounding
The birth of home rule from the Head of Kinsale.
"There's many a slip 'twixt the cup and the lip,"
And poor Erin needs friends to sustain her to-day;
I'll renounce from my heart every thought of the trip,
All because of the siren, sweet Kitty O'Shea.

Oh! woman, since first you were launched on crea-
tion
To sail down the ages resplendent in charms,
You've raised the old deuce with full many a nation,
When claspings its leader up close in your arms.
Whole empires right down to the devil might tumble,
And blaze like a load of inflammable hay,
Before he'd be heard at such havoc to grumble,
When clasp'd to the breast of some Kitty O'Shea.

Dear Debs, you've no mercy at all for a fellow
Whose heart is enraptured by womanly wiles!
'Tho' made of cast iron, 'twould soon become mellow,
And fuse in the flame of her ravishing smiles.
The angels, Tom Moore says, came down for a season,
Bewitched by the charmers, on earth here to stay—
Think you that Parnell, void of infinite reason,
Was proof against beautiful Kitty O'Shea?

I'll be true to him still, for he never yet faltered
When leading the hopes of a nation along.
The course he mapped out is the same course unal-
tered

It was before Kitty allured him to wrong,
Bad luck to her phiz! If the smallpox had marred it
Ere ever he met her, to fall by the way—
Even now, if he'll only agree to discard it,
He'll win and we'll not censure Kitty O'Shea.

Shandy Maguire.

The Union Spirit.

The influence of habit and custom is no less marked in the sphere of thought than in that of action.

We are most of us so much the creatures of circumstances that our religion as well as our political belief is determined by the place of our birth, the manner of our bringing up, the standard of opinion daily confronting us.

The sum total of these influences begets the characteristics of a people.

So pronounced is this effect that the philosopher and historian recognize the inability of the occidental to understand the oriental, and vice versa.

The most devout Christian in America may well have been the most fanatical Moslem if born and reared in Arabia. The most zealous defender of states' rights in ante-bellum Mississippi might quite likely have been an ardent disciple of the Hamiltonian theory of government if fate had decreed Skowhegan, Me., as his birthplace.

As law is universal in its scope, the general principle referred to holds sound when applied to the attitude of men towards social problems.

Take for instance the organization of labor. The recognition of its value as a great social force varies widely in different communities.

It is an interesting and curious inquiry to analyze this difference. What makes it? How comes it about? Something like this:

The change in industrial conditions, in processes of production and manner of work during the past century, and especially during the last fifty years, has, by subordinating the importance of the individual, imposed an entirely new code of duties upon the wage-earners. As standards of thought change slowly, there are yet many communities where the full meaning of this change is not yet apparent.

As in the political world there are traditional Democrats who still solemnly vote for "Old Hickory," so in the industrial world there are supposedly intelligent men who are not aware that the spirit of to-day is the spirit of association—of labor as well as of capital.

When there is a race of trade union grandfathers in America—and the present generation will produce them—the non-union spirit will be more nearly extinct. The trouble is that to-day many of our trade unionists are but late converts. They were not taught in their childhood by the example of parents, by the standard of thought in their home-life, that the non-union spirit is an unsocial and unprogressive spirit.

The children who are growing up now will be confronted with a widely different standard of opinion and will be unionists, even before they begin to learn the trade they are to follow.—*Boston Labor Paper.*

Our Railroad System.

The New York Sun, which boasts that it shines for all, in a seven column article of a recent issue reviews the railroad situation as it is presented in *Poor's Manual*, which is considered good authority on railroad matters, and from this article we make some extracts for our readers, hoping to be able to let them see a little of the methods in use by which the dividends are kept low, and as this is often used as an excuse when labor demands better pay, it is hoped that the space devoted to this matter will not be wasted. The Sun starts out with the following headlines:

The railroads. Monster figures about the country's transportation lines. Radical reforms necessary. The whole system of management needs reorganization. The railways last year earned \$1,120,000,000 gross and \$68,000,000 net on a capitalization of more than nine billions and a total mileage of 152,745. This was an increase of seven per cent. in gross, but the average rate of dividend paid was lower than ever. Enormous shrinkage in price of bonds the last of the year. Bondholders should have a voice in management.

Eighteen hundred and ninety was an eventful year in many respects, but especially eventful to the business interests of the country, and to none more so than to the railway and financial interests. The gross earnings for 1890 reported by the railroads of the country as given in "Poor's Manual" for 1890, aggregated \$1,001,736,586. The mileage of all roads embraced in these returns was 152,745 miles, so that these earnings averaged \$6,574 per mile. The total share capital and indebtedness of the roads was estimated at \$9,361,000,000; the gross earnings consequently equalled 10.7 per cent. of the capital investment.

An increase of seven per cent. in the gross earnings of the railroads of the country does not necessarily imply an increase to that extent in the average gross earnings per mile, for the reason that the mileage divisor is constantly increasing; therefore, to explain the above estimate, it should be noted that the gross earnings of about 150 leading railroads show an increase of about nine per cent., and these lines have added but little to their mileage within the year. Again, a large extent of road has been brought into operation during the past eighteen months, the earnings of which will swell the total very perceptibly, although at a lower average rate than the estimate of \$7,000 per mile. It is certain, also, that the lesser properties, whose earnings are made public but annually, will show a far greater ratio of increase than do the 150 roads above referred to, for the reason that, being mostly local roads, subject to little or no competition, they are enabled to maintain remunerative rates, which, in view of the immense volume of tonnage moved during 1890, must have vastly augmented their earnings.

The one point worthy of notice in the above is the fact that the share capital and indebtedness of the roads for the 152,745 miles in use during the period under consideration is said to be \$9,361,000,000, or at

the rate of over \$61,300 per mile, and that the earnings were at the rate of about \$7,000 per mile, or over 10½ per cent.

During the past calendar year the gross earnings of the railroads increased fully seven per cent over the earnings of 1889, if the current reports of earnings are to be relied upon, and there is no good reason to doubt their accuracy. If the Manual's estimate of \$6,700 per mile gross in the calendar year 1888 is accurate, it would apparently follow that the gross of 1889 would average seven per cent. more, or \$7,169 per mile. But, to be conservative, put the average at \$7,000 per mile, or \$1,120,000,000 on 160,000 miles of railroad.

The article then proceeds to figure on the net returns the investors in railroad securities ought to receive out of the above earnings, and assumes that the experience of the past has demonstrated that it takes about 68 per cent. of the gross earnings for operating expenses, thus leaving 32 per cent. of the earnings for the benefit of the capital invested. Thirty-two per cent. of \$1,120,000,000 is \$358,400,000, to which must be added about \$50,000,000 more as the proceeds from miscellaneous sources, thus bringing the total amount available to over \$400,000,000. The question is asked: Has this amount been distributed? and is answered in the affirmative by a table compiled by the *Daily Stockholder*, of New York City, which shows that nearly \$363,000,000 were actually paid to share and bondholders during the past year. As before stated, there has been a marked increase in the earnings of the roads and in the returns to the investors, and we quote:

The tendency on the whole has been in the direction of improvement, and evidences of this tendency are not wanting. Several companies have entered the ranks of the dividend payers for the first time, others have rejoined the ranks after a greater or smaller lapse, while still others have found it possible to make more liberal distributions than in the periods immediately preceding.

Among the more conspicuous illustrations of better dividends, we have the increase on the Lake Shore from five per cent. per annum to six per cent. The Cincinnati, New Orleans & Texas Pacific paid four per cent. last February and two per cent. more in October, making six per cent. for 1890 against three per cent. in 1889 out of the 1889 earnings and nothing for several years preceding. The Fitchburg has resumed on its preferred stock, the Canadian Pacific has increased from three to five per cent. per year, and the Northern Pacific is distributing regular quarterly dividends of one per cent. on its preferred shares. The Denver & Rio Grande has also re-entered the lists, having paid 1½ per cent. on its preferred stock in February and 1½ per cent. in August. The Rio Grande Western has declared 1½ per cent. on its preferred shares, payable February, 1891, in stock of the same kind. The Cincinnati, Hamilton & Dayton has recovered from the effects of the Ives catastrophe and is paying five per cent. a year now. The Lake Erie & Western is distributing four per cent. on its preferred stock, and the next dividend of the Evansville & Terre Haute will be 1½ quarterly instead of 1¼ as before. The Chicago & Eastern Illinois, having suffered from a strike, suspended regular dividends on its preferred shares, but in December made a lump distribution of six per cent., payable in the same preferred stock.

The Chicago, Burlington & Quincy has advanced from a four per cent. basis to a five per cent. and the Great Northern has made a dividend of one per cent. of its preferred shares. The Toledo & Ohio Central has begun periodical payments on its

preferred stock. The Huntingdon & Broad Top increased from 2½ per cent. semi-annual on its preferred stock to three per cent. last July. On the Atlanta & Charlotte Air Line there has been an increase in the dividend from 2½ semi-annual to three per cent., under a provision of the lease requiring such increase when gross earnings reach a certain figure. The Louisville & Nashville has paid six per cent. part in cash, against five per cent., wholly in stock, in the two years preceding. The Cleveland, Cincinnati, Chicago & St. Louis—or Big Four—besides paying five per cent. on its preferred shares, paid four per cent. on its common stock. Of course there have been some reductions of dividends—not a great many, however, and the reductions are not very important, as a rule.

It is, however, a rather curious circumstance in connection with these railroad finances that the amount of interest and dividends paid during a period of years do not continue in the same proportion, and this indicates the introduction of a modern system which is called "over capitalization" in monetary circles, as it does not sound quite so harsh as the more common term, "watering the stock." Again we quote:

In 1876 the total amount of interest paid was \$93,559,573. In 1889 such payments were \$219,877,150, an increase of \$126,317,577, or 135 per cent. over the amount paid fourteen years previously. In 1876 dividend payments aggregated \$48,039,668; in 1889, \$81,264,029, the increase being only \$33,224,361, or less than 20 per cent.

In connection with this the following statement, showing the average rate per cent. of interest and dividend payments for the past eight years on all the railroads of the country, is of interest:

	Interest.	Dividends.
1882	4.73 per cent.	2.91 per cent.
1883	4.75 per cent.	2.75 per cent.
1884	4.66 per cent.	2.48 per cent.
1885	4.77 per cent.	2.02 per cent.
1886	4.75 per cent.	2.04 per cent.
1887	4.71 per cent.	2.18 per cent.
1888	4.35 per cent.	1.77 per cent.
1889	4.38 per cent.	1.77 per cent.

OVER-CAPITALIZATION.

The continued decline in average rate of return upon railroad shares when taken in connection with the comparative steadiness of the return upon railway bonds naturally suggests an inquiry as to the causes which have produced this result. The explanation is to be found in an examination of the statistics of railway capitalization.

In 1855 the total capitalization and debt of 17,663 miles of railroad then in operation was as follows:

Share capital	\$421,792,190
Funded debt	299,262,973

Total stocks and bonds \$724,055,163

The capitalization at this date averaged \$41,000 per mile throughout the whole country.

Make a note of it; \$41,000 per mile! Again read:

Between 1855 and the close of the war, the railroad mileage of the country was doubled, although a panic (1857) and the war intervened.

The total mileage of our railroads at the close of 1865 was 35,085 miles. In the twenty-three years since then (1866 to 1888 inclusive) there have been constructed 121,000 miles of new road, an average of 5,260 miles per annum, twice the annual average of the whole period of sixty years, and fifty three times the annual average of the first period of thirty-five years. During these twenty-three years the country has experienced three great waves of railroad construction, which were checked only by extraordinary financial revulsions.

The first of these great construction waves occurred within the eight years intervening between

the close of the war and the panic of 1873. In that time the mileage increased more than 100 per cent., or from 35,085 miles in 1865 to 70,268 miles in 1873. Within this period was completed the first Pacific railroad line, and construction on a second line to the Pacific was well under way. The cash cost of the 35,000 miles of road constructed in these eight years must have exceeded \$1,400,000,000; and the panic, which began in the fall of 1873, was largely the result of the transformation—following so close in the wake of a great civil war—of this vast sum from floating into fixed capital.

Divide \$1,400,000,000 by the 35,000 miles of road and the product is \$40,000 per mile. Now read again:

In 1873 the capitalization of railroads had grown to proportions enormous in comparison with the figures of 1855. The average of \$41,000 per mile in 1855 very fairly represented the cash cost of the roads with their equipments. In 1873 extravagance and modern methods of financing had begun to be introduced and the nominal capitalization did not so fairly represent the value of the roads.

Now take the figures for 1889, 152,745 miles at \$9,361,000,000, or at the rate of \$61,300 per mile, and the figures for 1890, with 160,544 miles "capitalized" at \$9,680,942,249, or at the rate of about \$60,300 per mile, and the query is, how did it get so high? In answering this question the article makes tables for the fifteen years commencing with 1875 and ending with 1889, inclusive, and shows that in the first period of five years covered by the tables there was an increase in share capital of \$404,649,807, and in bonded debt of \$250,255,280, a total of \$654,905,087. In this period there was built 11,770 miles of road. Assuming that this new mileage cost \$30,000 per mile cash to build, the cost of all would have aggregated \$353,100,000, leaving over \$300,000,000, which, theoretically at least, would represent the amount expended on the old lines in the way of double tracks, &c.

Applying this reasoning to the succeeding two periods, and we find that in that ending in 1884 the increase in share capital was \$1,366,969,393, and in bonded debt \$1,349,626,600; total, \$2,716,595,993. In these five years there was added to the country's railway system 40,759 miles of line, costing say \$1,221,770,000, or to be liberal say, \$1,300,000,000. This would leave \$1,417,000,000 as representing the amount expended on the old lines during that period. In the last period of five years the construction equaled 29,124 miles, costing not more than \$875,000,000 as against an increased capitalization of \$1,891,732,631. Summarizing the three periods we find that there were built 81,653 miles of railroad at an estimated cost of \$2,528,100,000, as follows:

Period.	Miles built.	Approximate cost.
1874-79	11,770	\$353,100,000
1880-84	40,759	1,300,000,000
1885-89	29,124	875,000,000
Totals	81,655	2,528,100,000

The average length of old lines which would call for improvements during the

period of 1874-79 would approximate 75,000 miles, and the apparent increase of capitalization thereon was, as shown above, \$300,000,000, or \$4,000 per mile. In the next period the average mileage would be say 105,000 miles; the increase in capitalization \$1,417,000,000; the average increase per mile about \$13,500. During the five years, 1885-1889, the average mileage was say, 145,000 miles; the increased capitalization \$1,000,000,000, or say, \$6,800 per mile.

It is manifest from this that during the period from 1880 to 1884 there was an immense inflation in capitalization, which was wholly unwarranted by the improvements made on the existing lines of railroad.

Taking the increase of \$4,000 during the first period, the increase of \$13,500 during the second period, and the increase of \$6,800 during the third period, we have a total of \$24,300 per mile of inflation "wholly unwarranted by the improvements made." Suppose that we allow them a first cost of \$40,000, and \$1,300 for improvements, it would make \$41,300 per mile, but instead of this the stock has been increased and the country is asked to pay dividends on the "fictitious value" which adroit manipulation has apparently given to the stock. Taking the 100,544 miles of road in use during 1890 and figuring the first cost and improvements at \$41,300 per mile (which by all accounts seems to be amply sufficient for the purpose) and we would have the cost of the roads amount to about \$5,630,467,200, and this should be and is the amount of capital which is entitled to returns, and not the sum of \$9,680,942,249 as they are now capitalized at, as this is an excess of \$3,050,475,049 above cost. We find the indebtedness of the roads stated at \$5,185,842,931, and thus find that the shareholders must have put in about \$1,444,624,269 to raise the amount involved in the construction and equipment of the roads, and not \$4,495,029,318, which would be the amount if the roads were not "over-capitalized," as the mild term calls it. In the division of profits for 1890 we find that the bond and note holders were paid \$255,423,695 interest on the \$5,185,842,931 of claims held by them, or nearly five per cent. This is certainly a good return for the money when much money is loaned to different enterprises at four and even 3½ per cent. Turn now to the share account, and we find that the dividends paid to the shareholders during the past year amounted to \$107,306,727 on their share of \$1,444,624,269 of money, or the \$4,495,029,318 money and water which they show by their "modern methods of financiering." Taking the true amount at issue and leaving out of the account the inflation and water we find that the shareholders have had dividends at the rate of nearly 7½ per cent. on an average all through

the country; some of course received more, others less, but on the whole this is a very nice return for the capital invested, and these figures should be brought to the notice of the various railway officials, when they try to bluff labor's demands with the plea of poverty.

The above figures are so large, and may serve to bewilder and confuse even when the utmost care has been used to be plain and leave no room for misunderstanding, so we will use an illustration which all can understand, to make plain the new method of inflation. In most all sections of our country it is taken as a rule that a house should rent for 10 per cent. of the money it cost to build; for instance, a house costing \$1,200 should rent for \$10 per month, or \$120 per year. This seems to be considered a fair rate for both the landlord and tenant, for it gives the one a good interest and leaves enough to pay for taxes and improvements, and the other ought to have a comfortable home in the house. Now, suppose a "modern financier" should put up a house costing say \$800; that he borrowed \$600 on a bond and mortgage on his house, and used only \$200 of his own money in its construction. After his \$800 house is done he wants to rent it as if it were a \$1,200 house, and tries to make believe that it is a \$1,200 house, because he has promised his father, his mother, his brother and his sister each the income of a hundred dollars if they would help him get the \$600 that he needed to build the house. An applicant for the house would be very apt to "kick" if he found that he was to pay for this increased valuation, yet this is just the same plan which is being used by our railway financiers, and they do not want any "kick-ing" about it, either. *Vulcan.*

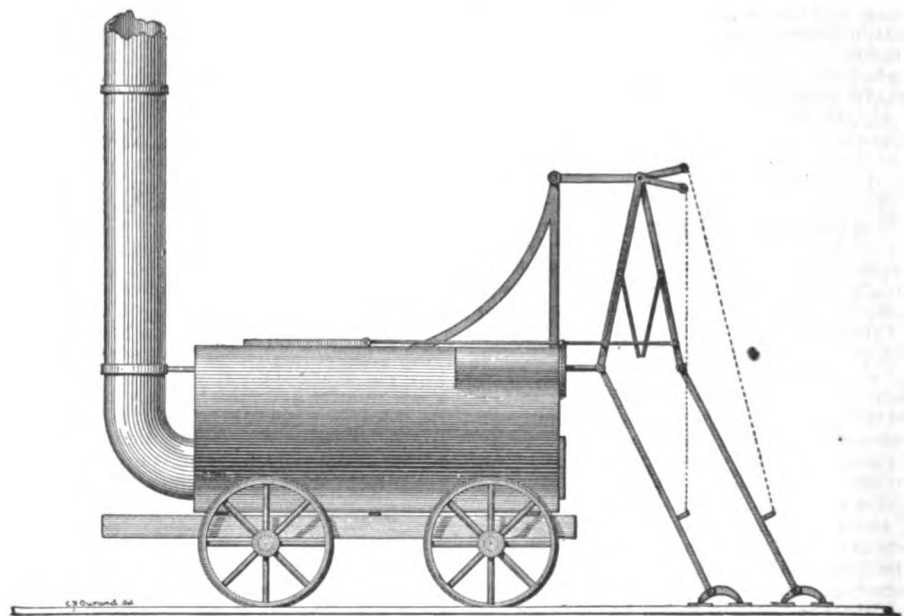

Expired Railway Patents.

The following list of railway patents, furnished by F. B. Brock, Patent Attorney, Room 26, Atlantic Building, Washington, D. C., expired during the month of February, 1891, and are now free to be used by anyone, viz.:

Car brake, G. Westinghouse, No. 147,212.
Air brake, M. Champion, No. 147,225.
Refrigerator car, J. J. Bate, No. 146,980.
Sleeping car, J. R. Renfill, No. 147,171.
Head rest for car seats, W. H. Peirson, No. 147,161.
Signal, C. Sammons, No. 147,178.
Switch, J. B. Stannour, No. 147,189.
Atmospheric brake, H. E. Marchand, No. 147,416.
Fire extinguisher for cars, W. L. Drake, No. 147,284.
Car coupling, W. Stiles, No. 147,340.
Rail joint, R. Johnson, No. 147,250.
Apparatus for heating cars, W. Thamm, No. 147,706.
Railroad gate, W. J. Garrison, No. 147,495.
Pneumatic signal, W. Robinson, No. 147,692.
Construction of cars, J. E. Leeper, No. 147,777.

Persons desiring copies of patents drawings and specifications, can obtain the same for fifteen cents, by applying to Mr. Brock, whose address is as given above.

The Mechanical Traveler.

PIONEER LOCOMOTIVE, FIG. II., PLATE VI.

In my article on the "Evolution of the Locomotive," *Magazine*, June, 1890, pages 513, 514, I made mention of "1813, Mr. Brunton, of Derbyshire, England, constructed a curious machine in which the steam power was applied to two legs extended behind, which by grooved ends took firm hold on the ground."

The above illustration is copied from the American edition of Nicholas Wood's "Practical Treatise on Railroads," republished from the English edition by Carey & Sea, Philadelphia, 1832. The following quotation from the title page of this volume seems an apt one for the *Locomotive Firemen's Magazine*:

"Should we live to see fully developed all the powers and energies of this system, we have no doubt we shall also live to see it recognized as one of the very greatest benefits which either philosophy or art has ever conferred on mankind."—[*Quarterly Review*.]

On page 127, "Motive Power and Disposition of Railroads," the writer says: In 1813 Mr. Brunton, of Buttery Iron works, also obtained a patent for a mode of accomplishing the locomotion of the engine without the aid of the adhesion of the wheels upon the rail; and of which, as it displays great ingenuity, I have given a drawing.

Fig II., plate vi., is a side view of the engine. The boiler was nearly similar to that of Mr. Blenkinsop,* cylindrical with a tube passing through it to contain fuel. The cylinder was placed on one side of the boiler; the piston rod projected out behind horizontally, and was attached to the leg, at, and to the reciprocating lever, which is fixed at the lower extremity of the leg; feet were attached by a joint. These feet to lay a firm hold upon the ground were furnished with sharp prongs, which prevented them from slipping and were sufficiently broad to prevent their injuring the road.

On inspecting the drawing it will be seen that when the piston rod is projected out from the cylinder, it will tend to push the end of the lever, or leg, from it in a direction parallel to the line of the cylinder, but as the leg is prevented from moving backwards by the end being firmly fixed upon the ground, the reaction is thrown upon the carriage, and a progressive motion given to, and this will be continued until the end of the stroke. Upon the reciprocating line is fixed a rod sliding horizontally backwards and forwards upon the top of the boiler; it is furnished with teeth, which work into a cog wheel, lying horizontally; on the opposite side of this cog wheel a sliding rack is fixed, which, as the cog wheel is turned around by the sliding rack, is also moved backwards and forwards. The end of this sliding rod is fixed upon the reciprocating lever of the leg. When, therefore, the sliding rack shown in the drawing is moved forward, the opposite rod is by the progressive motion of the engine moved in the contrary direction, and the leg is thereby drawn towards the engine, and when the piston rod is at its farthest extremity of the stroke the leg will be brought close to the engine; the piston is then made to return in the opposite direction, moving with it the leg and also the sliding rack; the sliding rack acting on the toothed wheel causes the other sliding rod to move in the contrary direction, and with it the leg. Whenever, therefore, the piston is at the extremity of the stroke and one of the legs is no longer of use to propel the engine forward, the other, immediately on the motion of the piston being changed, is ready, in its turn, to act as a fulcrum or abutment for the action of the moving power, to secure the continual progressive motion of the engine.

The feet are raised from the ground during the return of the legs toward the engine by straps of leather

*Mr. Blenkinsop's locomotive has been illustrated heretofore in the *Magazine*, viz., August, 1886, p. 464; and also *Locomotive Engineers' Journal*, May, 1890, p. 376.

or rope fastened to the legs and passing over friction sheaves, movable in one direction only, by a ratchet and catch worked by the motion of the engine. The feet are described of various forms in the specification, the great object being to prevent them from injuring the road and to obtain a firm footing that no jerks should take place at the return stroke, when the action of the engine comes upon them; for this purpose they were made broad, with short spikes to lay hold of the ground.

"In a communication to the editor of the *Repository of Arts*, vol. 24, the patentee gives an account of an experiment made with one of these engines, which he termed his *Mechanical Traveler*. The boiler was of wrought iron, five feet six inches long, three feet diameter; the step was twenty-six inches long; the piston rod having a stroke of twenty-four inches; the weight of the whole forty-five cwt. The machine being placed on a railway I first ascertained the power necessary to move it at the rate of two miles and a half in an hour, which I found to be eighty-four pounds. I then applied a chain to the binder part of the machine, by which, as the machine moved forward, a weight was raised at the same time and rate, and found that with steam equal to forty or forty-five pounds pressure on the square inch the machine was propelled at the rate of two miles and a half per hour, and raised perpendicularly 812 lbs. at the same speed, thus making the whole power equal to 896 lbs. at two miles and a half per hour; equal to six horses nearly." The volume herein quoted from, "Wood's Treatise on Railroads," contains more than 600 pages of printed matter and illustrations relating to the early history of railways before the date of its publication, 1832. Mr. Nicholas Wood, the author, was one of the three judges on the test runs of the four celebrated locomotives entered for competition and the reward of £500 offered by the railway, Mr. George Stephenson's celebrated *Rocket* having won in the contest, October 6th, 1829. Mr. Stephenson's first locomotive was built in 1813 or '14, so we have him experimenting and building locomotive after locomotive for fifteen years before his great success with the *Rocket*, 1814 to 1829, with the advantages of all his predecessors' work before him for two hundred and twenty-seven years, 1602 to 1829. In view of all these records of success and failure, and a final great success that revolutionized the world, I use the following as an appropriate quotation in its relations thereto:

Pluck wins. It always wins; though days be slow
And nights be dark 'twixt days that come and go,
Still pluck will win. Its average is sure.
He gains the prize who can the most endure,
Who faces issues, he who never shirks,
Who waits, and watches, and who always works.

WILLIAM E. LOCKWOOD.

He who puts the iron horse to his mettle
may be the monster's master, but he must
also account himself the slave of chance.

Wheel and Lever Question.

H. W. Hall has lately read up on this question, and was apparently "halting between two opinions" until he "had that discussion," was shown those "loose" wheels, and made his experiments with "that pair of small wagon wheels," and by it proved to his satisfaction the fact which no one has disputed, that the fulcrum of a pair of wheels standing on the rail, free from the restraint of the boxes, and moved by a force not kept in rigid connection with the center of the axle, is to be found at the point of contact with the rail. If the power is applied above the rail the center of the wheel becomes the place of resistance or weight to be overcome and we have a lever of the third class, with the power between the fulcrum and the weight. When the power is applied below the rail we have a lever of the first class, for we have the power on one side and the weight on the other, with the fulcrum between. As the character of the lever has been changed by this transposition of points, we also find that the motion of the lever is changed, and that while the power continues to act in the same direction the lever will move in the opposite direction. But as I have ever understood the wheel and lever question, it does not relate to a pair of "loose wheels," but to wheels under a locomotive, fully connected to its rods and piston and moving in unison with all the parts that go to make up the machine that we call a locomotive. Now as our friend Hall is of a practical turn, and has one pair of small wheels, it would be a good idea for him to get another pair, and for the purpose of experiment to nail several strips of board across from one axle to the other, thus making a so-called "buck-board" out of it. I am not about to say that the addition of another pair of wheels will make any change in the leverage, but will venture to say that if any of the wheels are pulled above the point of contact the whole wagon will come toward you, unless the wheels slip, and that if the same force be exerted in the same direction below the point of contact the whole machine will roll from you. Now, having rigged up our wagon let us get on and take a ride! Let friend Hall fasten a rope to a spoke of the front wheel below the axle and jump on behind and pull, and I rather think the wagon will run ahead; at least it will if he pulls strong enough, and just as long as the rope remains below the line of pull. Before, when we had the loose wheels, we changed the action of the lever by changing the point where the power was applied; now let us see what a change of situation will develop. Suppose you had a chance to fasten the rope to a spoke or a handle below the point of contact and that Mr. Hall was again seated on the wagon and pulling, and

again the pesky thing moved; but it has upset a theory, for it moves in the same direction it did before we changed the leverage. *It moves ahead again.* According to these experiments it ought to be clearly demonstrated that the wheels of a locomotive in full gear are not governed by the same laws of leverage as a pair of wheels knocking around loose, and that any lessons learned from the one must be carefully revised to suit the other. *Vulcan.*

Velocity of Steam and Water.

"Vulcan" intimates that I have somewhere rejected the idea of steam and water being subject to the same laws under pressure. Now I am not aware of having written anything that by any stretch of imagination can be tortured into a denial of this truth; the trouble is just here: "Vulcan" has seemingly never been able to recognize the distinction between water *per se* and water having an added factor of efficiency, represented by an increase in velocity. While my arguments have ever been devoted to the latter aspect of the case, his have been devoted entirely to the former, and he has persistently refused to consider the question in its latter and true aspect. To illustrate, here is the only argument "Vulcan" has thus far used to oppose the theory we have been discussing. I quote from November, 1890, *Magazine*: " * * * This was the point I made, that even if it was a large steam opening with a contracted opening to enter the boiler, a part of the pressure would be expended on the pipes and prevent the concentration of the whole pressure due to the large opening on the smaller one." Now, I have never denied nor sought to deny the truth of the above proposition. What I did and do deny is the correctness of "Vulcan's" application of the proposition to the principle we are discussing. My article in December *Magazine*, 1890, fully explained my position in regard to this matter. According to "Vulcan's" argument, a body of water moving with its normal velocity, would overcome as much resistance as a similar body of water moving with a higher velocity. "Vulcan" surely does not intend to advance this proposition. Now, for the purpose of showing how "Vulcan" has stumbled over well accepted truths, I am going to quote Forney's explanation of the injector's operation. He says: "Steam escaping from under pressure has a much higher velocity than water would have under the same pressure and condition. The escaping steam from the *receiving tube* unites with the feed water in the combining tube, and gives to this water a velocity greater than it would have if escaping directly from the water space in the boiler. The power of this water to enter the boiler

comes from *its weight* moving at the velocity acquired from the steam, and it is thus enabled to overcome boiler pressure. * * * Now, as already stated, steam under a given pressure escapes from an orifice with a very much greater velocity than water. But steam being very light, if its weight is multiplied by its velocity, its total energy will be comparatively small. *Now in the injector a portion of the high velocity of steam is imparted to the heavy water (italics mine), because this water is presented to the action of the steam, not in a mass, as in the boiler, but in a small quantity and in such a position that it can easily escape, so that it gradually acquires as high a velocity as the escaping steam can impart, and at the same time the steam is condensed and therefore there is a heavy substance with a high velocity, whose actual energy is sufficient to overcome the pressure in the boiler. If the steam were not condensed we would have a comparatively light substance moving at a high velocity, which, as has already been explained, would have little actual energy, and would therefore not overcome the boiler pressure"* (italics mine).

Now is it not as plain as the nose on a man's face, that this explanation is predicated on the absolute truth of the very principle we are discussing? And yet "Vulcan," after examining this explanation, finds nothing that indicates the truth of that principle. Suppose that "Vulcan" is right, and that steam condensed under these conditions immediately loses the velocity it had as steam and has only the velocity of water; is it not plain that Forney's explanation becomes no explanation at all? For it would be an utter impossibility to increase the energy of the mass of water above that of its prime source; and all that could be even hoped for would be the establishment of an equilibrium of energy between the water outside the check and that inside. On the other hand, supposing my position to be correct, and that steam condensed under these conditions retains its velocity, the explanation at once becomes clear; we can follow it in all its details and it becomes plainly apparent that the product of condensation *must* force its way into the boiler, carrying a certain percentage of fresh feed water with it. Think it over again, friend "Vulcan." In regard to the velocity of steam, "Vulcan," by an excellent train of reasoning, has convinced himself that the rules may be correct, but it is evident that he has accepted the rules under protest, as he intimates, that much has to be taken for granted that is not susceptible of proof. I think it can be shown that the amount of guesswork that enters into these rules has been exagg-rated by "Vulcan," and that the conclusions are arrived at through inference from facts, rather

than from analogy. We know that a body of steam under pressure will overcome the same amount of resistance as a body of water under equal pressure; from this fact the inference is plain that the momentum or actual energy of steam is the same as that of water under equal pressure. A cubic foot of water weighs 62.5 pounds; a cubic foot of steam of 1 pound pressure weighs .0411 of a pound, or less than $\frac{1}{2}$ of an ounce. Now multiply the weight of a cubic foot of water by the square of its velocity under 1 pound pressure and we have its momentum. The problem then is, with what velocity will a body weighing .0411 of a pound have to move to have the same momentum as a body weighing 62.5 pounds moving at the velocity which water would have under a pressure of 1 pound above atmosphere. It will be found that a cubic foot of water under 1 pound pressure, and a cubic foot of steam under 1 pound pressure will have the same momentum when moving at velocities that approximate very closely to those given by our rules. It is not necessary for me to occupy space with these calculations, as I merely wish to point out the manner in which the rules can be proved, and "Vulcan," or others who may be interested, can figure it out for themselves. I think it will become evident to anyone who figures the thing out carefully, that the rules by which we determine the velocity of steam are not founded upon guesswork.

Vacuum.

Compound Locomotives.

Some experiments or tests were lately made on the Brooklyn elevated railroads with a simple and a compound locomotive. Both were of the Forney type, with two pairs of connected driving wheels and four wheeled truck under the tank. The drivers carried 45,000 lbs. and were 42 inches in diameter. Both had 16-inch stroke, the cylinders of the simple engine being 11 and 11 $\frac{1}{2}$, and of the compound 11 and 18 inches. The compound cylinders were so arranged that both of them took live steam from the boiler when the engine was first started, but as soon as the exhaust from the high pressure cylinder had reached the normal pressure in the receiver the direct steam was cut off automatically, and the engine became a true compound. We quote from the *Railroad and Engineering Journal*, of New York, as follows:

The road on which the experiments were made is five miles long, and in that distance has 16 passenger stations and two junction points, at which stops were required. The trains consisted of two light passenger cars during the middle of the day and late at night, and three or four cars during morning and evening hours. The running time is 21 minutes.

The experiments consisted of one day's service with each engine. They were started from the yard at East New York, at 6:15 A. M., and ran six miles,

with a light four-car train, to Fulton Ferry, where they commenced service, making 22 trips (11 round trips) of five miles each, from Fulton Ferry to Ridgewood and return; then one trip of four empty cars to East New York, six miles, making a total train mileage of one hundred and twenty-two miles from 6:15 A. M. to 8 P. M. The coal used was soft anthracite. The steam pressure in the simple engine was 140 lbs. and in the compound 155 lbs.

Under these conditions, the experiments showed that during the 13 $\frac{3}{4}$ hours that each of the engines were doing practically the same work, the simple engine burned 3,899 lbs. of coal and the compound 2,430 lbs. or 37.7 per cent. less than the simple engine.

This is a very extraordinary result and deserves careful consideration. The difference of steam pressure in the two engines will be noted. This, of course, is a disparity in the conditions under which the experiments were made. If there is any advantage in using a high pressure in a simple engine, it should have the advantage thereof in a comparative test of this kind.

The report also shows that the boiler of the compound engine evaporated 8.25 lbs. of water per pound of coal, whereas that of the simple engine evaporated only 6.69 lbs. This is a difference of 22.3 per cent. In other words, as was noted in these pages with reference to the experiments with the Baldwin compound engine, the report shows that the boiler of the simple engine, which is said to be exactly like that of the compound, is nevertheless much less economical. In the language of Artemus Ward, "Why is this thus?" The reason for it is not explained in the report.

The first point, and the one most worthy of note, from the fireman's point of view, is that while some of the "boys" out West are shoveling 5, 6, and even 8 or 10 tons of coal for a day's work, "our boys" on the "L." road get along with less than two tons, even if they have a simple engine, while the compound used less than 25 cwt. during that day's work. The compound boiler, although said to be exactly like the other one, is said to have evaporated over 14 lbs. of water per pound of coal more than the other one; and the question naturally arises why there is or can be such a difference?

In the first place we note that the steam pressure of the compound was 15 lbs. more than on the simple engine. If the boilers were alike, as is stated in the report, it is strange that there should be a difference made in the pressure carried, and that that difference should be in favor of the compound, as it is an admitted fact by all engineers who have given any thought or attention to the matter, that the highest steam pressure is the most economical, for the reason that a smaller quantity of high pressure steam will have as much power as a larger quantity of lower pressure steam. As the heat units for 155 lbs. steam are not as great in proportion as the increase of force between 140 and 155 lbs., a part of the saving in fuel is the result of the higher pressure. Thus, a piston receiving a pressure of 140 lbs., cut off at 4 inches, would have about the same average pressure during the 16-inch stroke as a piston which received 125 lbs. of pressure, cut off at one-third stroke or 5 $\frac{1}{3}$ inches, and yet in the first instance it takes only 380 cubic inches of steam, and in the other it takes 507 cubic

inches, a difference of 25 per cent. in favor of the higher pressure. That it takes more heat to keep steam at the higher pressure has been stated, and is a fact well known to all firemen, but as the sensible temperature is only 7 degrees between the 140 and 155 lb. steams, it is at once apparent that even after deducting something for the increased heat a handsome saving of say 15 to 20 per cent. still remains to the credit of the higher pressure.

Next we must note the statement that the compound boiler evaporated more water to the pound of coal than the other, and the fact that they were said to be of the same pattern, and yet showed 23 per cent. more of evaporation in the one as compared with the other. If the boilers, including of course the area of the grate and other heating surfaces, were alike, there would remain only one other cause to which to look for the effect, for there is certainly a cause for it. One of the first difficulties which confronted locomotive builders was the production of a boiler sufficiently small to make it portable and yet having steam generating capacity equal to and exceeding the largest of stationary boilers. The forced draught, by means of the exhaust, thus became an accompanying attachment to locomotive engineering and plays an important part in the combustion of fuel and the evaporation of water, and one to which a great deal of thought and attention should be devoted.

We speak of "searching for knowledge under difficulties," but did you ever think when looking into your fire box about "burning or heating under difficulties?" We here have a fire from which we wish to obtain a given quantity of heat to generate steam for a large amount of work. In order to get it we must draw into the flame a large quantity of air in order to get the required amount of oxygen to support the combustion. The amount of air needed to burn one pound of coal is stated to be about 150 cubic feet, and in order to get that amount through one of our fire boxes, it has to go through with the speed of a tornado, and if any one has watched a fire, while under the influence of a strong exhaust, he will admit that it does. But, while this forced draught gives us the steam we need, it is an open question whether it is as good economy in the evaporation of water with a given quantity of coal, as the slower combustion with only a natural draught. The gases in their rapid passage through the fire box and flues, do not have time to communicate all their heat to the surfaces with which they come in contact, and much heat is thus lost and expelled to the air which would be imparted to the boiler if more time was given them, and this is no doubt the reason why the compound boiler proved the most economical in the evaporation of

water. As the exhaust from the high pressure cylinder goes into the receiver and from there to the other cylinder to be used again, and then to be exhausted at a very low pressure and with only two exhausts to each revolution of the drivers instead of the usual four, it is evident that the passage of the gases through this boiler is not at the same, or anywhere near the same rapid rate, and that much of the otherwise lost heat has no doubt been saved for useful work. It is evident that the draught was enough to make steam, and this being done there is certainly no occasion for more draught. It might be inferred that the simple engine might be made lighter on her fire, but even with the shortest possible cut-off, it is hardly possible that the steam pressure would be so nearly used up as with the compound system, and even if it were we would have twice the number of exhausts and twice as much draught as before. Further experiments will no doubt prove the truth of these suppositions, and if they should not, it is to be hoped that they will show what the true cause is.

Vulcan.

The Dynograph Car.

In a late issue of the *New York Sun* appears a paragraph which is reproduced as follows:

There is a car at the Grand Central Depot which performs for railroad companies the work that it formerly required innumerable track walkers and trackmen at great cost to perform. It is called the dynograph car, and contains mechanism by which, as it rolls over any track, a perfect record is made of every imperfection, whether it be spread rails, open joints or defective iron. The dynograph was invented by P. H. Dudley, and its use has become general over the United States, so that the car is rarely idle even for a day. Mr. Dudley is a cousin of General W. W. Dudley, of Indiana, and bears a strong facial resemblance to the famous politician, although he wears a full beard. He spent fifteen or twenty years in evolving his ideas into a perfect invention.

"Here we are again!" When the average reporter starts out to give us a mechanical article he generally manages to get there, but sometimes he will find that he has put his foot in it, and has things rather mixed in consequence. Here is the dynograph car that does the work "that it formerly required innumerable track walkers and trackmen at a great cost to perform." What a great thing it would be if the one dynograph could, as is stated, perform the work of this army; and yet in the next paragraph we find that the function of the dynograph car is to indicate imperfections, and having done this its mission appears to be ended, for it does not stop to correct any imperfections that it finds, but leaves that part of the work still to be "performed" by trackmen, who are not so easily "knocked out" as the article above would seem to imply. The faithful trackman's work, although too often ignored

forms no inconsiderable factor in the general make up of the road, for the best of material furnished in unlimited quantities would not avail to produce a good track if it were not applied with the proper care and some degree of skill; therefore even the trackman is a fellow laborer worthy of his hire and of due recognition in the field of labor. *

One or Two Cylinders.

The *American Journal of Railway Appliances*, in a recent article on compound locomotives says: "Any railroad man can testify that the locomotive running with one side only will do more work in proportion to the steam used than when both cylinders are in use." What do the "boys" who are charged with making the steam think of this? Is it possible or even probable that a locomotive run with one side, with its two dead centres should be able to develop more power in proportion to the steam used than one with its two cylinders in working order, each helping the other over the dead points? *

The Cost of a Sleeping Car.

The question is frequently asked, says the *Railway Age*, "What is the cost of a sleeping car?" The report of the Pullman company places the cost of 101 sleeping, palace, dining, special and tourist cars put in service last year at \$1,365,503, or an average of \$13,519 per car, which gives an approximate idea of the expense of these different classes of cars, comprised in sleeping car equipment. But more definite information in regard to sleepers alone is given in the statement that orders have been placed at the company's works for 119 Pullman cars, the estimated cost of which is about \$16,500 each. The wonderful proportions which this company's business has reached are indicated by the statement that the number of cars employed in the service is 2,135, of which 1,849 are standard and 286 tourist or second-class cars. The last item shows that very great increase has been made in the accommodations for comfortable travel on long journeys extended to tourists and home seekers who are not able to pay the rates charged in first-class sleeping cars.

Tracklaying in Nine Months.

Railway construction in the United States, says the *Railway Age*, has been going on this year with so little flourish of trumpets, the larger part of it being carried forward by the great companies in the form of branches and extensions of existing lines, that the public generally has little idea how much has already been done. It is only after footing the totals of new track on over

200 different lines that we find the aggregate thus far in 1890 to considerably exceed that for the same period of 1889, giving indication that the record of construction for the entire year will show a very considerable increase over that of the year before. We compile from our detailed records the following summary of main line track which has actually been laid down since the commencement of the present year:

TRACK LAID FROM JAN. 1 TO OCT. 1, 1890.

States.	No. lines.	Miles.	States.	No. lines.	Miles.
Alabama	13	201	Missouri	6	73
Arkansas	7	108	Montana	8	312
Arizona	1	3	Nebraska	4	170
California	5	33	New Jersey	5	40
Colorado	6	105	New York	3	22
Florida	5	64	North Carolina	11	226
Georgia	12	323	Ohio	8	58
Idaho	1	5	Oregon	2	12
Illinois	6	98	Pennsylvania	14	135
Indiana	5	49	South Carolina	3	109
Indian Terr.	4	82	South Dakota	6	70
Iowa	1	8	Tennessee	6	147
Kansas	4	65	Texas	8	195
Kentucky	8	168	Virginia	8	136
Louisiana	4	127	Washington	15	207
Maine	2	12	West Virginia	2	33
Maryland	2	60	Wisconsin	2	15
Massachusetts	2	4	Wyoming	1	30
Michigan	6	118			
Minnesota	3	54	Total, 39 states,	212	3,782
Mississippi	8	78			

RECAPITULATION.

New England and Eastern group, 8 states	38	462
Central Northern group, 5 states	27	338
Southern group, 9 states	65	1,443
Southwestern group, 7 states	36	638
Northwestern group, 6 states	23	644
Pacific group, 4 states	24	257

A Great Work of Tunneling.

The Colorado Midland Railway Company has undertaken a piece of railway tunneling of more than ordinary difficulty. After leaving Leadville, which is at an elevation of 10,025 feet, the road runs around the mountains at a distance of twelve miles, reaching Busk at a height of 10,000 feet. From this point the road zigzags up the face of the mountains for a distance of five miles to reach a point 500 feet above Busk. On this part of the trip long lines of snow sheds are erected to protect the track, and in these drifted snow lies the year round. The old tunnel here pierces the continental divide at an elevation of 11,528 feet, which is within thirty feet of the height of the Alpine Pass on the Union Pacific road, the highest in Colorado. This tunnel is about 3,000 feet long.

It is proposed to begin the new tunnel at Busk. Its length will be 9,350 feet, and the highest point reached will be 10,948.7 feet. The maximum grade on the old line is 3 per cent. and the new is only 1.4 per cent. The length of new line required is 3.25 miles, and this replaces 10.18 miles of old line, effecting a saving of 6.93 miles. The section of the tunnel is 15 feet wide and 22 feet high.

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's interests in educational, reformatory and domestic matters are requested

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the tenth day of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
INDIANAPOLIS, INDIANA.

CARD PLAYING IN THE HOME.

A great deal has been said in these columns in regard to card playing. If as much more were said probably each reader or writer would continue to be of the same mind. It is a matter of individual opinion in which one's own conscience must be the guide. The general sentiment in regard to cards, dancing, theatres and various forms of amusement, is much more liberal than in past generations. People are learning to take life more cheerfully, to relieve the routine of work with more recreation, to modify the harshness and narrowness and bigotry which characterized our ancestors. We cannot but think that men and women are more agreeable nowadays than in those olden times. There is a vast deal more of tolerance and charity than there used to be and the world is by that much better and more habitable. Much more liberty both of thought and action is granted, and there is less self-constituted censorship over the doings of others. This highly commendable spirit is destined to increase and there is no doubt but that, much as we pride ourselves upon our breadth and liberality, we shall seem as narrow and conservative to those who will follow us as our stern and severe Puritan ancestors now appear to us.

Victor Hugo has said, "The nineteenth is woman's century." Verily, then, the twentieth century may be said to be dedicated to the children. There seems to be a universal desire to make life happy and pleasant for them, from the time they are born until they pass from our homes and loving care into their own homes and the protection of another. Every form of amusement is prepared for them, games of all sorts are devised, bicycles and ponies and dog carts are furnished, parties are given, excursions planned, everything possible is done to give them pleasure. Now the question naturally arises, where shall we draw the line? and it does not seem possible for us to set a limit for anyone's family but our own. I say, for instance, "I do not be-

lieve a girl should go into society and receive attention from gentlemen before she is at least eighteen years old." You say, "O, let them go and have a good time, that is the way I did and it resulted in no harm." I say, "I would not compel young children to go to church and listen to a long sermon which they cannot comprehend." You say, "I believe church going is a good habit and children should be trained to observe it." Very well; then you must bring up your children according to your ideas and allow me the same privilege. I would never permit a child to taste of intoxicating liquor. You might advocate that if he is accustomed to see it constantly around, he will never acquire the habit of taking too much. Both of us could cite examples for and against our respective theories. There is nothing for us to do but to carry out our convictions and abide by the results.

And so with regard to card playing. We all agree that gambling is a great evil, the greatest, perhaps, next to drunkenness; our only point of difference is whether card playing at home will lead to gambling. In my own experience cards were as common as newspapers, a game of euchre or whist the ordinary evening's amusement, and yet neither father nor brothers ever developed the slightest taste for gambling, and cared very little for cards. On the other hand some of the worst gamblers I have ever known were brought up in families where a card was never allowed beneath the roof. And yet I have seen the case exactly reversed. In my judgment parents may take it for granted that if their children want to learn to play cards they will find the opportunity, and if they have a taste for the game they will indulge it elsewhere if forbidden at home. Card playing is like dancing, an accomplishment that is really needed if one goes much in society. Neither amusement is harmful in itself, both may be carried to a deplorable excess, but the same is true of many other recreations.

Fathers and mothers must be guided in this matter by their convictions of right and wrong. To me a game of cards around the evening lamp, with neighbors or friends, presents no harmful features. It will sometimes keep the husband and sons at home. The evil of playing for money should be fully explained and condemned and its inevitable results illustrated by such object lessons as every community affords. I consider this course to be safer than to banish cards from the house and to treat their use as an unpardonable sin. The boys see their companions enjoying the pastime in their homes, and they do not believe what has been told them of its wickedness. They learn to play by stealth, and, having to engage in it in a clandestine manner, the step from deception to betting

is not so very great. These ideas may be wrong; they are the result of many years' observation, but I should never presume to dictate to others in the matter. Each must be a law unto himself or herself in this regard, only let parents be sure they are not influenced by prejudice and their own early teachings, but are acting conscientiously in what they believe to be for the best present and future interests of their families.

"POCATELLO" makes some excellent suggestions in her letter this month, when she urges that the Woman's Department take up some new topic of discussion. We have obtained about all the information possible in regard to the "management of husbands and wives," and the consensus of opinion seems to be to avoid all attempts at managing, as far as possible. It is not surprising to notice in this discussion that the unmarried brothers and sisters seem to best understand how it is to be done. Husbands and wives have learned that there is a vast difference between theory and practice, and are rather conservative in their opinions. The consideration of this question, however, has brought us many beautiful letters, expressive of the confidence and affection that exist between married people to a far greater extent than is generally admitted.

THE attention of our correspondents is once more called to the address at the head of this column and also to the statement, several times published, that all communications must contain the name of the writer. To commence a letter by saying, "I have been a constant reader of the *Magazine* for years," and then to address it to Terre Haute, neglect to sign the real name and request that it shall not be put into the waste basket, when all of these sins of omission and commission have been alluded to again and again, seems rather inconsistent, doesn't it?

A LONG and interesting letter was received from "Mary," Tracy, Minn., but as the entire letter was taken up with a description of the annual reception and ball of the lodge, we were unable to use it. We have several times explained that at the last convention of the B. of L. F. it was decided not to use the space in the *Magazine* for descriptions of social events.

THE number of letters received this month, thirty five, causes both pleasure and regret, the former because of the interest taken by our contributors in the Woman's Department, the latter because some of these letters will be unavoidably crowded out. All, however, have been prepared for publication and will appear in due time.

PALESTINE, TEX., January 4, 1891.

Editor Woman's Department:

In reading the January *Magazine* this evening (which is the first chance I have had), I took in the Woman's Department entire, and it occurred to me that the kickers had not succeeded in abolishing it. I do not know as I will be admitted but I am going to make the attempt. I used to see the many methods of "how to manage a husband" given, but could not pass judgment, as I am so situated that my knowledge is limited. "A Fireman's Mother," of Kansas City, voices my sentiments exactly—as I think too many men are apt to say. "My mother did thus and so," instead of appreciating the effort the young and inexperienced girl he has taken away from her home has made to make him a pleasant home. Now if I was married I know I would eat pie, cake or anything, no matter how it was cooked (if it did not have a long hair in it) and be satisfied. The only place a single man likes to find long hairs is on his coat sleeve. "Belle," of San Antonio, says a blonde engineer on the I. G. & N. can testify to the quality of the cake. She should not have made the discrimination of that special engineer, as any engineer likes good cake, I think, and firemen do, I know. It always occurred to me that a good appetite was a great blessing but a greater was something to satisfy it with—and I think the best way to manage your husbands, those who have them, will be to give them something good to eat—for if they are all like I am, or was this morning when I arrived in town, they would appreciate it, as I was like the biblical character, Esau—I would have sold my old overalls (not bright) for a nice piece of porterhouse and a good cup of coffee, with the other necessary embellishments to make a breakfast; but had I had that precious article, a wife, I would not have allowed her to have got up to cook for me as it was a few moments before the wee small hour of two when I reached my room.

You say for your correspondents to write the lessons they learn in their daily life. Well, here is one: Girls, learn how to cook, and put up a nice lunch, for if there is one thing that makes me feel like a poor, forlorn, forsaken and forgotten wretch, it is to have the man I am out with take out a nicely filled lunch basket and have his meal; if we do not stop at any place where I can buy, I have to impose on him or flag around that meal, which is mostly the case, for my partner on the engine needs it more than I do.

Here is another: Boys, get married if you can find anyone to take you, and if you behave yourself you will have a nice home and a table of your own to put your feet under three times per day, when the old bachelors are hustling to get money enough to pay last month's board.

Here is some advice: Girls, when you do get married, and those who are married, don't find fault all the time, as I have seen some women do. Give the man a chance. He may have had to hold the pointer around to the proper place all night or day with poor coal and a heavy train behind him; or, if he is on the other side, he may have had to hold a slippery engine down to the rail all night with the frost or dew on the rail to make it more pleasant.

Here is some more advice: Boys, when you get married, and those who have a little or big wife, go back to the time when you first started to learn to "make her howl." Did you always have her just so, and do you, now since you have learned? I say no, you do not, neither can you expect a woman to always have her house as neat as a pin—especially if there are children around, nor can she have a bright smile on her face when her work comes extra heavy any more than you can when you have to double every hill between Palestine and Mineola and back. Hoping that the Editor of the Woman's Department may always have a space allotted to her in the *Magazine*, I will close with kindest regards to herself and all readers.

Yours truly,

Jim Dooly.

[Some woman seems to have missed an appreciative husband, but no doubt she will get him yet. We will be glad to hear from him again.—Ed.]

For Woman's Department.

IN LOVING MEMORY.

J. K., DIED NOVEMBER, 1890.

(From the boys of Queen City Lodge, No. 262.)

No; no one knows just how it was, or who was most to blame,
 What caused the fearful accident, with so much grief and pain.
 Some say his watch was not quite right—two minutes, only, wrong.
 Some say that he was tired out—"no rest," the old, old song!
 One thing we know, that brave and true, he nobly held his post,
 Nor feared to look death in the face, tho' life itself it cost.

For on that night, that sad, sad night, the last he spent at home,
 He thought that he could rest so well, for many hours to come.
 But no! scarce had he closed his eyes, when knocking at the door,
 The call boy shouts for "Special North," so he must start once more.
 Yes! off he goes—so brave so true, for duty must be done—
 Two trips to make—to Owen Sound, and to his Heavenly home.

No one can tell save God alone, what thoughts passed thro' his brain
 In that one fearful flash of time, ere train crashed into train.
 Perhaps they were of loving wife, or of his little son,
 Perhaps of some small kindly deed, he thought he might have done;
 Maybe time was too short for that—for Death was standing there,
 And left but space to breathe to God one brief unuttered prayer.

Tho' in his home, no longer now his dear voice makes her glad,
 We know that God will help the wife, and guard the little lad.
 The widow and the fatherless are His especial care,
 And tenderly He'll guide their feet, till all shall meet "up there."
 "Up there," with no more need for sleep, no calls North, East or West.
 No working on the Sabbath day—but perfect endless rest. F. M. P.

WEST TORONTO JUNCTION, ONT., Jan. 1891.

CLINTON, IOWA, January 6, 1891.

Editor Woman's Department:

I have read every letter in the January number. With some I agree; with others I do not. As that is a matter of very little importance, I will say no more about it, as I might get into trouble.

I do wish there were more written on other subjects. It seems to be the same thing every month, the boys and husbands.

I believe I will talk about my neighbors. You know we ladies have the name, so why not the game?

I have one neighbor that seems to be more fortunate than I in one respect—she has a horse to drive when she pleases. Saturday she ran in and invited me to take a sleigh ride. Such glorious weather, such a comfortable sleigh, good horse and pavement to drive on; wasn't that nice? Shall I tell you never saying almost unheard of? This same neighbor never says a word of harm of anybody. I visit her without fear of gossip being made of our conversation. Isn't she a treasure? Such people make me feel so comfortable.

How nice it must be not to see other people's faults? I wish I couldn't. I try hard not to, sometimes, but my eyes will see things they ought not, and I turn the matter over in my mind, which I ought not, but I am like the girl that got married and sang, "Oh, how could I help it; how could I, mamma?" Don't think I am so shortsighted I don't see my own failings. I could tell you of enough

faults to make a good sized book, all my own, but I don't want to.

I have neighbors that I go to see through my back yard in their back door. To others I always go for a short call when dressed for the afternoon; still others I feel so much at home with I venture in with fancy work or sewing, and I like them all, every one. They all have a great many good traits, and some have a few faults. I think good neighbors are a blessing, and I am happy to say I am well blessed. My neighbors seldom borrow of me, and I seldom annoy them. I like friends and neighbors, but not solely to make use of them. I am willing to lend and help when necessary, but deliver me from a constant borrower.

One of my neighbors had a New Year's gift in the shape of a baby; yes, a real, live baby boy, and she don't like baby babies, and never did. She says that it all turned out wrong, and on the first day in the year, when everything should be right.

That reminds me that somewhere in the *Magazine* it was mildly suggested to turn over a new leaf. I will turn it, but I can't promise any more just yet, for it is so much easier to do as you please than it is to be straight laced and good. Oh, dear, it makes me ache to think of it.

When my husband goes out he has a habit of saying, "Be good." I tell him I can't, and I certainly don't know how to be real good. How easy some people do what is right. I guess they are like Topsy, they just grew so, but I didn't. I have to argue with myself until I think there are two of me—one wishes to do right, the other finds it up hill business; that is, when it is going to be any trouble. It is all right if it is all straight work and no inconvenience, but when self denial is required (and a great deal sometimes), then, well it simply goes against the grain. There, some one will lecture me for that expression. Please don't. I will close.

The Brotherhood will do without my well wishes, so I will only say, success to the Woman's Department and its writers. I remain

Yours, etc.,

Kittie B.

GOODLAND, KAN., Jan. 9, 1891.

Editor Woman's Department:

Did any of you dear sisters ever have your "better half" tell you right after breakfast on Sunday morning, "I will have all my work done on the engine by noon and then we will have the afternoon together," and then when noon came and the better half with it to have him yell out, "Stock extra at 2:30!" If so, you can sympathize with me. Oh! dear, we all like to have "extra good things to eat," and "extra good things to wear," but no extra trains, if you please. I have just been reading the good letters from "Excelsior," "Joanna Ploughman," "Vernie," "Anna" and "A Fireman's Mother," and of all the receipts for pie and cake, I like "Fireman's Mother's" best.

How wonderfully such dessert helps out the plainest meal. We have seen the time that where the next meal was coming from was a profound mystery, but the pie and cake of affection was always plentiful. And now that our table is always supplied with plenty, the same pie and cake, keeps a prominent place.

The question of the right and wrong of playing cards seems to be pretty well agitated at present. Now, for pity's sake, some one that knows tell us mothers at once whether it is wrong or not, before we bring up our children all wrong. Don't say it is wrong because you think so, just give us a scientific explanation. I have known people to play checkers and most bitterly denounce cards, and I can't see the difference only that one is wood and the other usually pasteboard. Now if both, or any game, is played without betting, where can the harm come in, provided people have time and wish to play?

Now, wives all be good to your husbands; you can't afford to be otherwise. This trip may be their last, and how would you feel afterward if it should be? If you have plenty of tact and love for them, you can so manage them that you will have no family jars to speak of. May the New Year find each wife more patient and each husband more loving, is the sincere wish of the wife of one of the best firemen in Goodland.

Phillippa.

ABBOTSFORD, WIS., Jan 21, 1891.

Editor Woman's Department:

In regard to playing cards, I repeat, that I agree with a "Fireman's Mother." In August number, I also join with the editor in saying "a very sensible letter." Her boy who was allowed to play cards at home, now a young man, has outgrown them with his marbles and jacks and they are no attraction to him now. The deacon's son, who is not allowed to play at home, plays in other homes, also barns, and plays for money. The question is, which is the best method? I approve of the method used by the "Fireman's Mother." To the young wife, whose little experience was related in the December number, regarding her husband—"If George is going to smoke, I am going to have him smoke at home." To her I would say, You have started in the right course for comfort and happiness at home. A man of good sense will appreciate such kindness and thoughtfulness, and never abuse that privilege by making a smokehouse of his home or a will barrel out of his mouth.

There is a right use and a wrong use for everything, from a locomotive down to a match, and it is very necessary to understand the right use. The locomotive is of great importance and benefit, when its wonderful powers are used in the right direction, and equally disastrous and fatal when the power is used in the opposite. Who would say that matches should never be made, because some one may set a house on fire? Take a boy at eighteen years of age, who had never seen or handled a match, one of the same age who had used matches all his life—which would you trust with a box of matches? To those who can not play cards without getting drunk, swearing, turning their homes into gambling dens, I would advise to put the cards in the stove and never allow another to come into the house. This is where I would draw the line between right and wrong. One sister says, "Children can't be satisfied." To this I will add, "Not for any great length of time." You may give them from the top to the clock, and each in its turn pleases only a little while or a few moments, and so from childhood up, we are nothing more than grown up children. The evenings would be rather dull and monotonous at our home should we have no change from reading the whole evening, or should I sit at the piano to play or sing without any information, or to use all our time for playing cards. Instead of that we divide up the time, and give a little to each. It is change that children want, large or small.

The boy who is denied the privilege of playing cards, is going to find out when he gets a little older what great secret or mystery there is in cards. The amusement will be new, the gambler's table very attractive. He is tempted and he falls. The boy who had the privilege of playing cards at home is better fitted to resist the temptation. It is *secrecy, mystery, and covering up* that depraves human nature. Those who get into trouble, such as quarrelling over an innocent game, are usually of a pugnacious disposition, and dispute about trifles. I know of a married couple who quarrelled and parted on account of a button; I should be terribly disappointed to go without buttons for such a reason. Some one has said, "Every one has his hobby." They also have the right to ride that hobby, providing they do not infringe on others' rights. It is abusing the privileges we have that makes trouble and unhappiness. We all have mouths and the right to use them, but when people are inclined to slander, to circulate untruths of their own manufacture, in the attempt to drag their betters down, for the purpose of elevating themselves, they not only abuse the right which they are entitled to, but degrade themselves with every additional falsehood. Mothers are responsible to a certain degree for the characters formed in their children; therefore, I say, prepare them to fight the "devil" that be. Covering up evil only allows it to spread in the darkness. Doctoring symptoms never cures the disease. You can assist in making an honest, frank, openhearted boy with self respect and esteem enough in him to choose the right and shun the wrong for principle's sake, not out of fear. Or can be the means of making a narrow minded, despicable snark one who sails around under false colors like the Pinkertons. Liberty loving people will rejoice when Pinkertonism is suppressed.

The extract from the Rev. Hugh O. Pentecost, in the *Firemen's Magazine* of July, is worthy of notice; that he is level headed is correct. So is the editor of the *Firemen's Magazine*. When I hear people boast of their home being founded on the Bible, it recalls to memory the story of the "Pharisee and Publican" in the Bible, we have too many Pharisees. It is rather an indefinite expression, saying our government is founded upon the Bible. One naturally asks, "On what part of the Bible?" Which of its many sides did the founders select? The Bible allows polygamy, slavery, war, incest, and many other evils that we now condemn as wrong. It deals in revengeful punishments, while the race is now evolving out of all kind of savagery and brutality, and into love, kindness, and charity.

The man who first wrote the words, "The free and independent states of America," was not a Bible believer, but a Deist. Thomas Paine, and there are proofs, incontrovertible proofs, that he was also the real author of our famous Declaration of Independence. Washington and Jefferson were also Deists, and did not believe in the divine inspiration of the Bible. Ours is by no means a Christian Republic, but a Republic of humanity, where Christians, Mohammedans, Jews and atheists should have full and equal rights, and would have, did we inherit the rights designed by its founders. Nearly all our presidents have been what the Christian calls infidels. Our best beloved ones, Lincoln and Garfield, were broadly liberal and grandly humanitarian; Grant, too believed in entire separation of Church and State. In taxing church property and having no sectarian Sunday laws, but leaving the day free for each to enjoy in his own way, so he did no harm to others. The names of Paine, Adams, Washington, Franklin, Madison, Hamilton, Jackson, Lincoln and Grant were none of them upon the class roll of a Christian church. They all worked for universal mental liberty and not Bible theology. All that is good may be carried to excess and become evil; card playing, dancing, theater going and like amusements, wisely enjoyed, are good.

We must take a wise means and not go to extremes.
Engineer's wife. H. C. P.

BATTLE CREEK, MICH., January 5, 1891.

Editor Woman's Department:

I would ask a little space in the *Magazine*. I had always thought the B. of L. F. a good society, but never knew its real worth till my husband was hurt. When the news came I was stunned, for he was gone so few hours, and coming home on a stretcher; I felt so alone and it all seemed so terrible. But the brothers brought him home, and never ceased in their attention to our wants; and their kind and hearty encouragement did much to restore him and strengthen me for the trials and worry which always follow sickness. They, as a body, have our heartfelt thanks. And all who may chance to read this, and have loved ones on the road, I hope God in His kindness will spare you like pain; but should it come may you trust Him, and may you find as firm and willing helpers as the generous boys of Calhoun Lodge, No. 84.

Long live the B. of L. F. Mrs. J. E. Williams.

CARROLLTON, MO., Jan. 9, 1891.

Editor Woman's Department:

Having received the *Firemen's Magazine* for the past few months through the kindness of a friend, I have become very much interested in them. I think the Woman's Department is just grand, and as instructive as interesting. I have thought several times (after reading the nice letters) that I would write, but as I had never before ventured to write for any paper or magazine, I felt rather timid in making a start. I like the *Magazine* better every time I read it. I read the letter in the last *Magazine* signed "Belle," and I think her idea is quite right in regard to managing husbands. I am not married, but may be some day, and if I ever am, I hope that managing my husband will be my least trouble.

If this letter is accepted, I may come again. With best wishes to the *Magazine* and good luck to the firemen, I am, yours truly,

Grace, a Firemen's Friend.

For Woman's Department.

THE LAST FAREWELL.

The April day was waning.
The springtime eve was near.
When I heard outside the cottage
The step of one most dear.
Soon at the dear old doorway
Appeared the smiling face
Of one so true and faithful.
So winning, full of grace.

But had he come to tell me
Good news to cheer my heart?
Ah! far from joy his message—
'Twas that we soon must part.
Oh! could it be forever?
There's none but God can tell.
Still there was fond hope cherished
In that last and sad farewell.

"You will kiss me once, my darling,
Will you not, before we part?
'Twill be long years in the future
Ere I press you to my heart."
Then we parted, 'twas the gloaming,
The sun was sinking low;
All nature seemed sweetly smiling,
The birds flitted to and fro.

Still not a ray of sunshine
Could penetrate the gloom
Of my sad heart that evening.
When I knew that he was gone.
Need I tell of days that followed
Since that day so long ago.
Of patiently, longingly waiting,
As the seasons come and go?

Months have passed, and still I'm waiting
For that loved one's presence near.
Oh! that he would come to-morrow,
Then to-morrow would be so dear.
Fondest hopes are often buried
Like the rear leaf long been dead;
Fondest hearts for others beating
Have too often sorely bled.

Am I waiting for a future
Full of happiness and truth,
Or to see my hopes all vanished
And behold a blighted youth?
God knows best, I must not murmur,
Only trust him while I stay;
If this life is all a shadow,
Bright will be the eternal day.

S. E. C.

POCATELLO, IDAHO, January, 1891.

Editor Woman's Department:

January 7th and the welcome *Magazine* at hand, new, improved and instructive. Its cheerful contents add another ray of brightness to the new year and do much credit to the editors, who deserve a word of praise as well as the boys on the road. "There be some who appreciate your noble endeavors," as Will Carlton says. We have taken the *Magazine* since '84. I find much improvement. Mrs. Harper's articles and the Woman's Department have been both entertaining and instructive. I have gleaned many good ideas from them, and not willing to take much for nothing, I will send a small contribution.

Perhaps you would like to hear something about Pocatello. It is away out here among the foot hills, sage brush and Indians, on the Union Pacific R. R. I think we have about 3,000 inhabitants. The Indians come around and frighten us women folks. They stick their red painted faces against the windows and ask for biscuit. If we don't give them any they say "Ky, no," no good; if we do, we are "Y no," heap good. The squaws wash for us but they won't do any kind of housework. The Indians have dances and we go to see them dance. They sing all the time and go in a big circle. They dance for a week or two at a time. They dance for grass or game, the same as we would have a week of prayer and thanks.

We have a fine climate here. The sun shines most every day the year round. For amusements we

have socials, dances, five churches with their various entertainments, six labor orders, and they each give a ball during the winter, and also the Knights of Pythias, Masons and Odd Fellows, take a turn on the programme; but the most attractive and healthful enjoyment here is horseback riding and driving. Everybody rides that can possibly afford to. I think there is nothing to compare with it for real enjoyment.

Now ladies, I was thinking we've had our husbands and kickers and lunches and lodges, all sandwiched and dished up for a year or two. Suppose we talk about books. What are the most instructive magazines to subscribe for? And also about how to spend money wisely, how to dress well and what things we need most in this life, for it is not what we want but what will do us the most good for the money. I have seen ladies spend enough money for fancy work to buy four of the best magazines of today and not one in the house. They say they can't afford it. They buy two or three new hats a year, at from \$4 to \$10. I can do without fancy work and expensive hats, but I can't do without my reading. I take the *Ladies' Home Journal*, the *Arena*, the *Cosmopolitan* and this *Magazine* and others. I like to have my husband read when he is in and I get the best I know of and place it where he will see it. We have quite a library. I liked that extract from C. A. M.'s letter and "Belle" and "Fannie's" crispy letter in this last number. I believe in a woman having a little dignity and, when she has done her best, she is not expected to overdo. If there is any petting she needs it for that is a woman's nature. The most of the family trouble arises from ignorance of what we owe each other. This fault comes from early training. A mother should train her boy to respect his sisters more. There is no well trained boy who will neglect his wife or his duties in the household.

Here is another fault: no fireman will ask a girl to marry him unless he can earn enough to keep up the expenses of a home, but how many girls know how to fill their part of the contract and how to use money usefully. I think every girl who marries a fireman ought to know how to keep a house—clean, wash, mend, do plain cooking and do her own dress-making, and if there was any management at all they would never get in debt. My husband was a fireman and is a B. of L. F. man. Still I know just what can be done with his wages. I have seen so much of time, money and patience wasted and people discouraged.

Well, I have only touched lightly on the subject and if my letter is worth reading I may write again sometime. Let us have more plain dresses, less fancy work and more comfortable rocking chairs and good lights and more good literature. With kind wishes for the Woman's Department and hopes for the brotherhood, I remain

Yours truly,

An Engineer's Wife.

[A very sensible letter. Come and see us again.—Ed.]

HENDERSON, KY., Jan. 3, 1891.

Editor Woman's Department:

I am a constant reader of the *Magazine* and having read so many letters from your charming circle I have at last summed up courage enough to ask for admission into the same circle.

I do not remember of having ever read anything in the *Magazine* from Welcome Home Lodge, No. 317, so I am going to tell you about them. They are in a prosperous condition and still adding members to their list. This lodge is one of the best in the city, and is composed of the best and truest set of boys you could find. They are ever willing and ready to go forth and extend a helping hand to a brother in need or a friend in trouble. Some of the boys seem to be glad that they are living, for they have moved from the left to the right hand side of their engine lately and among them are Bro. G. A. Brown, G. W. S. Austin, E. H. Zirkel. Well, as this is my first venture into your bright circle, I must not make this letter too lengthy. Hoping this will find space in your department I will close with my best wishes for the B. of L. F. and the *Magazine*.

Callie, A Fireman's Wife.

SALIDA, COLO., December 21, 1890.

Editor Woman's Department:

I have just this minute finished reading the *Magazine*. (For some reason we didn't get ours till quite late.) I never read the *Magazine* till this year, and I think there has been a great improvement in the *Woman's Department* especially. I only hope it will continue to improve in 1891. I have never seen but one letter from here and it didn't take me long to guess who wrote it. Now she can have a chance to guess who wrote this one. I think the idea absurd of "how to manage a wife." What man wants a wife he has to manage? There are lots of men who marry to get a manager for themselves and their home. And in nine cases out of ten a divorce will follow a wife who has to be managed. A railroad man, especially, expects to find in a wife a partner and companion who will help him to manage his affairs. So if he gets left, then, and then only, is marriage a failure.

"W. I. F.," "them's my sentiments, too." Education will only open the women's eyes a little bit, and they will consequently not throw themselves away on a worthless man. Not that they would look down on a good, honest, hard working, sober man, even if he didn't have an education equal to their own. Women as a general thing look at both sides of the question. It seems to me that boys are not given the advantages which are bestowed upon the girls. Too often the boys are sent out to rustle for themselves, while the girls are kept in school.

"Poor 'Violet Eyes'!" I feel for you. How I would like to live near you, so I might console you. And if I knew more about the "disappointment so bitter" which remains as bitter as ever in spite of the "song of the bard" and the "poem of the poet," I might know more how to sympathize with you. The greatest disappointment I have experienced as yet was when I expected a—I won't say what—for Christmas, and then didn't get it. Now, produce your Cupid with a greater disappointment than that.

Why is it better to have loved and lost than ne'er to have loved at all? I don't understand it unless it means that we ought to have better sense than to fall in love after being left once. I know I wouldn't feel very much like trying for anything *again* after losing once. I would rather be putting in my time at something else, but perhaps that would be violating "Try, try again." It makes me weary to read letters from those wives who think a woman ought to smile when her husband comes home. I'd like to know if a woman ought to hide her feelings any more than a man? If I were a man and should come home tired and sleepy and hungry, and my wife would meet me with a *great grin* on her "phiz," I would feel like asking her what tickled her. Of course it is all right to be pleasant, and not always look like "somebody sued for murder," but I believe that "circumstances alter cases." So when I get a man I am going to smile when I feel like it and when I don't feel like it I am going to look just like I feel. Well, I guess I have said enough to make some of the *Magazine* readers tired, so I will close by saying I do hope that "W. I. F." will make use of the 12th string quite often. *Au revoir*.

K. L. W.

PLACER, COLO. Dec. 20, 1890.

Editor Woman's Department:

I have been an interested reader of the *Magazine* for over a year, and I have never seen a word from the Pioneer Lodge, No. 108, Chama, New Mexico. I think they are noble and true hearted boys; trying to uphold the order in its onward march to success. They are always willing, with a kind heart and free hand, to help a brother or his family in time of need.

As for managing a husband, I am not very well posted, as I have none of my own to manage. But I think if the husband and wife are loving and true, to each other, marriage will be a blessing instead of a failure. Perhaps in the future I may be able to say more on the subject. As this is my first attempt in writing, I will close wishing the B. of L. F. good success, especially the boys of 108.

Yours sincerely, A Fireman's Daughter.

ST. ALBANS, VT., January 28, 1891.

Editor Woman's Department:

I am a fireman's wife. I have been married scarcely a year, and in that time have been a constant reader of your valuable *Magazine*. I read it carefully, and like it ever so much. I am impatient to have the month roll around, so that once more the *Firemen's Magazine* will gladden my eyes. At times I get lonesome and tired, and I take up the *Magazine* and am happy once more, for where is there a fireman's wife lonesome when the *Firemen's Magazine* is at hand? After reading awhile I forget that I was lonesome or tired. Well, as there are a number of articles in the *Woman's Department* regarding the management of a husband, I will say I have not had much experience in married life. I do not think it is very hard to manage a husband if a wife goes about it in the right way. I find that kindness, loving words, and good advice go a good ways; at least I have found it the best way. I do not believe in driving a man. Now, let a railroad man go out—and we all know it is a hard life, and perhaps that day was a hard one—what will be pleasanter for a man when he comes home than to find a neat, tidy house, and have a loving wife meet him with a kind word and a kiss? Oh, that black face will soon forget that he is tired, and will find out that there is no place like home, and no one like his dear wife. Now, my advice to all girls that can marry is to marry a railroad man, and you will never regret the step you have taken. I have married one of the boys of Lodge No. 332, and I must say I do not regret having done so. My most fervent wish is that all railroad men are as true and brave as the boys of No. 332. May God bless them all and guard them while at their posts of danger.

I will conclude with best wishes to the *Firemen's Magazine*. It is with pride I sign myself

A fireman's wife,

Annie.

ELDORADO, KAN.

Editor Woman's Department:

A constant and eager reader of the *Magazine* for the past year, I watch and hail its coming with almost equal pleasure that the signal of my brother's engine conveys to me the glad news of his safe return home again. More especially is this so of the *Woman's Department*, for the correspondence of our married sisters furnishes us with an abundance of subjects for thought, and in some instances almost makes us believe that their journey through life was over a rough road and all up hill, since they have taken upon themselves the herculean task of "managing a husband." I am well aware that life has but little joys for those who do not cast the "shadows behind," yet my life for the most part of twenty summers of sunshine does not entitle me to pass judgment on the sisters who have experienced the sterner realities of life. I am aware that little sorrows enter each home, and we are apt to exclaim with the poet:

"That life is short and full of care,

The end is always nigh;

We seldom half begin to live,

Before we are doomed to die.

Were I to start my life again,

I'd mark each separate day;

And never let a single one,

Pass unenjoyed away."

And we should ever be ready with a helping hand to administer to the wants of those whose strong arms and stout hearts enable them to brave the dangers incident to their calling.

My brother is a member of the B. of L. F., and so far as I know the order is in a flourishing condition. The boys have recently organized a dancing club here and quite a number participate in the enjoyment. This gives their sisters as well as the other fellows' sisters a chance to while away a few pleasant hours while they are off duty. Now, for fear that a continuation of this train of thought may incur the editor's displeasure, I will cease my prattle with a promise that if acceptable to you between the time that Jack Frost comes to leave his tracks on the window pane, and the "Robin's return," I may call again.

Olga Lane.

For Woman's Department.

THE BOYS OF THE PRESENT DAY.

You may talk of the noble boys of the past,
We own they were gallant and gay;
The boys of the past were true to the last,
When terrible war held her sway.
We read of brave deeds fearlessly done,
In many a bloody affray;
But boys just as true, you'll find not a few
'Mong the boys of the present day.

The boys of the past were dauntless and bold,
Fought faithfully both night and day;
They fought for their own, and seldom were known
Their own country's flag to betray.
But should war again be our country's fate,
You would find not many would stay
At home, but would go, their country to show
She should not want for brave boys to-day.

Yet we do not need war to prove beyond doubt
That the boys whom we see run and play,
Are as loyal and brave as any that gave
Their lives while in battle array.
The boy that protects and supports, with a will,
His mother, and her does obey—
We say proudly you'll find many boys of that kind
'Mong the boys of the present day.

When we read the names of the boys of the past
Who were noble and true, we can say—
And our words are as true as the heavens are blue—
They cannot outshine those of to-day.
Our boys have some faults, but not more, I think,
Than those of the boys passed away;
So here is a toast to the glorious host
Of boys of the present day.

May they ever be noble, gallant and brave,
Endeavoring to allay
With a will that is good, as all boys should,
All sufferings that come in their way.
God bless the bright faces so bonny and true,
Of the generation which we now survey;
May we speak without shame of the honorable name
Of the boys of the present day.

Mrs. A. M. Coffenbarger.

DENVER, COL.

ABBOTSFORD, WIS., Dec. 28, 1890.

Editor Woman's Department:

Looking over the list of letters written on the home, I failed to see any telling of the husband doing the washing. It matters not how frail or delicate a woman is, that work seems to belong to her, simply because she's a woman. Very often a husband could save her a good many steps that he does not.

I am fortunate in this respect. My hubby did the washing over a year and a half. I'll tell you how it came about. After trying three different women in the short space of six months, the clothes continued to turn yellow. I became discouraged and concluded to try it myself, although I had never had any experience. To this he objected seriously, saying that he would do it in preference to running the risk of having an invalid wife. He believes there would be fewer invalids if men tried to save their wives' health while they had it to save; an ounce of prevention is better than a pound of cure. Building up invalids is very expensive and seldom satisfactory. After our second washing (of course I did the starching and kept an eye on the bluing bottle) the clothes were as white as snow. At present we have a woman and use "Dobbin's Electric Soap" according to directions; think it very good.

Such men as laugh at this ought to try the experiment. Besides softening up their hands once a week, they would learn how hard their wives have to work and why there are so many invalids.

Wearing corsets is also injurious to women. And could they be abolished entirely, we would see a healthier race. "Race Culture" is one of the pressing problems of the day, and is getting the attention it duly deserves. When married people are mismatched and do not agree the sooner they divorce the better, not only for their welfare, but for the safety

of the people in general. Offspring produced by such unions do not make the best of citizens. Instead of enlarging the reform schools and penitentiaries and legislating the poor unfortunates into existence, every precaution should be used to prevent such. Their efforts should be to bring about a purer, healthier and happier race. The scandal monger of to-day would be a thing of the past and innocent persons would not be victimized, who are more sinned against than sinning. That the "Cloak of Religion" is used as a shield also to accomplish their end is a deplorable fact. That religion should be so dwarfed and misconstrued as to cover a multitude of sins, is indeed a sad state of affairs.

Education and evolution are the only hope, and will do as much for the future as they have done for the past.

"The Prodigal Daughter, or the Price of Virtue," (price 10 cents), by Rachel Campbell, is a book I wish every person would read, especially those who have their tongues tied in the middle and wiggle at both ends.

"Save the Girls," by Mason Long, is another good book.

When Bellamy's predictions in "Looking Backward" are fully realized, the keynote of happiness will be struck.

Engineer's Wife.

LA GRANDE, OREGON, January 12, 1891.

Editor Woman's Department:

I have been a constant reader of the *Magazine* for several months, and as I have never seen anything said in favor of Blue Mountain Lodge, No. 348, I will try to say a word in its favor. The boys are as noble and steady a lot of boys as you can find, and I am proud to say that my "hubby" is one of them. Some of my young lady friends say they would never marry a railroad man. Now, girls, if you want a good husband (and I know you do), marry a railroader; for when he comes in off the road, tired and hungry, and finds something nice and warm, his supper or dinner, whichever the case may be, and his wife meets him with a smile and a kiss (which I most always do, and it don't cost anything, either, if you only try), he is sure to appreciate her, even if he doesn't say so just then. If my boy comes home and I don't meet him with a hug and a kiss, he very soon reminds me, and asks for them. I will send my recipe for chocolate layer cake:

Half cup of butter, one and one half cups of sugar, three cups of flour sifted with two teaspoonfuls of baking powder, half cup of milk or water, the yolks of five eggs, and half a teaspoonful of lemon. Bake in layers. For the fillings, take the whites of the eggs and beat to a stiff froth, add three tablespoonfuls of white sugar to each egg and add last two tablespoonfuls of grated chocolate. I know that this is reliable.

If this finds a place in the *Magazine*, I will come again. With best wishes for the success of the B. of L. F., especially Lodge No. 348, it is with pride I sign myself

A fireman's wife,

E. M. H.

CHICAGO, February 1, 1891.

Editor Woman's Department:

Through the kindness of friends in 203 (Garfield Lodge), I am permitted to read the *Firemen's Magazine* from time to time, and think the January number the most interesting I have seen lately. I do not think card playing will pollute any home, and firmly believe that the father and mother that see their sons and daughters and young companions spend an evening playing "pedro" or "euchre" can look forward to the future with less fear of their sons becoming gamblers, than many other parents who will not allow this pastime in their homes.

I am a church member, and I think there are more sins committed and harm done at "kissing parties" and sociable gatherings, where the scandals of the day are rehearsed, and stories told that should bring the blush to any modest brow, than by playing cards or dancing.

Success to the brotherhood.

Minnie Steele.

MATTOON, ILL., January 3, 1891.

Editor Woman's Department:

With the first copy of the *Magazine* for the new year before me it reminds me I have been a constant reader of its valuable pages for over two years. My husband was a member of the noble order when we were married and is still one of its thousands. I think it is one of the grandest orders there is. As I write I think of the sadness the new year has brought for some. One's trouble is never so great but that you will see others more miserable than you are. Let those that are in trouble cheer up, for there never was a cloud so dark but that there was a blue sky beyond. If some of these unthoughtful husbands would take the advice of "A Fireman's Mother," how many happy homes and smiling faces there would be. Yes, many of the sisters that read these letters are starving for the want of a few loving words. How they would brighten many a sad heart. A woman needs love and affection as much as the flowers need sunshine. What is life to a woman without her husband's love and confidence? Some men think so their wife has something to eat and a little something to wear. It is all they need. They can find amusement at home. Little do they realize the many heartaches and lonely hours their poor wife has. A few loving caresses would make her more happy than all Vanderbilt's wealth. But they can be their slaves. He can enjoy himself in other company without one loving thought for her who is praying to God to protect him and bring him home safe. God pity the wife that is neglected by her husband, him who promised to love and protect her.

I believe in waiting on one's husband. When my husband works all day in the cold I know he is tired. I never leave anything for him to do when he comes home. He can eat his supper, which I always have ready, and sit down by a good fire. I finish my work, fix everything ready for morning, then I can enjoy his company for a few hours, for he never goes to town without he has business to attend to.

What has become of "Mother Jones," that we don't hear from her?

With a wish for a prosperous year to the *Magazine*, good luck and happiness to Mrs. Harper, my best wishes for the boys of the B. of L. F., I am as ever,

Mrs. J. W. Taylor.

[Come again.—Ed.]

COLUMBUS, O., Jan. 12, 1891.

Editor Woman's Department:

In looking over the Woman's Department I came across "Fannie's" letter. In it she states that our husbands would never reveal, no they would die before they would tell our faults, but women, just let your husband speak one cross word, and the town knows it. I don't mean to offend or to criticize, but I do mean to say that one side is as free from fault as the other. I don't wish the readers to misunderstand me and think that my husband is cross with me, or I with him, for we get along very nicely, but I know an engineman who runs in, or rather lives here, who is always telling his wife's faults, and says if she was more saving he would not be so poor, but he never says if I had the money I spent in such and such a saloon, I would be better off, or I would not be where I am to-day. No, the women has to bear the blame. Justice is justice on both sides. I could give other circumstances if I had the space and time, where it would favor both sides, but it isn't necessary. Circumstances alter cases.

Now, for the lodge: I don't mean the men's lodge but the women's: we often hear the ladies speak of such a lodge but it is always the men's, and in reality we know nothing about them. They run their own lodge and why not we run ours, that is if we have one to run? We have no lodge in the city of Columbus. I don't know why, but I think it is a shame, and some of us ought to rally and see if we can't have a lodge here as well as other places. I know we have the material if we only could get one started. But let us hear from our sisters, at least I would like to hear how they are prospering. I will close, wishing you all a happy New Year.

Yours truly,

Altona J. L.

MEMPHIS, TENN., January 9, 1891.

Editor Woman's Department:

The boys of Ft. Pickering Lodge, No. 306, wish to return their thanks to Ethel May, for her kind and gracious words of encouragement to us in her letter to the Woman's Department, in the January number.

If good wishes go for aught her life will be one of perpetual joy and prosperity, her blue eyes undimmed by tears of sorrow. May her step ever be as light and joyous as when tripping to the delightful strains of the Firemen's Band.

May God's choice blessing follow her and her particular fireman, be with him on his trips and bring him safely back to her. Is the earnest wish of the boys of Ft. Pickering Lodge, No. 306, B. of L. F.

Thanks are due Mrs. Thos. Cosgrove, Mrs. John A. Murrey, and Mrs. Geo. A. Robertson. Owing to their untiring energy and self-sacrifice in a great measure is due the grand success of the ball, as all can attest who attended.

Very respectfully,

ST. JOSEPH, MO., Jan. 28, 1891.

Editor Woman's Department:

As I am a constant reader of the *Magazine* and have never seen any communication from the lady residents of St. Joseph, I have decided to be the first to lift the veil and reveal St. Joseph Lodge, No. 43, B. L. F., of which my husband is a member.

I think the article signed "A Fireman's Mother" and published in the January *Magazine* is just splendid. As my hubby is out this eve., and he does not know of my intending to write I am not going to tell him about it, but let him see it himself in the *Magazine*. This being my first entrance into your bright circle, I will close with best wishes to the *Magazine*, and the boys of the B. of L. F.

I remain, a fireman's wife, A. B. N.

COLUMBUS, KY., Jan. 7.

Editor Woman's Department:

I always read the *Firemen's Magazine* and enjoy it very much. I think it is very good. I don't know if any one from this part of the world has ever written to you. We are a railroad family. My husband is an engineer in the Columbus yard, has been for sixteen years. Our daughter is married to a fireman that is a brotherhood man. God bless the brave engineers and firemen. I think they are the noblest men living, always kind and true, always ready to help the unfortunate. The widow and orphan never suffer where the railroad man is concerned. Wishing the *Magazine* great success in the future.

Yours,

Mrs. S. Burton.

THINK NOT.*For Woman's Department:*

Think not because you see me smile
And laugh with joyous glee,
That I am happy erst the while,
Because I smile for thee:
I've quaffed the dregs from sorrow's cup—
Have seen bright hopes depart—
Have known of grief through dreary years
That left its lurid print on the heart.

I've seen fond hopes fade, one by one,
As fades the mist away
Before the bright, effulgent sun
That heralds in the day:
I've dreamed of future bliss; alas!
It ne'er fruition reached—
In vain I've reached for happiness,
That only brought defeat.

The surging tide of weary years,
Has stranded many a life barque,
And ships go down in the world's broad sea
Engulfed in waters dark:
Thus my life is encompassed in shadows here,
While hope from the heart is gone—
Like the storm tossed barque on the sea of life,
I am helplessly drifting on.

Mrs. Nellie Bloom.

WEST OAKLAND, CAL., Jan. 8, 1891.

AUF WIEDERSEHN!

Auf Wiedersehn, friend I speak it,
And tears dim not my eyes;
The German word hath a sweeter meaning
Than all our cold good-byes.

It hath a faith for future moments,
And days that pass us by,
And so I say Auf Wiedersehn,
I will not say good-bye.

To meet again! ah, hope believing,
It spans the ocean wide,
It sweeps the joy and mirth of living,
Across life's surging tide.

Auf Wiedersehn! words so hopeful,
They give us joy, not pain;
For parting loses half its sorrow,
When friends may meet again.

To meet again! ah, shall we say it
When death, the king, comes nigh?
Or must we look with tears and heart break
And simply say good-bye.

Oh! death would lose its pangs of sorrow,
And life its fiercest pain,
If we could stand beside the dying,
And say, Auf Wiedersehn.

Sophie Basse.

LAREDO, TEX., Jan. 10, 1891.

Editor Woman's Department:

As I have never seen anything from our Lodge 278, I hope you will allow me to say something of the boys. I am neither wife nor sweetheart of a fireman, though I love to read the *Magazine*. I think the Woman's Department very interesting. I can not give any advice how to manage a husband for I have not gone that far yet, though if I had one I would just let him manage himself and I would do the same; then there would be no misunderstanding. Well I must change the subject.

The Lodge is in a prosperous condition; the boys are all good, responsible and intelligent, therefore causing much good to be done in our city by the brotherhood. How I wish I were a railroad. If I were a boy an engine would be the first thing I would make for. Laying all this aside, I have a warm heart for all the firemen and engineers. I live just a little way from the Mexican National road, and my greatest pleasure is to watch the trains come and go. It is really distressing, the long trains they pull out of here, but who is it that suffers? No one but the poor firemen, for their work is hard at all times, and think of the danger they are in. You may be surprised to hear from this part of Texas. Just a few steps and one can be in Mexico; but I prefer Uncle Sam's country. As this is my first letter to the *Firemen's Magazine* I will not write too long. May God bless and protect the brotherhood.

Miss Fireman.

EL PASO, TEXAS, Jan. 28, 1891.

Editor Woman's Department:

For the past few months I have been an interested reader of your valuable *Magazine*, and I like it very much indeed, especially the Woman's Department. It seems to me that almost all the letters in the Woman's Department are headed by the same title, "How to Manage a Husband." Now it is my idea that a husband does not require "management;" let him "manage" himself. When a man gets married he is certainly old enough to do as he likes, and also to manage himself. In "Ida's" letter, in the January number, she says the pleasures and comforts of home depend mostly upon the woman. Now, I do not think so; it is my opinion that it depends as much upon the husband as the wife. It is all very well for the wife to keep her home neat and clean, but I do not think a woman should have a warm supper (or whatever the meal may be) just to the minute when her husband comes home, but let her get it as soon as she can. I agree with "Belle, a Fireman's Wife," when she says she could not love

a man whose first look when he comes home is to see if his dinner is waiting for him. I know I could not love a man like that, but I am afraid I would hate him. I think a husband's first thought and question would be to ask his wife if she had been well while he was away, and I am sure if men truly love their wives that is their first question, and the dinner can be prepared afterward. But if husband and wife really love each other there will be no need of management. Now I am not a married woman, but I expect to be some day, and I am sure if my husband will love me as I shall love him, there will be no difficulty in "getting along," and if we each try to please, our home will be a "haven of rest."

I will close, for I did not intend to write so much in the beginning. Wishing the *Magazine* a successful future and all the firemen good luck and prosperity (I am partial to the firemen, for there is one fireman that I think a great deal of, so I can afford to be generous). I remain a fireman's friend,

F. M. S.

PANA, ILL., January 6, 1891.

Editor Woman's Department:

I read the *Magazine* and like it very much. I have often thought I would like to write a letter but was afraid I would make a mistake of some kind. The ladies seem to be having a rather hard time in trying to manage their husbands, but as I have not got mine yet I can not help them any. I think I shall let my husband manage himself, and I will do the same. I have neither father, brother nor husband that are firemen but may have the husband soon.

As this is my first letter I will not write any more this time, but if I see this in print I will write again. With best wishes for the B. of L. F., I remain

Yours truly,

A Fireman's Sweetheart,

A. T. G.

VANCEBOROUGH, ME., January 24, 1891.

Editor Woman's Department:

Having seen nothing in the *Magazine* about 357 I shall make a start, hoping some one else will try and put something in, too. Writing is something almost out of the question for me but something should be said of the boys of Justice, 357, so I shall make the start. They are all a good lot of fellows and are loyal to the old B. of L. F. flag. I take great pleasure in reading the Woman's Department and wish I could write like some of the sisters. May the order ever prosper and may the boys be guided by the unseen hand of God through the many dangers which they have to meet. A firemen's best friend.

Nan.

Work for Women.

What a blessing it would be to the many "superfluous women" if a knowledge of light carpentry was an essential part of their education! So many small comforts and conveniences would result from the ability to use a hammer, gimlet and saw handily and well. In one of the pleasantest suburbs of the Hub, a set of bright society girls took a course of lessons in carpentry, to their great enjoyment and profit. There was, necessarily, some scoffing and much laughter and railery, but the brave damsels were nothing daunted, and have declared since that few more pleasant hours have fallen to their lot than those spent among the sweet-scented woods and the clean disorder of the canny old Scotchman's shop, and the good man himself declares that he had never more willing and heedful pupils than these same gay girls.—*Dress.*

A Chapter for Mothers.

"Why did you do that when I had expressly forbidden it? Answer me at once."

The voice was harsh and threatening, the face was flushed and angry, and in the uplifted hand was a stick sufficiently large to have beaten out the life of the trembling little culprit whose frightened blue eyes were raised entreatingly to the face of the indignant mother, as in spite of fear he answered her the simple truth:

"Because mamma, I forgot to think."

"Forgot to think, did you? Well I mean now to give you something that will make you remember to think in the future."

And then followed a scene which it is hard to think of as often occurring in a country which boasts of its civilization, and among some of the most respected of its citizens.

A few minutes later a little quivering bundle of humanity lay sobbing in one corner of a comfortable sofa which was decorated with tidies, and an angry mother was trying to still the inward motherly feeling which was uneasy because of the treatment she had given her boy, by heaping still more abuse on his unprotected head. "In all the world there was not such a thoughtless child, or one who cared less for his mother's wishes."

"He was so bad that she almost despaired ever making anything of him, and was ashamed of him every day of her life."

Hard speeches for a little fellow to hear, who was still sobbing from physical pain, weren't they? This is not an overdrawn picture, but something which occurred in a neighboring door yard, and to which I was an eye witness. The woman was not an "unnatural mother," but one who loved her boy dearly, was very indulgent at times, was intellectual, well liked by all who knew her, a conscientious church member. There are mothers like her in nearly every block in the city. This degrading scene was enacted because she, like her little boy, "forgot to think," but she will not be so brave about owning to her fault.

Her cruel after speeches were delivered not because she believed them, but because she "forgot to think" how miserably false they were. She was nervous from overwork, and when her boy "forgot to think" of what she had told him, she "forgot to think" whether there might not be some better method of making him remember, where the heroic method had so often proved a failure.

It may be when night came and her boy was quietly sleeping and she had become a little rested, that she had time to think, and her heart would ache for the little fellow. Very likely she would reprove herself for her harshness and resolve to be more tender and considerate with him in the future, but the

very next time that he would happen to be disobedient when she was nervous, or tired, or cross, she would "forget to think" again, and the same miserable scene would be repeated, and one step more would be taken away from the path which leads to a knowledge of the beauties of child-culture.

Oh, if there were only some way to teach mothers to remember to think how much more perfectly could they accomplish the duties which are theirs to perform, and how much less often would they find it necessary to resort to the rod as a means of exacting obedience.—*Selected.*

Confide in Your Wife.

Men can be largely at fault for an indifference of this kind, on the part of the wife. They take it for granted that a woman has not the ability to wade through business problems. They say nothing to her of business, and often pay the wife the compliment of thinking she is not even able to take care of a bank account; consequently the wife, having no responsibility, takes what she can get, and trusts to luck in getting more as soon as the amount just received is gone; she keeps no account, because she knows just what she expends—she spends every cent she receives. If a husband placed a certain amount to his wife's credit the first of every month and she understood that was to suffice, in nine cases out of ten there would be something saved out of it. She would pride herself upon her management and would not betray the trust imposed upon her. She would be happy in the thought that she was not a "beggar," and that her husband considered her capable of attending to the finances of the household. Many men add to their business cares by compelling the wife to appeal to them for each individual dollar that goes to supply the daily necessities.—*Terresa H. Dean, in Chicago Herald.*

Nurse was giving Merle his bath, and presently arose a great commotion and shrill squeals of delight. Mamma hastened to the rescue, and found her wee son girded about with a towel—guiltless else of raiment—and dancing around poor nurse, who was looking damp and dismayed. "O, O, Mamma! Merle shrieked gleefully, "I are John Baptist, don't you see? An' I'm bappertizing nurse!"

FOUR-YEAR-OLD Bessie was having her doll dressed, and when it came to the bonnet, the little maid called for feathers, refusing to be satisfied with flowers. "But they don't wear feathers now, dear," mamma said. "I can't help that, mamma; the thinks inside of me isn't like the thinks inside of other folks." Of course the feathers won.—*N. Y. Tribune.*

Plain Words to Mothers.

Thousands of the best homes and kindest parents in the world turn their daughters out into society to drift about in the snares and traps lying thick about them, letting them go out with young men of doubtful morality, going to balls that take up nearly the whole night, and keeping as late hours as they please and with whomsoever they please, and then are horrified when they are awakened to the horrible fact that their girl, that they sent out all innocence and trust to cope with the world, has fallen a prey to some scheming, but polite, genial and winning man who is all guilt. Can parents who are thus guilty curse a daughter who has fallen into the pits from which they could and should have warned her?

It is the first wrong step of a girl taken innocently, and not the last, that ruins her. And nine times out of ten that first step the watchful, careful eyes of parents could have prevented. Let no parents, who know how full the world is of temptation to women, blame too harshly the daughter who has fallen by reason of not knowing a little of the things of which her mother might have warned her. For it is too often the over-indulgence and the mistaken kindness of parents that give the reins and license for the first step in the way that leads to the ruin of the girl and to the sorrow and woe of all who love her. Any close observer in a city or in a town now can see almost every day sweet and lovely and innocent girls taking this fatal first step. Girls are seen taking this first step in handkerchief flirtations on the streets, with some man they do not know, or it they do they ought not to know. Again, it is seen in one step too far at the ball, in some sacrifice of modesty, or too great familiarity, of which the young libertine who was her partner boasts to his chum the next day, adding still some more to it. Sometimes it is taken in receiving and answering a clandestine letter; at others in long and late walks at night in secluded places, terminating in a supper somewhere at which wine adds fire to a flame already, but perhaps unconsciously, started. It is taken, too, in a clandestine kiss at the gate or in a carriage—a kiss not of a brother or an accepted lover, but of a pirate and his poison; in the secret reading of an inflammatory book, secretly and shrewdly loaned, and in many other ways I need not mention.

The sweetest, purest thing in all the world is a pure girl, when she is just emerging from the daisy and violet field of youth, and blushing into all the beauty of womanhood. Standing thus in her purity, she moves more a thing of heaven than of earth, and all heaven contains nothing that ought to be more sacred from the touch of the spoiler. But the earth is no heaven, and that which good people would hedge about as sacred

thousands of evil-hearted men would trample down into the mire of the earth and into the fires of hell. Let the parents who know this, and who see their daughters stepping out of their arms in all the radiance of girlish beauty or ripening womanhood look more closely to the safety and purity of their jewels. Let the girls, too, listen more faithfully to the low-toned monitor of delicate instinct that nature has placed in every pure woman's breast, and not trust as fair all that seemeth so, and there will be fewer such tragedies, fewer girls and women daily falling to a depth that is below and beyond even the kindness of death.—*C. M. Des Isles, Ph. D., in Omaha World.*

In Union is Strength.

When people aspire to have a purer society they say, "We must have a stricter society; we must be more ascetic; we must diminish the opportunities enjoyed by the sexes for meeting each other; we must keep a tighter hand upon our boys, and keep our girls closer indoors." I believe that is all wrong, and rotten from bottom to top. I think that God Almighty knew a long sight better how to make this world than you or I, and it always seemed to me that if He in His creation had taken a hint from some of our wise men and wise women, He would have had all the boys born in one family and all the girls born in another. No; as brothers and sisters we are born into the world in the same family, so as men and women we must mingle in all departments of human life. Wherever you exclude either the one or the other element, therein I believe you have a source of weakness and of danger. The true unit of humanity is not the man or the woman, but the man and the woman; and the more you can bring together in your church and in your industries, in your social life and in everything, man and woman so that we can reproduce the family life in which you have brothers and sisters meeting on equal terms, therein you will have less danger, more purity, much more happiness.—*William T. Stead.*

PRETTY little silk handkerchiefs, which come in all colors and at low prices, make very artistic lamp-shades over the white porcelain shade. Red, pink, or yellow are the favorite colors, on account of the soft light they give. Lay the handkerchief flat on the table and with a pencil mark out a circle the size of the globe-top. Then cut out the center and hem it neatly around with silk of the same shade, and sew a frill of soft lace inside so that it falls over the top, and another around the bottom. They may be further ornamented with an embroidered design or a bow of ribbon, if desired.—*Detroit Tribune.*

Things to Make for Church Fairs.

A table nicely covered with light felt may have lots of novelties on it, and be called "The Variety Table."

A useful newspaper-holder is made by taking an ordinary wire toaster or broiler. Paint the toaster with liquid gold paint, arrange wide ribbons in two shades, run in and out alternately through the wires, each piece of ribbon being in one continuous piece all around, thus banking the sides; the ends are neatly joined at the back. A ribbon bow is fastened to the top at the sides, and ribbon is also tied in a bow near the top of the longest handle, by which the pocket is suspended.

A dainty lamp screen is made by taking a Japanese fan, of medium size, and covering it with satin, upon which a floral design has been previously painted. The handle, which in such fans is hollow, is wound with narrow ribbon and decorated with a bow of wider variety, and slipped over the point of a common letter-file having a round iron standard, the latter being concealed by a full gathered cover of satin.

A convenient trifle is a little box lined with rubber cloth or oiled silk, and covered on the outside with imitation leather, heavy paper, canvas or any material that looks well and is not too frail to withstand close packing in satchel or trunk, because the box is designed to hold brushes and blacking, or dressing for the shoes. A catch that will keep it securely closed when its contents are not in use is essential, and if a box possessing such an attachment is not available, a small, leathern strap, with buckle, may be tacked firmly to the back to take its place. "Shoe Dressing" may be marked on the cover with brass tacks.

Scrim cushion-covers, for cushions in every-day use upon the toilet table, and dressing-case covers that can be taken off to permit of brushing off the dust that penetrates through them and readjusted without loss of time, are the most practical, but they must be pretty as well. Along the sides and ends of the cover threads are pulled out to permit of running in the narrow ribbons, their ends hanging down and folded under to form loops. A large bow of wide ribbon is fastened near one corner. There are a great many varieties of scrim, but that showing a uniform and rather loose weave is best adapted to this purpose. The narrow ribbons may be all of one shade, or in two or more contrasting colors. Pink and blue give a dainty pompadour effect, which is heightened if the cushion case be of either color. A pin thrust through each corner will hold the cover in its place. Sides of cushion may be trimmed with lace.

A strawberry basket held under running water and scrubbed lightly with a brush may be freed from fruit stains. Having re-

ceived the freshening, paint the outside with blue, white or pink enamel, or with any of the metallic paints, applying the latter with their own special medium or with French glue, or thin white mucilage. Line it with silesia, sateen or India silk.

The baskets in which grapes are bought may also be so treated. Various uses for these baskets will suggest themselves, to hold silver, etc. Enamel may be bought in pound cans and applied by almost anybody.

—*Ladies' Home Journal.*

Miss Anthony and Political Parties.

Much has been said about Miss Anthony's attitude towards the political parties. This is what she says for herself in a recent letter:

Not one of the new state parties that I have heard of has put a woman suffrage plank in its platform. Each and all of them, like the old Republican and Democratic parties, have welcomed women to work for them and have nominated women to some school offices. The new parties may have nominated more women, but not one of them has made woman's right to vote a party measure, requiring its nominees and its official papers to speak of it as one of the planks in its platform of principles. And until some great party does this thing, I shall not shout the praises of any one of them for nominations of women. The thing we are asking is not for men to put us into office, but for them to let us have the power to vote into office whomsoever we please.

A RATHER precocious infant had its christening unfortunately deferred until it was able to talk. After the minister had dipped his fingers in the water, and made the sign of the cross on her forehead, the unawed child leaned down, and catching up the long sleeve of his white gown, wiped the water away, calmly remarking: "Baby's face clean. Don't want wassin; dot it wassed 'fore ustummed out."—*Harper's Bazar.*

RISE AND FALL.

'Twas a breach of promise suit, the letters all were read,
And here is what the opening words of each epistle said:
"Dear Mr. Smith," "Dear Friend," "Dear John,"
"My Darling Four leaf Clover,"
"My Ownest Jack," "Dear John," "Dear Sir," then
"Sir," and all was over.

Chicago Post.

The pipe of peace is a gentle thing,
And worketh pleasing charms:
But O, the stove pipe is not so!
It changeth weal to bitter woe,
And soundeth war's alarms.

The following curious advertisement appeared not long ago in a newspaper in Paris: "A lady having a pet dog whose hair is of a rich mahogany color desires to engage a footman with whiskers to match."

THE MAGAZINE.

Rejected Manuscripts are not returned unless accompanied with required postage.

Subscriptions must begin with the January, April, July or October number, and expire with the year.

Changes of Addresses of subscribers should be reported to us promptly to insure the safe delivery of the Magazine.

Contributors are required in all cases to give their real names, not necessarily for publication, but as a guarantee of good faith.

Subscribers are required to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

THE NEW NATION.

We have on our table No. 1, Vol. I, of *The New Nation*, published weekly, by Edward Bellamy, at No. 13 Winter street, Boston, Mass. In an article captioned "The New Nation," the editor pays special attention to the question, "Why will not the old nation do?" Among the reasons why the old nation will not do, and in what special particulars the new nation will be an improvement, the editor says that: "In the old nation, the system by which the work of life is carried on is a sort of perpetual warfare, a struggle, literally, to the death, between men and men. It is a system by which the contestants are forced to waste in fighting more effort than they have left for work. The sordid and bitter nature of the struggle so hardens, for the most part, the relations of men to their fellows that in the domestic circle alone do they find exercise for the better, tenderer and more generous elements of their nature." The editor further remarks, that in the old nation—that is, in the present nation, "the people are divided, against nature, into classes: one very small class being the wealthy; another and much larger class being composed of those who maintain with difficulty a condition of tolerable comfort constantly shadowed by apprehension of its loss; with, finally, a vastly greater and quite preponderating class of very poor, who have no dependence even for bare existence save a wage which is uncertain from day to day." It is also pointed out that "half of the nation—the women—are dependent upon the personal favor of the other half, the men, for their means of support"—that "a million of men are crying for work; that, not only does wealth devour poverty, but wealth devours wealth," etc. Under the "new nation," all these things will be changed. There will be "neither rich nor poor," all will be employed except the sick, the old and infirm, and they will have every possible attention.

In the new nation it is said that "the children will be cherished as precious jew-

els, inestimable pledges of the divine love to men. Though mother and father forsake them, the nation will take them up," and that "education will be equal and universal, and will cover the entire period of life during which it is now enjoyed by the most favored classes," and when these things are accomplished, then—"for the first time in history, the world will behold a true republic, rounded, full-orbed, complete,—a republic, social, industrial, political."

W. A. SHEAHAN AND MISS JENNIE PRATT.

We have seldom sharpened our fable for a more agreeable task than to record the marriage of Brother W. A. Sheahan, Grand Secretary and Treasurer of the Brotherhood of Railroad Trainmen, to Miss Jennie R. Pratt, of Galesburg, Ill.—the happy event having taken place on the 10th of February last.

How much pleasure it would have afforded us to have been present on the delightful occasion, we shall not attempt to explain, but it would have been all that we are capable of realizing, when a friend, noble, strong and true, endowed with every ennobling trait of manhood, appropriates to himself the highest prize man can draw in all of the lotteries of life, a beautiful and accomplished woman, to be his partner, for weal or woe, through life. On the occasion referred to, we fancy Bro. Sheahan was oblivious of his records, cash account—death and disabilities, and grievance committees, and, contemplating his wife in her bridal robes, whispered audibly—

"Tis in your eyes, my sweetest love!
My only world I see:
Let but their orbs in sunshine move,
And earth below and skies above
May frown or smile on me."

It is needless to say, how warmly we welcome Brother Sheahan and his bride to the ranks of home builders and beautifiers, or how much or how generously we wish them the largest possible share of happiness and prosperity.

We have before us Vol. I, No. 2 of the *Brotherhood Home Journal*, a new monthly paper published in the interest of the Brotherhood of Railway Employes' Home, a very worthy and beneficent enterprise which we have discussed at some length in previous issues of this *Magazine*. The *Journal* is edited by Dr. Frank M. Ingalls one of the vice presidents of the "Home" and can be had at the low rate of 60 cents per annum. It is designed to disseminate the gospel of fraternity and fellowship and has our best wishes for success. Address, Brotherhood Home *Journal*, 1014 W. Lake St., Chicago. Send for a sample copy and see how you would like to invest sixty cents in a year's subscription.

BROTHERHOOD OF BLACKSMITHS.

That the "brotherhood" sentiment is abroad in the land and that it is growing at a phenomenal rate, is apparent to even the most indifferent observer of the signs and tendencies of the times. All trades and occupations are coming into line. It is the shibboleth of the age and is destined, as we believe, to arouse mankind from social lethargy and stupor to a full comprehension of their rights and the requisite courage to defend and maintain them. In this connection it affords us pleasure to introduce an official circular issued at Denver, Colo., under date of January 19th, by our valued friend and co-worker, James H. Cater, who has recently succeeded to the office of Grand Master of the International Brotherhood of Blacksmiths, an organization in all regards in sympathy with the protective spirit of the times and meriting the unqualified support of every friend of labor. The full text of the circular, which voices heroic sentiments, is as follows:

DENVER, COLO., January 19, 1891.

To the International Brotherhood of Blacksmiths of America:

BROTHERS:—By the resignation of Brother James Edwards, our first grand master, I, by virtue of being the vice grand master, am his successor, to serve until the next annual convention of the grand union in the capacity of grand master. Therefore I feel it my duty to address you upon a matter of very grave import and of great moment to the unions. I beg of you to give the subject that amount of consideration and thought that it demands.

To my mind, and I believe a large majority of the brothers are with me, the time has come when something of an active nature must be done in order to win success. We are passing through the experimental period as an order. Very much depends upon our action in the next few months. If we act with wisdom and zeal for the brotherhood we shall pass through the period of trial with credit and prosperity.

In view of the importance and desirability of our existence as an organization, is it not worth our while to make a strong and united effort to make the order a powerful body and a complete success? We believe the brothers generally deem the cause of sufficient moment to us all to push forward any measure of a reasonable character to promote the best interests of the brotherhood. It may appear to many of us that we are a very small body of men, and it will require many years of patient effort before we amount to much, that it is best to grow slowly and take time to develop.

We are living in a wonderful age and one of its distinguishing characteristics is the remarkable progress of labor organizations. There are many powerful orders to day which a few years ago were only weak and struggling societies. By active work and persevering endeavor they are to-day in the foreground.

Why the same results cannot be accomplished by us we cannot understand, providing we show the same commendable spirit of zeal and persistence. Anything worth having requires an effort to be made in order to secure it. From every standpoint we may look upon the matter of our expansion and increase it means benefit and advantage to us.

My proposition to the brothers is for the executive officer to make a circuit all over the manufacturing districts and proceed to organize unions. The work cannot be successfully accomplished by mail—it is too slow and does not perform the labor satisfactorily.

We can have the valuable help of labor leaders in the various cities of importance in organizing the

trade if the brothers desire it. We feel able to make the effort, starting for Chicago and forming unions along the line from there to the middle eastern and southern states: call open meetings to the trade; lecture to them on the labor cause, and show the necessity of a Blacksmiths' Union in every city in the United States and Canada.

In this endeavor we can count on the cooperation of such men as Gompers, Debs, Howard, Sweney, Gruelle and a number of other able men who are desirous of seeing unionism flourish. It will entail some expense, of course, but that will very largely be defrayed by the new unions that will be brought into our ranks. We would like to hear from the unions on this subject and be guided by their decision. A small amount from each union will be sufficient—say ten cents from each member in good standing on the books—to carry on this line of work.

Brothers, please take action on this matter at your next meeting if you are desirous of seeing our honored organization go to the front where it belongs. We have a bright future before us if we can prove equal to the emergency, and make a strong and determined effort to succeed. There is nothing to prevent us having as powerful a brotherhood as the Brotherhood of Locomotive Firemen, save our own inaction and lack of interest. Brothers, let us prove worthy of the task imposed upon us, and by the use of that irresistible power, organization, win a glorious victory.

Yours fraternally,
JAMES H. CATER,
Grand Master.

N. B.—Presidents and secretaries of unions will please send all communications for the grand master to James H. Cater, 428 Charles Block, Denver, Colo.

Having the pleasure of a personal acquaintance with Brother Cater, who, by the way, is also the editor of *United Labor*, published at Denver, a dauntless advocate of the rights of workingmen, we do not hesitate to say that he is eminently the right man in the right place. His mental equipments are such as to make him a superior presiding officer, while as an executive he will be equal to every duty his office imposes. The members of our brotherhood, who are the friends of all brotherhoods of workingmen are urgently requested to aid in every way in their power in promoting the interests of the Brotherhood of Blacksmiths and by so doing they will be contributing to the advancement of the great cause of labor to which we are all consecrated.

AN English statistician, having given national wealth special attention, says that "public wealth is made up of ten items, every one of which can be calculated to a nicety except the value of public works. Thus; land is worth thirty times the assessed annual rental valuation. Houses are worth eighteen times the rental. Furniture, according to insurance agents, is worth on an average half the value of the house. In the comparison of aggregate values arrived at by this computation our own country comes out ahead. The wealth of France is \$15,500,000,000, that of the United Kingdom, \$18,000,000,000, and that of the States, \$68,000,000,000." This would give the people of the United States about \$180 per capita—several millions have less than 18 cents per capita, but Jay Gould is not of the number.

MR. D. J. BROWN, OF THE B. OF L. E.

In the B. of L. E. *Journal* for January appears an article attacking D. J. Brown, of Leland Stanford Division, No. 283, B. of L. E., and captioned "A Miserable Effort." The caption is singularly expressive. The article is, sure enough, "A Miserable Effort"—that is to say, it is of very poor quality, really worthless. The *Journal* never hit the nail squarer on the head than when it captioned its attack on D. J. Brown, "A Miserable Effort." It was a happy idea. It filled the bill. The writer must have been inspired. It was a center shot. As a "trade mark" nothing could have been more felicitous—in a word, "A Miserable Effort" tells the story.

"O! ah! alack! exclaims the *Journal*, you don't get the hang of the "shooting match." What we intended saying was, that the oration of D. J. Brown, at the San Francisco convention of the B. of L. E., was a "miserable effort, not our criticism of the address." Well, your explanation of your "miserable effort," scarcely helps you, for if you intend to say Mr. Brown's splendid address was a "miserable effort," then, in that case, you made a miserable mistake.

Mr. Brown's address, instead of being a "miserable effort," was a masterly effort. Print it alongside of Chauncey M. Depew's Pittsburg oration, and then call for votes as to which is the "miserable effort," and Chauncey will win by a big majority. It would be seen that Mr. Brown was the most thoughtful and indeed, the most brilliant.

From first to last, D. J. Brown's address held the audience and won applause. It was bold, honest, courageous, and thoughtful. It was the address of a man who dared to tell the truth and take all the responsibilities.

In our notice of the address, our words were not too eulogistic. We sought to do the gallant locomotive engineer simple justice, without the slightest reference to his criticisms upon Grand Chief Arthur. Mr. Brown not only knows the Grand Chief Engineer, but is capable of measuring him and weighing him, and why should not a veteran engineer, a member of the B. of L. E., who is a friend of all the orders of trainmen, say, "We want a leader whose charity goes a little farther than his own threshold?" Why should he not tell the truth and say, "Our order is and has been for years dominated by one man," and that this one man "is an autocrat in the organization over which he presides."

In this connection it is well enough to say that Leland Stanford Lodge, in censuring (?) Brother Brown, does it in such a mild, courteous and considerate way, that it becomes equivalent to an indorsement. The language is as gentle as a zephyr. If every word had been chips of pig lead, and

had fallen a thousand feet, they would not have injured the wing of a gnat. The "whereases" and the "resolutions" are equivalent to saying, "Ah! Brother Brown, you naughty man, don't you know the truth need not be spoken at all times?"

The division did not resolve that Brother Brown's address was a "miserable effort," and it is just here that the B. of L. E. *Journal* made a mistake. It should have been content to let the division speak.

The editor of the *Firemen's Magazine*, in referring to the address of D. J. Brown, kept largely within the boundaries of admissible commendation. The hearty and constant applause awarded the speaker from start to finish, was in the nature of an ovation. A veteran engineer, with gray hairs, furrowed cheeks, bronzed with exposure—himself once a fireman, and whose great heart was full of kindness, touched responsive chords. His address was really eloquent. If Grand Chief Arthur would utter such sentiments, or, more properly, if he would practice such sentiments, he too could have the applause of conventions other than those of his order. Let it be said right here, that "the locomotive firemen's association" approve the address of D. J. Brown at San Francisco. His utterances were not dictated by the B. of L. E. convention. He spoke from his own knowledge and his own experience, and no one has said that he did not *speake the truth*.

In closing this article, already too extended, we desire to quote a sentence or two from the article of the *Journal*:

The *Journal* has in the past, and we hope we may never forget our position in the future so far as to be guilty of giving our personal opinions editorially against a sister association. [The italics are ours.—ED. MAGAZINE.]

Why talk of "sister associations?" Why use such an endearing expression? What associations are referred to? When did the *Journal* treat any association of workmen as a "sister association?" When did it ever speak a generous word for a "sister association?" Was it when P. M. Arthur said "sister associations" must "mind their own business?" Was it when he declared he "never had and never would cooperate with any 'sister associations?'" It does not matter if the *Journal* has been silent about "sister associations"—what has been its policy, except cold, callous, unfeeling indifference? Not one kind, encouraging word has been spoken; no helping hand given. Such has been the policy of the B. of L. E. *Journal* toward what it calls its "sister associations."

Again, says the *Journal*, "If our readers will devote a few hours of their leisure time to the perusal of the several railway official publications, the most skeptical of them will perceive that there is a lack of that fellowship that should exist."

The *Journal* starts out as a pseudo evangelist. It wants to be known as an advocate of "fellowship," when its policy toward all its "sister associations" has been that of "mind your own business," as foreign to brotherhood, companionship, fraternity, generosity, fellow feeling, as fire is to an icicle. To look for a sentiment of fellowship, of interest in the welfare of a "sister association," in the *Journal*, would be like hunting for sunflowers in Spitzbergen, and yet it would have its readers believe that all "the railway official organs" are opposed to "fellowship."

Consistency, verily, thy name is B. of L. *E. Journal*.

THE GIFT BUSINESS.

Some railroad officials are fond of costly presents, quite as much so as was old Solomon and all the breed of kings down to the young Hohenzollern William, who wears a four pound crown, stuck full of precious stones, valued at several millions.

This thing of giving gifts to august personages has vast antiquity to back up the custom and is likely to continue for some time to come. The *Railway Age*, however, is disposed to sit down on the custom and save:

Presentations to railway officials, either by employees or by patrons of their roads, should cease to be tolerated. No employee should be subjected to the moral compulsion of being asked to contribute toward a gift for his chief; no shipper should dare to seem to invite special consideration in return for a present; no railway officer should accept a gift in his official capacity which represents money contributions. When an esteemed officer is retiring from service or going to another company a handsomely written expression of good will from his associates and subordinates is appropriate, and its possession should be far more gratifying to the recipient than costly gifts of gold or silver or precious stones, the money for which he knows, to some extent at least, has been wrung from unwilling givers or at any rate from some who have robbed themselves or their families in making their contribution.

As a matter of course the whole thing is ridiculous. There is not a redeeming feature in it. It is not only ridiculous but vicious. But nevertheless, this thing of giving gifts to kings has a practical side to it. True, the maxim is, "Kings can do no wrong." They can forget gifts and all other exhibitions of sycophancy, still the givers hope that substantial returns will be made. They hope for the king's favor when it is required, and having the gifts the king ought to remember the givers in the time of trial. Kings like substantial things: a gold watch, a medal, a gold headed cane, a diamond ring or breastpin, are of more value to them than a set of gilt edged resolutions, and the employees know it, hence they give what the boss will appreciate. The idea is founded in human nature and it will take some time to reconstruct the average official. In this connection the *Locomotive Engineer* remarked some time ago:

This is about the season of the year when the Christmas present fiend commences to pass his little

list for the names and dollars of such suckers as will put up. If there is an official on your road who needs a Christmas present, don't stand in the way of his buying one for himself. You buy your own. If some official is going away who has been a man among men, and you want to encourage him for it, it might do to give him a present. But a well-written memorial or set of resolutions will show him your appreciation just as well as a gold watch—and is cheaper. If there is an unfortunate fellow worker of your acquaintance, or the needy family of one, put your hand in your pocket and fish up all you can spare. When the man who has the list for the "old man's present" comes around, don't plead poverty, don't sneak away, but say "No," in as good clear English as you can command.

This thing of thanksgiving resolutions has gone quite far enough. They are, to say nothing, syntax; a mass of slush and gush. The simple way out of the business, is, as the *Locomotive Engineer* says, say "No." Should the time ever come when the officers present gold watches, diamond pins, etc., to faithful employees, who change from one road to another, or pass highfalutin resolutions, it will be the time to discuss reciprocity; till then, let "no" be the watchword.

CHICAGO is to have a Masonic temple eighteen stories high. It will be the grandest structure in the world and architects of Europe are sending for cuts of the building. Norman S. Gassett says in the *Chicago Herald*:

The temple will be built so as to resist successfully the wind at a velocity of 135 miles an hour. Such a wind would level all the ordinary business blocks of the city. The highest wind known in Chicago was but forty-two miles an hour. The weight of the people on each floor has been overestimated. We have provided to sustain a weight of as many people as could be packed in solid as sardines on every foot of space on every floor. We have also exaggerated the weight of the beams and of fire-proofing. The upper floor will be as strong as the lower. They will so depend upon each other as to be of uniform strength. Built on this principle it could be safely made forty stories high on that foundation. The only objection would be it would require too much room for elevators. We now will have fourteen elevators, eight foot cars, all arranged in a circle. That's more elevators than there are in any other building in the city. The superstructure and foundation are alike solid. Externally the four sides of the temple will be exactly alike. Even the alley sides will be a duplicate of the State and Randolph street sides. It will appear exactly the same, no matter from what direction viewed. The general appearance of the temple will be that of a gigantic monument.

The temple speaks for Chicago which carries at least 500 pounds pressure to the square inch of boiler surface without the slightest danger of bursting.

The following is from German authority upon railway mileage January, 1889: Europe, 133,900; America, 190,000; Asia, 18,000; Africa, 5,200; Australia, 10,500; total, 357,600, as compared with 293,000 in 1884. Of the increase of 64,600 miles during the four years, 40,000 is in America and 30,000 in the United States alone; 11,000 miles were opened in 1885, 17,000 in 1886, 23,000 in 1887 and 13,000 in 1888.

WARES, MERCHANDISE AND MEN.

Kate Field's Washington has the following:

The Ways and Means committee say:

"Those who advocate duties for revenue solely see only as a result of their theory cheaper prices of wares and merchandise, and are blind to the other necessary effect, that of lower wages and cheaper men."

If that sentence has any meaning whatever—which I do not assert—it is that the less price one pays for provisions and clothes the more expensive is living, and that the cheaper the cost of necessities the cheaper are the buyers.

I find a similar thought embodied in a speech accredited to General Harrison, in March, 1888. He says:

"I am one of those uninstructed political economists that have an impression that some things may be too cheap. I cannot find myself in full sympathy with this demand for cheaper coats, which seems to me necessarily to involve a cheaper man and woman under the coat."

I will not do the President the injustice to infer that he measured the value of the man by the cost of the coat which covered him, or that he held a laboring man in a jeans coat to be less worthy of his consideration than a manufacturer in broadcloth; but as an "uninstructed political economist" he has fallen into the error of implying that a man who wears a coat which was bought with the price of ten bushels of wheat was a "cheaper man" than if he had paid the price of twenty bushels of wheat for the same coat; or that the housewife whose dress was bought with fifty pounds of butter was a "cheaper woman" than she would have been if she had bought the same dress with one hundred pounds of her butter.

Running through the foregoing, is the association of men and women, and children as well, with goods, wares and merchandise of every description.

The admission is made that "lower wages" make "cheaper men." The terms "cheap men" and "cheap women" are becoming as common as "cheap pork" "cheap beef" "cheap wool" or "cheap cotton." Low wages, say the political economists of the times, make "cheap men." In old plantation days negro traders talked of "cheap men" and of "cheap women." Prices ranged from \$50 for a "yearling nigger" to \$500 for a "field hand," and \$800 to \$1,000 for a superior male or female "nigger." Now we hear "cheap men" talked of in what is called the "Northern labor market," and in congress men chatter about labor as a "commodity."

"Cheap men" and "cheap women" are, if employers can bring about the change, to constitute a class. A "cheap coat" is to designate a "cheap man," and a "cheap dress," a "cheap woman."

Words are the signs of ideas, of conceptions of the mind. What do the terms "cheap men" and "cheap women" signify? Are they intended to convey the impression that such people are independent, self respectful, the peers of high priced men and women? Why should a "cheap coat" and a "cheap dress" signify that those who wear them are "cheap?" A rich man may wear a cheap coat, and a rich woman may wear a calico dress, and not be known and referred to as "cheap" people; but compel

them to wear cheap clothing, and then the rich designate them as "cheap" men and women. Withhold from them honest wages, compel them to work for such wages as are being paid by hundreds of corporations, and you have entered upon a policy which degrades men, women and children, and they become cheaper the longer the injustice prevails.

Already, in the United States, it is known that human life is cheap. The reports from New England, officially made, and presented to congress, demonstrate that New England is full of "cheap men," and particularly, "cheap women." They not only wear cheap coats and cheap dresses, but live in cheap huts and subsist upon cheap food and too little of that. In the mining districts of the country, particularly where the Philadelphia & Reading R. R. Co., holds sway—cheap men and women abound. "Cheap men and cheap women" is the shibboleth of corporations—of monopolists and millionaire employers. This cheapness brings rags and filth and degradation.

Philanthropists blubber over conditions which would shock the sensibilities of savages. Crime is steadily increasing as men and women are cheapened. What is the matter? This: Employers, by methods that are cruel to devilishness are robbing people who work, and as a result, degradation is increasing. What is the remedy? This: Pay fair wages. Let labor have its fair share of the wealth it creates. Stop stealing by processes that shame civilization and make our boasted christianity a gilded sham, and our laws a menace to advancement. Stop taxation by which the poor are made poorer and the rich richer. Cleanse the Augean courts and put honest men at the helm to make laws. The multiplication of "cheap men" is dangerous.

The Switchmen's Journal, under the editorial management of John A. Hall, is developing into a robust and influential publication. The February issue, as the cockney said of Niagara, is "dom'd foine, well got up," and seriously Brother Hall is making the *Journal* all that the most exacting could demand. It is out and out a brotherhood publication and in discussing subjects relating to labor, displays the *map* and *grit* characteristic of the organization it represents.

READERS of the *Magazine* who purchase goods from merchants, firms or companies who advertise in its columns are requested to state always that they saw the advertisement in the *Firemen's Magazine*. The value of the *Magazine* as an advertising medium will thus be made manifest and the pecuniary advantages therefrom will accrue to the brotherhood.

THE *Steam Railroad Men's Journal* is the title of a new monthly publication which has just made its appearance, the initial number of which is on our table. It is published at Boston, with Chas. A. Kellar as editor and manager, and is the official organ of the Steam Railroad Men's Protective Union. In his "bow to the public" the editor, among other things, says: "This journal will be devoted exclusively to the work of forwarding the interests of railroad men and the publication of such news, from various parts of the country, as shall be of interest to those who are engaged in the hazardous and laborious work of setting brakes, pulling pins and throwing switches." Also the following: "The immediate interests of railroad men are multifarious and highly important. Lives and limbs need protection, wages are entirely too low, railroad employes are required to work too many hours daily. The managers of railroad corporations are slow to make improvements in the service. They are fearful that safety drawbars, guard rails, increased wages, reduced hours of labor and higher bridges and many other needed changes will decrease dividends, and hence that the manager will be forced to resign. While we do not propose to deprive the stockholder of his dividend nor the managers of their positions, yet we do emphatically claim that the lives and limbs of human beings, whether they are employes or travelers, should be placed above every other consideration."

While this *Magazine* is committed to the "brotherhood idea," that is to say, that each department in the railway service should organize separately and then unite together in a federated alliance, still we are not disposed to discourage others who, with equal faith in their particular plan of organization, are seeking, by such means as may to them seem prudent and advisable, to promote the interests of the great body of railway men of the country. The end in view is always the same, and ultimately, as we believe, the principle of the "survival of the fittest" will prevail and all men who favor the triumph of workmen over oppression and injustice will be brought together in harmonious alliance and work together upon the same lines to achieve success. We wish the *Journal* success in its work equal in all regards to its expectations.

SINCE the time when Professor Morse hitched electricity to the wire and made it talk, the United States has built 776,500 miles of telegraph wire, and in 1889 no less than 56,000,000 messages were sent through the country. France has 220,890 miles of wire, on which in 1889 were transmitted 30,050,000 dispatches. Great Britain has 180,000 miles of metal line, and in 1889 sent 51,000,000 messages.

THE BURNS LIABILITY BILL.

The following is the full text of the bill introduced by Hon. Wm. E. Burns, of Chicago, in the General Assembly of Illinois, defining the liability of railroad corporations for injuries to their employes:

A bill for an act to define and establish the liability of railroad corporations for injuries by and to their fellow-servants.

SECTION 1. *Be it enacted by the people of the State of Illinois, represented in the General Assembly.* Whenever any railroad corporation operating any railroad in this State, shall have in its employ two or more fellow-servants, co-employes, or agents who shall be, by the nature of their employment, habitually associated and jointly engaged as such in the same line or branch of railroad service, connected in any manner with the use and operation of its railroad in and about its business as a common carrier of passengers and freight, and one of such fellow-servants, co-employes, or agents shall be injured or killed by reason or in consequence, wholly or in part, of the wrongful or negligent act or default of another of them, occurring in and about the latter's performance of his part of such branch or line of such railroad service in, or in any manner connected with, such use and operation of said railroad in and about its business as such common carrier of passengers and freight; and such wrongful or negligent act, or default is such as would have entitled the said party injured; or in case of his death, his personal representative, for the benefit of his widow and next of kin, to have maintained an action against such railroad corporation, and to have recovered therein damages in respect of such injuries or death, had the party so injured not been such fellow servant of the party so causing such injury, then and in every such case such railroad corporation shall be liable to an action for damages for such injury at the suit of such injured servant, employe, or agent, or in case of his death at the suit of his personal representative, as aforesaid, for the benefit of his widow and next of kin, as if the relationship of fellow servant had not existed between the party so injured or killed and the party so causing his injury or death; and no rule, regulation or contract between such corporation and any servant, employe, or agent thereof, shall impair or diminish such liability of such corporation.

SEC. 2. Whereas, an emergency exists, therefore this act shall take effect and be in force from and after its passage.

The bill is eminently just in its provisions. There is not an element of injustice in it. All that is contemplated in the bill is that railroad employes, when injured in the discharge of their duties, shall not be made the victims of unjust discrimination in the courts, as has hitherto been the case. No special privileges are asked or desired. Simple justice—fair play, is all that is demanded. The railway employes of the State of Illinois are profoundly interested in the passage of the bill, for should it become a law it will protect them against outrageous decisions of courts, by virtue of which, no matter how just their claims, they are deprived of their rights to recover damages in case of injury while in the discharge of their duties. As a matter of course a powerful lobby has been organized at Springfield to defeat the bill in the interest of the corporations. Every conceivable influence will be brought to bear against the measure, but if the railway employes of the state are alive to their interests, if they will rally to the support of the representa-

tives who are championing their cause, the bill will pass in spite of corporation attorneys and be incorporated in the statute books of the state. In this connection we desire to introduce the following circular, which has been issued by the Grand Lodge of the Switchmen's Mutual Aid Association:

CHICAGO, January 24, 1891.

DEAR SIRS AND BROTHERS:—The inclosed "bill" was presented in the house by Wm. E. Burns, representative from the Fifth district. Mr. Burns is a member both of the B. of L. E. and the B. of L. F., and was elected by the railroad men of his district. The bill was prepared by Judge Barnum, the legal adviser of our association, and he is the best authority on constitutional law in this city. So many bills of this character have been passed by the various states, only to be declared unconstitutional by the Supreme Court of the United States, that it is absolutely necessary that we permit no tinkering or amending of this bill. Mr. Barnum is *our own paid attorney*, and stakes his professional reputation upon the constitutionality of Mr. Burns' bill, and we cannot afford to have its usefulness destroyed by our would-be friends in the legislature, who think that they can improve upon it, as the introduction of a single word may render it null and void. If these men are our friends, they will fall in line and support this measure: if they are paid by corporations, they will endeavor to render our bill useless by amending, or supporting another bill that would not be worth the paper upon which it is written.

The grand lodges of the S. M. A. A. of N. A., B. of L. E., B. of L. F., B. of R. T., B. of R. C., and O. R. C., have indorsed the bill presented by Mr. Burns, and have pledged themselves to use their influence towards its passage. A committee has been appointed to make the proper representation to the members of the legislature at Springfield, but it is now desired that each lodge of the above named organizations appoint committees to wait upon their representatives, in both the house and senate, at home, and enlist their active cooperation in securing its passage. This is not a political measure in any sense. We must have the aid of both parties. Give your representatives plainly to understand that we will not permit any amendments or legislative trickery of any kind to interfere with this bill. Make it distinctively and emphatically known that no amount of technicality will blind us; we know what we want and will strip the veil from every man, and let him stand out clear and distinct. In the broad light of day, either as a friend or a foe. Heretofore party affiliations have been too strong with us. Let your representative be informed that if he is our friend and honestly supports this measure, we will bring an army of friends to his support. Independent of party lines; if he is our enemy in this work, and attempts to defeat our bill, either openly or by supporting a fraudulent measure, we will unite every railroad voter in his district against him. We will generously reward our friends, and as certainly punish those who are lukewarm or refuse to give us their aid.

Having outlined the policy to be pursued, let us impress upon your minds the imperative need of immediate action. Brothers Simsrott and Hall have just returned from Springfield and report favorably on our chances, but it is necessary for railroad men of the districts to confer with their representatives, and let each of them know that their constituents are vitally interested in this bill, and request their aid. *Do not delay action.* Call a meeting at once, appoint a committee with proper credentials or authority, who will call upon the senator and members of the house at their first visit home, and in the meantime the secretary of the committee must write them at Springfield advising them of the action taken by the railroad men in indorsing Mr. Burns' bill and requesting their influence to secure its passage. Let that letter be signed by the whole committee or as large a number of their constituents as possible to obtain in so short a time.

The foregoing states the case fully and

explicitly. No time should be lost. If the bill fails to pass, it will be because of the supineness of the men themselves. They have it in their power to make a law of the Burns bill. Will they do it? We shall see. For years we have heard men talk about what they proposed to do in the way of securing fair and honest legislation and now the time has come for action and we hope that it will be such that its force will be felt and respected and that when the legislature of Illinois shall have adjourned, the cause of labor will have triumphed in so far as the statutes of the state relating to labor's interests are concerned.

A bill similar to the Burns bill is pending before the legislature of Indiana and has passed the lower house. The same measure has been introduced in other legislatures. The demand for its passage is spontaneous and universal, and what is here said in reference to the duties of railway employes in combining their influence to carry it through will apply to all states and localities. Let there be prompt, vigorous and united action, and victory is certain.

COMPLIMENTARY.

Our esteemed friend, J. H. Cater, Esq., of *United Labor*, Denver, Colo., is pleased to say:

We are pained to notice the intended retirement of the above named distinguished leader and teacher from his position as Grand Secretary-Treasurer of the Brotherhood of Locomotive Firemen and Editor of their able *Magazine*. We fully realize the loss that the gallant knights of the scop are about to sustain by his resignation. Beyond all question he has been the leading spirit of their splendid organization. It was his bright mind that led them on the pathway of success and devised the methods that secured such triumphant results. Surely we cannot help but regret the severance of so strong a tie and the resignation of so great a worker and champion from the Brotherhood of Locomotive Firemen, an organization we have always admired and for whose prosperity we ever desire. It may be that a broader field of usefulness opens for Mr. Debs in the establishment of a large daily labor newspaper on the same scale as the *World, Sun or Herald*. It is possible that he can do more good in that capacity than where he is now. We trust that such may be the case, but in view of the efforts of Swinton and other noble and gifted journalists who have made the experiment in a weekly paper and failed, we must confess we look upon the project with some misgiving, but we shall be glad to see our fears unfounded. With the restless energy, business tact and great literary abilities that Mr. Debs possesses, backed up with sufficient capital, he may be successful in accomplishing the greatest work of the present time for the labor cause by establishing a truly great labor daily.

The project is a noble one, a gigantic task, which, if it succeeds, will prove an inestimable boon to the workers and civilization. We hope that in everything the tireless leader of the Brotherhood of Locomotive Firemen undertakes for the advancement of the cause he will be unanimously supported by the hosts of organized labor.

Such generous words may not appear to every one like "apples of gold in pictures of silver," but to one soon to take his position in the ranks, they possess inestimable value.

And here are more in the same line, from Comrade J. N. Corbin, editor of the *Union Pacific Employes' Magazine*:

E. V. Debs, General Secretary of the Brotherhood of Locomotive Firemen and editor of the *Firemen's Magazine*, announces in that journal for January that he is about to resign from his position. Mr. Debs has demonstrated that he is possessed of the qualifications necessary to fill the dual position, and we trust the Brotherhood will select a man equally as qualified. Mr. Debs has our best wishes for success wherever duty or inclination may call him.

Journalism has its rough places, but without, its sunny spots, so bright and endearing that when found they live forever in the memory while all else is forgotten.

And here is one of them made specially pleasant by the artistic pencil of our friend and co-laborer, L. W. Rogers, of the *Railroad Trainmen's Journal*:

Eugene V. Debs has announced his intention of retiring from public life, and sincere will be the regret of his many thousand friends. For more than thirteen years Mr. Debs has been the Editor and Manager of the *Firemen's Magazine*. For several years he has also been treasurer of the organization, and through his hands have passed the millions of dollars gathered in small sums from all parts of the country, and distributed among the unfortunate. During these years of service for the Brotherhood of Locomotive Firemen Mr. Debs has made a reputation as a writer that is by no means confined to railroad circles, while his sturdy defense of the rights of labor has won for him a place in the hearts of the toilers that may well be envied by the ablest leaders and advocates.

The organization to which he belongs will find no little difficulty in filling acceptably the position of so able a man.

"Kind words never die" has been set to music for Sunday school children, but with even more propriety, and in a louder tone, they can be sung by stalwart men. That's a fact.

The *Federationist*, having read our note "To the Brotherhood" in the January *Magazine*, is kind enough to comment as follows:

We confess to a feeling of more than ordinary sorrow upon reading the above, for, look at it any way we may, it cannot be regarded otherwise than as a calamity to the best interests of our order. There is no doubt but that to Mr. Debs more than any other one man the great and prosperous Brotherhood of Locomotive Firemen owes to-day its greatness and prosperity. There can be no doubt but that to him belongs the credit of raising it from an obscure handful of men, comparatively without protection, credit or standing to its present splendid condition. To him belongs the honor of placing its official organ, the *Magazine*, in the very front rank among labor journals, and in making this assertion we except none. And lastly to him belongs the credit of keeping it where his energies and business ability had placed it. Therefore, we say his resignation cannot but be regarded as a calamity, and one which will be worse felt in realization than in anticipation. True, many—very many—will say we have men in our order of equal ability with our present Grand Secretary and Treasurer, and it is not for us to say that we have not, but it may, and probably will, take a long time and much research to find them. We hope, for the good of the order, that Mr. Debs will reconsider his determination, and we believe that he owes it to the organization, which is such a splendid monument to his ability, not to sever his connection with it until some vital problems are unraveled at least.

The *Midland Mechanic*, of Kansas City, in commenting on the same subject, is kind enough to say the following:

In the January number of the *Locomotive Firemen's Magazine*, Eugene V. Debs, Grand Secretary and Treasurer of the Brotherhood of Locomotive Firemen and Editor of the *Magazine*, makes a for-

mal and positive announcement of his intention to refuse a re-election to that or any other office.

Mr. Debs has held his present office over a decade and has been re-elected without a dissenting vote on six different occasions. When he accepted the office, which is more closely allied with failure or success than any other, the order was practically bankrupt and had less than 2,000 members. To-day the order has over 20,000 members and a financial standing second to none.

Since Mr. Debs' induction as editor the *Magazine* has increased from 3,500 to 33,000 copies per month. Eugene V. Debs has been one of the most successful labor agitators in the country and wields a pen which is a terror to the opposition and a comfort and encouragement to his co-workers. He has never been a trimmer and, while conservative, has yet been one of the foremost in the battle for labor's rights. He is a great federationist, and to his efforts is in a great measure due the success of the Federation of Railway Employees.

The reason given by Mr. Debs for his retirement is that he intends engaging in other business. The *Associated Press* says he is going to found a labor paper in New York city.

If this is true, it will mark two important facts. First, that the metropolis will secure a first class, live and enterprising labor paper, and the *Associated Press* will for the first time in its history have told the truth in a matter which interests the labor organizations of the country.

No matter what vocation Mr. Debs may decide to follow, he will take with him the respect and well wishes of thousands who will still continue to fight in the cause of unionism and federation.

Such expressions are appreciated and like wine will improve with age, but the Brotherhood of Locomotive Firemen without trouble will find the man to carry forward the work in which we have been engaged.

We would be less than fair if we failed to introduce such testimony as may be offered from the *other side*, and hence reproduce the following extract from a communication which appeared in the *Engineers' Journal* for February, written from Portland, Me., under date of Jan. 1st, 1891, and signed "Division No. 40":

MESSENGERS. EDITORS: Am very glad to see the improvement in our *Journal*. It is getting to be a very strong publication, and it was a good move making its subscription a part of our grand dues. I am not in favor of compulsion—by railroad companies—but if a member don't think enough of the order to take its official organ his case ought to be attended to. I have read the *Firemen's Journal* a good deal lately, and the principal part of the editor's business seems to be in trying to injure the Brotherhood of Engineers, its grand officers and *Journal*. Happily, the aforesaid editor is harmless. Still it shows a woeful lack of decency and good sense in a person holding such a position, and if not prompted by personal feelings, shows him to be a dull scholar of the times in which he lives. His *extensive* railroad service did not make him a great student of human nature. I don't think any great portion of the firemen take any stock in his utterances, and perhaps the best editorial he ever published was the one giving notice of his proposed resignation. I hope the next editor of the firemen's journal will be more liberal-minded. His utterances against Mr. Depew were in very bad taste. I should be very sorry to have our *Journal* indulge in any such criticisms upon any prominent man who might address the firemen upon a public occasion. It is an honor to us when such men go out of their way to address us, and we should cultivate their acquaintance as much as possible. It is a part of our Grand Chief's policy of "let us reason together," and neither Mr. Depew nor the Brotherhood of Engineers have lost any of their self-respect or manhood by the few hours of social intercourse they have had together. May the friendly feelings long exist.

The question of federation is still "on deck"

among part of our members, though from my standpoint I am happy that the number is in the minority, and very much so. I am in favor of joint action with the firemen in matters pertaining to our mutual interests. I am not in favor of a federation as proposed.

To what extent firemen "take stock" in our utterances is not for us to say; and the writer may be correct in his opinion of the "best editorial" we ever published. From his standpoint we are not inclined to differ with him. At all events we shall have no fault to find with the final verdict.

INUENDOES.

The *Railway Service Gazette*, under the caption of "A Suggestive History," refers to "a certain railway official" who has "just discharged from his employ nearly every one of his old passenger conductors." The *Gazette* says:

We have for the last fifteen years been pretty familiar with the career of this official. His history furnishes a curious and remarkable comment upon his action in discharging his old conductors. When we first knew him, and knew of him, he was a poor man and was the general freight agent of one of the leading lines of railways, with a salary not exceeding \$2,500 a year. He is now a millionaire.

Throughout the entire article there are insinuations that this railway official has been a railroad wrecker and has made money by his scoundrelism. His plan has been to discharge conductors ostensibly because they were dishonest, but the *Gazette's* article, from first to last, suggests that his purpose was to bankrupt the road, throw it into the hands of a receiver, that he might enrich himself.

Now then, who is this railroad wrecker? Name him. He is one of those railway rascals whom it was a compliment to call a villain. He wrecks character that he may the better wreck railroads. He ought to be named, so that every honest man may have a whip to scourge him. Such a wretch ought to be "white-capped." Metaphorically, it will be pleasant for the *Magazine* to engage in the business; all we want is the name and the facts. The *Gazette* professes to be posted. Let us have the name of the miscreant.

The first issue of the *Toiler*, a new monthly paper published at Mason City, Iowa, in the interest of workingmen, is before us. In his salutatory the editor says: "The *Toiler* now enters on the brink of its laborious task of assisting the masses to wrest from unprincipled tyrants and oppressive corporations that which is justly theirs. The laboring men have accomplished much in the past few years, and the *Toiler* now joins in the onward march to victory. Its cause is the laboring men's cause, its sympathy is solely with them." All of which is very commendable, and we hope the *Toiler* may meet with success in its mission.

"A TIME TO SPEAK."

Said "The Preacher," "To everything there is a season, and a time to every purpose under the heaven; a time to keep silence and a time to speak."

It is a time to speak when great wrongs exist and remedies are demanded. At such times courageous men are required to speak, and they will speak though the heavens fall.

The widely lamented Henry W. Grady, the editor of the *Atlanta Constitution*, on June 29, 1889, delivered an address to the graduates of the Virginia University, and said many things that should be read and remembered.

Mr. Grady saw with the vision of a seer "that the time is approaching when the issue between plutocracy and the people will be forced to trial." What form the trial will take Mr. Grady did not intimate. He left his listeners to form their own conclusions, but added:

The fact that a man ten years from poverty has an income of \$20,000,000—and his two associates nearly as much—from the control and arbitrary pricing of an article of universal use, falls strangely upon the ears of those who hear it as they sit empty handed while children cry for bread. The tendency deepens the dangers suggested by the status. What is to be the end of this swift piling up of wealth? When the agent of half a dozen men who have captured and control an article of prime necessity, meets the representatives of a million farmers, from whom they have forced \$3,000,000 the year before, with no more moral right than is behind the highwayman who halts the traveler at his pistol's point, and insolently gives them the measure of this year's rapacity, and tells them—men who live by the sweat of their brows, and stand between God and Nature—that they must submit to the infamy because they are helpless, then the first fruits of this system are gathered, and have turned to ashes on the lips. When a dozen men get together in the morning and fix the price of a dozen articles of common use—with no standard but their arbitrary will and no limit but their greed or daring—and then notify the sovereign people of this free republic how much, in the mercy of their masters, they shall pay for the necessities of life, the point of intolerable shame has been reached.

Economists have held that wheat, grown everywhere, could never be cornered by capital. And yet one man in Chicago tied the wheat crop in his handkerchief, and held it, until a sewing woman in my city, working for ninety cents a week, had to pay him twenty cents on a sack of flour she bore home in her famished hands. The men held the cotton crop until the English spindles were stopped, and the lights went out in three million English homes. Last summer, one man cornered pork until he had levied a tax of \$2 per barrel on every consumer and pocketed a profit of millions. The Czar of Russia would not have dared do these things; and yet there are no secrets in this free government of ours!

Having said so much in such splendid English, having pointed out crimes perpetrated by gilded robbers who have played "highwaymen," men who have made bread dear to famishing families, atrocious acts which "the czar of Russia would not have dared to do," Mr. Grady asked, What is the remedy? and answers the question as follows:

To exalt the hearthstone; to strengthen the

home; to build up the individual; to magnify and defend the principle of local self government.

The man who kindles the fire on the hearthstone of a holy and righteous home burns the best incense to liberty. He does not love mankind less who lives his most

Exalt the citizen. As the state is the unit of government, he is the unit of the state. Teach him that his home is his castle, and his sovereignty rests beneath his hat. Make him self-respecting, self-reliant and responsible. Let him lean on the state for nothing that his own arm can do, and on the (national) government for nothing that his state can do. Let him cultivate independence to the point of sacrifice, and learn that humble things with unbartered liberty are better than splendors bought with its price. Let him neither surrender his individuality to government, nor merge it with the mob. Let him stand upright and fearless—a freeman born of freemen, sturdy in his own strength, dowering his family in the sweat of his brow, loving to his state, loyal to his republic, earnest in his allegiance wherever it rests, but building his altar in the midst of his household gods and shrining in his own heart the uttermost temple of its liberty.

The question arises, did the eloquent speaker suggest any practical remedy for the monstrous crimes he pictured most truthfully? Did he not fail at the supreme moment? Did he not his address end in rhetorical pyrotechnics? Did he say "Ho! all ye millions robbed by a few robbers, under laws or in defiance of all laws, human and divine; band together, and with the ballot, the mighty weapon of free men, elect honest men to make laws and honest men to administer the laws?" No; nothing of the sort. He would "exalt the hearthstone," would "build up the individual" he would "exalt the citizen." But the men who have despoiled the hearthstone, degraded the individual and the citizen, made "flour" and "pork" dear, and home gloomy, and poverty universal, are in the saddle, and unless the treatment of conditions is heroic they will continue to rob as Mr. Grady showed they had done.

To crush the wrongs of which the eloquent speaker spoke, there must be organization of the masses, the victims of the robbers.

The lessons Mr. Grady would have the citizen taught have been taught for a couple of centuries. What is wanted is more than teaching; it is to put what everybody knows by heart into practice. The country wants organization, federation and ceaseless agitation, determination and action to roll back the encroachments of the money power organized for plunder.

If this is not done the continuous triumph of wrong and injustice is assured.

The *Journal of the National Association of Machinists* for February comes to us enlarged in form and materially improved in all respects. It now has 32 pages and its columns are replete with matter both interesting and instructive to the general reader. The *Journal* is a growing publication and fitly represents a growing organization.

SENATOR INGALLS, OF KANSAS, ON MILLIONAIRES.

In the senate of the United States, on the 14th of January, Mr. Ingalls of Kansas, delivered a speech which has attracted deserved attention. It seems that Senator Sherman, of Ohio, had referred to millionaires as "speculators." In reply, Mr. Ingalls said:

They are nearly the same, for the millionaires are not the producers and laborers of the country. They are arrayed like "Solomon in all his glory," but "they toil not, neither do they spin." Yes, they do spin. These gigantic accumulations have not been the result of industry and economy. There would be no protest against them if they were. The people had suddenly awoke to the conception of the fact that the great bulk of the property of the country was passing into the hands of those whom the senator from Ohio called by euphemism the speculators of the country. They were not of this country alone; they infested the financial and social system of every country. They were men of no politics; of all nationalities, and of no nationality. They had no politics but plunder, and no principle but the spoliation of the human race.

One man in this country, the Midas of the century, at whose touch everything turned to gold, had in a lifetime acquired, out of the aggregate of the nation's wealth, earned by the labor of all, a sum that exceeded the assessed value of four of the smaller states, and which was many times more than the entire wealth of the republic when it was founded. This was the most terrible commentary ever recorded in the book of time. And Nero fiddled while Rome burned. The means by which these fortunes were acquired were euphemistically denominated book-keeping and financial speculation. This process was going on with constantly and frightfully accelerating rapidity, by means of combinations. We were accustomed to speak of this as the land of the free and the home of the brave; and it would soon be the home of the rich and the land of the slave. It was no wonder that the laboring and agricultural masses of this country had at last awakened, and the speculators must take warning.

Referring to the late election, he said that it was neither a Republican defeat nor a Democratic victory. It was a great uprising, independent of and superior to both political parties. It was a crisis that might become a catastrophe. It was a peaceful revolution. He attributed the depression in the country, in a great measure, to the demonetization act of 1873. He did not claim that that act had been passed fraudulently. His only explanation of its passage was that both houses of congress and the President had been hypnotized by the money power. He had not the slightest doubt that a great majority of the people, irrespective of party, were in favor of the free coinage of silver, and had been for the past fifteen years. They had been paltered with in a double sense and their will had been thwarted, defied, and contumeliously trodden under foot. Warnings and admonitions had been plenty in this debate; but he would say to those who were arraying themselves against the deliberately expressed judgment of the American people—he would say to the senate, to the house, and to the executive—that there would come a time when the people would not be trifled with on this subject.

The foregoing language, be it remembered, was used in the United States Senate in the month of January, A. D. 1891.

The language used by the senator may be, doubtless is more polished than that used by the average workingman orator, but is it less severe? He says the "gigantic accumulations" of the millionaires of the country "have not been the result of industry and economy." He says these millionaires "have no politics but plunder

and no *principle* but the *spoliation* of the human race."

Workingmen are constantly beset by these millionaires, and they are endeavoring to protect themselves against the rapacity of such men. Mr. Ingalls says their politics is "plunder" and their principles "spoliation;" in other words, their politics and principles are robbery, pillage, rapine, devastation and destruction; their victims are "the human race," and especially workingmen.

Who will charge Senator Ingalls with fomenting a war "between labor and capital?" No one, not one. He simply points out a truth that workingmen are acting upon, that certain capitalists are plundering the weak, and none so successfully and criminally as workingmen. Admit the truth of what the senator says, and who can blame the victims of the millionaires' greed for organizing, combining and resisting their plundering schemes?

The fight is not between labor and capital, but between workingmen and that class of capitalists, "millionaires," whom Senator Ingalls of Kansas denounces as men who "have no politics but plunder and no principle but spoliation."

THE COLOR LINE.

The governor of Texas discusses the question of separate railroad coaches for whites and blacks as follows:

Exigencies have arisen and produced a demand by the people that the railway companies of this state be required to provide separate coaches for their white and black passengers. It is regretful that such a measure has ever become necessary in Texas. Intolerance on the one side and intolerance on the other, unnecessarily exhibited by the disturbing elements of both races, have borne this fruit. Nothing less than wise legislation can now correct the evil. Avoiding all unjust discrimination, the law should be so framed as to be sufficiently flexible to relieve the companies of unreasonable burdens resulting from its application and enforcement. The passenger business of some roads will not justify the outlay and expense of providing separate coaches for the two races. Others are differently situated, and can do so between points in populous sections on their lines without much inconvenience or unnecessary expense. An arbitrary law without qualifications to vary with the conditions of the railways and the travel over them is not demanded nor could it be expected by a just people. Therefore it would be well to pass one requiring the companies, under penalties to be enforced at the instance of the state, to provide separate coaches as demanded; or in cases where business would not otherwise justify them, to sectionize their cars so as to separate their white and black passengers. It is doubtless best to place the regulation, adjustment and control of this matter under the law with the Railway Commission.

There may come a time when in the South whites and blacks will be on terms of social equality—but till then, it were better to separate than to fight.

Poor's *Manual* should make a note of the fact that railroad officials are making tracks in all of the legislative halls of the country.

MORTGAGES.

The *Bankers' Monthly*, supposed to know, speaking of the farm mortgages in six of our best states, gives the amount carried by each as follows: "Kansas, \$235,000,000; Indiana, \$645,000,000; Iowa, \$567,000,000; Michigan, \$500,000,000; Wisconsin, \$357,000,000; Ohio, \$1,127,000,000." The estimates are far too large, but supposing they are true, what can be done about it? A man owns a farm. He wants money. The only way he can get it, we will suppose, is by mortgaging his farm. Who can stop him from borrowing?

If he wants money to purchase better stock, to build fences and barns, he may borrow money as prudently as any other man. But if he mortgages his farm that he may send his boy to college instead of to the field, the probability is, the penalty of his folly will be the loss of his land.

Another trouble is, a great many men are farmers only in name, they know little or nothing about farming. Such men ought to sell their farms and go at something they understand. A still greater trouble is, the boys on the farm want to be educators, doctors, lawyers or preachers, and the farm is mortgaged to give them a chance, and in such cases the farm is usually sold. There is absolutely no remedy for such folly.

No party and no policy can remedy the difficulty—except that farmers must be farmers.

THE FEDERATIONIST.

Beginning with the March number, the *Federationist*, hitherto published at Mattoon, Ill., will be published in Terre Haute. The *Federationist* gives ample proof that it has come to stay and that its editors have a clear comprehension of its mission. It says:

The railroad principle of blacklisting persons whom they are pleased to regard as labor agitators has reached such a state of perfection that it is almost useless for a person on their list to try to get employment. The editor of this paper knows this to his sorrow. Have we not brains enough in our order to find a way to put a stop to this criminal practice?

Yes, plenty of brains; all we want is to *federate* the brains.

Our esteemed contemporary, the *Switchmen's Journal*, says:

In the January number the *Firemen's Magazine* enters upon its 15th volume. The new cover is a model of neatness and simplicity and bears an additional attraction in a table of contents. Inside the new number is similar in point of excellence to the volume just ended, which was not surpassed in editorial and literary merits by any labor publication which came to our notice. Judging the new volume by the past record of the *Magazine*, we do not know where a railroad employé could invest one dollar or ten dollars and secure a title of the benefits that he would receive from one year's subscription to the *Locomotive Firemen's Magazine*.

We accept such remarks, as we take the hand of a friend, with all our heart, and say, "Draw on us 'at sight.'"

LABOR ORGANIZATIONS AND THE LABOR PRESS.

We write entirely independent of partisan influence. We propose to discuss the election of last November upon propositions, which, if not new, have not been brought into deserved prominence, in fact, have not been alluded to at all, as factors in the recent struggle.

It does not matter to the *Magazine* which of the two great parties of the country, considered as an aggregation of men, succeed. We are not interested, as to whether A or B goes to the legislature or to Congress—nor are we tied to the fortunes of any nominee for President. Parties are of no consequence to workingmen, except as they advocate principles and policies which antagonize class legislation, and seek to do justice to all.

Hitherto the workingmen, by party leaders, have been regarded as a class of citizens in the keeping of bosses, to be brought into line and voted as they might decide.

The employer has regarded them as largely subject to his will—an unthinking herd, of little intelligence, who were deflected right or left, as he might choose. He had but to indicate his pleasure, and his employes obeyed without question or protest. The employer was supposed to know everything; the employe nothing, or so little as to exert no influence at all in deciding his vote.

In these regards the country has been awakened to a sweeping change of programme and it is eminently worth while to inquire what causes have been at work to produce the new order of things.

We shall state them briefly and they are signs of the times of wonderful import.

In the first place, labor organizations are in the nature of schools. Every member of a labor organization is more or less a student of economic questions. He no longer accepts the dictum of the employer. He studies and thinks for himself. He grasps facts, he analyzes statistics, he notes investments and dividends; he estimates the constant increase of watered stocks and marks well how interested parties mix fiction and facts for the purpose of reducing wages—and in the lodge and assembly rooms discusses economic questions with earnestness and with an intelligent appreciation of cause and effect, which rivets attention and secures conviction.

This constitutes a new era in politics, a new departure in campaigns. There is not a labor organization in the country, that has not put into operation mind forces hitherto dormant. It will no longer do to count upon the votes of workingmen based upon party fealty—partisan prejudice or the pride of partisan victory. Something more rational is now demanded. The boss can

no longer cajole nor intimidate. Workingmen will no longer blindly follow a banner nor a transparency. Symbols must hereafter relate to something practical.

Workingmen see that money erects the palatial residences and surrounds their owners with luxury. The fact does not create envy in the minds of workingmen. They do not want to pull down the palace nor destroy the carpets, furniture, mirrors and paintings, but knowing these riches are secured from their surplus earnings, they are resolving that they will have comfortable homes instead of shanties or dens; they are resolving that their homes shall be supplied with the necessities and comforts of life. They are resolving that they will have so much of the wealth they create as to furnish an abundance of good food and good clothes; at any rate, they are resolving that their votes and influence shall no longer be secured for their impoverishment and degradation, and in these regards, the workingmen of the country are rapidly solidifying and in so far as their votes can change the aspect of affairs, they will cast them with a purpose to better their condition.

In proof of this, it is worthy of note that labor organizations are taking a profound interest in state and national legislation and are appointing committees to look after certain measures, to urge or to prevent their adoption. What are these measures? The list is too extended to introduce here were it in our power to name them all.

Take for instance, the employment of Pinkerton thugs by corporations. A blacker crime was never perpetrated in any civilized land. It is too monstrous for contemplation, and yet, the corporation of which Chauncey M. Depew is President, employs Pinkerton murderers, abandoned wretches scarcely fit to be sent to hell, to overawe workingmen because they dare protest against outrages which no workingman can submit to, and retain a grain of independence or self-respect.

All over this broad land, workingmen should see to it that the employment of these thugs should be made a felony and the matter should be brought to the attention of every legislature in the country.

The co-employe iniquity, which has not one trait of justice in it, an infamy which makes law a farce and judicial decisions worse than jugglery, can be knocked in the head and killed only by express statute. It is an imported infamy—an antiquated monstrosity, the spawn of the divine right to rule curse which through all the ages has made the workingman the victim of oppression, symbolized by prisons, dungeons, rack and thumb-screw, and yet this devilish deformity of justice, hideous as a living skeleton, stalks into all the courts and chatters

its decisions against the rights of workingmen.

How long, in the name of Eternal justice, is this ghastly remnant of infernalism to prevail in American courts? When will workingmen by the fiat of the ballot, banish it to its native hell?

Labor organizations exist, because of a right to exist by virtue of laws that antedate constitutions, statutes or kingly decrees—while corporations and monopolies, trusts and syndicates exist, at least in the United States, only by statutes—statutes which workingmen can, if they so decide, repeal. And still the corporation, with an impudence that defies exaggeration decrees that a man, because he exercises his inalienable right to join a labor organization shall not work.

Governments exercise three supreme prerogatives which touch the individual at vital points. First, government can take the life of the citizen. Second, it can deprive the citizen of liberty. Third, it can take the property of the citizen, confiscate it, and send him forth a pauper to drift or to die. But the victim in every case is awarded a trial; his case is to be determined by a jury of his peers. He can be heard in his own defense. He has the right to appeal, until he reaches the highest tribunal known to the law.

Let us see how the case stands between the corporation and the victim of its hate in this God favored land:

There stands the workingman. What is his condition? Go look at his home. There it is by the way side. There is his wife and little ones dependent upon his daily wages. Intelligent and hardworking, he would better his condition, and the condition of those dependent upon him. He joins a labor organization. In doing this he becomes obnoxious to the corporation. He is a marked man. The corporation issues its decree. The workingman is discharged. At one blow everything goes down. Without work, without wages, the home is made as dark and gloomy as a tomb. Unable to pay rent, he is evicted and thrust out upon the highway. Without money, hunger comes with its pangs and fangs. The home is broken up—the father is a tramp. Now every appalling fancy becomes a frightful fact. What becomes of the family? Would you know the details in thousands of instances? Search the records of poor houses, prisons and brothels.

What was the workingman's crime? What was the height and depth of his offending? The answer is, he joined a labor organization and the corporation, with more power than the government that created it, decides without a hearing, without a trial, to take from him the means of living, which in thousands of instances is taking life, liberty and property.

We do not paint the picture too black. We challenge the record, and aver that in the archives of hell there is nothing more infernally repulsive. And such transactions are of daily occurrence, not in Russia, not in Turkey or Persia—not only in autocrat cursed lands, but here in the United States; here where we are told the government is by the people, of the people and for the people.

We state no hypothetical case, we are not drawing upon our imagination for the facts. There is not a reader of the *Magazine*, not a reader of newspapers, not a man of intelligence in the land who does not know that every day in the round year, men are discharged from work because they are members of some labor organization.

Just here we make the point that workingmen by concert of action can change this state of affairs by their votes. There is nothing impractical in the proposition. Why should the corporation be permitted to boycott the labor organization? Why should the corporation be permitted to inflict the direst penalties upon men for exercising an inalienable right? Why may not the monstrous wrong be eternally exiled by statute? There is no good reason why such a change may not be wrought by the ballots of workingmen. They have the power, and in due time we verily believe they will exercise it.

In surveying such subjects, the labor press of the country looms up and blazes forth like a light-house on a rock-bound coast. It is pointing the way to the harbor. It shows workingmen the way to steer. It is a Bethlehem star leading to redeeming possibilities, a conquering force that partisan politicians have neither weighed nor measured.

The corporation is even more obtuse than the politician. They do not see that class legislation is doomed. Their greed and their arrogance blinds them to coming events. They rely upon their money.

It was Goldsmith who said:

"For just experience tells in every soul
That those who think must govern those who toil."

But it so happens that an era has dawned when those who toil are those who think—those who write and reason, those who grasp and solve problems, and those who lead. The labor press forms a grand torch-light procession. It blazes on the highlands and in the lowlands—in the shops and in the halls of legislation. It is helping on the revolution. It is the avant courier of a new dispensation in law and logic. There is one demand and it is being heeded. The labor press of the country, discarding party and creed as under the old regime, is blending its clarion notes and bugle calls, for unity of purpose in the councils of all labor organizations. This accomplished and labor's jubilee follows.

"HERO WORSHIP."

The *Railway Service Gazette* in a recent issue has an article with the above caption—"Hero Worship"—and opens its batteries as follows:

The railway service is not altogether free from that form of lunacy known as hero worship. It has several times shown itself in the setting up of a base image as an officer of some of the employes' associations and the kneeling down of members of the particular association represented and the groveling in the dust and worshipping at his feet. Some of these images have been shattered. Others are still posing before the public, but they will be shattered.

It would seem from the foregoing that it is not "hero worship," after all, that "the railway service" is engaged in, but a sort of an "image" worship—an "image of an officer" or an employé, hence not "hero worship," but idol worship. It occurs to us that there is a vast difference.

It would seem proper in this connection to have a correct conception of the term "worship." We presume our esteemed cotemporary uses the term metaphorically. We do not suppose that members of any association "kneel down" in the dust at the feet of an officer and worship him. We take it that is hyperbole. But, if there are those who do such things, then it is a *fact* and not "a fallacy." Not "a delusion," not "an idle dream."

Our esteemed cotemporary says there are "heroes in the world," true heroes, noble heroes. We are told that we are meeting them constantly in the streets, so frequently indeed, that we do not so much as dream "that they are heroes." This leads us to inquire, what constitutes a hero?

Webster says: "a hero is a man of distinguished valor;" but our lexicographers have so many grades of heroes, that the term "hero" has lost much of its significance. We have heroes in the "prize ring," at all the various modern tournaments (?), base ball, foot ball, cricket, boat races, billiards, etc., etc., to the end of the chapter; the woods are full of them, all heroes according to modern estimates. In fact, we have revived the "Heroic Age." Some people believe that Chauncey Mephistopheles Depew is a hero, not an image, not a thing of wood, nor of clay, but of brass and brains, with legs and arms and eyes and ears, a Vanderbilt god who gets \$50,000 a year,—an oracle, who, when he has on his blouse and overalls, and speaks for labor, is received with the "wildest kind of cheers." And there is H. Walter Webb, another Vanderbilt *deity*, who inhabits the same temple that glows with the presence of god Depew, a fighting god whom the Pinkertons worship, the god that distributes the guns and ammunition and makes Knights of Labor get up and hustle, or be caressed into quietude by a bullet. Are we dreaming? are we nursing a fallacy? Nay, verily we can almost hear the resounding

shouts, the deep-toned thunder of the cheers as god Mephistopheles Depew, the labor god, steps to the front, waves his hand and squirts his liquid taffy with perfect abandon over P. M. Arthur.

"He spake, and bowed with muttering jaws;
The wondering circle grin'd applause."

Yes, we guess our esteemed cotemporary must be right, that such railroad "employés" as Depew are worshiped, but it is not a "fallacy," a "dream," an hallucination, a vagary, but a fact.

These heroes, it will be noticed, are not "wooden images." They are not images. They are flesh and blood, and the same may be said of a ground hog. The mistake is, they are not heroes, they are not men of distinguished valor. Now, then, in the "railway service" there are both officers and employés who have the "distinguished valor" to look with proud contempt upon pseudo heroes. They have the courage to denounce with unmitigated scorn, men who seek to establish an aristocracy of labor—an aristocracy predicated upon the difference between \$2.00 and \$4.00 a day, a \$2.00 a day aristocracy. It is such an aristocracy that Chauncey M. Depew would have locomotive engineers cultivate, but the engineers should remember that this labor leader, this labor agitator, this walking delegate, receives more for his *work* one day than they receive in thirty days.

But returning to the question, who are real heroes? Not that they may be worshiped, but that their heroism may receive its just meed of praise and admiration. It is not difficult to estimate exhibitions of physical courage. Not long since, two gold medals were awarded two heroes by the Government for saving life at the peril of their own. But after all, are there not instances of moral courage, as justly entitled to applause?

See you that man? He is at the head of a great labor organization. He loves his fellow man. He has witnessed his oppression and his degradation. The sight has aroused him, fired his soul. He speaks, he works for the deliverance of his fellow toilers. He would not abate his energies to relieve them a milligram for an ocean of Depew's taffy, nor for the wealth of the Vanderbilts. He would rather die as poor as a Lazarus, with only vagabond dogs as his nurses, than accept the millionth part of a mill for the applause of the enemies of labor and the luxuries of a Vanderbilt. He is a hero. We do not worship him, we simply admire him and it is a privilege to praise him.

Again, we impersonate a brotherhood for illustration: The C., B. & Q. strike was brought about by the Brotherhood of Locomotive Engineers. Did the Brotherhood of Locomotive Firemen in that fight, exhibit "distinguished valor?" It entered into an alliance with the Brotherhood of Locomotive

Engineers. It stood by them. The men saw their situations go. They peered into the future and saw desolation coming, they saw themselves wanderers looking for work, they saw separation between father and family inevitable, they saw poverty and destitution. Did they quail? Did they murmur? Did the membership hesitate to pay? Let the figures tell. We like that sort of heroism amazingly. It is the sort that will emancipate labor, if the victory is ever to come.

As we write we have in our mind's eye a man earning a large salary. He needs it. He is not rich in shekels. He can go on, take his salary, and be quiet. No, he sees a large body of men with whom he has been actively identified, oppressed, wronged, degraded. He resolves to find a remedy and apply it. He gives up his comfortable and lucrative position. He proclaims his purpose. He goes forth on his mission. He plants the seed of a new brotherhood, and, as if by magic, it comes forth equipped for the fray. It grows in numbers, in force and in influence. It sounds the keynote of protection and federation. What of it? George W. Howard is the Grand Chief of the Brotherhood of Railway Conductors. Is he not a man of distinguished moral courage? We admire his zeal, his integrity, and his noble work is winning applause.

Again, there is a heroism of integrity when assailed by temptation, that will not yield, that stands and withstands.

See you that man? He is the financier of his lodge, the custodian of its funds. There are hundreds, perhaps thousands in his hands. His lodge is in easy distance of the Canadian boundary. Did temptation ever assail that man? It has attacked others and they fell. We do not know. This we know, his hand is a burglar proof safe. Bonds to the winds. He would rather pluck out his heart and feed it to the crows than to part dishonestly with a farthing. He is a hero. Put him anywhere and he will fight for the right. We will not worship such a hero, but we will applaud, and where rests his dust is sacred ground.

"Upon his brow shame is ashamed to sit,
For 'tis a throne where honor may be crown'd,
Sole monarch of the universal earth."

RAILROAD companies seem to have the power of hypnotizing legislatures by making passes.—*Omaha World.*

And legislatures hypnotize law by passing bills.

A GREAT many railroad men who are laboring to pass righteous laws in the interest of employes, find their bills can't pass over a railroad pass. The railroad pass blocks the way, and though they have faith sufficient to remove mountains, the railroad pass won't budge.

THE CANADIAN PACIFIC RAILWAY AND THE SUPREME COUNCIL.

On Wednesday, February 4th, the Supreme Council was convened at Montreal, Quebec, in response to the official call of Grand Master S. E. Wilkinson, of the Brotherhood of Railroad Trainmen. For some weeks the conductors and brakemen on the eastern divisions of the system had been making ineffectual efforts to have their wages increased, which, in many cases, were barely above the living point; while the general average was not much better. The committee were patient to the utmost limit of endurance; they sought by every honorable means to obtain what was universally conceded to be their due, but they were doomed to disappointment. The management, while ostensibly willing to receive the committee and discuss their grievances, turned a deaf ear to every appeal for justice and finally refused point blank to make any concession that would even remotely touch the grievances involved. At this juncture the members of the B. of R. T. sent for their Grand master and the members of the O. R. C. appealed to their Grand Chief, both of whom responded promptly and made renewed efforts to have the differences between the employes and the company amicably adjusted. Failing in their efforts the Supreme Council was convened and each organization was fully represented. At the opening session the grievances were discussed and every mooted point was carefully investigated. The result of the meeting was that the grievances were approved as a whole and a committee was directed to call on the officials and request an interview in behalf of the council. This request resulted in the committee being sent for by the officials, and after a brief conference an amicable adjustment was effected, which was perfectly satisfactory to the committee and the men they represented. The concessions made by the company were such as will materially increase the pay of the employes in the train service and all hands were pleased with the outcome of the meeting.

The potent and effective influence of federation was never demonstrated to better advantage. It filled the bill, it met every requirement, it was equal to the emergency. Without federation it is safe to say that no concessions would have been made by the company. Indeed, we doubt if the employes would have had the temerity to even approach their autocratic officials on the subject of grievances.

It is proper that we should give credit to the Order of Railway Conductors and its grand officers, E. E. Clark, Grand Chief, and C. H. Wilkins, Assistant Grand Chief, who coöperated with the Council in all things necessary to effect a settlement. The grand

officers, committees and members of the order were in hearty accord with the spirit of the occasion and gave unquestionable evidence of their "stickability," whatever the outcome of the negotiations might be.

We had the pleasure of meeting Grand Chief Clark personally for the first time, and much to our satisfaction we found him to be a gentleman of liberal and advanced views, wide comprehension, and in all regards fully abreast of the progressive spirit of the times. We believe Grand Chief Clark to be a man of principle and honor, officially as well as personally, just such a man as will by unflinching rectitude, courageous defense of the right and unswerving fealty to obligations, inspire confidence and achieve success.

INFAMOUS.

The *Rocky Mountain News* remarks that "two thousand railroaders killed and 20,000 crippled annually because of defective appliances for coupling cars, is a frightful record, and yet it is well attested. The law of Colorado, as established through senseless and unjust court precedents, debars railroad employes from indemnity for accidents occurring under nearly every condition of the service. The courts discriminate against a company's servants and in favor of passengers who are maimed or killed in the same disaster, to which none of the parties have contributed by their own carelessness." "Such infamous proceedings under infamous laws continue from year to year, without reference to the party in power. When will workmen band together and declare by the fiat of the ballot that such detestable things shall disappear?"

TEXAS AND PERSIA.

A cotemporary, with the eye of a detective remarks that "traveling about the press of the country are the following lines:"

"Dear, the sweetest songs are those
That have never yet been sung,
And the noblest deeds of all
Are the deeds we have not done.

"And the tenderest prayers are those
That our lips have never said;
While the saddest tears of all
Are the tears we have not shed.

"Dear, the joys we found the best
Was the joy that first has flown,
And the truest loves are those
Which our hearts have never known."

"They are credited to Reba Gregory Prelat in the *Galveston News*. The ideas are very poetical and very dainty, but they are not as well expressed as they were in the original Persian, or even in the best translations of them. It is a long way from Persia to Texas."

(One remarkable difference between Texas and Persia is that the former is celebrated for steers, and the latter for seers.

THE B. OF R. C.

The Brotherhood of Railway Conductors continues to make commendable progress. Grand Chief Geo. W. Howard, than whom there is not a more active or intelligent executive, is in demand in all parts of the country. The work of organization goes steadily forward and all the signs of the times are cheering for the stalwart young order. Since the brotherhood established its headquarters at Toledo and made the *Railway Service Gazette* its official organ, its growth has been unprecedented and the future promises to be even more fruitful of success than the past. The gallant young brotherhood adopted correct principles from the beginning. Its policy has been, is now, and will continue to be aggressive and progressive, and its crew being manned with courageous men, it is bound to reach its destined port.

WHEN poor old UNCLE SAM or any of his brood of states go into the railroad building business, they get *done up* in a style immensely artistic, as is seen in the Pacific roads.

The *Chicago Herald* says:

The whole amount of bonds guaranteed for the Pacific roads was \$4,623,512. On this principal the government has paid interest to the amount of \$86,363,968, of which the companies have repaid \$23,221,374 by transportation service, and \$1,103,620 in cash, supposed to be five per cent. of their net earnings, leaving \$62,038,974 due from the companies to the government on account of interest. Against the principal the companies have been made to provide a sinking fund of \$13,275,089. All this debt matures between January 16, 1895, and January 1, 1899. It will be seen, therefore, that the companies will owe the government nearly twice as much at the end of the thirty years' term of their bonds as they did at the beginning.

With such facts in full view, the Nicaragua Maratino Canal Company, wants UNCLE SAM to guarantee some more bonds, to mature in 1911—when the old dupe will be stuck for about \$200,000,000 which his working children will have to pay. It will occur to a good many people that UNCLE SAM better keep out of such *maps*, or he will earn the sobriquet of a durned old fool.

AN English tourist crossing the Continent on the Union Pacific, when out on the plains between Omaha and Denver, wrote in his scrap book:

Prairies, boundless prairies, as far as eye can see.
A broad expanse of level plain, no rock, nor ridge,
nor tree.
No object breaks the vast horizon stretched in
beauty round.
A perfect circle where the sky seems resting on the
ground.
No mountain chain disturbs the view, no forest,
lake or pond.
One fading of the here to where it blends with the
beyond.
A peaceful sea of waving grass with naught to
mark its shores.
Here freedom is exemplified. The land of out-of-
doors.

HON. SAMUEL GOMPERS, President of the American Federation of Labor, addressed a monster mass meeting of workmen at Terre Haute, Indiana, on February 14th. The unanimous verdict of the audience was that the address was a masterly effort from start to finish. From the opening to the close the speaker held the undivided attention of the vast audience who applauded again and again as he delivered his telling blows at the enemies of workmen. The speech of President Gompers should be heard in every city, town and hamlet in the union. It is filled with facts and logic and unanswerable argument. His ringing words are full of inspiration and we are persuaded that great good will result from the campaign he is making in the Western States in the interest of labor, which will end only at the Pacific coast. Sam Gompers is a valiant defender of the rights of labor, and has our best wishes for success.

A young gentleman residing in Beef-borough, a suburb of Chicago, where slang is the vernacular of the people, relates his experience when making a courting call, as follows:

She came from Boston, so I kept my speech from
slang expressions free,
And hoped thereby my lofty tone would cause her
to admire me.
For well I knew that eastern maids—so I had reason
to suppose—
Are greatly shocked when'er they hear those words
which lack of taste disclose.
I told her I detested slang. Said she, "me too. It
makes me tired
And chumps who monkey with the stuff should all
be very promptly fired."

THE people of Iowa want to derive some benefit from the railroads of their state, and the idea seems to be that the rates hitherto charged can be reduced. The roads kick, and the cry is set up that Iowa is driving capital from the state, as no more railroads will be built within her borders. Iowa wants to squeeze the water out of her railroads. She desires that dividends shall be declared only on cash investments, and not on water. All she has got to do is to stick to her policy. The water will disappear eventually. This done, corporations and people will get their rights. The motto should be: "Water must go."

THE *Midland Mechanic*, published weekly at Kansas City, Mo., in the interest of labor, is one of the most interesting and versatile exchanges that come to our table. It discusses with decided ability a wide range of topics and is in all regards a sturdy champion of the industrial classes. The subscription price is \$1 per year, and those of our readers who have that amount to invest can do no better than to subscribe for the *Mechanic*. Send for a sample copy. The address is *Midland Mechanic*, northwest corner Eighth and Main streets, Kansas City, Mo.

MORNING ON THE IRISH COAST.

Reproduced by Request.

[The incident which prompted the writing of the following lines was related to me by a friend who visited Ireland during the summer. On the voyage eastward my friend made the acquaintance of an old man, who in his frank and candid way, told him he had been thirty years residing in "the States," and that he was then going home to spend the evening of his life in the Old Land, amid the scenes of his boyhood. His anxiety to see Ireland once more was so deep and fervid that my friend took a special interest in him. The night before the ship reached the Irish shore they remained on deck, and as the dawning broke, they were rewarded for their weary vigil by beholding the dim outlines of the Irish coast. The sight awakened all the old man's slumbering enthusiasm, and his first impassioned exclamation was, "The top o' the mornin' to ye, Ireland, alana."]

Th' anam au Dhia! but there it is,
The dawn on the hills of Ireland!
God's angels lifting the night's black veil
From the fair, sweet face of my a Ireland!
Oh, Ireland, isn't it grand you look,
Like a bride in her rich adornin',
And with all the pent up love of my heart,
I bid you the top o' the mornin'.

This one short hour pays lavishly back
For many a year of mourning;
I'd almost venture another flight,
There's so much joy in returning—
Watching out for the hallowed shore,
All other attractions scorning;
Oh, Ireland don't you hear me shout?
I bid you the top o' the mornin'.

Ho—ho! upon Cleena's shelving strand,
The surges are grandly beating,
And Kerry is pushing her headlands out
To give us the kindly greeting;
Into the shore the sea birds fly
(On pinions that know no drooping;
And out from the cliffs, with welcomes charged,
A million of waves come trooping.

Oh, kindly, generous Irish land,
So leal and fair and loving,
No wonder the wandering Celt should think
And dream of you in his roving!
The alien home may have gems and gold—
Shadows may never have gloomed it;
But the heart will sigh for the absent land,
Where the love light first illumed it.

And doesn't old Cove look charming there,
Watching the wild waves' motion,
Leaning her back up against the hills,
And the tips of her toes in the ocean?
I wonder I don't hear Shandon's bells.
Ah, maybe their chiming's over,
For it's many a year since I began
The life of a Western rover.

For thirty summers, astore machree,
Those hills I now feast my eyes on
Ne'er met my vision save when they rose
Over Memory's dim horizon.
Even so 'twas grand and fair they seemed
In the landscape spread before me;
But dreams are dreams and my eyes would ope
To see Texas skies still o'er me.

Ah! oft upon the Texan plains,
When the day and the chase were over,
My thoughts would fly o'er the weary wave,
And around this coast line hover;
And the prayer would rise that some future day,
All danger and doubtings scorning,
I'd help to win my native land
The light of young liberty's mornin'.

Now fuller and truer the shore line shows—
Was ever a scene so splendid?
I feel the breath of the Munster breeze,
Thank God that my exile's ended.
Old scenes, old songs, old friends again,
The vale and cot I was born in!
Oh, Ireland, up from my heart of hearts,
I bid you top of the mornin'.

John Locke.

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the *fifteenth day* of each month.

The Supreme Council.

POCATELLO, IDAHO, Feb. 7th, 1891.

Editor Firemen's Magazine:

As the constitution of the Supreme Council of the Federated Order of Railway Employees has been forwarded to all subordinate lodges in numbers sufficient to have a copy thereof placed in the hands of each individual member of the Brotherhood; and as the time draws near for holding the next annual session of the Council, a discussion into the merits or demerits of said constitution, with a view to having amendments proposed which might improve or strengthen it, ought to be in order.

Before entering upon the subject, however, I wish to state, by way of preface, so there may be no misunderstanding of my motives, that I am actuated by no desire to engender ill-feeling, excite bitter controversy, or in any manner whatever antagonize Federation; and by federation I want to be understood as meaning the principle, the abstract theory. Federation may be defined, simply as a mutual compact between two or more parties by which each engages to render some benefit to the others.

This principle I believe in fully, and am ready and willing to give it all the support I am master of. It is the plan adopted by the Supreme Council to apply that principle to organizations of railway employees that I wish to review.

Several men may agree to erect a building as necessary for business purposes, but they may not agree on the architectural design and materials to be used in construction. They agree in principles but differ in details. It is so with the advocates of federation for railway employees. They all agree as to principle but differ as to details. Some desire a strong central body, or national federation, such as the Supreme Council is supposed to be; others advocate local system federation without any central head or national council; while, still others believe that neither the plan of the Supreme Council, or the proposed local system federation, each in itself separate, meets the requirements of the case, but believe that by a judicious compromise or merging of both ideas into one the best and most substantial system could be perfected.

I confess that I am of the latter party of

federationists. Our idea is that the plan of federation should copy more nearly the design of the government of the United States—the Supreme Council to be national head, each system of railroad, organized and federated, to bear the same relation to it as a separate state of the Union does to the central government. In the present article I do not propose to compare the plans outlined above but shall confine myself to the Supreme Council alone. Progress towards the truth is best made by honest differences of opinion. I hope those who differ with me in this matter, and their name is legion, will be honest yet fearless in expression, but do not resort to abuse and vilification.

Since its inception the Supreme Council has done excellent good work; I want to pat it on the back and say, "bravo!" It is a young giant, and presents a vigorous, healthy exterior. But how about the interior? Will it stand the test of time? Is there any possibility of internal disintegration from constitutional defects? I believe there is, and wish you to follow me through the constitution itself while I call attention to what appears to my mind as defects. If I am wrong please correct me.

Begin with section 2.

Each organization under the jurisdiction of the Supreme Council shall be represented by its chief executive and two associate grand officers selected for the purpose.

This section takes away from the Supreme Council all semblance of a Republican, or representative, system of government, and makes it entirely autocratic. It is dictatorial, and robs the organizations concerned of their independence by denying them the right of free selection. Each organization ought to be the best judge of the qualifications of its representatives and it should be left free to choose whomsoever it deemed proper.

A benevolent autocracy may be an excellent form of government could there be any assurance that it would remain so, but the possibility of its becoming corrupt, tyrannical and inimical to popular interests is what makes it feared. It has been tried in the past and found wanting.

It has been contended by supporters of the Supreme Council that its plan of federation was analogous to the government of the United States and that each order represented bore the same relation to the Supreme Council as the separate states do to the union of states. I dissent from this view and challenge any supporter of the council to point to one single essential resemblance.

The Supreme Council is an alliance of the grand officers of the orders connected with it. Its members are not elective but by virtue of the offices they hold in the different orders become *ipso facto* representatives in the Supreme Council.

The government of the United States is representative of the people in every essential feature. Its president is chosen by the ballots of the people; though not quite as direct as might be. Its senate is elected by the legislatures of the states; not a good policy either. Its representatives in congress, apportioned to districts on a basis of population, are elected by popular vote. The executive and other officers of a state do not become by virtue of their office representatives of the people of the state in the government of the United States.

"There are," says John Stuart Mill, "two different modes of organizing a federal union. The federal authorities may represent the governments solely and their acts may be obligatory only on the governments as such; or they may have the power of enacting laws and issuing orders which are binding directly on individual citizens.

"The former is the plan of the so-called German confederation and of the Swiss constitution previous to 1847. It was tried in America a few years immediately following the war of independence. The other principle is that of the existing constitution of the United States and has been adopted by the Swiss government in recent years. The federal congress of the American Union is a substantive part of the government of every state. Within the limits of its attributions it makes laws which are obeyed by every citizen individually, executed by its own officers, and enforced by its own tribunals. This is the only principle which has been found, or which is ever likely to produce an effective federal government. A union between the governments is only a mere alliance and subject to all the contingencies that render alliances precarious."

Speaking of the system of federation in vogue immediately after the war of Independence and before the present constitution was adopted, Washington said: "It was little more than a shadow without a substance," and "congress being a nugatory body, its ordinances being little attended to."

The Supreme Council does not very much resemble either of these systems, but its nearest prototype is the alliance of governments spoken of by Mill.

It is, as I said before, an alliance of grand officers. It is not representative in the full acceptance of that term, its members are not chosen by the orders direct, its ramifications do not permeate the rank and file, and its mandates are known to us only through the heads of our organizations.

Section 6 is somewhat ambiguous. First it declares that a full representation of each organization shall be required to constitute a quorum for the transaction of business. A "full" representation means three grand officers from each order, no more, no less.

At the end of this section there is a *proviso* that if any organization should fail to be represented as herein required, such failure shall not affect the quorum or interfere with the proceedings.

Is not this *proviso* a nullification of the first paragraph of the section? If an organization should fail to be represented as required, would the action taken by those present be binding on the order not represented? I ask this question because of the spirit and intent of section 16, which will be referred to later, and also because I consider it possible for several contingencies to arise under it that might seriously hamper the operations of the Council.

Section 14, provides for the complete surrender of independent action of individual organizations in cases of grievance necessitating a strike, and speaks of a penalty to be imposed for its violation. Is not this too great a sacrifice? The Supreme Council should certainly reserve the right to extend or withhold its support of any grievance; but should it have the right to prohibit organizations from taking action on their own responsibility after being refused aid by the Council?

Section 16 provides for the investigation of grievances, and the taking of a ballot to decide on action, &c.

This section contains within itself the essence of disruption, and puts it within the power of any two representatives of one organization to defeat the ends for which the Supreme Council is at present constituted. It reverses all precedent and places absolute power in the hands of almost the smallest possible minority. Think of the absurdity of two men being granted power to decide on a course of action binding ten others besides themselves! It is preposterous! The members are allowed to prepare their ballots in secret and not in open session. Why? If they are honest, as they are presumed to be, they should have the courage of their convictions, and ought not to be either afraid or ashamed to speak out before the entire Council, and have their votes go on record before all the orders. The rank and file of the organizations whose interests are most at stake in this issue, should have a means of fixing responsibility where it belongs when those interests are jeopardized through the timidity or corruption of representatives. This clause leaves a loop hole for bribery, treachery and cowardice to crawl through to the council chamber. It should be amended at the next session and the majority rule inculcated. This rule may not work any harm in the Council at present but remember that you are earnestly striving to induce other orders in the railway service to join you. Suppose such men as C. S. Wheaton, or W. P. Daniels, should become members of the

Council; or should the engineers at any time roll up the necessary two-thirds majority in favor of federation and their grand chief, Arthur, become a member of the council—to his great disgust no doubt,—would not this minority rule prove a dangerous weapon in such hands?

Section 17 says:

The Supreme Council may, upon a two-thirds vote of the representatives in meeting assembled, modify or amend a grievance, or strike out any portion thereof.

This is just as it should be; but pray, why not apply the same rule to section 16?

Section 19, provides for declaring a strike at an end by the unanimous consent of the chief executives of the orders represented. Failing to agree the Supreme Council as a body is given the right to declare the strike at an end by the same process had in its inauguration. Presumably by the process specified in section 16.

Section 21 makes a two-thirds majority necessary to the election of an applicant for membership.

Section 23 permits of no alteration or amendment to the constitution only by a two-thirds vote. All very good and perfectly satisfactory. But is the declaring of a strike on, or off, of less importance that a small minority should be given power to decide it?

I believe this section 16 was drafted with the best intentions, and that the idea was to have no organization drawn into a conflict without the consent of a majority of its representatives. But, *perdu*, why should they be allowed to nullify all action and tie up the hands of the entire council?

This rule if permitted to exist, is liable at any time in the future to render the present plan of federation abortive.

The question of federation has been before the various organizations of railway employes a sufficient length of time to have its meaning and import understood alike by all. Understanding its principle, and knowing what is required of all connected with the Supreme Council, any organization deciding to apply for membership therein does so with its eyes open, and no doubt fully resolved to carry out its part of the compact. Such being the case there could be no serious objection to the two-thirds majority rule as necessary to determine a line of action.

Each organization having deliberately decided to federate for purposes offensive and defensive it should not be left to the cowardice or treachery of the representatives of any one order to defeat that purpose.

The last session of the Supreme Council adopted a resolution which has stirred up considerable wrath in certain quarters. The resolution in effect declared the work of the Supreme Council perfect, incapable of improvement &c., and pledged the members

to decry and oppose all efforts to establish any other plan of federation.

I do not want to see any division or rivalry either; one system of federation for railway employes is sufficient for all useful purposes, and we want but one. I do, however, consider the bold assumption of infallibility as expressed in that resolution to be supremely silly. There never yet was work of human hands made absolutely perfect and indestructible; all are capable of improvement and subject to change. Time has few favorites and laughs to scorn our most sublime efforts.

Governments are not the results of inspiration, but of growth, superinduced by necessity.

"Governments," says John S. Mill, "in every stage of their existence are made what they are by human voluntary agency." The Supreme Council is no exception to this rule. It is hoped that it will admit of alterations to its constitution at the next session that will strengthen and improve it.

In federation we have a tremendous power for good or ill, as virtue or mendacity shall direct its energies. Being by nature an optimist I am hopeful of the future, and feel confident that beneficial results will follow a judicious application of this great power. I do not believe in confining its application to the adjustment of grievances alone; its scope should be made expansive enough to include within the limits of its attributions a number of interests not a whit less material to us.

T. P. O'Rourke.

Quack Medical Examiners.

MR. EDITOR:—I notice in the February number of the *Firemen's Magazine* an article entitled Quack Medical Examiners. Now, I hope we are not so unfortunate as to have quacks to make examinations for us, but if we have, it is to be hoped that such examiners will be removed from office and good men put in their places. The case cited in that article certainly never should have happened, because if a man is suffering from phthisis pulmonalis and is within one month of death, it was certainly gross neglect on the part of the doctor or else because he did not care, for I do not believe that he could have been so ignorant as not to know the physical signs of consumption at that late stage of the disease.

This goes to show that this order, like all other insurance companies, ought to have a supreme medical examiner to look over and examine thoroughly every application before it is accepted. This would have a tendency to make examiners more careful and if there were any things that were not satisfactory, the applicant could be rejected.

My plan in examining is not to accept a fee if I cannot pass the applicant, but simply tell him not to make application for insurance.

If a man is rejected once it is next to impossible to get insurance in any other company, even though he may be in a very much better physical condition, therefore I do not wish to debar him from getting in to another order if he can. I hope this will be taken into consideration at the next convention and that the constitution may be changed so as to allow the order to have a supreme medical examiner. I am a member of the order and have interests in common with the other members and I hope this matter will receive careful investigation.

Herbert A. Robinson, M. D.

CHICAGO.

PAPA'S WHISTLE.

To little Nellie, daughter of J. C. Milroy, Div. 17, B. L. E.

The wintry winds and the falling snow
Keep Nellie indoors to-day;
And she merrily scampers to and fro
In the mirth of her childish play.
But the sound of a train attracts her now:
She runs to the door with skip and bound—
What a joy lights up that little brow
As she hears the welcome sound!

She knows that whistle: "That's Papa," she cries,
As she claps her hands in childish glee,
"The two long whistles for you, Mamma,
The two little toots for me!"

How dear to the heart of the engineer
The thoughts of his little child,
As he blows the blast that she can hear
Though the wind may be high and wild.
The run from "The Bluffs" was hard to-day,
But the "Eight Spot" pushed through all the snow
Toward the home where Nellie stops her play
When she hears that whistle blow.

She knows that whistle: "That's Papa," she cries,
As she claps her hands in childish glee,
The two long whistles for you, Mamma,
The two little toots for me!

Through the lonely night, though his careful gaze
Is fixed on the track ahead,
Another vision before him plays—
Of his Nellie asleep in bed:
And he thinks when the run is made at last
How she sometimes murmurs in her sleep,
"That's Papa," as loudly the well-known blast
Swells out through the silence deep.

She knows that whistle: "That's Papa," she cries,
As she claps her hands in childish glee,
The two long whistles for you, Mamma,
The two little toots for me!

O, well for that innocent little Dear
That she only knows of the joy
Instead of the perils the engineer
Must meet in each night's employ!
May the day be far, if there be a day,
When that whistle shall cease to thrill
The heart of that little child at play,
Or its sounds be forever still!

She knows that whistle: "That's Papa," she cries,
As she claps her hands in childish glee,
The two long whistles for you, Mamma,
The two little toots for me!

Geo. W. Hall.

STANBERRY, MO.

ON EASTER MORN.

May the joys of a happy Easter be thine, my child,
this day,
And meek devotion's soothing voice drive cankering
care away;
On every Easter's due return may those joys still in-
crease,
As long as thy earthly race shall run, and may thy
end be peace.

Edward Splaine.

WATER VALLEY, MISS, Feb. 16, 1891.

MR. EDITOR:—The February *Magazine* is at hand, laden with its "Golden Treasures" of instruction and general information. And whilst we peruse its many pages, our mind cogitates upon men and things. In taking a retrospective view of the progress and development of our order, and with it our *Magazine*, we are forcibly impressed with its vitality and innateness, and had it not been for that which is inherent in its nature, it could not have survived the unmerciful attacks of its many foes from without and from within. The present number demonstrates its strength of will to do, to dare, and even to die for justice, truth and humanity.

Seeing the stand, Mr. Editor, you have taken against the oppressors of your fellow-men, I would like to unite my feeble efforts with yours, in an appeal to my brothers to use every effort that they possess, at this opportune time, to push the anti-Pinkerton bill before their several state legislatures, to use every means at their command to impress upon their representatives the necessity of supporting our bill. Whilst much has been done in the past, much remains to be done. Whilst I was living in Boston, I had much to encourage me from my immediate associates in bringing our anti-Pinkerton bill before the people and the legislature of that state. And had I met with that hearty response which the importance of this bill demands of our brothers, to my three hundred and two (302) communications which I personally addressed to the several lodges of our order, and labor assemblies, east of New York City, to the confines of the Canadas, we should not now be regretting that Pinkerton thugs, thieves, and cut-throats were still alive and waiting to do the bidding of the N. Y. C. R. R., or any other corporation who might wish to employ them to further murder their employes who refused to bow to the oppressors' yoke. Their existence we all deplore. But what are our members doing either individually or collectively to suppress this pest, this national curse?

I read the communication of my esteemed friend and brother Ed Ferrill, to you, Mr. Editor, with mingled feelings of surprise and regret, surprise at his lack of sympathy with you, sir, in your "David and Goliath," like warfare with our oppressors, and regret that he did not use his influence with the members of 284 to form a legislative committee for the purpose of bringing our anti-Pinkerton bill before the legislature of his nutmeg state. I am afraid Bro. Ferrill's letter only indicates too truly the supineness and servility of too many spineless members of our noble brotherhood.

I notice with pleasure Mr. D. J. Brown's vindication of the position he took in the

opening exercises of our late convention, but I was much disappointed when I found that he used the *Magazine* to reply to the *B. of L. E. Journal*, I think Mr. Brown would have shown good discretion had he sent his communication to the *B. of L. E. Journal* first, and then if it was not accepted by that journal, the *Magazine* should have been his to use. I trust however Mr. Brown will make his reply to the *B. of L. E. Journal* yet, for I am satisfied by so doing he will find that he has more brothers in the *B. of L. E.* who share his views, than he can possibly dream of.

Whilst the motto of our order is a grand one, I would like to add another one to be constantly used by every member of our order,—"Excelsior;" yes, "onward and upward" should be the motto of every brother, putting forth every effort and using every opportunity at his command to bring about a better state of things for every railroad employé in the land, and never rest contented until the goal has been reached, when every man shall have a "fair day's pay for a fair day's work," when there shall be no more misunderstanding between employer and employé. Then Righteousness, Peace and Good Will to all men shall reign supreme upon this Earth.

T. H. Haines.

THE STRANGER.

He stood on the beach and his heart was sad
For his native land was over the sea,
And he thought of the time, when a careless lad,
He roamed o'er the hill, the meadow and lea.

He thought of the cot that stood near the wood,
With the rill that ran by the garden gate;
He thought of his mother so kind, so good,
And sad he lamented his wayward fate.

His father, his brothers, his sister too,
With many a friend that he loved dear,
All seemed to pass in a grand review,
As his thoughts went back for many a year.

He thought of the clough where blackberries grew,
And the birds built their nests in the early spring,
And the rippling brook, full well he knew,
Where minnows he'd caught with a worm and string.

In his mind he could see the old gray church,
With the maypole on his dear village green,
Where the noble elm and the silver birch
Afforded the children a sylvan screen.

And he sighed as those dear scenes passed away,
And he came to realize once again
That his own native land, so fair and gay,
Was thousands of miles away over the main.

Edward Spaine.

We have received from the Matchless Metal Polish Co., of Chicago, an assortment of polishes which, by virtue of their superior qualities, have become widely known among users of metal polishes of whatever description. After putting the polishes to a practical test we do not hesitate to say that they are in all regards up to the standard claimed by the manufacturers, as any one will be convinced who will give them a trial. Locomotive firemen being specially interested in metal polish, we suggest that they try a package which can be obtained by addressing the Matchless Metal Polish Co., 88 Market st., Chicago, Ill.

The Old and Reliable Watch and Jewelry House.

The majority of the readers of the *Locomotive Firemen's Magazine* have so long since become familiar with the extensive watch and jewelry establishment of Messrs. Jos. P. Wathier & Co., 178 W. Madison Street, Chicago, through dealings of a more or less extensive character, that it seems almost superfluous for us to occupy a few moments of their time by speaking briefly of the firm and its business. However, as one is always glad to see an old and valued friend, so will those of our old readers who have enjoyed business relations with the house named, be pleased to hear through us of its increasing success. While those who have not dealt with it, but would be glad to know of a strictly first class and thoroughly responsible house, in which they can have complete confidence, when wanting anything in the way of watches, clocks, diamonds or other precious stones, or jewelry of any description, will thank us for placing them on the right track to reach just such an establishment.

The foundation of the firm of Jos. P. Wathier & Co. dates back to the year 1874, and its inception antedated that time by several years, as its senior member, Mr. Jos. P. Wathier, had for a long time previous to the organization of the existing firm been prominent as an expert in this branch of business and to his thorough practical knowledge of its every detail is largely due the credit for the constant success and remarkable growth of the present establishment.

The ramifications of the business are so great at the present time that hardly a state in the union is unrepresented on the firm's books, and it is understood that the shipment of goods to other countries than our own is not infrequent. In the several manufacturing departments of the house operations are conducted on the factory basis, so that every workman's time is employed at the class of work for which he is most especially qualified. This also serves in a measure to unite the whole in a brotherhood of common interest, to the advantage of all concerned. As our readers are well qualified to appreciate, there are many advantages to be derived from harmonious and united effort, and an establishment operated on the plan named accomplishes, though only to a moderate extent, some of the objects of our own brotherhood. It is an old and trite saying that "Fellow feeling makes the whole world kin" and this, on a smaller scale, can well apply to the extensive dealings between firemen and other railway employes and this firm, for on both sides exists the feeling of confidence which this mutuality of ideas engenders. When to this is added the well known fact that every article sent out by the house is fully warranted, that only first class goods are sold and these furnished at the very lowest price, the reasons for the extensive and constantly growing trade with railroad men, enjoyed by the firm are at once evident.

As a closing word, it will be well to mention that the repairing of watches, as well as jewelry, is made a special feature by the firm and it does work of this kind successfully that few houses would undertake.

In The Queen's last word contest, Dr. Edmund T. Stevens, of Buffalo, N. Y., won the first prize of a free trip to Europe and \$50 in cash, and Annie B. Turner, of Deposit, N. Y., secured the special prize of a handsome Shetland pony.

The publishers of this well known magazine have decided to offer one more competition, and to the persons sending them the largest lists of English words (of not less than four letters) constructed from letters contained in the three words, "Dominion of Canada," they offer many useful prizes, including \$750 in cash, Shetland ponies, China Dinner Sets, Gold Watches, French Music Boxes, Portiere Curtains, Silk Dresses, Mantle locks, etc., all to be awarded strictly in order of merit. An elegant Silver Tea Service (valued \$50) will be given each day to the persons from whom the largest list is received that day from the State in which they reside. The object of this Special Daily Prize for each State is to increase the interest in The Queen's Competitions in every locality in the United States. Those desiring to contest for one of these valuable prizes may start on their list at once, but send six U. S. 2c. stamps, and receive last number of The Queen with full particulars before forwarding your list. Address The Canadian Queen, Toronto, Canada.

DREHER'S CAR (CLEANING COMPOUND, the advertisement of which appears in these columns, is reported to give entire satisfaction wherever it is used. The Dreher Company are introducing their compound on many of the railroads of the country and from their references we do not hesitate to bespeak for their agents the courteous consideration of all whom they may call upon in their travels.

THE attention of locomotive men is specially called to the advertisement of the Jaros Underwear Co. which appears in these columns. The underwear of this company is specially adapted to railroad men who have to undergo rapid changes of temperature in their work and the bowel band is spoken of in the highest terms by those who have given it a trial.

MEN who advertise and need a new idea now and then, or who have not always the time or inclination to prepare their advertisements, will find a valuable assistant in the novel book of "Ideas for Advertisers," just published by D. T. Mallett, publisher, New Haven, Conn., and sent on receipt of \$1.00, post-paid. He also publishes a tasty pamphlet called "When" (price 25c.), a treasury of good advice to business men. Descriptive circulars of both these new books can be obtained upon request to the publisher.

Literary Notes.

WE have received from the publication office of the *National Car and Locomotive Builder* a copy of the book of Arthur Woods, M. M. E., on Compound Locomotives. The book contains 167 pages and is liberally illustrated. In his preface the author says: "The aim of the author is to combine the description of the various forms of compound locomotives which have been actually used, with so much of the theory of the design of compound engines as would seem to be directly applicable to locomotive practice. The book is divided into twelve chapters, discussing as many subjects in a clear and comprehensive manner. The work is of special interest to students of the compound locomotive, who will find in its pages a thorough and exhaustive analysis of the subject."

THE February *Arena*, in addition to a brilliant array of American authors, presents two papers of great interest by foreign essayists. Camille Flammarion, probably the most eminent European astronomer, writes at length on "New Discoveries on Mars." His paper is accompanied with a full-page geographical map of this wonderful star, as prepared by Flammarion and other leading astronomers. It also contains two small maps illustrating strange changes that have recently taken place on one portion of Mars. The distinguished Frenchman's paper in the short compass of sixteen pages gives the busy reader the important astronomical discoveries of recent years in a nutshell. Alfred Russell Wallace, D. C. L., LL. D., contributes a striking paper on "The Nature and Cause of Apparitions." In the field of psychical research, Doctor Wallace seems as thoroughly a master as in the realm of natural science. His paper will doubtless produce a profound impression on numbers of readers who have hitherto paid scant heed to the alleged facts of psychic phenomena. The paper which will probably attract most attention in this country, however, is by C. Wood Davis, whose contributions to the *Forum* last year, were so widely quoted. This paper is on "The Farmer, the Investor, and the Railway." It is a careful, exhaustive survey of one of the problems, which is to-day challenging the widest attention. Everyone, especially every farmer who would intelligently discuss an issue which will be a paramount political issue in the near future, should not fail to read this remarkable essay and make a note of its valuable facts and statistics.

PALE youth (to dusky brother): "Wouldn't I be a fool to fight wid you, anyhow? What would be the use? If I give you a black eye it wouldn't show."

MY PHOTOGRAPH ALBUM.

Ye front each other, face to face.
Dear friends of long ago;
Your air serene but commonplace,
Your costume comme il faut
Since ev'ry smirk and ev'ry smile
Came first beneath my ken.
'Tis more than just a little while:
We all were younger then.

Tom, Dick and Harry meet my gaze—
How much I liked the three!
As thick were we in early days
As four could ever be.
But why expect the glow of youth
From silvery headed men?
'Tis true, although 'tis bitter truth,
We all were younger then.

Ah, Mary Ann and Emma Jane,
My flames of other days;
Alternately, although in vain.
For you I wove my lays.
By fate my hopes were overcast
(It boots not how or when),
Your married names I quite forget,
We all were younger then.

Some errant stars are gathered here
Who nightly lit the stage:
But very few to mem'ry dear,
Though lost to sight and age.
Do many look so lovely now?
Nay, hardly one in ten,
My errant stars, you must allow
We all were younger then.

But let me not morosely brood,
Old "Chronos" o'er thy flight,
And waste, in sourly cynical mood,
My hours by day or night.
Dear friends, I merely pause to say—
Before I drop my pen
And put your photographs away—
"We all were younger then."

Domestic Monthly.

A Fine Point.

Tommy—Mamma, will it be wrong if I make a kite to-day?

Mrs. Peterby—Yes, my child. To-day is Sunday.

Tommy—Well, s'pose I make it out of the *Christian Advocate*, will it be a sin then?

MAMMA:—"Well, Edith, how did you like the kinder-garten?" "I didn't like it a bit. The teacher put me on a chair and told me to sit there for the present. And I sat and eat and she never gave me the present."

Teacher—John, of what are your shoes made? Boy—Of leather, sir. Teacher—Where does the leather come from? Boy—From the hide of the ox. Teacher—What animal, then, supplies you with shoes and gives you meat to eat? Boy—My father.

A REVEREND gentleman, addressing a school concert recently, was trying to enforce the idea that the hearts of the little ones were sinful and needed regulating. Taking his watch and holding it up he said; "Now, here is my watch; suppose it don't keep good time; now goes too fast, now too slow; what shall I do with it?" "Sell it!" shouted a youngster.

Gould's Golden Grip.

THE RAILROAD WORLD AT HIS MERCY.

[Chicago Herald.]

Jay Gould will—Jay Gould has—Jay Gould says—Jay Gould wants—these have been the overtures to a mass of telegraphic announcements which, following each other in rapid succession, have astounded the financial and railroad worlds for two weeks. It has been Gould in every other line, and when Gould was not the magic name that ticked from the telegraph instrument it was Standard Oil. Gould and Standard Oil have together made the greatest monetary manipulation in the history of the world. To accomplish their ends they have jeopardized the financial safety of governments, not to speak of individuals. At the close of the fiscal year of American railroads in 1889 these corporations had a total debt of \$9,931,453.146, about seven times the amount of the national debt of the United States, and considerably more than the aggregated federal, state, municipal, county and town debts of the entire nation. This monster indebtedness is divided as follows:

Capital stock	\$1,495,099,318
Funded debt	4,828,365,771
Unfunded debt	357,477,160
Current debt	250,510,897
Total	\$9,931,453,146

This debt is secured by about 161,000 miles of railroad. Upon this debt was paid in interest on funded debt the enormous sum of \$219,877,150, while \$81,264,029 was disbursed as dividends upon the stock. More interest fell due than ever before in the history of American railroading and less dividends were paid than in any previous year since 1880, except 1888. Upon this pile of American railroad securities American credit is largely based. Place the value of these securities in jeopardy and a financial panic is precipitated. To attain their ends Gould and Standard Oil have risked the value of these securities, and at the eleventh hour averted the panic only to save themselves.

It may be asked how a combination of one man and a single corporation could do all this. It is very simple. American railroad systems are so interlocked and competition is so close that reckless rate cutting by one disturbs all. Cut the passenger rate between St. Paul and Chicago to \$5 and it will affect rates between Chicago and Omaha and Kansas City, St. Louis and Kansas City, Omaha and St. Louis, St. Paul and Kansas City, and then the rates between the Missouri river and Denver will follow. Let this situation stand a year, and, as under the long and short haul clause of the interstate commerce law, a local rate cannot be higher than a through rate, all passenger rates between Lake Michigan and the Rocky

Mountains will be in chaos and the roads in that region will sacrifice from \$10,000,000 to \$15,000,000 in revenue. A cut in freight rates precipitates more disastrous consequences, because it compels roads in a large section of territory to meet it, spreads faster and wipes out revenue in hundred-thousand-dollar chunks. Jay Gould and Standard Oil owned enough railroads to start the rate cutting going, and did not hesitate to do so. For almost a year railroad rates in the West, Southwest and Northwest have been demoralized, with a view to reducing revenue, causing most of the roads to fail to pay dividends, or pay them on borrowed money, thus impairing public confidence in them as an investment and sending down the price. Like a piece of good luck for Gould and Standard Oil came the British panic in Argentina, caused by the inflation and revolution at Buenos Ayres. London was compelled to raise money, and threw more than \$100,000,000 in American railroad securities into Wall street in one lump, which crushed through values, carrying everything before it.

Then came Jay Gould's hour to act. He has an income of \$700,000 a month, and for years he has been hoarding ready cash, dollar by dollar, until his vaults were bursting. The Standard Oil has even more money than Gould. Its directors sit in nearly every New York bank. It can make money tight or easy at will. It joined hands with Gould. Millions upon millions were dumped into Wall street by the government in the attempt to stem the tide of panic, only to be locked in the vaults of Standard Oil financial institutions.

When bottom was almost touched Gould and Standard Oil were buying. For 100,000 shares of Richmond & West Point Terminal Gould paid between \$1,500,000 and \$1,800,000 in cash—probably nearer the smaller amount. What the control of the Northern Pacific cost no one knows. The status of the Union Pacific stock is yet an unknown quantity, except that Gould and his friends are in the majority. Pacific Mail again changed owners and passed into the hands of Gould and Standard Oil. Great blocks of Atchison were secured by this alliance. By their purchase they have become absolute dictators of transportation in the South, in the Southwest, in the Pacific Northwest and several minor or isolated localities, each large enough for an empire. More than one-quarter of the railroad mileage of the continent is now in the control of Gould and Standard Oil. More roads are expected to fall into the grasp of this combination. New York dispatches say that Gould is after the Rock Island and Burlington. Where it will end he best can tell.

In the shake-up that he has given Wall street and the railroad world Gould has de-

rived keen pleasure, for while he played with millions as easily as a newsboy pitches pennies, he has settled many an old score. Calvin S. Brice and his partner Thomas have felt his wrath. George J. Gould was once a director in Richmond Terminal, which is owned by the Brice-Thomas syndicate. He resigned because he could not have everything as he wanted it. Then the Brice-Thomas crowd joined hands with Collis P. Huntington and ran the Gould party out of the Pacific Mail directory. Now Brice and Thomas are at Gould's feet and Huntington's great Southern Pacific Company is forced to show at least an outward feeling of friendliness for the king of Wall street and join in his great trans-continental combination.

Wonderful Trees.

The following statements are compiled from apparently reliable accounts of tree wonders: One tree of the Mariposa grove, in California, is 90 feet in circumference; through another a roadway 27 feet long, 10 feet wide and 10 feet high has been cut, yet the tree is still vigorous and growing. Columbia county, Georgia, has a quivering tree, every twig and limb of which, however large, is constantly trembling as if in fear. A white mulberry of Newton, N. C., constantly emits puffs resembling smoke, which issue from every part of the tree. A tree of New Zealand catches birds in a sticky fluid given off by its seed vessels. The calabash tree of the West Indies has a fruit, often 12 inches in diameter, with a hard shell that is made into dishes of various kinds, and may even be used over a fire for boiling water. A tree of the Nubtan forests grows ready-made whistles, galls left by insects having holes through which the wind blows with startling effect. The vegetable wax tree of Japan bears berries from which fine candles are made. The stinging tree of Queensland is dangerous to the touch, but leaves no mark, though the pain is maddening, and the part stung is tender for months when wet. A palm of Pedur, India, 11 feet high, changes its position morning and evening, a handkerchief tied to its leaves so as to touch the ground at 4 A. M. having been 6 inches from the ground at 5:30 A. M., 18 inches at 8 P. M. and 9 feet at 3 A. M. A leaf-stalk of the travelers' tree of Madagascar contains, even in the driest season, a quart of water. Schelwisch, the Bavarian naturalist, found in the heart of Africa an iron tree, from which the leaves could only be removed by filing. Another African tree yields butter. An engineer who has been surveying in Central America reports a tree which shines with a brilliant light at night, a tree which gives milk, and a tree which bears dough for bread.

Above the Clouds.

A THRILLING EXPERIENCE OF A CELEBRATED AERONAUT IN A BALLOON.

[Youth's Companion.]

Herr Maximilian Wolff, the celebrated aeronaut, in his balloon ascension from Cologne, last June, had one of the most frightful experiences recorded in the annals of balloon travel. On June 31 he received orders to prepare the "Stollwerck" for her fourth ascent from the Kaiser-Garten, the trip to take place on the 6th. Usually, he began work at the filling before daybreak, to have ample time, but on this occasion wind and rain delayed him till past eight o'clock in the morning. He dreaded making the voyage at all on such a day, but as an air-sailor, like his brother at sea, makes money only while on his ship, he decided to take the risk.

"At five o'clock in the afternoon, the balloon was ready. The weather was worse, and my courage was ebbing fast. I would gladly have given my pay twice over to remain on solid ground, but my reputation was dear to me, and I dared not face the jeers and insults of the vast crowd assembled to see me off. Two gentlemen, Herr S— and Herr D—, from Cologne, were to accompany me.

"At half-past five I gave the signal 'Los!' and our ascent began favorably. Our course was southwest to northeast, and in one minute we had risen five thousand feet. The temperature was cool. Behind us lay Cologne in a thick fog and a gathering thunderstorm. Our 'Stollwerck' soared continually higher in a fog that grew every moment more dense. The aneroid barometer showed a height of eight thousand feet. The basket swung like a pendulum—a proof that we were moving with great rapidity.

"A second thunderstorm gathered and burst beneath us. Then after a quarter of an hour, the clouds dispersed, and we could see the earth far below. We were spinning over long stretches of dense forest, very unfavorable for landing. The air had grown icy cold, and the balloon dropped rapidly.

"At last I spied a clearing on the mountain-side, which seemed our best chance for alighting. I pulled the check, dropped anchor and we sank gently toward the ground. The violent wind knocked us about for a time, but fortunately the anchor held. We had been seen, and the people were seen hurrying to the spot. The strength of eight men was barely enough to hold my struggling, pitching ship long enough for my companions, S— and D—, to clamber out.

"So far all was well. Then, without a moment's warning, a violent gust, like a whirlwind, broke over us; we were tossed wildly to and fro, but by straining every

muscle managed to hold down the 'Stollwerck.' Still in the balloon, I threw out a rope and with great difficulty tied it in a tree. Then came a violent wrench, and I fell over backward in the basket. As I sprang to my feet I found myself soaring cloud-high once more, and to my horror, two men were clinging to the outer edge of the basket!

"I seized upon one, and tried with all my strength to draw him in. He was a peasant of the neighborhood, a good-hearted, sturdy young fellow, who had worked with a will to quiet the wild plunging of the 'Stollwerck,' as she dragged at her anchor down in the clearing. But it was of no avail; my arms were as weak as a woman's, and the poor fellow's strength was spent. With a wild, despairing look straight in my eyes, he let go, and I heard his body strike upon the ground with horrible distinctness.

"My heart stood still, my head swam, and I should have sunk down indifferent to my fate, had it not been for the cries of poor S——, my companion, clinging to the other side of the railing. I tried to rescue my friend from his frightful position, but alone I could not drag him over the edge of the basket, and he was powerless to help himself.

"It was an awful moment. Already the clouds began to float below us; we must have been at least nine thousand feet high. I leaned out so far that it seemed every instant as if I must lose my balance, and seized S——'s coat in my teeth. I managed to grasp a rope with which I hoped to tie him fast. Those minutes, not knowing whether I could succeed or not, were like an eternity.

"At last the rope slipped under his arms. I drew it taut and to my inexpressible relief it held. But the danger was postponed for a few moments only; if S—— lost consciousness, he would be sure to drop, in spite of the rope.

"It was life or death to the poor wretch, according as our descent was rapid or slow. I pulled the check and we sank noticeably, but alas, into the thick of a thunder-cloud! The balloon spun round like a top. It hailed, thundered and lightened, as if hell itself had broken loose. We swung to and fro with frightful violence. I fell on my face with a roaring in my ears like the screams of a thousand angry fiends. But I dared not give way.

"S——, I called, frantically, 'hold on, for God's sake!'

"It's all over with me—the rope is slipping,' my poor friend gasped in reply.

"Pull yourself together! In a moment more we will touch ground,' I screamed hoarsely.

"But the nearer we came to earth, the more wildly we pitched to and fro.

"Don't let go the first moment you touch the ground or we are both lost,' I cried to S——.

"We skimmed over a house and barn—cracking, snapping, jerking. A rent yawned above my head. We flew onward swift as a feather before the wind. Nothing but extreme measures could save us now.

"Let go, S——,' I panted; 'let go, and jump for your life—to one side, away from the anchor.'

"Not a moment too soon, he obeyed me. The balloon, lighter, by one hundred and ninety pounds, swept me up again to the clouds. With all my remaining strength I laid hold of the check, not letting go till the anchor caught in a tree.

"A second's pause only, and the giant tree was jerked up by the roots. With the force of the wrench the basket was so turned that I hung head downward. The anchor gripped a second tree, again a moment's rest, and that tree was torn from its bed. Knocked about like a ball, I at last took my fate into my own hands. I jumped into the top of an oak, and slid through its branches, down to the blessed ground.

"I had landed at the 'Neuen Hause,' near Cleves, and straightway set the whole neighborhood on the search for poor S——, who must be lying somewhere terribly injured, if not dead. None of my emissaries were able to find him.

"Broken and bruised in mind and body, I set out for the station at Overath. Suddenly, from a side road, we saw a troop of men approaching. 'They're bringing somebody this way was called from mouth to mouth. I dashed forward, and a moment later S—— and I were in each other's arms, sobbing like a pair of children.

"To-day my head is heavy; a hammer pounds steadily at my temples, and I cannot rest for thinking of the other poor fellow who lost his life trying to save mine. I would give all I own in the world to see him once more in life and health. Never shall I forget this most horrible journey."

A week after the foregoing events, a notice appeared in a Cologne newspaper, which must have been balm to Herr Wolff's troubled soul. The paragraph stated that the man who fell from the balloon "Stollwerck" on June 6th, had by amazing good luck suffered no serious injury, and was as well as ever.

To cure a felon, says a correspondent, mix equal parts of strong ammonia and water, and hold your finger in it for fifteen minutes. After that withdraw it and tie a piece of cloth completely saturated with the mixture around it and keep it there till dry. If this treatment is adopted when the ailment is at first realized, the pains will cease at once.—*Scientific American*.

THE NEWSPAPER AFFIDAVIT LIAR.

The snake liar and the fish liar, both bowed in their gray old age.

Came traveling back from their journeys wide, from their earth-wide pilgrimage;

A tear drop stood in the snake liar's eye, and the fish liar groaned in pain.

And a death-like look of infinite grief came over the face of the twain.

"I cannot compete with the modern liar," the sad-eyed snake liar said,

"In its limitless length and breadth and depth, and I wish that I were dead:

For I stand rebuked with a shame-faced look 'neath the triumphant gaze of the eye

Of the newspaper affidavit liar, with his circulation lie.

"For the snake liar and the fish liar and the horse liar own his away.

And the easy-going liars who work by the job, and the liars who work by the day;

The traveling liar, old inhabitant liar, and liars of low degree.

And liars who lie for the fun of the thing, and liars who lie for a fee.

"The horse liar, the peach-crop liar, the sea-serpent liar and all,

With the wide, untraveled wastes of cheek and their soulless seas of gulf,

All bend the knee to the sceptered sway of this crowned and peerless one,

And the father of lies looks tenderly down on his most accomplished son"

Unidentified Poet.

Railroads and Forests.

The St. Louis *Lumberman* has the following to say concerning the use of timber for railway purposes:

The consumption of timber for railway purposes includes ties, bridge trestles, fences, telegraph poles, culverts, depots, rolling stock and fuel. The consumption of railroad ties goes for constructions and renewals. The number needed for annual renewals is estimated at 60,000,000; to this may be added an average of 13,000,000 for new construction; in round numbers, our railroads consuming 73,000,000 ties, requiring at least 365,000,000 cubic feet of raw material. An approximate computation of the proportion of the various kinds of timber used places the distribution of material:

Oak ties	45,000,000
Chestnut ties	3,500,000
Pine ties	12,500,000
Cedar ties (red, white and California)	5,000,000
Hemlock and tamarack ties	2,500,000
Cypress ties	1,500,000
Redwood ties	2,500,000
Various	500,000

The oak, therefore, our most valuable timber, furnishes over 60 per cent. of the material, and not only from choice trees mostly, but from the young growth, which may make "one tie to the tree," or "one tie to the cut."

Sixty million cubic feet of sawed material may be added for bridge and trestle timber, etc., making a consumption of 500,000,000 cubic feet of wood in the shape of round timber chargeable to the demands of railway service. This requires the annual

culling of probably more than 1,000,000 acres of forest land, and would require not less than 10,000,000 acres of well managed forest to continue the same ratio of supply.

The consumption of wood for fuel amounts to two and a half or three million cords, to which but one objection can be made, that timber fit for other purposes is largely placed in the wood pile. Railroads being responsible for such an enormous drain on our timber resources—and no system of forest management being yet practiced in this country by which the supply of timber would be constantly renewed—the economy of its use by railroads is one of the more direct and immediate escapes from a possible timber famine.

The use of iron and steel will necessarily reduce the consumption of timber. The steel mail car is already a fact, and metal coaches on elevated railroads are a success. Freight cars are built with metal frames and others with steel and iron panels. Bridges are very largely replaced by stone and iron structures, and the old wooden culvert is making way for cement, pipe and masonry, and yet with all this in the favor of timber, some of our Western roads use 3,000 feet per mile, and on some of the middle group of Eastern roads from 3,500 to 4,500 feet of timber per mile is used. It may, however, be safely assumed that in a general sense the inroad of railroads on our timber domain has had its best days.

Be Moderate.

[I. L. E. in Printers' Ink]

Moderation is a virtue always.

The possession of the quality does not imply lack of ambition, lack of power or lack of ability.

Crudity generally runs to extremes. It is often said that a man realizes his ignorance of a given subject only when he actually begins to know something of it.

Especially in advertising is it wise to be moderate. A little ostentation goes a long way, and the public is surfeited with it.

Take out of your advertisements the "verys" and the "greats," the superlatives and the exaggerations. Be moderate.

If you understate rather than overstate your case, the sympathy of the reader is won. He is made to feel that there is some one who pays him the compliment of crediting him with a reasonable amount of penetration. Thus he is led to add to rather than to discount your story. He or you may not analyze all these feelings, but they exist just the same.

To be moderate sometimes requires more "nerve" than to be boastful.

Lastly, let us not lose sight of the fact that there is such a thing as ostentatious humility.

Iowa's Aged Athletes.

[From the New York Tribune.]

Something over a year ago the *Tribune* printed the challenge of Mr. A. C. Owen, of Mason City, Ia., 84 years old, to run a forty-rod foot-race with any man of his age for \$1,000 a side. We are sorry to say that he has now withdrawn this challenge; as he has not been able to arrange a match, and has grown tired of negotiating with irresponsible persons, who are willing to talk, but not get out on the track and run. But Iowa must still be regarded as the land of aged athletes, as with the withdrawal of Mr. Owen's challenge there comes a proposition from Dr. L. K. Garfield, of Algona, aged 79, to race any man in the United States of as great an age, on a bicycle at any distance for any reasonable amount. He would not object, of course, to any man older than himself, though he would not care to race with a man who was over 110, as he believes that at that age a man should retire from the track if he ever intends to.

As we just remarked, Iowa furnishes our best example of the great-grandfather in athletics. Other States have alleged aged athletes, but when it comes to putting up their money and getting out on the cinder-path they make dismal failures. Mr. Owen's experience proved this, and we sincerely trust that Dr. Garfield will have better luck. The first to respond to Owen's challenge was a man named Palmer, living in Oregon, Ill. He wrote that he was anxious to run, and Owen told him to come on. Then Palmer began to make conditions and find fault with the articles of agreement, and it finally came out that he had lost a leg in the war of 1812 and wanted fifteen rods start. Owen promptly replied that it was no handicap race, and that he would not give an inch the start, even if he had lost both legs in the Revolution, and that if he meant business to come on and toe the scratch. That was the last he ever heard of Palmer. Then a man in Michigan offered to race if the purse was made \$20,000, and another in Kansas would gladly run if the distance was extended from forty rods to four miles, but Owen saw that they were only seeking notoriety, and refused to have anything to do with them. One of the last to try to arrange a match was a man named Stark, living in Canton, O. He claimed to be 94, but his eyesight was poor, and he said that it was necessary that he run with a dog, the intelligent animal being supposed to lead him and keep him on the track. Owen was inclined to arrange a match with him at first, but investigation showed that Stark ran with a big dog weighing 140 pounds, and that he would yell, "Sic 'em, Tige!" and the dog would start off like a jack-rabbit, leaving the old

gentleman with nothing to do but to hang to the string and skate behind. Indeed, it was intimated that even if he did get ahead the dog would grab him by the calf of the leg and hold him while his master shuffled along and went under the wire. Naturally Stark was dropped.

But in the case of Dr. Garfield the conditions are rather more liberal, and we presume that he will be able to arrange a match. He is willing to race any distance for any stakes, and he will be fair in regard to the gate receipts. His opponent may ride any sort of wheel he chooses, and in case he has lost one or more legs the Doctor will give him a reasonable start. He even hints that rather than not get a match he would be willing to throw off a few years in the age, and race any man over 75 years old. Of course, he can not afford to fool away his time on young men under 75. The Doctor seems to "mean business," and any of the *Tribune's* readers between the ages of 75 and 110 who consider themselves experts on the wheel would do well to communicate with him. His postoffice address is Algona, Kosuth County, Ia.

The French Stove.

Eli Perkins, whose luxuriant fancy does not permit us to take his statements too literally, thus describes the French stove: "The stove is about the size of an icewater tank in a Pullman car. It is loaded with two quarts of coal, the small three-inch pipe adjusted to the chimney and the coal lighted. After burning a while the draft is shut off, and the stove is wheeled around the room. The room is warmed in sections. First it is wheeled up to the old man, who throws out his fingers, then across to the old lady, who embraces it, and then up to the baby. Then it is wheeled back to the chimney, the draft opened, and the fire rekindled. There are usually two chimney holes about the room. After one room has been treated to a fire, the stove is rolled into the hall or into another room, or taken by the handle and carried up stairs. The same stove is used in the bedroom to dress by, rolled into the breakfast room, like a baby carriage, then into the sitting room. It is *multum in parvo*. It is a cook stove, fireplace and furnace. The American who burns ten tons of coal in a range, twelve tons in a furnace, and two tons in the grates, is amazed when he sees a whole house in Paris warmed with one ton of coal. The twenty tons used by the American would warm the Boulevard des Italiens. Such overstrained economy has, however, its disadvantages in loss of health, and occasionally of life itself."

Any railroads left out over night are likely to pass into the hands of Mr. Jay Gould.

THE OLD HOME.

In vain we strive to keep the tears
 From falling as we turn to face
 The dear old home, the dwelling-place
 Of ours for many happy years.

A spirit seems to whisper low
 In language quaint, sublime and queer:
 "How can you leave without a tear
 The old home of the long ago?"

The old, old home where happy hours
 Were often passed in childish play:
 Where memory sweet did pass away
 Beneath time's overwhelming powers.

We turn to go, yet linger nigh
 Unwilling still to leave the place
 Which time alone will soon efface
 Beyond the sight of any eye.

Again we look, and through our tears
 The purest feelings of the heart
 Awake to life, and quickly start
 Adown the mystic flight of years.

Again we walk in childhood's prime
 Viewing the bright scenes as of old;
 Our mother's form we do behold
 With gladness, for she seems sublime.

Our father, working near the door,
 Has given leave that we depart;
 And now our teardrops quickly start.
 For now we leave forevermore.

Yes, we must go; our mind is set
 On something dearer yet to find!
 The dear old home we leave behind
 With "one pure image of regret."

O, blessed place of rest, farewell!
 We leave thee with our hopes and fears
 To sail adown the fleeting years
 To some fair isle where seraphs dwell.

Adieu, thou peaceful realm of light!
 Along the gulf of time we stray;
 We'll think of thee when far away—
 We'll think of thee with glad delight.

Farewell! In leaving, all the years
 Of happy childhood quick return:
 Farewell! Farewell! We yet may learn
 Of something grander for our tears.

Old home, adieu! Yet as we roam
 Far from thy peaceful vale of rest
 We can not hope to be more blest
 Than we were in our dear old home.

Howard C. Tripp in Western Rural.

The Birth of Labor Day.

[New York Star.]

The first inception of the Labor Day festival took place in Brooklyn in June, 1882, when a meeting of Advance Local Assembly 1562, was in progress.

Some of the members fell into a chat and began recalling holidays they remembered, such as the birthdays of statesmen and soldiers, the dates of great battles and the events which marked great changes in the history of the republic. Suddenly one of them asked why labor should not have a holiday of its own.

The idea was eagerly indorsed by every one in the room, and a sort of informal discussion took place, resulting in a unanimous resolution that they would advocate

the celebration of one day in the year in honor of the genius of industry. No time was lost in carrying out the idea.

At the next meeting of the Central Labor Union P. J. McGuire and Mathew Maguire, who were then members of Local Assembly 1562, brought the matter up and by unanimous vote it was resolved that the first Monday in September of every year should be set apart for a labor holiday and called "Labor Day."

The leaders in the movement had another matter in view in connection with the first Monday in September. It so happened that just then General Master Workman Powderly, of the Knights of Labor, and Local Assembly 1562, were not on good terms, and their chief had expressed himself in pretty hard terms about some of its members.

The General Assembly was to convene in New York City on the first of September of that year, and it was determined to hurry up matters and have the first Labor Day festival then, with Mr. Powderly and his aids to review the procession.

The programme was successfully carried out, Mr. Powderly and the other members adjourned the Assembly to review the parade, 1562 and its chief again were friends.

Labor Day of 1886, when Henry George ran for mayor, was a memorable one. The United Labor party, which he was supposed to represent, rallied for the occasion in great numbers, forming probably the biggest labor parade ever seen in that city.

The same year Geo. E. McNeil ran on the labor ticket for Mayor of Boston, and one of the largest demonstrations ever seen in that city was held.

The idea of setting a day in the year apart as a labor holiday is by no means a new one. In France during the revolutionary days a century ago a meeting was called by the revolutionary leaders and it was ordered that Labor Day 10 should be set apart as a labor festival.

In latter days the custom is gaining ground in the other countries in the Old World, and in a few years it is thought there will be a labor festival every year in all the civilized countries in the world.

A French magazine, devoted to geographical matters, figures up the areas of African territory appropriated by the European powers. They are as follows: France 2,300,000 square miles; Great Britain, 1,909,445; Germany, 1,035,720; Congo Free State 1,000,000; Portugal (not yet ratified), 774,993; Italy, 360,000; Spain, 210,000. While the area secured by France is much the largest, so far as value is concerned England has no rival in Africa. There are still 2,500,000 square miles in possession of the native rulers.

The Car Stove Still Lingers.

That the car stove is a dangerous thing, and has caused the roasting alive of a large number of people, is well known. That cars can be heated by steam is also well known, for many cars are so heated, and the New York Court of Appeals recently fined a railroad company \$7,000 for continuing to use stoves in defiance of the law. People who ride on railroads in other states are therefore not a little surprised this fall to meet with the car stove in its accustomed place, and to discover no signs whatever of an intention to discard it. But this is precisely what might be expected of a railway company until the law has collared it and choked it into a decent regard for human life.

Railroad presidents, superintendents and directors have a vague impression that the money they receive from the public is the source from which their salaries and dividends are drawn, but of any obligation incurred thereby their notions are extremely indistinct. What they do realize, however, and can be made to feel very acutely, is a law which is likely to be enforced, and which subjects them to a penalty which they have reason to believe will be collected. There is no other way of reaching them. Complaints and remonstrances which do not take the form of penal statutes might as well be addressed to an Indian pagod as to an American railway magnate. Even against legislatures and courts the railroad companies are able to make head for a considerable time; first by owning as much of the legislature as possible and thus staying off inconvenient laws, and second, by using their abundant resources to prolong any litigation which may arise in the courts, until the attacking party is either defeated or tired out. But in an extreme case, like that of the car stove, the continual pressure of public opinion does at length make itself felt, and attain its end. In some parts of the country, as we have seen, it has already succeeded; and it will do so everywhere whenever the men whom the people send to their state capitals find it safer to represent their constituents than to receive their instructions from the attorney of a railroad.

ONE sheep raiser recently sold at Albuquerque, N. M., 200,000 pounds of merino wool of the finest texture. It was brought to market in sixty-three wagons, each drawn by four oxen. Before it was taken from the wagons a street parade was made. The procession was nearly a mile long.

LONDONERS consume 30,000,000 gallons of milk—or what is sold as milk—per annum, and pay £50,000 for it.

Beliefs About a Hell.

THE ANCIENT AND MODERN IDEAS CONCERNING PUNISHMENT AFTER DEATH.

The idea of a place for the punishment after death of wicked men is found in most, though not all, of the religions of the present time and of antiquity. According to some beliefs the punishment is to last forever; according to others, the torments are to continue only for a time, and are to result in purifying the imprisoned souls and fitting them for heaven. No idea of penalty was connected with the classic Hades—it was simply an under-world where dwelt all those who had the misfortune to be dead, irrespective of their conduct in life.

The word comes from the Greek adjective *Aides*, meaning unseen. The English word hell had also originally the same meaning. It is derived from the Teutonic base *hal*, whence also the Anglo-Saxon *helan*, to hide, "so that the original sense is the hidden or unseen place." (Skeat.) The conception of future existence which lays claim to the greatest antiquity is that of the ancient Egyptians.

According to the Egyptian belief, if the great judgment resulted adversely, "the condemned soul is either scourged back to the earth straightway, to live again in the form of a vile animal, as some of the emblems appear to denote; or plunged into the tortures of a horrid hell of fire and devils below, as numerous engravings set forth; or driven into the atmosphere, to be vexed and tossed by tempests, violently whirled in blasts and clouds, till its sins are expiated, and another probation granted through a renewed existence in human form."

From Persia, also, we get a religion of great antiquity—Zoroastrianism—which, in a modified form, is held to-day by the small body of Parsees still to be found in Persia and India. According to the Parsee belief the good after death pass safely over the bridge *Chinevat*, which stretches from Mount *Alburi* up to *Garotman*, the blissful realm of *Ormuzd*; while the wicked fall from the bridge into the Gulf of *Duzabk*, which yawns beneath, where they are tormented by devas.

At the end of the world a comet will fall upon the earth, causing a vast conflagration by which the whole earth will be melted, and the molten stream will pour down into *Duzabk*, carrying with it the sinners who are on earth at the time. Here they and the earlier comers, except those already redeemed by the prayers of friends, will burn for three days and nights, and then, thus purified, will be received into heaven. Afterward all the devas, and even the archfiend *Ahriman*, will have their evil burned away and will also enter the abode of light.

The "Laws of Manu," one of the early

sacred books of Brahmanism, names twenty-one hells. Punishments for different sins are to be reborn into one of these hells, or to return to the earth as a beggar, cripple or leper, or in the form of a rat, a snake or a louse, the penalty being in each case appropriate to the crime. Punishment need not be endless for any one, as each successive life is a new probation, in which righteousness wins admission to a higher stage of existence.

In Buddhism, which is one of the religions of China and the state religion of Thibet and other countries of Eastern Asia, future punishment is provided for in a great hell, comprising a system of 136 lesser hells. The torments of these hells are depicted in many Buddhist books and paintings with much detail and vividness. As for the two other religions of China, Confucianism tells nothing whatever about punishment after this life, while Taoism has a theory of retribution much like that of Brahmanism.

The Jews in Old Testament times had no idea of a hell. There was no mention of punishment after death in the teachings of Moses, nor is this doctrine taught by the prophets. The word *sheol*, which is translated by hell in the King James version of the Bible, meant simply the abode of the dead, and corresponded to the Greek Hades, used in the New Testament and other Greek writings.

Gloomy and repulsive ideas were associated with *sheol*, similar to those we connect with death and the grave, but it was the destination of good and bad alike, and not a place of punishment. The troubles which the wicked and the enemies of the Jews were threatened with by the prophets pertained to this world. They were pain, disease, loss of possessions and kindred, hostility of neighbors, death and indignities to the dead body.

The idea of *sheol* first became modified after the Persian captivity. The place was divided into parts, which were separated only by the width of a thread. One of these divisions was for the good awaiting resurrection, and was called Paradise; the other, set apart for the wicked, was called Gehenna. This latter designation means "the valley of the son of Hinnom," and was originally the name of the gorge outside of Jerusalem in which the Jews had practiced the fiery worship of Moloch, and where afterward offal from the city and the bodies of criminals were thrown to be consumed by the fires always kept burning there.

The idea of Gehenna as a place of future punishment had appeared in rabbinical theology and become quite detailed a century or more before Christ. Hell was represented as having special apartments for different kinds of torment.

One place, from its darkness, was called "Night of Horrors." The fire of Gehenna was said to have been kindled on the evening of the first Sabbath, and would never be extinguished. The religion of Islam is characterized by lack of originality, and the Mohammedan hell contains nothing but easily made variations of the Gehenna of the Jews. To the man who disobey the precepts of the Koran it is promised that "God shall cast him into hell fire; he shall remain therein forever."

Opening of the New Broad Gauge Line to Ogden.

[Omaha Bee.]

The opening of a standard gauge road from Colorado Springs to Ogden is an event of considerable importance to the railroad world. The route comprises a large part of the Denver & Rio Grande system, but does not traverse the Royal Gorge and Marshall Pass, those scenic wonders which have made the Rio Grande famous. The road traverses Ute Pass, South Park, Leadville, the valleys of the Roaring Fork and Frying Pan, and joins the Rio Grande Western near the Utah boundary. The gauge of the latter road has been broadened through to Ogden. The great advantage of the line, which is controlled by the Santa Fé Company, is that it affords a standard gauge road from the eastern base of the Rockies to the Salt Lake valley, and places the Santa Fé on an equal footing with the Union Pacific at Ogden. Despite the discomforts of narrow gauge passenger cars, the splendors of this route have attracted the cream of transcontinental travel. The change of gauge and equipment will make it a most profitable summer feeder for the Atchison system. Aside from the importance of the change to the railroad systems of the West, it is a notable evidence of the gradual disappearance of narrow gauge roads as avenues of trade and travel in the mountains.

How Not to Succeed.

[Golden Cross Journal.]

After joining the order, pay no attention to it; the officers are paid to do that.

Let those who are desirous of a large tent work for it; it is their privilege.

Have no faith in the order, as you might make a mistake.

In argument about the order always take back water; it is easier.

Never attend the reviews; they are so dull.

When the order is beset with enemies, help them out; tell them things they forget.

Always hope you will come out right; pray for yourself.

If any mistakes are made, herald it to the world; it is your right to spread knowledge.

The Silver Law.

The workings of the new silver law have, so far, surprised the expectations of its best friends. At the rate at which silver is advancing in price, the silver dollar will soon be on a par with the gold dollar. Then we can have the free, unlimited coinage of both gold and silver, without the least disturbance of the financial or commercial condition of the country.

There was a very general demand among farmers for silver legislation, and since it has been accomplished, "things are going their way." The advance in wheat has kept pace with the advance in silver. Not all the rise in the value of our products can be attributed to the advance in silver; there are other causes, but, undoubtedly, the new silver law has been a great benefit to agriculture.

The bearing the advance in silver has on agriculture is clearly pointed out in the following able editorial of the *New York Sun*:

The advance in the price of silver from 94 cents to \$1.20 per ounce has a wider bearing than seems to be generally appreciated. There is a general disposition to see in this new departure merely a variation in the amount of currency, or a speculative phenomenon incident to a great and sudden advance in the value of an important commodity.

We have, heretofore, in round numbers, exported about 20,000,000 ounces of silver per annum, the remainder of our product being absorbed by government purchases and by use in the arts. For these 20,000,000 ounces there is now opened a market at home, and it would seem at first sight as if for their former export to pay our debts abroad we should have to substitute a corresponding export of gold, but this is not the case. In our three staple exports, petroleum, cotton and wheat, we come in competition with silver-using countries exclusively, with the exception of Australia. Egypt and India supply cotton and wheat to Europe, and with declining values of silver in terms of gold, so long as we were on a gold basis those countries were competing with us at a tremendous advantage. This is proved by the enormous increase in the exports of wheat and cotton from India during the last few years. By causing the appreciation of silver, as measured in gold, we make Indian wheat and cotton cost just so much more as the rise in the gold price of silver measures.

Of course, we cannot expect to get the full measure of this advance. The augmented price of wheat and cotton in India and Egypt must, to a certain extent, react in order to meet the increased competition from America. But European markets will rise in sympathy with the higher cost of these exports from those countries measured in terms of gold. Of our cotton crop we ex-

port in round numbers 5,000,000 bales, and of our wheat crop from 100,000,000 to 150,000,000 bushels. It is fair to assume that the advance under normal conditions in the price of the exportable surplus of these two staples would reach two-thirds of the advance in silver, allowing one-third to be taken off the increased standard for Indian and Egyptian wheat and cotton, to enable those countries to export at all.

As against the export of 20,000,000 ounces of silver bullion we have therefore the enhanced value of the exportable surplus of wheat and cotton, to say nothing of oil.

Assuming that we receive two cents per pound more for our cotton out of the now inevitable 30 per cent. rise in the value of silver, we should thus have \$10 per bale added to the value of the exportable surplus of cotton, and thus the country would receive from Europe \$50,000,000 more than it has received from this staple previously. The same calculation applies relatively to our surplus of wheat and oil.

We believe it will be found that this new value of silver provides the true protection to our agriculturists. And the inferences to be drawn from these facts are plain. Given \$100,000,000 more in the pockets of our farmers, and it is safe to argue that an activity such as we have not witnessed for years in this country must follow in all lines and ramifications of business.

An Unmistakable Sign.

[Detroit Free Press.]

"How long yer bin in Christian country, stranger?" asked a native, stepping up to me as I was riding slowly along one of the narrow roads near Chadwick.

"About six months," I replied.

"Startin' er boom?"

"No," I answered, with some astonishment.

"Gotter patent right?"

"Not that I know of."

"Runnin fer offis?"

"I rather guess not."

"B'long to the Bald Knobs?"

"Certainly not, sir."

"Serkit ridin'?"

"No."

"Makin' moonshine?"

"What do you mean, sir?" I broke out, impatiently.

"Oh, nothin'," ingenuously replied the native, digging one of his bare toes in the gravel. "I on'y wanted ter know which yer waz, fer ef er man aint one er them things down hyar, it's purty nigh ter set him down fer hoss stealin', an' bein' er consterbul, I'm jes' carryin' on mer dooty."

THE English are the tallest race among men, their average height being 5 feet 10 inches.

PUBLIC SCHOOL IDYL.

Ram it in, cram it in,
 Children's heads are hollow;
 Slam it in, jam it in,
 Still there's more to follow—
 Hygiene and history,
 Astronomic mystery,
 Algebra, histology,
 Latin, etymology,
 Botany, geometry,
 Greek and trigonometry,
 Ram it in, cram it in,
 Children's heads are hollow.

Rap it in, tap it in—
 What are teachers paid for?
 Bang it in, slap it in,
 What were children made for?
 Ancient archaeology,
 Aryan philology,
 Prosody, zoology,
 Physics, clinicology,
 Calculus and mathematics,
 Rhetoric and hydrostatics—
 Hoax it in, coax it in,
 Children's heads are hollow.

Rub it in, club it in,
 All there is of learning;
 Punch it in, crunch it in,
 Quench their childish yearning
 For the field and grassy nook;
 Meadow green and rippling brook;
 Drive such wicked thoughts afar,
 Teach the children that they are
 But machines to cram it in,
 Bang it in, slam it in—
 That their heads are hollow.

Scold it in, mould it in,
 All that they can swallow;
 Fold it in, hold it in,
 Still there's more to follow.
 Faces pinched and sad and pale
 Tell the same undying tale—
 Tell of moments robbed from sleep,
 Meals untasted, studies deep.
 Those who've passed the furnace through,
 With aching brow will tell to you
 How the teacher crammed it in,
 Rammed it in, jammed it in,
 Crunched it in, punched it in,
 Rubbed it in, clubbed it in,
 Pressed it in, caressed it in,
 Rapped it in and slapped it in,
 When their heads were hollow.

By Frank Lintaber.

How He Paralyzed Her.

[New York Mercury.]

"Rambo," said Baldwin, as the two sat down at a table in a restaurant, "watch me paralyze that waiter girl?"

He beckoned to the girl and she obeyed his summons.

"My dear," he said, "you may bring me some rare done chicken soup."

She went away and returned presently, bringing a bowl of lukewarm water with a chicken bone floating about in it.

"This isn't on the bill of fare," she observed, putting down a check for 25 cents, "and it costs extra. Anything else?"

THE London of to-day, with its millions of inhabitants, includes more Scotchmen than there are in Edinburgh, more Irish than there are in Dublin, more Jews than there are in Palestine, and, adds the *Industrial World*, more Americans than there are in Kalamazoo.

Buffalo Bill Ready.

HIS VIEWS ON RELIGIOUS INDIANS.

[Chicago Herald.]

Colonel Buffalo Bill may fight Indians again. He may go up into the Dakotas tomorrow. For two days he has been in his apartments at the Leland considering the advisability of going up there and spreading an advanced and refined civilization among the redskins with his long and trusty rifle. For two days he has been frequently consulting General Miles about this uprising at Pine Ridge, but as yet has reached no definite conclusion. The other night Buffalo Bill and General Miles sat at dinner.

"What you want to do," said Bill, dropping his diamond-plated fist upon the cloth, "is to stop these sun dances, these ghost dances."

"Can't you stop them?" asked General Miles.

"Well," said Bill, "well, I'll see." Then he leaned back into the leathern depths of the chair and thought. The eyes of the big gold buffalo head on his shirt bosom blinked into the lights that gleamed on General Miles' dinner. Buffalo Bill has been thinking over it ever since.

Yesterday afternoon he and his next friend, Dr. Frank Powell, the famous "White Beaver" of the wild West, which Colonel Cody and he have done so much toward currying, sat talking about the uprising. One of the *Herald's* men sat with them.

"A religious Indian," said Buffalo Bill, opening his eyes and staring into vacancy, "is the worst sort. Now, I am a deeply religious man. And I like religion among other men, except Indians. Down in Pennsylvania, at camp meetings, they work men up into such a religious furore that something's bound to break loose before long, and somebody'll join church."

"Do you gather my idea?" inquired Colonel Bill, putting up his fluent hair into a Psyche knot.

"A religious Indian," continued Buffalo Bill, "is the most disastrous kind. Some of my best Indian friends, when they get religious, grow cold and haughty and distant, and I can hardly get along with them at all. There is nothing so reprehensible to my mind as a religious Indian. When I was in London," the colonel continued, toying with an opulent gold beaver that hangs on the golden cable he wears for a watch chain, "I was going to dinner one night and told my driver to get me there as quickly as possible. As my carriage clattered along over the cobble stones of a narrow street we overtook a funeral procession. Immediately my driver got into a dispute with the driver of the hearse over the right of way. I told my driver to keep straight on the trail and not cut through the funeral

showing my deep religious inclination, and he said he wouldn't. He said he'd beat the hearse if it took a year. Well, we rattled on. The race was growing interesting and exciting. My driver, I feared, was getting the worst of it. Presently, however, they stopped to argue the matter, and I heard my man say to the cheerful driver of the hearse:

"Here, my man's in a hurry; your's isn't."

"Well," said Colonel Cody, shaking out his mane, "I thought that was pretty raw. But it hasn't anything to do with this story, has it? But to return to these Indians. I don't know yet whether I shall fight them or not. It might not look exactly right for me to do so, for I have made a fortune out of them, but if they get to shedding innocent blood I may, if I can be of any service, go up there. I am commander of the troops of Nebraska, and if ordered out, of course, would have to obey. This is very likely to be the most gigantic uprising of Indians ever known. There are ten thousand of them up there, all well equipped and well armed. The messiah craze has wrought them into a frenzy. They are ready for anything. And you must remember you only have 4,000 men in the army. It is mathematically impossible for 4,000 men to round up 10,000 light infantry, which the Indians are. And for this reason I fear trouble. An Indian is at once the most credulous and the most incredulous person you can imagine. He believes everything and he believes nothing. An Indian will never take the war path unless he has feed for his pony, which of course, is grass. There is no grass at this time of the year; but, recollect, these sun dances and ghost dances have wrought him into a religious furore. He believes a messiah is coming, and, believing this, trusts the messiah to furnish food for himself and horse. They must have some jerked meat on hand; they have plenty of arms and ammunition, and in their present state they are ready to do anything."

"Physical torture," interpolated the White Beaver, who was smoking on the bed, "has no terrors for an Indian where his religion is concerned. Every year they tear their flesh in these sun dances, and, the fight being waged for religion, they would risk anything. It may be the greatest uprising the Indians have ever undertaken."

"Yes," said Buffalo Bill.

THE area and capacity of the Hotel del Coronado, of San Diego, the largest hotel in the world, is: Area of grounds, twenty acres; area covered by building, five acres; total floor area, four and a half acres; capacity of reservoirs, 150,000 gallons; area of dining-rooms, 10,000 square feet.

Was It Instinct?

On one occasion, lately, writes J. A. Bartlett in *Longman's Magazine*, London, a particularly fine Newfoundland dog was sitting on a wooden bridge discussing a bone, when a predatory mastiff came along, and being unable or unwilling to distinguish between meum and teum, a smart altercation arose. So violent became the debate, that both suddenly overbalanced and fell into the stream beneath. The nearest landing place was a hundred yards down, and to it the Newfoundland betook himself without much difficulty, and, after a good shake, was preparing to depart, when he suddenly became aware that the other dog, which was more of a soldier than a sailor, was wildly beating the water and drowning as fast as he could drown. One look was enough. In went he of the shaggy coat, and, seizing the other dog by the collar, brought his late enemy safely to land. The two dogs then eyed each other with a perfectly indescribable expression for some seconds, then silently and solemnly wagged their caudal appendages, and with dignity departed. Some will, no doubt, say this was but instinct, and they may be right; but I prefer to give my four-footed friend the benefit of the doubt.

None of That For Him.

[Chicago Tribune.]

"Your father refuses his consent to our union?"

"He does, Harold."

"Nothing seems to be left for us, then, except an elopement. Do you think, Myrtle," said the young man swallowing a sob, "that you could leave this luxurious home, forfeit all the enjoyments of wealth, banish yourself forever from your parents' hearts and go to the West with a poor young man, to enter a home of life-long poverty?"

"I think I could, Harold."

"Then you are not the practical girl I have always taken you to be," said Harold, with deep dejection, as he rose up wearily and reached for his hat.

Bacteria.

A writer on "minute marvels" states that the nature of bacteria was for a long time doubtful, but it has recently been determined that they are vegetable rather than animal, occurring in four forms—spheroidal, ovoidal, rod-shaped and spiral. So minute are they that 1,500, placed end to end, would only cover a space equivalent to one-quarter the head of a pin. They are composed of a granular, watery mass, surrounded by thickened walls. A drop of water is the ocean in which they live. Among their various functions is included a marvelous power of reproduction. In twenty-four hours one bacterium will produce over 16,000,000.

He Took It Hard.

[New York Sun.]

My room in a Virginia hotel was a large one and the bed stood in the middle of it. As I lay on my right side I faced two windows opening out on a veranda. At 1 o'clock in the morning a sudden draft of air woke me up from a sound sleep. It was bright moonlight, and a man had just entered one of the windows. I carefully lifted my hand and clutched the revolver under my pillow, and then I waited to see what the intruder would do. He kept perfectly quiet for five minutes, and then tip-toed over and took up my trousers. There wasn't over thirty cents in change in the pockets. He then tried my trunk, but it was locked. He picked up my coat and vest, but I had removed everything. He stood for a while as if in doubt, and then started to come to the bed.

"Want anything?" I asked, as I covered him with the pistol and sat up in bed.

"Oh, shucks!" he exclaimed, as he sat down on a chair.

"Who are you?"

"Nobody nor nuthin'! I hain't fitten fur hogs. If I knowed anything, I'd hev pizened myself last year."

"You seem to take it hard, old fellow."

"Can't help it. Everything I go into busts up on me. I've busted a sawmill, a sand bank, a yoke of oxen, a tobacco crap, and a saloon, and I was in hopes to get cl'ar of this county when this had to happen. Git up 'n tote me off to jail, and finish me up, fur I hain't fitten to be around alone."

I talked with him a while, and, finding him down on his luck, I let him out by the window and closed it after him, giving him \$2 to start the world anew on.

"I'll try it, stranger," he said as he climbed out, "but I shall look fur a bust up. When a feller hain't fitten with fittiness, then he hain't, and all the fitten he kin do won't gin him proper fittiness. Good night."

Paternalism.

[Harper's Weekly.]

THE question of a protective tariff, as Mr. Gladstone shows in his recent article, is not one of infinite and complex details only, into which experts alone can hopefully enter, and in which they often merely array assertion against assertion, but it is one which involves great principles of government. Its chief principle is foreign to the American doctrine of liberty, because, as its name implies, it is paternalism. Protection is paternalism applied to trade or commercial intercourse, as the various degrees of despotic administration in other countries are paternalism in the sphere of politics. The public authority which regulates individual freedom in travel, in residence, in public meeting and debate, in speaking, in writing, and in voting, is akin to that which restricts the same free-

dom in buying and selling. It is indeed an authority which, under the plea of the public good, tends to absorb every function, and instead of exercising only the power which is expressly given to it, assumes that the individual may exercise only such freedom as it may permit. Louis Napoleon, in the effort to establish his personal rule in France, called himself the savior of society, which is the ancient plea of despotism.

This general view was admirably and forcibly stated at the late dinner of the Tariff Reform League in Boston, by Mr. John M. Forbes, who until recently was one of the strongest and most liberal and efficient Republican leaders in New England. But upon the question of protection as in itself a good and wise policy he has parted with the party. He cited the course of events in France under the two empires, which ended in fearful disaster for the French people. Every omnibus wheel and post-horse wore the government badge. The interfering hand of public authority reached everywhere. Overtaxation, extravagance, corruption, jobbery, and all kinds of tyranny and injustice, and the general dry-rot under which the Second Empire crumbled, were due to the spirit of paternalism, which Mr. Forbes defines as over-government, or an absorbing centralization, as opposed to local government, or Lincoln's government "of the people, by the people, for the people." High tariff, posing as protection of the poor laborer, and holding on to a surplus which breeds extravagance, corruption, and jobbery, necessarily tends to a reaction in which the laborer will be the sufferer. Moreover, he argues, it is the precursor of socialism, or communism; for if the interests of trade may be properly protected by the government at the expense of other interests and industries, those other interests may in turn, and logically, be equally protected by government, until Mr. Bellamy's Look Backward will be shown to be merely a Look Forward.

This is the philosophy of protection. It is a form of paternalism, and therefore it is not agreeable to what we call Americanism, in which Mr. Forbes has great confidence. Whatever may have seemed to American enlightenment and common sense in a certain degree and under certain circumstances permissible or desirable, yet the tendency to convert a medicine or stimulant into daily food or drink must be jealously watched. He finds comfort in Lincoln's shrewd saying, "You may fool some of the people all the time, and all of the people some of the time, but you cannot fool all of the people all the time," and from Burke's famous sentence, "The people never give up their liberties but under some delusion." The paternal aspect of protection is well worthy universal attention, apart from the contested details of the tariff schedules.

Wonderful Dogs.

[Mechanical News.]

A remarkable story is told of a dog—a pointer—owned by a gentleman in Cincinnati, who three times gave him away to friends at some distance from the city, only to find him back again, once through a blinding snow storm, very shortly after his banishment. It was resolved to experiment with him, in order to test the fact whether this was the result of memory or of some keenly developed scent, or other sense not known. He was accordingly dosed with morphine and taken to a town in Kentucky, 150 miles away. In twenty-eight hours he was at his master's door. It was thought, however, that he might have recovered from his lethargy in time to see in what direction he was going, and so had found his way back by simply keeping to the railroad track. He was therefore dosed with ether, put in a closed basket, and taken northeast and southeast, then kept in a dark shed over night, and let loose in the morning. He at once set out in a straight line and on a run—not at all like a dog that had lost his way—crossed two broad rivers and three steep mountain ranges, through five large towns and a network of roads and cross roads. Although he had never been in that part of the country before, in four days he reached Cincinnati again. He could not have remembered or known anything about his journey down, for he was unconscious the whole of the time. What, then, induced him to start in the right direction and keep it until he arrived home? This question has long puzzled the naturalists, for stranger instances of animals finding their way home even than this have occurred. They are, however, rare, and suggest the idea that this instinct is exceptional, and not common to animals.

Alaska's Bears.

[Juneau Letter to Denver News.]

To the bear hunter the wilds of Alaska offer a paradise that can be found in no other country on the globe, as is attested by the yearly shipments of hides. The most chosen are those of the black bear, which roam the woods by hundred, and prime skins bring from \$25 up to as high as \$100 each in the market. During the excursion season tourists from all parts of the globe make a thriving trade for Alaska merchants in the bear-skin line. There are five distinct species of the bear in Alaska—the black, brown or cinnamon, and a cross which inhabits all portions of South-eastern Alaska and the upper portion of the Yukon country. Further north, in the St. Elias Alps, is the home of the grizzly which in size, ferocity and color much resembles the grizzlies of the Sierra Nevadas; and still further north, along

the lower reaches of the Yukon and the ice fields of the Arctic Ocean, is the white polar bear. As brave and skillful in hunting bear as the Alaska Indian is, he seldom hunts the St. Elias grizzly, both because there is little profit in the hides and the great size and ferocity of the beasts make hunting them a most hazardous undertaking. Their mode of killing them is by shooting into them from a heavily charged smooth-bore musket a heavy slug of lead, copper or iron, then awaiting their charge, which never fails to follow the shot, with a long, heavy and strongly made spear, resting the butt of the weapon on the ground and planting one foot firmly against it. The point of the spear rests at an angle to pierce the bear in the breast, and the bear's own weight when it strikes the spear in its mad charge, is calculated to drive the weapon through him or pierce him deep enough to cause death. As will be readily seen, if at this critical moment the hunter's courage should fail him, or by a miscalculation the spear failed to impale the charging beast, the hunter would be knocked senseless and immediately torn into shreds. This mode of bear-hunting may have its advantages, but only the Alaska Indian has the courage to try the experiment.

Anecdote of Girard.

[Detroit Free Press.]

A man who had just set up in the hardware business, and who had been a clerk where the eccentric millionaire, Stephen Girard, had been in the habit of trading, applied to him for a share of his patronage. Girard bought of him, but when the bill was sent in, he found fault and marked down the prices.

"Cask of nails," he growled, "which I was offered for so and so. You have charged so and so, and you must take it off."

"I cannot do it," said the young merchant.

"But you must do it," roared Girard.

"I can not and will not," was the final reply.

Girard bolted out, apparently in a rage, but soon after sent a check for the whole bill.

The young man began to relent and say to himself: "Perhaps he was offended, then, at that price, but it is all over now. I am sorry I did not reduce the bill and get it out of him on something else. His trade would have been worth a good deal to me."

By and by Girard came again and gave him another order. The young man was very courteous, and said he was almost sorry he did not reduce the former bill.

"Reduce a bill!" exclaimed Girard. "Had you done it, I would never trade with you again. I merely meant to see if you had cheated me."

Let each man take what he needs—no more.

Shame on the miser with unused riches,
Who robs the toiler to swell his hoard—
Who beats down the wages of the digger of ditches,
And steals the bread from the poor man's board.

Shame on the ruler who rides in his carriage
Bought with the labor of half-paid men—
Men who are shut out from home and marriage,
And are herded like sheep in a hovel pen.

Let the clarion voice of a nation awake them
To broader views and fairer play,
Or let the hand of a just law shake them
Till their ill gained dollars shall roll away.

Let no man dwell under a mountain of plunder,
Let no man suffer with want and cold;
We want right living—not alms giving;
We want just dividing of labor and gold.

Mrs. C. I. Wolf.

Have But One Object in Sight When on Duty

[Locomotive Engineer.]

Every engineer should train himself to think only of his work while on duty, to lay aside all his troubles, and joys, and hopes, and fears, and aspirations, and think only of that particular engine and train, and how best to bring them to their destination safely, on time, and in the best possible manner known to the art of locomotive engine running.

Just think for a moment, and see if you don't remember of a wreck, and a bad wreck, when in your own mind you are satisfied that it was caused by an engineer thinking of something else—family troubles, religion, love or real estate.

When you step upon your engine, try to lay aside every other care, and every other thought but the exacting duty in hand.

If you were out riding with a friend, and telling him or her a story, and your horse suddenly took fright and ran away, you would bend every energy to subdue the horse, and then resume your story. Learn to do that on your engine.

Lay aside all engrossing thoughts on religion, love or money, as of secondary importance, until you are at the end of the run; then, if you so desire, take them up where you left off.

The writer once fired for a man who, in this particular, had mastered himself completely; he left all his cares at home—and he had some sad ones—and thought only of his work.

He would sit as rigid as stone for an hour, his hand on the brake valve, his eyes on the track; you would think his thoughts far away, but ask him where any train was, what orders he had, or what the extra click was, and he would tell you in an instant—he was thinking of his work.

He put all his life and soul into his present duty; ask him a question outside of the work in hand, and he invariably replied, "I wasn't thinking about that." This man was afterward killed by a fireman who, after letting their light engine into a siding

at night, locked the switch for the side track, and let an express train crash into the engine from behind; the fireman confessed at the hearing that he was thinking about what the Rev. So-and-So said the day before, and forgot what he was doing.

If you are running, remember that your success and reputation do not depend on how good an all-around, average man you are, or how much you know about running the master mechanic's office; it depends upon how well you perform your duties each hour and each minute.

The safety of your train does not depend upon your remembering what place you will meet a train that has just left the other end of the line, but upon your knowing where and where not to meet the *next* train.

If you are a fireman, remember that your first duty is to do your particular work the very best you know how; to think of your fire, and all that pertains to its evaporating the most water on the expenditure of the least coal; to think of your signals, your lamps, and of everything under your care; you will rise in the estimation of your engineer and the officers of the road, only on your reputation as a fireman.

You cannot afford to think of anything else than your duty while on an engine; train yourself to this now, it will be of the greatest value when you are promoted.

No man does his whole duty to his employers or to himself when he "thinks about something else" while on a locomotive—do you do it?

Jay Gould's Prayer.

A newspaper published in the far west says they have it from the very best of authority that the Wizard of Wall street prays when he prays at all, as follows:

Our father who art in England, Rothschild be thy name; thy financial kingdom come to America; thy will be done in the United States as it is in England. Give us this day our bonds in gold, but no silver; give us plenty of men's votes to keep a monopoly in power and their friends in office. We know, our father, we have done wrong; we have robbed the honest poor and brought distress to many a door. We know it was wrong to refund the bonds and make them payable in coin; we know that it was wrong to water our railroad stock, but thou knowest we made money by that. Thou knowest our father, that we are above politics. It is the same to us whether Democrats or Republicans rule, for thou knowest we are able to sway all political jobs in our favor. Lead us not in the way of strikers, but deliver us from the hands of the insane Knights of Labor and the Farmers' Alliance. Thus we shall have the kingdom, bonds, interests, power and gold until the Republic shall end. Amen.

The Life of a Rail.

[Benjamin Norton in August Scribner.]

It is not economy to allow anything to be out of repair, on the supposition that it is less expensive than it would be to spend comparatively little from day to day to keep it up. The day of reckoning will come in the end and the sacrifice will be considerable. As the track is the fundamental feature, the cross ties or sleepers and rails should be the best. Iron rails are practically out of date, and it is fair to assume that the time is approaching when wooden ties will be things of the past. Where the traffic is light, heavy steel rails may not be necessary; but it has been generally found economical to put in use rails which do not weigh less than 67 or 70 pounds to the yard; and even greater weight than this is not ill advised—they require fewer cross ties to the mile, and in consequence the force of men required to keep the track in condition is less. Light rails are soon worn and battered out on a road over which heavy engines are run and large trains are hauled. The powerful locomotives now built require a well-kept track and a solid and substantial road-bed. Heavier and faster trains have tended to reduce the average life of rails, even though the weight of the rails has also been steadily increasing. Circumstances vary on the different roads, but it safe to say that eight to ten per cent. of all rails on the track must be renewed every year.

Shingled Farms.

[Daniel R. Goodloe in Forum.]

The Western States have given more attention to the collection of statistics of mortgages than any other part of the country. The subject is one of great and growing interest, and it is well worth the careful examination of statisticians and statesmen.

Ohio is the oldest of the Northwestern States. The state bureau of statistics reported for the year 1888, 291,640 mortgages upon real estate, and the amount for which the land is mortgaged is \$330,999,000. The assessed value for real estate was \$1,220,262,000. The mortgage indebtedness, therefore, was, within a fraction, one-third the value of the whole real estate of Ohio.

The aggregate mortgage indebtedness of the people of Indiana is at least \$26,000,000.

The total number of real estate mortgages in Illinois in 1887, apart from city lots, was 12,777, for an amount of \$142,400,000. The overdue interest amounted to \$4,919,754, and the total indebtedness of the farmers, therefore, was \$147,320,000. The number of acres mortgaged was 8,082,794, and the rate of interest was about 6½ per cent. But of course the interest "nominated in the bond" was not all. The interest, in one

form or another, will rarely fall below 10 per cent.

The annual report of the Michigan labor bureau for 1888 shows the following results: The total number of farms in the state was 90,803, of which 33,079 were mortgaged, their assessed value being \$79,713,000 and the mortgage indebtedness \$37,456,000. The rate of interest was 7.2 per cent., and the accrued interest was \$2,701,000. The percentage of mortgages to the assessed value of the mortgaged lands was 46.8. The number of mortgage foreclosures during the year was 1,067, and the number of redemptions 131. The number of sales under execution was 244, and the number of redemptions was 33.

There are said to be 270,000 farms in Kansas, and on this basis the editor of the *Topeka Advocate* concludes that the total mortgage indebtedness of the state among the farmers is \$146,563,000. The report adds: "A great many have had to borrow interest from the banks, and others have not paid interest for two years."

Female Factory Slaves.

Dr. Matthews, the pastor of Centenary church, St. Louis, who has achieved quite a reputation by his advocacy of the rights of the poor, and who frequently raps his aristocratic congregation over the knuckles because of its vainglory, has preached a sermon on the factory girls of St. Louis that has excited much comment. He was bitter in his denunciation of the employer who "herds" men and women into the same apartments to work, and declared that the tendency is to destroy and unsex womanhood. He also roundly scored the men who work with these women but so far forget themselves as to fail in their respect to the sex.

Touching on the labor question generally, he said there was much to say regarding the miserly wages paid these young girls, many of whom are in poverty stricken circumstances. "Here are the brickmakers, carpenters and mechanics," said he, "along all lines fighting for eight hours a day. Able bodied men fighting for what they think is justice, but who says a word in behalf of the ten and twelve and fourteen hours a day child, at nothing a week practically? I understand there is to be an emancipation day for the laborer and mechanic who works more than eight hours a day. Why does not some one plead for the emancipation from the pernicious surroundings, fourteen hours a day and small pay, of the girls in the factories?"

JACOB's well and the plot of ground surrounding it have been sold by the Turkish government to the Greek church for £4,000.

Forty Proverbs of the Sea.

He who would learn to pray should go to sea. When one falls into the sea he stays there. When you walk, pray once; when you go to sea, pray twice; when you go to be married, pray three times. Women are ships and must be manned. The sea refuses no river. All the rivers go to the sea, and it never overruns. The sea is not soiled because a dog stirs it up. To a drunken man the sea only reaches to the knees. If the sea boiled, where would one go to find water to cool it? What comes by starboard goes by larboard. Being at sea, sail; being on land, settle. He that will not sail till he have a full, fair wind will lose many a voyage. Unless you have the wind astern you must know how to navigate. You cannot sail as you would, but as the wind blows. In a calm sea, every man is a pilot. To a rotten ship every wind is contrary. What fear would he have of the waves who had Noah for a pilot? Every sea, great as it is, grows calm. A large ship needs much water. Where the ship can go the brigantine can go. It is easier to get away from the bank than from the bottom. The ship which doesn't mind her helm will mind the hidden rocks. He who can steer need not row. It will not do to have two mainmasts in a ship. Better lose an anchor than the whole ship. Good roller, good sailor. Do good and cast it into the sea; if the fish ignore it, God will know it. If the clouds look like they had been scratched by a hen, get ready to reef your topsails then. The full moon eats clouds. He who sends a mean man to sea will get neither fish nor salt. Every port serves in a gale. A mariner must have his eyes on the rocks and sands as well as on the North Star. Ill goes the boat without oars. From the boat we get to the ship. Don't judge of the ship from the land. The freshest and sweetest fish come from the saltiest sea. No one can complain of the sea who has been twice shipwrecked. He gets his passage for nothing, and winks at the captain's wife. The sea isn't burning. He that is embarked with the devil must sail with him.

Gutta-Percha.

[Electrical Review.]

It appears that there exists a serious risk of the extermination of the plant or tree from which gutta-percha is obtained. This gum is used in many industries, but principally in the manufacture of submarine cables, as it is capable of sustaining its insulating qualities when submerged under water at great depths; in fact, the insulation of gutta-percha actually improves with age when kept continually under water. The disappearance of the curious tree from which gutta-percha is obtained would,

therefore, be a calamity of world-wide importance, yet it would appear from a report recently made to the French Academy of Sciences that we are actually threatened with such a calamity. The French government, recognizing the importance of possessing an intimate knowledge of the source of supply of this precious material, entrusted to M. Sérullas, a distinguished scientist, the task of exploring the Malayan Archipelago, which is the home of the *isonandra-gutta*, with a view to studying the peculiarities of the tree and methods employed in cultivating it and extracting the gum.

M. Sérullas spent three years in Malay and studied the *isonandra* in all periods of its existence, acquiring a complete knowledge of its natural history and physiology; but he reports that there is absolutely no method in the manner employed by the natives in robbing the tree of its sap, and that no effort is made to cultivate and propagate so valuable a member of the plant-world. The natives adopt the wholly barbarous system of cutting a tree at the roots in order to extract the gum; thus each tree only gives one yield and is then dead forever. No wonder gutta-percha is rapidly getting to be worth its weight in silver. We would suggest to our British cousins, who are probably the largest consumers, that the simplest way out of the difficulty would be to annex the Malayan Archipelago and place the cultivation of the *isonandra* on a scientific basis.

A Veritable Salt.

Mrs. Belle Wooster Higgins, of Sullivan, Me., is described as a "veritable salt." She has been at sea almost constantly for nineteen years, and during that time has sailed to nearly every part of the globe, including several European ports, Africa, Australia, the Island of Sumatra, South America, every port of the West Indies, and nearly every Atlantic port in this country. She is expert in navigation, and is possessed of sufficient nautical skill to enable her, if it should ever become necessary, to take full command of a vessel and sail her to any part of the world.

He Meant Well.

[Chicago Evening Post.]

Dr. Squills—Yes, I realize my time to die has come, but I feel that I am not going among strangers.

Parson Snooks—No, indeed, doctor. Think how many of your patients have preceded you.

A boy in a Braintree Sunday school, when asked from the catechism, "What is the chief end of man?" said: "The chief end is the end with the head on."

Betty's Many Husbands.

[Bradford (Pa.) special to Philadelphia Press.]

Ten years ago the little tavern of Emersons' Mills in the Pine Run lumber region was kept by an odd character, Elias Benton. He had a very pretty daughter named Betty. Her mother was dead and she looked after the household affairs of the tavern. She was sixteen years old, and Edward Shott, a bark contractor, young and well-to-do, was in love with her and wanted to marry her. Betty wanted to marry young Shott, but her father had other plans, and she was compelled to obey.

He chose for her husband a man three times her age, who owned a large pine tract in the neighborhood, a valuable property, that Landlord Benton was anxious to possess. He compelled his sixteen-year-old daughter to marry this man, Aulds by name. He lived only six months and left his young widow the pine land, which her father sold and appropriated the proceeds to his own use. Young Shott, in the meantime, had closed his contracts and gone away. One year after the death of her husband, Mrs. Aulds married, to spite her father, John Grover, a sawyer. He was killed in his employer's mills one month later.

The landlord's daughter was now twice a widow, although she was not yet eighteen years old. Two months after her second husband's death Edward Shott returned to Emersons' Mills, and on her eighteenth birthday young Widow Grover, who had grown defiant of her father, married her old-time love. The couple lived happily for one year and a child was born. The child was not two weeks old when the father was crushed to death by a falling tree in the woods. Widowed now for the third time, the landlord's daughter mourned her third husband sincerely for two years. About this time her father died.

At the age of twenty-one she made what was regarded as a most fortunate marriage, her fourth husband being Elmer James, a young Warren County lawyer. James turned out to be a drunkard. He abused his wife and her child so shamefully that she had no difficulty in obtaining a divorce, which was granted four months after she became Mrs. James. She remained single then until she was twenty-three, when she married George Rhone, a widower of fifty. He was a prominent man in the locality. Before they were married a year Rhone died with the small-pox. His young wife nursed him all through the course of the dreadful disease, escaping without taking it herself. Rhone left his widow \$10,000 in cash.

Not long after her last husband's death she took her child and went to Ohio, where

she had relatives living. This was one year ago. Last Tuesday she wrote to a friend in this city that she was to be married the next day in Covington, Ky., to a young man named Charley Green, a blue-grass farmer.

REPORTER—Can I see Mrs. B.?

Servant—She's out, sir.

Reporter—One of the family, then?

Servant—All out, sir.

Reporter—Well, wasn't there a fire here last night?

Servant—Yes; but that's out to.

Acknowledgments.

SLATER, MO., February 14, 1891.

To the Members of West End Lodge, No. 18:

GENTLEMEN:—I have just received through Brother Rufus McCormack a draft for \$1,500.00 on the policy held by my beloved husband, Eugene Rogers. Please accept my heartfelt thanks for the prompt adjustment of the claim. May God bless your order and let it still continue to prosper. I sincerely thank the brothers of Lodge 18 for their kindness to me during my great trouble. May God in His goodness and mercy protect the members throughout the land in the earnest prayer of

MAGGIE ROGERS.

DEFIANCE, OHIO, January 9, 1891.

To the Brotherhood of Locomotive Firemen:

I wish to offer my sincere thanks to Messrs. H. N. Lamb and Chas. F. Reneman for a draft for \$1,500, the amount of insurance held by my late husband, C. J. F. Cook. My heartfelt thanks are tendered to Garfield Lodge 283, for their many acts of kindness to me in my affliction and sorrow and also for their handsome floral offerings. May peace and prosperity go with you through life in the best wishes of

MRS. LAURA A. COOK.

LOGANSPORT, IND., January 25, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I desire to express my sincere thanks to the Brotherhood of Locomotive Firemen for the prompt payment of \$1,500 due me on the policy of my dear son, Frank M. Dudley, through Mr. C. E. Wallace, Receiver. I also desire to express my thanks for the beautiful flowers presented by Wm. Hugo Lodge, No. 166, and also to those who accompanied the remains and who so kindly assisted at the funeral. May God ever bless and protect your noble brotherhood in the sincere wish of his parents.

MRS. DOLLIE DUDLEY.

CLEVELAND, OHIO, January 31, 1891.

To the officers and members of the B. of L. F.:

DEAR SIRS AND BROTHERS:—I desire to return my sincere thanks through the columns of our Magazine for the payment of \$1,500 on my disability claim, also to the brothers of Forest City Lodge No. 10, for their kindness and help through all my misfortune and sufferings. Hoping that our beloved order will continue to prosper and with best wishes for all its members, I remain

Yours fraternally,

JOHN MINKE.

LIVINGSTON, MONT., Feb. 18th, 1891.

To J. K. Gilbreath Lodge, No. 264, B. of L. F.:

DEAR BROTHERS:—I have received the draft for fifteen hundred dollars (\$1,500), due on the policy of my beloved husband, Mr. Jacob Hutter, who was killed last September at South Butte. Hoping you will accept my heartfelt thanks for your kindness and sympathy shown toward me in my great sorrow, and praying that the good Lord will prosper the B. of L. F., I remain,

Mrs. Georgia Hutter.

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

MARCH, 1891.

Assessment Notice for March.

OFFICE OF GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., March 1, 1891. }

ASSESSMENT No. 19, \$2.00.

To Receivers of Subordinate Lodges:

DEAR SIRS AND BROTHERS:—You are hereby notified of the death and disability of the following members entitled to all the benefits of the order, viz:

CLAIM No. 382. Morgan D. Tindall, of W. H. Thomas Lodge, No. 159, was killed by Railroad Accident, December 13, 1890.

CLAIM No. 383. C. D. Hennessey, of Big Four Lodge, No. 337, was killed by Railroad Accident, December 13, 1890.

CLAIM No. 384. Frank Thorpe, of Windsor Lodge, No. 421, died of Heart Disease, December 24, 1890.

CLAIM No. 385. Michael H. Brown, of Endeavor Lodge, No. 267, was killed by Gun Shot Wound, December 25, 1890.

CLAIM No. 386. William E. Fisher, of Petroleum Lodge, No. 383, died of Typhoid Fever, January 1, 1891.

CLAIM No. 387. Murdock McLean, of S. M. Stevens Lodge, No. 150, died of Abscess of the Brain, January 11, 1891.

CLAIM No. 388. Hiram W. Stephens, of Clinton Lodge, No. 34, died of Heart Failure, January 13, 1891.

CLAIM No. 389. Alexander McGilvrey, of Maple Leaf Lodge, No. 151, was totally disabled by Loss of Leg, January 15, 1891.

CLAIM No. 390. Chas. A. Young, of Success Lodge, No. 33, was killed by falling into Coal Shaft, January 20, 1891.

CLAIM No. 391. Jno. F. Stafford, of White Breast Lodge, No. 278, was killed by Engine Turning Over, January 21, 1891.

CLAIM No. 392. Gus Altenberg, of S. S. Merrill Lodge, No. 188, was killed in a Collision, January 25, 1891.

CLAIM No. 393. Fred S. Brouse, of Pike's Peak Lodge, No. 218, was killed in a Collision, February 1, 1891.

CLAIM No. 394. Patrick J. Loneygan, of Violet Lodge, No. 365, died of Pneumonia, February 3, 1891.

CLAIM No. 395. Albert H. Miller, of Adair Lodge, No. 100, died from injuries received in a Wreck, February 4, 1891.

CLAIM No. 396. Samuel G. Allison, of Enterprise Lodge, No. 75, died of Paralysis of Bladder, February 8, 1891.

CLAIM No. 397. Hugh Monford, of Belle Plaine Lodge, No. 311, died of Pneumonia, February 11, 1891.

An assessment of Two DOLLARS (\$2.00) has been levied for the payment of the above claims, and you are required to forward said amount for each member whose name appears on the rolls of membership MARCH 1ST, 1891, said remittance to reach the Grand Lodge not later than MARCH 20TH, 1891, as provided in Section 50 of the Constitution. Any lodge failing to make returns as above provided will stand suspended from all the benefits of the order, as per Section 52 of the Constitution.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. and T.

Disability Claims.

A large number of disability claims have been filed with the Grand Lodge since the new law enacted at the San Francisco convention took effect, and as this law requires the grand officers to make a *personal* investigation of all such claims, they will have to wait their turn as it requires time to visit the remote points from whence the claims are filed. The claims will all be reached in due time, but in the nature of things no immoderate haste can be taken. In so far as it lies in their power the grand officers will allow no claim that is not legal and just. The fraud and imposition practiced under the old law, which cost the order thousands of dollars, will not be re-enacted if diligent investigation and mature deliberation will prevent it.

Addresses Wanted.

R. P. KLEINHAUS—A member of Oasis Lodge, No. 396. When last heard from was employed on the Seattle & Eastern Railway. Anyone knowing of his whereabouts will please advise Chas. A. Smith, Box 372, Ogden, Utah.

FRANK ALEXANDER—A member in good standing of Northwestern Lodge, No. 82. When last heard from was in Mexico. Any information as to his whereabouts will be thankfully received by W. E. Richmond, 820 N Girard ave. Minneapolis, Minn.

J. S. WOOD—Left Montpelier, Idaho, last July. He was employed there as locomotive fireman. Anyone knowing his address will confer a great favor by addressing his father, Eli Wood, Boulder, Boulder County, Colorado.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER,
TYLER BLAUTE, IND., February 1, 1891.

To Subordinate Lodges: The following is a statement
of the Beneficiary Fund for the month of January,
1891: RECEIPTS.

incentive to every Magazine Agent in the
order to roll up his sleeves and enter the
competition.

SOLID GOLD WATCHES FREE!

time with proper management and square, honest and truthful statements to our subscribers that we will be friends with every person in the land. Then again, we know that our elegant Solid Gold Watches and our paper will give such perfect satisfaction that we will get as much as 50 to 100 new subscribers in every town where our paper goes, and as there is something like 50,000 towns in America, you can easily see what an immense circulation we are sure to build up. Remember we are after a large circulation! You must have it! Even though it costs Two Millions of Dollars! Other papers are sure to be sold and fail, but we will not. We will be the most popular and the most profitable Home publications that is printed. You'll say so too, when you see it. It is a complete family paper in every way. Each issue is beautifully illustrated, containing complete and serial stories of fascinating interest, and a rich variety of funny sketches, anecdotes, news, condensed notes on fashion, art, industries, literature, &c., and stands conspicuous among the illustrated journals. When the New York World, Herald, Times, Tribune and other papers have an income of over One Million Dollars each year, we can't see why we can't do it. Use a man every day, and you can't see anything yet that another one couldn't do! Any person with money to invest, can make money! Isn't this true? Now read the following and secure a splendid premium.

OUR GRAND 60 DAYS OFFER!

Will hatch larger percentage of fertile eggs at less cost than any other hatcher. Send 6c for Illus Cats. GEO. H. STAHL, Quincy, Ill.

IT REGULATES THE LIMITED.

The Standard Watch for Railway Service. A Watch That Will be Passed by The Most Critical Railroad Inspector. Within the Reach of All.

Where to obtain a thoroughly reliable watch that will stand the hardest kind of usage without impairing its value as a time-keeper, is a question the locomotive firemen, as well as railroad men generally, often find hard to get answered. The difficulty is overcome by the opportunity presented in this advertisement. This is no less than the offer of our celebrated **Standard Watch** for Railway service, which is well known as one of the very best time-keepers now on the market, at prices so low that one cannot afford to buy any other. It is a watch that will be passed by the most critical

Railroad Inspector. The movement contained in this watch is made by the celebrated Waltham Watch company. It is Non-Magnetic, gilt, has fifteen red ruby jewels, four pairs of jewels in gold settings, chronometer-compensation balance, patent regulator, patent Breguet hair spring, double sunk dial with fine Arabic figures, quick train, dust band; is ADJUSTED TO HEAT AND COLD and THREE POSITIONS and is NON-MAGNETIC.

Styles and Prices.—We furnish these watches in the following styles and at the prices named:

4 oz. Silverine cases, open face	\$15.48
4 oz. Plain open face, gold joint, coin silver case	21.48
14 K. gold filled case, open face, screw bezel and back, handsomely engraved and warranted to wear 21 years	38.48
14 K. gold filled case, hunting, handsomely engraved, and warranted 21 years	26.48
14 K. gold filled case, open face, Louis XIV. style, screw bezel and back, handsomely engraved, and warranted 21 years	28.48
14 K. gold filled case, hunting, Louis XIV. style, handsomely engraved, in assorted designs, and warranted to wear 21 years	31.48

Any watch here described will be sent by express C. O. D., subject to thorough examination, on receipt of \$1.00 as a guarantee of good faith, which amount will be credited on the bill. All goods are guaranteed to be exactly as represented.

References—Your local bankers, managers of express companies doing business in Chicago, the Prairie State National Bank of Chicago, and the publishers of this paper. Our 160 page illustrated catalogue for 1891 will be sent to any address on receipt of 10 cents in postage stamps. Our watch and jewelry repairing department is the best equipped in this country. Fine and complicated work promptly done at wholesale prices.

WM. T. SIMPSON,

Only successor to Jas. A. Foster in Michigan in the Manufacture of

FOSTER'S PATENT UNION ARTIFICIAL LIMBS.

112 and 114 Bates Street, corner Congress Street,

DETROIT, MICH

Blank applications for limbs and transportation—or commutation therefor—and illustrated catalogues furnished free.

A conductor on a Western Express is the marvel of those who have been let into his secret. Although having had both of his feet amputated, he is a conductor of extraordinary ability.

He passes through his train going at the rate of fifty miles an hour. The car jolts, hitches, sways, and he retains his balance without the least awkwardness.

At stations he alights with agility, watches his passengers and gives signals. Boards his train and walks the passageway with the steadiness of one possessing his natural legs.

Day after day for three years he has performed this round of duty, and not a soul has had occasion to suspect that he operates on a pair of artificial legs with rubber feet, and only those to whom he voluntarily reveals his condition ever know of his dependence on artificial extremities.

All this is made possible by the virtues of rubber, which largely composes the feet; the old methods of artificial limbs, with wooden feet and mechanical joints, would render this man unsafe, tottish, unsteady and unfit for a position that requires sound footing. The engraving represents Mr. Wade operating on his artificials in his chosen profession.

Conductors, engineers, firemen, brakemen, and men of all trades, who have met with the loss of either extremities, have been restored, and enabled to resume their labors by the use of artificial limbs with rubber hands and feet of the MARKS Patent.

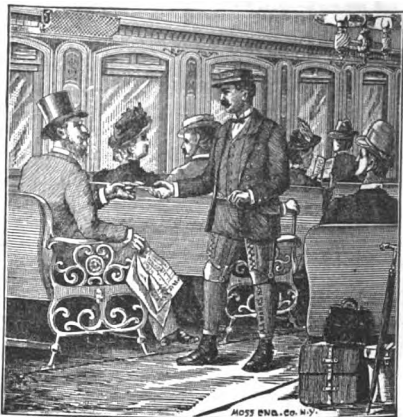

Subjects can remain at home and have artificials made, with fit guaranteed. One-half the legal arms are made from measurements and profiles, without the presence of the wearer.

Indorsed by the United States Government, the eminent surgeons in the country and over 11,000 men, women and children who wear them, residing in all parts of the world.

A treatise of 400 pages, with 200 illustrations, and 1,000 testimonials, sent free of charge.

Address,

A. A. MARKS, 701 Broadway, New York City.

Catarrh Cured, ONE CENT!

If you suffer from Catarrh, in any of its forms, it is your duty to yourself and family to obtain the means of a certain cure before it is too late. This you can easily do at an expense of one cent for a postal card, by sending your name and address to Prof. J. A. Lawrence, New York, who will send you FREE by return mail, a copy of the original recipe for preparing the best and surest remedy ever discovered for the cure of Catarrh in all its various stages. Over one million cases of this dreadful, disgusting, and oftentimes fatal disease have been cured permanently during the past five years by the use of this medicine. Write to-day for this FREE recipe. Its timely use may save you from the death tolls of Consumption. Do not delay longer, if you desire a speedy and permanent cure. Address,

Prof. J. A. LAWRENCE, 88 Warren Street, New York.

\$1,000 FOR AN OLD COIN

IF YOU HAVE ANY COINS

dated before 1871, with plain date, send us a list. We pay high prices for hundreds of dates and kinds. Among coins that we want are: silver dollars dated between 1794 and 1868; dates of half dollars before 1864; quarters of all dates before 1868; all dates twenty-cent pieces; all dates dimes before 1869; silver five-cent pieces before 1867; five-cent nickels of 1877 and 1883; all dates of silver three-cent pieces; nickel three-cent pieces before 1870; two-cent pieces between 1864 and 1873; all large copper cents, also small cents with eagles on, also cents of 1873 and 1877; all half cents; foreign coins, fractional and Confederate currency, etc. For above we pay big amounts over face value, if in required condition. This is a comparatively new business, and by merely keeping your eyes open when handling money, you may find many coins that we want. A short time since (Jan. 23), a Scotchman in an Illinois town found one coin worth \$700. Others have done even better. The New York World says: "Many people have become rich by looking after coins wanted by collectors." The Home Journal says: "Collecting coins is a very profitable business nowadays, as there are but few in it. One Boston broker, Mr. W. E. Skinner, buys from agents all over the country, and pays them big sums for rare coins." Coins that are very hard to find in one section of the country are often easily found in others. Largest business, highest prices, prompt payments, best references. Write at once for further particulars, enclosing stamp for reply, which may be worth hundreds of dollars, perhaps a fortune, to you.

W. E. SKINNER, Largest Coin Dealer in the U.S., 325 Washington Street, Boston, Mass.

SIDE BY SIDE.

TWO HEROES, speeding toward their homes where Wife and Little Ones await them, MEET THEIR DEATH while at the POST OF DUTY.

On Friday evening, October 3, 1890, a freight train, rushing down a heavy grade at full speed to the entrance of a tunnel, plunged into a land-slide which had completely blocked the entrance, burying the engine and piling up the cars in a heap of ruins. To add to the horror the wreck took fire. The Engineer and his Fireman were covered in the debris. The Fireman, GEORGE KNUCKLES, was caught by the arm, and was not released until about daylight the next morning, while ENGINEER MCCOY was literally buried beneath the pile of wreckage. With his head terribly crushed and his body almost cooked by steam and water, he finally succeeded, after more than an hour, in crawling out more dead than alive.

Both men were insured in the **RAILWAY OFFICIALS' AND CONDUCTORS' ACCIDENT ASSOCIATION**, and the history of their case is interesting.

ENGINEER JAMES B. MCCOY, Of Atlanta, Georgia,

was insured in the Railway Officials' and Conductors' Accident Association for \$1,000 at death and \$5 weekly indemnity. He was in a wreck on August 12th, being badly scalped and bruised. On August 18th, the Association sent him, while laid up, his first week's indemnity, and on October 3d, the morning of his death, had sent him the balance of his indemnity for seven weeks. His first run after his recovery was that in which he was killed, on October 3d. He lingered in a awful suffering until three o'clock Saturday morning, when his brave soul went out from his poor, maimed body. At nine o'clock that morning the Association in Indianapolis learned of his death, by telegraph. Before ten o'clock they telegraphed to his widow \$250 Funeral Benefit, and it reached her four hours and a half before the remains of her husband were brought home. Saturday afternoon's mail carried the balance of his death indemnity, which was paid over to Mrs. McCoy, and her receipt in full obtained on October 8th, just five days after his death. The following acknowledgment was received October 10th:

ATLANTA, GA., October 8th, 1890.

W. E. KELLS, Secretary Railway Officials' and Conductors' Accident Association, Indianapolis, Ind.:

DEAR SIR:—I have this day received from J. D. Collins, your agent,

the sum of \$1,000, being the full amount due me on policy held by my late husband, J. B. McCoy, who was killed at Little Tunnel, E. T. V. & G. E. R. R., October 4th, by running into a land-slide. I wish to extend my heartfelt thanks to the noble Accident Association. The \$250 funeral benefit was paid to me in six hours after my husband's death occurred. The full amount of \$1,000 was settled in five days after day of death. I remain, truly yours,

Mrs. JAMES B. MCCOY.

FIREMAN GEORGE KNUCKLES, Of Atlanta, Georgia,

had his arm badly crushed and burned, but the Association did not learn of his being in the wreck until Monday evening, October 6th. He was insured for \$2,000 death and \$10 weekly benefit. On Tuesday the Association sent him his first week's indemnity. On Thursday they were notified that his arm had been amputated on the night of October 6th, at the hospital in Dalton. The same day, October 6th, they telegraphed to him the sum of \$250, and sent by mail the balance, \$750 due him as *Half Benefit for loss of one limb*. On Saturday morning, the 11th, they were notified that he had died from his injuries on the night of Tuesday, October 7th, and the same day (October 11th) sent to their agent in Atlanta the remaining \$1,000 having settled the full claim of \$2,000 in five days from the first information received of his injury, and within four days of his death.

VARIABLE EXHAUST DAMPER, FOR LOCOMOTIVES.

PATENTED NOVEMBER 10, 1885.

The use of the Damper, placed under control of the Fireman, assists him
in the performance of his duties, so that, according to his testimony, the
difference is as day and night, as compared with an engine without the
Stack Damper.

RESULTS:

TO THE FIREMAN.—Less labor, no coal gas in the cab, no blowing of
cinders and sparks into the front of the cab when open, and easy control of
the fire and steam pressure.

TO THE R. R. CO.—In most cases large saving of fuel, also preservation
of the flue joints and firebox, and safety against fire from sparks.

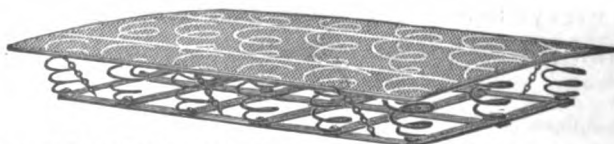

TO THE PUBLIC.—Cleanliness and noiselessness.

Send postal for pamphlet to:

H. A. LUTTGENS.

Box 131, PATERSON, N. J.

FIREMEN, ATTENTION!

Why not make your seat in the cab easy by having one of the BUCKEYE CAB SEATS, like above cut?
Have been tested and not found wanting. They are cheap and durable, having steel tempered springs and

General Tide Water Coal Agts.

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

87 MAIDEN LANE, NEW YORK.

Baldwin Locomotive Works.

ESTABLISHED 1831.

ANNUAL CAPACITY, 1000.

LOCOMOTIVE ENGINES,

Adapted to every variety of service, and built accurately to standard gauges and templates. Like all parts of different engines of same class perfectly interchangeable. Broad and Narrow Gauge Locomotives; Mine Locomotives by Steam or Compressed Air; Plantation Locomotives; Noiseless Motors for Street Railways, Furnaces, etc.

BURNHAM, WILLIAMS & CO., Proprietors,

PHILADELPHIA, PA.

WM. SELLERS & COMPANY,

(INCORPORATED.)

SOLE PATENTERS AND MAKERS OF

Self-Acting Injector of '87

Range of Capacity over 60 per cent., and can be regulated, therefore, to work continuously for light or heavy trains. Never fails to promptly lift hot or cold water.

No service on a locomotive sufficiently severe to permanently stop its working.

IT WILL RE-START ITSELF

should the Jet break from interruption of the stream or water supply, as soon as the supply is resumed.

ADJUSTS ITSELF

to varying steam pressures without waste of water. Increases quantity of water with increase of steam, and vice versa.

Very easily operated—Started by pulling out the lever, and stopped by pushing the lever in.

Sworn before me, October 1st, 1890.

GEORGE S. CONGDON,

Notary Public, Eureka Springs, Carroll County, Ark.

Copy of letter received from W. S. Roberts in acknowledgment: "The watch is a beauty. I am more than pleased with it. Thanks for the handsome monogram."

TOWNSEND'S NEW WATCHES

While maintaining the old-time high standard of general excellence of our goods, are fitted with the new Non-Magnetic Balance, Hairspring and Escapement. They are sold with the Guarantee of Absolute Freedom from Magnetic Influences and to Pass Inspection under the Time System on any Railway. For a high class, accurate watch, get the new **TOWNSEND**. Our specialty is "Watches for Railway use." We handle all makes and in greater quantities than any house in the Country, and will give you honest goods at the best possible figures. We are specially appointed agents for the celebrated Howard Watches.

WE WILL SUPPLY:

American Keystone, Hampden, Springfield or Elgin, stem-wind, 7-jeweled movements, chronometer balance and

straight line escapement, hunting or open face, 14-carat gold-filled engraved case, warranted for 20 years (assorted engravings), as per cut, (warranted).

Open face, net . . . \$17 00
Hunting case . . . 20 00

Your choice of same movement and 14-carat filled engraved case, as above described, and with 11 jewels (warranted).

Open face \$18 00
Hunting case 21 00

American Keystone, Hampden, Springfield, Rockford or Waltham, fine nickel movements, 15 jewels, 4 pairs extra in settings, chronometer balance, patent regulator, patent Breguet hairspring, hardened and tempered in form, quick train, straight line escapement, patent pinion, adjusted to heat, cold and position, in Columbia, Dueber, or Faby's gold-filled engraved case. Warranted for twenty years (assorted engravings). This watch is warranted a good timekeeper.

Open face, net \$30 00

Hunting case, net 33 00

Send 50c for express charges and we will send it for examination; if satisfactory and as represented, you can pay for it, otherwise it will be returned. A complete line of Cases in the newest and richest patterns. Gents' and Ladies' sizes, in gold, gold-filled and silver; also fine diamond ornamented cases suitable for prescription

All Railway Men will do well to patronize the old friend of the Orders, J. S. Townsend, who has a rich assortment of new and beautiful goods in the jewelry line, and some new grades of watches he wishes to introduce. Fine catalogue, containing 280 pages, filled with illustrations of handsome goods, sent on application.

J. S. TOWNSEND.

1554 WABASH AVE.

CHICAGO, ILLINOIS.

FIREMEN, and all Brotherhood men, remember A new feature in Emblems is the Lapelle Buttons: we have them for all Orders, in plate and gold, from 50 cents to \$1 50. Townsend originates, manufactures and sells more Railroad goods than any house in America. We are headquarters for emblem goods of all kinds. FIREMEN ARE INVITED TO EXAMINE.

Good morning

Have you used
PEARS' SOAP?

"I have never come across another Toilet Soap which so closely Realizes my ideal of perfection;

Its purity is such that it may be used with perfect confidence upon the tenderest and most sensitive skin—EVEN THAT OF A NEW BORN BABE."

Dr. REDWOOD, Ph. D., F. C. S., F. I. C.

Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain.

Insist on having Pears' Soap. Substitutes are sometimes recommended by druggists and storekeepers for the sole purpose of making more profit out of you.

Taking a Pill
is often a
happy thought.

**Beecham's
Pills**

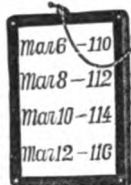

are the most wonderful antidote yet discovered for ALL BILIOUS and NERVOUS DISORDERS.

A Box of these pills, costing only twenty-five cents, constitutes a family medicine. chest. Wind and Pain in and Weakness of the Stomach, Giddiness, Fullness, Swelling after meals, Dizziness, Drowsiness, Cold Chills, Flushings of Heat, Loss of Appetite, Shortness of Breath, Costiveness, Blistches on the Skin, Disturbed Sleep,

Sick Headache, Derangements of the Liver, and all nervous and trembling sensations are cured by using these Pills.

The First dose often relieves in 20 minutes, and apprehension and sickness can be avoided by having a box always at hand wherever you are—in the house, on the train, on the steamer—ready for immediate use.

Prepared only by THOS. BEECHAM, St. Helens, Lancashire, England. B. F. ALLEN CO., Sole Agents for United States, 365 Canal Street, New York, will mail BEECHAM'S PILLS on receipt of price, 25 cents. Correspondents must mention this paper. Inquire first of your druggist.

THE ALMIGHTY DOLLAR.

At this writing it does not occur to us who first used the expression, "The Almighty Dollar"—nor does it matter in the least who was the author of the phrase—it has long since been canonized in the literature of the times, and all admit that it would be difficult to coin an expression more vividly indicative of the animating spirit of the age in which we live.

There is, confessedly, in the term, "The Almighty Dollar," a large ingredient of playful irreverence which admits of no question and is shockingly apparent when the terms, "The Almighty God" and the "Almighty Dollar" are placed in juxtaposition, but they should be placed in close proximity to enable the reader to comprehend the force of the term as applied to the dollar.

Throughout christendom the "dollar" has more devout worshippers than the omnipotent God—indeed, it is to be doubted

if there is in all recorded history more than one instance where the dollar, in a national policy, was required to take second place or a still lower rank as compared to the station of the gods—in fact, Lycurgus, some centuries before the days of St. Paul, gave the Spartans to understand, that "the love of money is the root of all evil." Lycurgus is dead, and St. Paul is dead, but the dollar is not dead. The temples of Mammon are more numerous than ever before in the world's history, the god is worshipped more devoutly and his devotees are numbered by millions, and nowhere is the idolatry more repulsive and debasing than in Christian (?) lands, and to such an extent has the debauchery proceeded in the United States, that the term, "The Almighty Dollar" tamely expresses the national degradation the worship has fastened upon us.

This debauchery is universal; no class, calling or profession has escaped its contaminations. It is a national disgrace. Its defilements are seen in every community. It pollutes the national mind, poisons every fountain of thought, and humiliates, shames and mortifies the few who, like the immortal three, would not fall down and worship the golden image the king had set up.

The worship of "The Almighty Dollar" is fruitful of all things detestable in national life. It is the prolific source of envy, jealousy and pride. It creates its aristocracies, all along the line, from rag pickers in their dens to the millionaires in their palatial homes. The worship of "The Almighty Dollar" breeds suicides and murders, and

every vulgar vice known to Sodom. It is licentious and lustful to a degree that ten thousand homes, however beautiful their exterior, are within like whited sepulchers, full of all manner of uncleanness, and still the worship goes forward and the soulless, heartless devotees, with blind and desperate eagerness, crowd around the shrine of their god like wild beasts at a lick.

In the January *Magazine*, attention was called to the announcement made by Thos. G. Shearman, of New York, that seventy persons had succeeded in securing \$2,700,000,000 of the wealth of the country.

In the January *Forum*, the same gentleman reiterates his statement, and in further replying to the question, "Who owns the United States?" says "one-half of all the national wealth is owned by 40,000 families, and that three-fourths of it is in the possession of fewer than 250,000 families.

The term "almighty" means all powerful, omnipotent, irresistible. The wealth of the United States expressed in round numbers is \$62,000,000,000. The population of the country is 63,000,000—divided into families of five each, and we have 12,600,000 families. Mr. Shearman says that "40,000 families" have secured one-half of the wealth of the country—\$31,000,000,000, an average of \$775,000 each. Again, he says that "fewer than 250,000 families have in their possession three-fourths of the wealth of the country—\$46,500,000,000, an average of \$186,000 each. As a result, if 250,000 families have secured \$46,500,000,000, there remains \$15,500,000,000 for 12,350,000 families, which would give an average of \$1,255 each. Tabulated, the showing is as follows:

250,000 families at \$186,000 each . . .	\$46,500,000,000
12,350,000 families at 1,255 each . . .	15,500,000,000
12,600,000 families. Total . . .	\$62,000,000,000

But it may be profitable to extend the analysis a stage further. If the wealth of the country, \$62,000,000,000, is divided by the population, the average amount per capita would be \$984.12. But according to Mr. Shearman's estimate, 250,000 families or 1,250,000 persons have secured three-fourths of the wealth of the country, \$46,500,000,000, or \$37,200 per capita, while 12,350,000 families, or 61,750,000 persons, have the remain-

ing one-quarter of the wealth, or \$251.00 per capita.

Such figures suggest to Mr. Shearman the coming of a billionaire, one man who will have one thousand millions of "the almighty dollars." He says:

"The least that can be said is that there are seventy American estates that average \$35,000,000. During the year, by the consolidation of two estates, one individual has become worth at least \$200,000,000. * * * The evolution of such enormous fortunes, absolutely inconceivable forty years ago, as an American possibility, naturally leads us to look into the future and to ask how far this concentration of wealth may go, and whether the existing hundred-millionaires foreshadow the coming billionaire. Is he coming? When will he come? What effect will his coming have upon society? Unless some great change takes place in our financial or social system, the billionaire is certainly coming and at a rapid speed."

The billionaire is coming with rapid speed, and will get here on time, unless some great change takes place in our financial or social system. What changes can be wrought in either the financial or social system to head off the coming of the billionaire?

Is it proposed to take the "almighty" out of the dollar? disarm it, deprive it of its power and subject it to restraints? Is it proposed to put a stop to the worship of the dollar? destroy its temples and its shrines, and disperse the worshippers?

If the billionaire is coming, he is coming with ten thousand millionaires in his train. He is coming in all the pomp and circumstances that wealth can bestow; and he is coming to stay and to multiply.

Mr. Shearman predicts that the billionaire will be here A. D. 1930, forty years hence, and asks, "what would be the effect upon our social order of the advent of the billionaire?" Some people are so mistaken about the effect of his coming, that they have drawn "lurid pictures of his tyranny," but such pictures, Mr. Shearman thinks, "have no basis in fact or common sense." Mr. Shearman is of the opinion that "the possession of such vast wealth brings a large degree of caution, and even timidity, to its

owner;" and this view he seeks to support by saying that "at the present time nineteen-twentieths of those who are worth more than ten millions keep out of active public life, and three-fourths of them are anxious to avoid even the suspicion of political influence."

Here we have the declaration that men worth from \$10,000,000 to \$200,000,000 are made "cautious, and even timid," by their wealth; but men worth from \$500,000 to \$5,000,000 do not hesitate to exert their political influence, or the influence of the almighty dollar with ostentation, and the opinion is expressed, that those of still greater fortunes are "coming to the front" in political affairs.

It would have been well if Mr. Shearman had named a few of the men worth from \$10,000,000 to \$200,000,000 who are so exceedingly prudent and faint hearted as to take no interest in public affairs, and are anxious to let it be known that they are without "political influence." True, such men may not be candidates for office, they may exercise great caution in declaring their partisan predilections, but all this caution and timidity vanishes the instant any interest they represent is in peril. Then they are no longer cautious about their declarations; they are at once transformed, they are daring to rashness, and bold to audacity. Then their money, in a steady stream, goes to support lobbies, to influence legislators and courts, and the influence of "The Almighty Dollar" is usually sufficient to carry the day. It is then that the millionaires everlastingly upset Mr. Shearman's declaration that they are timid, and that they seek no political influence. They are worshippers of "The Almighty Dollar," and they eternally stand guard around the temple of their god.

Mr. Shearman says, "the lurid pictures of the tyranny and cruelty of the millionaire have no basis in fact or common sense." That depends entirely upon what Mr. Shearman and others of his ilk may call tyranny and cruelty. The millionaire does not burn the objects of his vengeance alive, apply thumbcrews or break their bones upon the wheel. Such forms of cruelty and tyranny are not tolerated in the United States just

now. But the Millionaire Vanderbilts, under the laws of the Empire State of New York, did employ Pinkerton thugs to murder workingmen, an instance of "tyranny and cruelty" paralleled only in lands where a czar, a sultan or a shah, assumes the right to murder their subjects when it suits their whim.

Just here the question arises, Why is it that the laws of the State of New York, or for that matter, of any other sovereign state, permit the employment of Pinkerton thugs? Is it not because workingmen are supine and permit "The Almighty Dollar" to rule? Is it not because one class of workingmen, or men of one calling, totally disregard the rights, interests and welfare of other callings? Is it not palpable, glaring and notorious, that the wrongs to which workingmen are subjected, by virtue of the influence of the millionaire, are because of the suicidal divisions in their ranks, where oppositions, jealousies and indifference are ceaselessly nursed? And is it not true, that to bring about such divisions and enmities, is where the millionaire gets in his work?

When was there ever such an impudent illustration of this policy, as was furnished by Chauncey M. Depew, when he appeared before the engineers at Pittsburg to help P. M. Arthur defeat federation? On that occasion the Vanderbilts, three hundred times millionaires, were represented by Depew, and "The Almighty Dollar" was brought to the front to down federation, the last hope of railroad employes to win a final victory over the influence of millionaires.

Mr. Shearman is of the opinion that the coming "billionaire will bring an army of paupers in his train." But this is not all. "The masses, under a system which gives to one man a larger amount of wealth than can ever be attained by a million of his fellow citizens who are fully his equals in skill and merit, and far his superiors in industry," is to breed discontent which will forever increase.

What of such a picture? A train of "paupers" and universal discontent among the masses. How much further is it to scenes which the French revolution presented, and which live in crimson vividness? "The effect of such concentration of

wealth upon public and private morals," says Mr. Shearman, "may well be anticipated with concern. Already the wealthy classes," he says, "are hard pressed by the temptations of idleness, the parent of all mischief. Gambling has increased enormously, especially around New York, and a limited license for it, previously bought from local officials, has now been purchased from the legislature." Here we have it that the state of New York is completely under the sway of millionaires, and the debauchery has proceeded until the legislature of the state licenses gambling that the millionaire class may overcome some of the "temptations of idleness."

Say what we will, "The Almighty Dollar" is on top, and the billionaire is coming—coming not only "with paupers in his train," but coming with influences fruitful of discontent of the masses, coming with influences "which will corrupt multitudes less favored by fortune."

This picture is drawn by Thos. G. Shearman, a close student of events, and a man careful of statements. Men talk of the conflict between capital and labor, or between labor and capitalists, as if labor, disregarding all laws, human and divine, was rushing headlong to destruction; but Mr. Shearman sees in the growth of wealth in the hands of the few, the direst calamities to the nation, and he sees clearly the inevitable consequences of such a state of things.

The worship of "The Almighty Dollar" will proceed, and the devotees of the god will increase. Aristocracy, plutocracy and autocracy will combine their forces against democracy. It will be money against the masses.

As matters now stand, 1,250,000 persons have possession of \$46,500,000,000 of the nation's wealth, and 61,750,000 persons have possession of \$15,500,000,000. The plutocrats have an average of \$37,500, and the democrats an average of \$251.

If the masses will it, a fairer divide can be secured. If they submit to present arrangements, the billionaire will come and the little share of the national wealth they now possess, will disappear, and then they will have surrendered their rights, and will live by permission.

MANKIND IN A BAD WAY.

Mr. Alfred Russell Wallace, in the *Fortnightly Review*, refers to his latest conversation with Darwin, when the eminent naturalist "expressed himself gloomily on the future of humanity, on the ground that in our modern civilization natural selection had no play, and the fittest did not survive. Those who succeed in the race for wealth are by no means the best or the most intelligent, and it is notorious that our population is more largely renewed in each generation from the lower than from the middle and upper classes." And an American writer is quoted as saying that "We behold the melancholy spectacle of the renewal of the great mass of society from the lowest classes, the highest classes to a great extent either not marrying or not having children. The floating population is always the scum, and yet the stream of life is largely renewed from this source. Such a state of affairs, sufficiently dangerous in any society, is simply suicidal in the democratic civilization of our day." Such facts must indeed be very discouraging to philanthropists who deplore the fact that the highest classes do not marry extensively, or, if they do marry, prefer lap dogs to children; as a consequence, bearing children and obeying the command to "multiply and replenish the earth" is left to what is designated the "lowest classes," the "scum," and the "American writer" is quoted as regarding that sort of increase of population as "dangerous" anywhere, and "suicidal in the democratic civilization of the day."

It is such pestiferous stuff, constantly published in the magazines, that poisons the fountains of healthy thought, than which nothing could be more vicious.

In England, where Mr. Darwin lived, and where Mr. Alfred Russell Wallace lives, there are "upper classes," classes recognized by law. To say nothing of the Queen, who for a time was amazingly prolific, the "upper class" of England do not have many children. They care little for children, their preference being, as a general proposition, for horses and hounds. The middle class, to which Mr. Darwin belonged, and which includes merchants and bankers, traders and "well-to-do people," guard against a numer-

ous progeny. As a consequence, the replenishment of population is left to the lower classes, but for whom England would be without either sailors or soldiers.

Mr. Wallace is of the opinion that the fact that what he calls the "lower class," the "scum," are addicted to having children, acts as a "check to progress," and he regards the problem as serious because it has "attracted the attention of some of our most thoughtful writers, and has quite recently furnished the theme for a perfect flood of articles in our best periodicals." Mr. Wallace, it will be noted, says "the floating population is always the scum," and that the "stream of life is largely renewed from this source," and the fact is attracting "the attention of some of the most thoughtful writers," and that periodicals are flooded with articles upon the subject.

It may be well to remark just here, that whatever may be true in England, where Mr. Darwin discovered that God did not create man at all, nor anything else, for that matter, the "floating population" is the "scum," but it is not true in the United States. Since Noah's ark rested on Ararat, and man was permitted to touch dry land again, he has been a "floater," necessarily so. Naturally a man is a nomad. When Columbus discovered America, Europeans began floating to the New World and have kept it up ever since, and after reaching its shores, they began floating across the continent. They are still floating westward. The floating population is still engaged in subduing the wilderness—in making farms, in building towns and cities, and in laying the foundations of empire states. They move on from place to place, and instead of being a "check to progress," there would be no progress without them. And it so happens that these floaters have children and rear families. To designate them as the "scum" may suit the fancy of the "upper class" and the "middle class," as such classes exist in Europe, but here in America they constitute the bone and sinew, the strength and glory of the country.

We do not doubt that there are those in the United States who regard themselves the "upper class" and the "middle class," and that these two classes fancy there is a

class below them, whom they, as readily as Mr. Wallace, call the "scum."

We do not doubt that there are people in the United States who may be properly designated as the "scum" or the "dross." They are to be found in all of the large cities, and are the class from which the N. Y. C. draws its Pinkerton thugs when it wants to quiet dissatisfied railroad employes with bullets. We do not doubt that these people have children, too many perhaps, but when it is charged that the "stream of life is largely renewed from this source," a monstrous slander is perpetrated, for which the facts furnish no excuse.

It is doubtless true that the working classes, men engaged in physical labor, rear the largest families—and it is well that such is the case—indeed it is shown that of the 13,000,000 families in the United States, about 11,000,000 belong to that class who must work for a living, and of these 11,000,000 families it would be simply villainous to intimate that any considerable number should be classed as the "scum" of our population, or to state as a fact that they are "checking progress" by having children.

It has been held by men who were supposed to understand the subject that "education, hygiene and social refinement had a cumulative action, and would of themselves lead to a steady improvement of the civilized races," and it is said by Mr. Wallace "that view rested on the belief that whatever improvement was effected in individuals was transmitted to their progeny, and that it would be thus possible to effect a continuous advance in physical, moral and intellectual qualities without any selection of the better or elimination of the inferior types. But of late years grave doubts have been thrown on this view, owing chiefly to the researches of Galton and Weismann as to the fundamental causes to which heredity is due. The balance of opinion among physiologists now seems to be against the heredity of any qualities acquired by the individual after birth, in which case the question we are discussing will be much simplified, since we shall be limited to some form of selection as the only possible means of improving the race." Just here comes in to prominence the conclusion of scientists (?)

"Education, hygiene and social influences are no longer to be trusted," and "some form of selection" is to be introduced whereby a better type of children is to be produced. Manifestly, the "upper class" will not select from the "middle class" or the "scum," hence if an "improvement" is to come by "selection" the "scum" must select from the *superior* classes. The "scum" must look up and demand entrance to higher social circles.

Mr. Herbert Spencer, it is said, in a remarkable essay on the theory of population, comes to the rescue and shows by the "phenomena of the whole animal kingdom" that those animals which have the shortest lives produce "the greatest number of offspring," and the "upper" class doubtless regard such phenomena as proof that the "scum" is short lived. It will be seen at once that Mr. Herbert Spencer's idea is to compare the "lower classes" with the lowest type of animals, rabbits and rats, and the like, and this is called science and the authors of such drivel are known as scientists, investigators, men who hew out new highways of progress, men who have discovered at last that education, hygiene and social refinement, will not answer the requirements of progress, and that the hope of the world centers in "selection."

As matters now stand, it is held that population is increasing too rapidly, and "hygiene," while it promotes increase, does not improve the progeny; but, says the writer, "the facts accord with the theory, that highly intellectual parents do not as a rule have large families, while the most rapid occurs in those classes which are engaged in the similar kinds of manual labor." And in this we have the final conclusion that men engaged in "manual labor" are the "scum" who have "large families" and are responsible for renewing the "stream of life."

Such is the logic of so called science, which designates the men engaged in "manual labor" as the "scum," and deplores the fact that they rear large families.

This sort of writing floods our "best periodicals," and seeks through such avenues to degrade labor. The "upper class" is the rich, the "scum" is the poor, the

toiler, the wealth creator, the taxpayer, those who build everything and preserve everything from wreck and ruin.

And here, we ask, what is the labor press of the country doing to counteract the growth of such pernicious doctrines? Much we hope. Certainly much it can do, and much it must do, if the time is ever to come when the badge of labor is to be something besides the insignia of degradation, and scientists (?) are to be taught the truth of Burns' philosophy that

"A prince can mak a belted knight,

A marquis, duke, and a' that;

But an honest man's aboon his might,

Gild faith, he maunna fa' that.

GEORGE WASHINGTON'S WEALTH.

In the year 1790, George Washington was regarded a very rich man. He was worth about \$500,000, all told. An old almanac printed in the year named, informed the public that the "Father of his Country," "first in war, first in peace, and first in the hearts of his countrymen," "possesses 10,000 acres of land in one body where he lives; constantly employs 240 hands; keeps twenty-five plows going all the year, when the weather will permit; sowed in 1787 some 600 acres of oats, 700 acres of wheat, and prepared as much corn, barley, potatoes, beans, peas, etc.; has near 560 acres in grass, and sowed 150 with turnips. Stock, 140 horses, 112 cows, 225 working oxen, heifers and steers, and 500 sheep. The lands about his seat are all laid down in grass; the farms are scattered around at the distance of two, three, four or five miles, which the general visits every day, unless the weather is absolutely stormy. He is constantly making various and extensive experiments for the improvement of agriculture. He is stimulated with that desire which always actuates him to do good to mankind. In 1786 he killed 150 hogs, weighing 18,500 pounds, for his family use, exclusive of provisions for his negroes, which was made into bacon." A hundred years have gone since that inventory of George Washington's wealth was taken, and now there are men whose income in a month is more than were all of George Washington's possessions in A. D. 1790.

"OUR COUNTRY'S PROSPERITY DEPENDENT UPON ITS INSTRUMENTS OF COMMERCE."

The caption of this article is the toast to which Hon. Wm. Windom, Secretary of the Treasury, responded, at a banquet given in the city of New York, Thursday evening, January 29th. His speech on that occasion constitutes Mr. Windom's last utterances. He spoke and died.

We write no obituary of the great financier and statesman. We deal with his dying words. Still, we may be permitted to say that the late Secretary of the Treasury, whose word was law in matters of supreme moment to millions of men, was not born with a "silver spoon in his mouth," but in his young manhood was known as "Poor Billy," struggling against adverse circumstances to secure an academic education to fit him for the practice of law. He had pluck and persistency and won, as he deserved to do, and gained recognition as one of the thinkers of a great nation.

It would seem to be eminently appropriate to assign him the task of responding to the toast—"Our Country's Prosperity Dependent Upon Its Instruments of Commerce"—and as it naturally involves the question of labor, we deem it prudent to make allusion to it in the columns of the *Magazine*.

In beginning his address, Mr. Windom said: "The subject is very broad and my time is very limited"—and he therefore confined his remarks to what he designated "the two chief instruments of commerce—transportation and money."

We submit that one of the astounding hallucinations which not a few men, who rank as great thinkers, labor under, is that labor is not to be considered in any estimate of a nation's wealth and prosperity. In the discussion of commerce, transportation and kindred topics, labor is always omitted. It is like playing Hamlet without any reference to the old Dane. There seems to be an idea prevailing in all the charmed and gilded financial circles of the country that to mention labor, in the discussion of the "country's prosperity," is to degrade the subject—pull it down from its lofty habita-

tion and make of it the earth earthy, soil its robes of purple and fine linen, and make it totally unrepresentable at a banquet where wines at \$4.00 a quart, like Tennyson's brook, flow on forever, or thereabouts. Mr. Windom said:

A nation's wealth and prosperity are usually in proportion to the extent and success of its commerce, and commerce itself is dependent upon the adequacy and adaptation of these two essential instruments. The history of all civilized countries attests the fact that the nation best equipped in these respects rapidly becomes the most powerful, the richest and the most prosperous. Our own country is no exception to the rule. No nation has ever fostered more liberally or protected more carefully its internal and coastwise trade than we have done and the resultant magnitude and prosperity of our domestic commerce are, I believe, without parallel in the history of the world. We have more miles of railroad than all Europe, Asia and Africa combined. The floating tonnage of the United States engaged in coastwise commerce on our lakes and rivers is very far in excess of any other nation.

Such are the lofty periods of oratory that go circling over the country. They command attention, and smaller men than Mr. Windom, in banqueting halls less noted than Delmonico's, catch them up and repeat them, and thus wealth is ceaselessly exalted, while the source of wealth and the nation's prosperity, labor, receives never so much as a passing word. The allusion to the "coastwise trade" and our "domestic commerce" is made to speak volumes for *wealth*, but not a word for *work*. It has ever been thus and will be the same while the stars continue to shine, unless work can have a hearing and facts can take the place of gilded sophisms in the world's arenas of debate.

Go where all our "coastwise" fleets, all the steamers, boats and barges that float upon our rivers and lakes can pass in review before the admiring gaze of beholders, and no paddle, screw or oar will disturb the placid waters, if the *worker* is absent. No keel will cleave the waves and "commerce" will be as dead as in Central Africa, amidst the silence and gloom of its forests. If this is true (and we challenge all the millionaires and plutocrats from Dives to Jay Gould to deny a truth as immovable as the eternal hills) why should *labor*—workers—forever be denied a place where plutocrats are wined and dined?

Mr. Windom said:

Our increase of wealth from 1870 to 1880 as compared with that of other nations was United States, \$13,573,481,493; Great Britain, \$3,235,000; France, \$1,475,000; Germany, \$3,635,000. Our markets in 1890 absorbed five times as much of our manufactured products as Great Britain exported of hers to all the markets of the world.

Here we have an allusion to the increasing wealth of four great nations, of which our own stands at the head, and so far in advance that the sum total is bewildering in its magnitude. What better opportunity could have been offered to say a truthful word for *work*? Is it not true that, without work, instead of an increase of wealth amounting to \$13,573,481,493, there would have been not only no increase of wealth, but widespread desolation? A truth more fundamental and eternal could not have been uttered. There is not a political economist in the world who would deny it. Why not, in such discussions, bring labor to the front as one of the instrumentalities of commerce? It is the first and the most essential of all the agencies of commerce. In the name of all things rational, what is commerce? Is it not the exchange of commodities, the buying and selling of merchandise? Would it not be well for those who learnedly (?) talk commerce to name some one thing that goes to make up the grand sum total of commerce that labor has not made available for traffic? They might search for it until the sun had turned to a ball of ice, but they would not find it. Still, when men of wealth discuss instrumentalities of commerce, work is tabooed.

Reference was made by Mr. Windom to our markets in 1890. What was there in our markets? "Manufactured products." What produced them? Work—not wealth—and yet, from first to last, the Secretary of the Treasury, once known as "Poor Billy," never remotely alluded to work as an instrumentality, an agency of commerce or the prosperity of the country.

It is not required of us that we eulogize work. It speaks for itself. Still in a country where there are 11,620,000 families of workers, who produce everything, create all the wealth, make revenues possible and debt-paying possible, and without whose work and skill there would be no commerce, no

prosperity, it would seem fitting, when commerce and prosperity are topics of debate, some mention should be made of work. We are hopeful, and the signs of the times presage the coming of an era, when work and workers will have a place where men discuss national prosperity.

RAILROAD EARNINGS FOR 1890

It is a remarkable fact that we are constantly reminded that the railroads of the country are losing money, and then again we have the following statement that "the gross earnings of those railways in the United States, Canada and Mexico, which choose to make public statements, continue to show in the aggregate, a large increase thus far in 1890 compared with the same period in 1889. The returns for 143 roads for the eleven months ending November 30, foot up \$425,102,860, against \$390,247,948 in the same time last year, a gain of \$34,854,920. It is a very noticeable fact that of the 143 roads named, 132 show gains aggregating \$35,077,171, while only 11 show decreases, these aggregating only \$222,151. The roads which indicate the falling off are all very small lines with the exception of the Ohio & Mississippi, which suffered a decrease of \$86,882, and the Mexican railway, which lost \$100,583." There are a number of railroads in the country that are run to be wrecked, and to make money in that way for bondholders, who want the roads sold that they may take them in. Honest railroading pays.

ASTRONOMERS are making some startling discoveries nowadays. Dr. Huggins asserts that Sirius is a sun five thousand times larger than our "Old Sol," and that he is attended by planets a million times larger than the earth, and if these planets are inhabited the probability is the people are proportionately larger than those who inhabit the earth. Gods! just think of a Chauncey M. Depew a million times larger than our Chauncey M.—a Chimborazo making speeches against federation. At such a sight the old dog star, big as he is, would tuck his tail and run.

THE Standard Oil Trust Baron Rockefeller is building a palace to cost \$3,000,000.

THE BLUE PARLOR.

Congress is constantly making appropriations to beautify the "Blue Parlor" in the old White House at Washington, and make it appear so much like a room in a palace that the representatives of foreign courts will not turn up their aristocratic noses when they enter it. This old "Blue Room" is the focal center of American "damphoolism," as Josh Billings would remark. Already Washington society is so impregnated with snobbery that it is ashamed of the White House and wants to transform it into offices, and build for the President, the head servant of the nation, a palace of magnificent dimensions, where dudes of both sexes, and dunces generally, can display their feathers *a la urup*. A recent Washington dispatch says:

The decoration of the blue parlor, the historical private reception room of the executive mansion, was completed yesterday. The oval form of the room has been preserved, and the new decorations are of the historical blue, in exquisite shadings and gradations of color. The carpet, which was made by an American manufacturer, from American material, is a Wilton in shades of steel or electric blue after a special design. The wood work of the room is in cream and gold. The dado and frieze are in hand relief work in soft shades of blue lighted up with gold. The chair rail and the picture molding are of cream and gold. Between them the wadded wall is covered with blue silk of a graceful, subdued pattern. This silk was made in an American factory. In fact, everything about the new decoration is American except the beautiful embossed silk plush with which the old frames of the historical furniture of the blue room have been covered. The ceiling of the room has a beautiful relief border with a shield at either end of the oval. Within this border a summer sky effect is introduced, shading from morning light near the windows to evening shadows at the other end of the oval. The windows are hung in blue silk in harmony with the walls. The decorations cost \$12,000.

It is possible for the representatives of "foreign courts" to tolerate the old "Blue Room" for one season as it now appears; but next year the room will have to undergo another overhauling, when the decorations will be still more princely.

Only recently the word was flashed over the wires, that Minister Bob Lincoln would have to retire from the Court of St. James, because on \$17,500 a year he could not trot the required gait on the track with English snobs, and that Waldorf Astor would take his place. It is held that Waldorf could

shine so resplendently that the Queen would exclaim, "Well, now, but don't that beat anything;" and the Prince of Wales would make obeisance to Waldorf's gold. Labor foots the bills, and as long as working-men say, "Let'er go, Gallagher," she will go, and don't you forget it.

BANKERS.

Some months since, one of the most scandalous bank failures known as the Kean failure occurred in Chicago. One of the peculiarities about the wretched piece of business was the distinguished piety of Kean. He was a man of much prayer and great charities. He was one of the "sweet singers in Israel." Salvation was his theme on Sundays, and at social religious meetings, week-day evenings. He loved to dwell upon his "heavenly inheritance." On such occasions Brother Kean's soul "was on fire." He seemed to have electric communication with the "spirits of just men made perfect." He lived in full view of the "Promised Land." His ears were attuned to seraphic minstrelsy. He was, when not *banking*, on the summit of some sacred mountain, looking beyond Jordan's billows to the land of "milk and honey."

Brother Kean played his religious cards splendidly. He caught more gudgeons than fell to the share of other bankers. Money flowed to him in an ever-swelling tide, and as the cash came, brother Kean's piety took on a keener edge. He was *sharp*. He made religion pay. He speculated in *amens* and *hallelujahs*. He was not only a "pillar in the church" but was recognized as a power in the Sunday school, where the youth of Chicago are taught to be good. Brother Kean, as might be supposed, was deeply concerned in the welfare of youth. He would have them honest and virtuous—all of which helped Brother Kean in securing *deposits*.

In all of this, Brother Kean was shrewd, astute, wily. He feathered his nest. He got to himself a great name in Chicago, and then fizzled. The bank failed, the cash was gone, and with it went his piety—all of his professions and prayers came back to roost. Like ravens and owls, they took possession of the bank and amidst the wreck, ruin and

desolation, they croaked and hooted, while experts were determining, as near as possible, just how much Brother Kean had got away with.

But we did not begin this article so much to write about Kean, as about the hot shot other Chicago bankers deemed it prudent to fire into him on the evening of January 3d, 1891.

It seems that on the evening named, the Taxpayers' Association concluded to ex-coriolate the "praying swindler," and a number of "private bankers" concluded to be present, and put themselves on record in money matters and this they did with considerable emphasis. As for instance, one man said that "any banker who carries his religion so far into his bank as Kean did is a dangerous man," the audience loudly applauded the sentiment, as they also applauded the assertion of Herman Felzenthal that "a banker who would not pay his depositors ought to be hung." The purpose of the meeting was to appoint a committee to "formulate a bill for the better regulation of banks and the protection of depositors." One speaker remarked, that "the secret of an honest bank is an honest banker. If they are honest their banks will always pay." A lawyer said, "I believe that private banking business should be forbidden unless the person doing the business should first obtain a license under strict regulations." Another man remarked, "If a man goes to prayer meeting every morning before he goes to his bank, he is a hypocrite. He missed his calling. He ought to have been a preacher. He hasn't got time to attend to the safety of other people's money. Now, I am in favor, when a banker fails to pay, to hang him. And when men fail to pay the banker, hang them. Seriously, I think the dishonesty of bankers is overrated. I do not call the men who hang a bank-sign out bankers. Of sixty-eight banking firms in the directory to-day only ten are really bankers."

Another speaker said: "I have been reading a table of embezzlements in the United States, it occupies over two columns of a newspaper. The embezzlements for the year 1890 aggregated \$8,832,000. Nearly \$9,000,000, Mr. Chairman, embezzled by all

kinds of people, including bankers. From 1878 to 1890, the amount embezzled in the United States aggregated nearly \$63,000,000. One of the biggest sums was \$460,000, by a banker. A banker should be compelled to put up security with the state auditor to the extent of the capital invested. [Applause.] Each stockholder should be made individually liable for the entire debts of the banking company up to the last dollar he owns. You would then find fewer bank presidents fail. And I want to say that any man who, like Kean, carries his religion so far into his bank as he did, is a dangerous man. If we punished dishonest bankers here as they do in Germany, it would be a long time until a bank failed in Chicago. [Applause.] The criminal lawyers would have had several jobs recently. The English and Scotch laws are better than ours. I read the other day that the Glasgow bank, which failed by the dishonesty of its officials, had been wound up by the payment of every dollar due the depositors. How different in the Kean bank case. Instead of the bank owing the depositors, the investigation tended to show that the depositors owed the bank."

Another speaker referred to "the postal savings bank system of Canada, by which depositors obtained 3½ per cent. interest and their deposits guaranteed by the government. It was a matter of record that the government had not lost a cent for a period of ten years. Here in Chicago there were over sixty private banks doing business, and yet Mr. Mayer had declared there were not over ten bona-fide private bankers in the city."

All of this talk was brought about by the failure of Kean's bank—all the more aggravating because Kean was an arrant hypocrite. But the question arises, are not all bankers who obtain the money of unsuspecting depositors, hypocrites?

It is not important, however, to discuss such questions. Honest bankers always pay depositors. Dishonest bankers do not. They are thieves and swindlers of the worst possible type, and when religion, or more properly the profession of religion, is used as a cloak of scoundrelism, as in Kean's case, the crime merits double punishment, and here comes into prominence the fact that such

colossal scoundrels in a great majority of cases go free, while comparatively smaller criminals go to prison. Such things bring law, law-makers and courts into deserved contempt. The great mass of the people are made to conclude, that back of the law, the law-makers and the law's administrators, are corrupt forces, and the allegations are true to such an alarming extent that the courts are often regarded as helps to crime and rascality when sufficiently gold-plated.

DIPLOMATIC ETIQUETTE IN WASHINGTON CITY.

The British Minister, Sir Julian Pauncefote, the representative of Her Majesty the Queen of England, has been putting on extraordinary airs in Washington by attempting to take precedence in official matters. The German and Austrian ministers took the proud Briton at once to task and made him apologize, and Sir Julian will in future not lunge ahead on great occasions, but will take his place in the procession and put his nickel in the slot and receive recognition in return, according to the ironclad law of etiquette. But in such matters the people of the United States have little interest. It is a matter of no consequence to them whether Sir Julian Pauncefote is at the head or the tail of the diplomatic procession on great state occasions. They just say, "Let 'er go, Gallagher." But another incident in diplomatic etiquette is reported to the *St. Louis Globe-Democrat*, in which the rank and file of Americans have a right to be heard. The incident referred to kicked up a serious disturbance in the diplomatic corps, and serious consequences are threatened. The incident as reported is as follows:

A young attaché of one of the South American republics was accompanied to the White House by a young and pretty lady well known to all the gay youth of Washington, and presented her as a member of his family. Her presence was noted and commented upon by many persons who knew her as the daughter of an avenue tradesman. She had no right within the charmed circles. No outward comment was made, however, at the White House. But when, an hour later, her escort had the effrontery to introduce her to the breakfast given to the corps by the Secretary of State at his residence, there was the greatest indignation. A proposition was made and seriously considered to invite her to bow herself out, but it was decided that the attaché was more at fault than she, and no steps were taken against her,

except that the couple were given the cold shoulder. The next day all the diplomats took occasion to file in writing with the Secretary of State the assurance of their most profound regret at the inexcusable breach of etiquette, and their further assurance that they in no sense condoned the offense of the vealy young attaché, to whom an official rebuke will be administered in due time, and which may take the shape of a recall to his native country.

Just think of it, all ye millions of Americans, who boast of a government of the people, that a young lady, "the daughter of an avenue tradesman," young, beautiful, accomplished in all things that go to make up honored womanhood, given the "cold shoulder" at a breakfast given by Mr. Blaine, the American Secretary of State! Just think of a gang of foreign snobs, representatives of decayed and decaying monarchies, making a formal protest to the Secretary of State, stating their "profound regret" that an American girl, the daughter of a tradesman, should be admitted to the breakfast of an American official, and should be subjected to the insult of being told that it was an "inexcusable breach of etiquette," and that the "vealy young attaché" is liable to get his walking papers for perpetrating such an outrage.

If such a protest was made to Mr. Blaine, he should have indignantly returned it. More, instead of giving the young lady the "cold shoulder," he should have given her his distinguished consideration at the breakfast; and if any effort is made to disgrace the attaché of one of the South American republics for having honored the daughter of an "avenue tradesman," then, in that case, the Administration should just tell the diplomatic dudes that nothing of the sort would be tolerated. "The daughter of an avenue tradesman" is as worthy of consideration as is the daughter of any bestarred and bedizened representative of any rotten dynasty of Europe.

DURING the year 1889, in Paris alone, 17,224 horses, mules and donkeys were slaughtered for food, making 3,650 tons of flesh. Of this 2,433 tons was put into sausages, the remainder being eaten fresh. The horse might do, but the mule and donkey sausages, we should think, would make Paris bray and kick.

VANDERBILT, HEWITT AND DEPEW.

We have on our table the "anniversary number" of the *New York Railroad Men*, a publication that combines in an eminent degree, railroading and religion, capital and christianity, money and morals; in fact, it is a publication which without special change, would be most welcome to the "home and fireside" during the long prayed for and much delayed millennial era, when wolves and lambs will live on terms of most delightful amity; when bulls and bears, no longer contending for supremacy, Wall street will be transformed into an angel promenade; when Satan, chained for a thousand years, shall see the Paradise lost by his beguiling diplomacy, regained by the triumphs of the "Carpenter's Son," the poverty-stricken Nazarene.

We are more than usually interested in the *New York Railroad Men*, because the number before us brings out for our contemplation three such splendid *roadsters* as Cornelius Vanderbilt, Abram S. Hewitt and Chauncey M. Depew, the occasion being the fifteenth anniversary of something, which we surmise is the founding of the "Railroad Branch of the Young Men's Christian Association."

The anniversary meeting was held in the railroad men's building, which we doubt not, is all that could be desired by the most fastidious employé on all the Vanderbilt system or systems.

We note that Mr. Cornelius Vanderbilt presided at the meeting, and delivered an address. It is awe-inspiring, we are told, to sit on a platform near a railroad president who receives a salary of \$50,000 a year; in fact, many a railroad man experiences sensations of dread in the presence of a second or third vice president of a railroad corporation; indeed, symptoms of trembling are noticed occasionally when any railroad boss heaves into sight in yard, roundhouse or on the tracks; but in the case of the "anniversary" meeting referred to, railroad men were permitted to behold in the flesh a man a hundred times a millionaire. There he stood sure enough, a superior being, flesh and blood and bones, dressed in store clothes, a born millionaire. Look! he has

eyes, ears, mouth, limbs like a switchman, a brakeman, a fireman, an engineer, a hostler, a trackman, a baggageman, a Knight of Labor or a Pinkerton. In fact, it is said that he is a human being, with certain divine attachments which by the lifting power of money have placed him on top by a large majority.

Now, this great man, this *colossus of roads*, is on the stage. Look at his tracks, four feet wide and a thousand miles long. He has more ties binding him to earth than to heaven, and he is still making tracks across the continent. Well, this gigantic man, into whose pockets Fortune drops thirty cents every second night and day, for the round year, actually made a speech to railroad men, his employés. It was a speech that elicited no applause. It seemed to come down from the skies. It was \$150,000,000 talking to 75 cents and from that amount up to \$3.50, except in a few instances, where some *groundling* worth, say from \$50,000 to a million, was permitted to listen. It would have been grossly undignified for a \$25,000 a day man, to make a \$1.00-a-day man laugh. The New York "400" would have been thrown into spasms. Mr. Cornelius Vanderbilt didn't do it. It would have been as much out of taste, as for Mr. Vanderbilt to have asked his \$10,000 imported French *chef* to banquet him on corn bread and bacon. Mr. Vanderbilt thought he could see in his great railroad men's building some growth in "the *usefulness and value* of men engaged in railroad work." In that he touched the key note. He didn't say how much it added to the "*usefulness and value*" of his employés, nor did he intimate that as the usefulness and value of his *railroad men* increased, he increased their pay. Mr. Vanderbilt did not allude to the amount of money he paid to the Pinkerton armed murderers, employed by H. Walter Webb to shoot down men. Nor did he state how many Pinkerton thugs, skimmed from the slime, ooze, filth and mud of New York, were invited to participate in his great enterprise to improve the "*usefulness and value*" of employés; to wash, and study the Bible, that they might be fully prepared for translation to the "Happy Hunting Ground" in regular form or by accident. Mr. Cornel-

ius Vanderbilt didn't pretend to have any information relating to the "influence" exerted by his gymnasium and bathing tube, upon his employes in their "homes and lives," he believed such things would add to their "usefulness and value" as employes. The terms "usefulness and value" have a financial ring, they mean dollars and cents. If Mr. Vanderbilt's investment, say \$150,000, adds 5 cents a day to the "usefulness and value" of his employes, it means the creation of a fund out of which a small army of Pinkertons could be armed and equipped and kept ready for action at a moment's notice.

At the anniversary meeting in question, Hon. Abram S. Hewitt, who married the daughter of Peter Cooper, thereby securing stacks of chips, was introduced to the meeting. He was introduced by Mr. Cornelius Vanderbilt, the president of the meeting, and, we surmise, the president of the Railroad Branch of the Young Men's Christian Association, as a president of a railroad, as an ex-mayor and as one who had contributed to the usefulness of the "Cooper Union"—and the introduction was received with great applause.

It is proper to say that the distinguished gentleman married rich. With him, matrimony was *matrimoney*—and having secured a fortune he *husbanded* his resources. He was wedded to wealth, and understanding all the combinations of his wed-lock, and keeping the key himself, Mr. Abram S. Hewitt is in *shape* to hobnob with the Vanderbilts and New York's "400." He understands gilt edged christianity as thoroughly as Jay Gould, and can make New York religion pay splendid dividends.

His address was simply immense. He overflowed with facetiousness. He was reminiscent—was loaded with ancient history. He remembered the first railroad, the first locomotive, the first electric wire, and the first time the lightning bore a message upon it, and the first message was "What hath God wrought." He outlined the gigantic strides of progress—from the sloop to the palatial steamer, from the stage coach to the palace car, from the old tallow dip, the old whale-oil and lard-oil lamps to the electric light and then exclaimed:

Now, to understand what all this means, what kind of a world would this be if you removed the steamboat, the railway, the telegraph, the telephone, the cable, the electric light and the electric power, which has already begun to revolutionise the occupations of mankind? Go back the fifty years that I can remember, take away these elements of progress and of civilization, and what kind of a world would you be living in, or rather what kind of a world would you be dying in? for the population of the world, now subsisting in comfort, would perish of starvation if we took away the means of transportation and of progress which have been created by the inventions and improvements of which I have spoken. The world would be a desert. Destitution, starvation and destruction would run riot over the face of the habitable globe.

As a matter of fact, there is not a word of truth in the foregoing extract. Take away everything the distinguished speaker catalogues, and the world would not be a "desert." "Destitution, starvation and destruction" would not "run riot over the face of the habitable globe." The great man contradicts himself since he remembers a time when what he calls such great blessings were unknown, and in their absence the world was getting along amazingly well, in many regards, far better than at present. Old Commodore Vanderbilt, when he was captain of an oyster boat, and his good wife was keeping a boarding house, we doubt not were happier than their grandson, Cornelius, with his \$150,000,000—secured by processes which, if known in heaven, would make the "spirits of just men made perfect" lament the degeneracy of the times in which we live.

The ex-mayor, having ample time and money, had constructed a series of charts, which he displayed, showing the vast resources of the country and its growth in wealth; and then he asks: "Who has got all this wealth?" The question produced roars of laughter; it was exceedingly funny. Then he followed up the interrogatory with, "What has been done with it? and what are you going to do about it?" Then followed another outburst of laughter. Following up such brilliant strokes of wit—the old ex-mayor, the favorite of *Cupid* and the victim of cupidity—said, "There is a grievous complaint on the part of many people, who do not seem to have much else to do but complain that the distribution of this wealth has not been equitable or just." Mr. Hew-

it here took occasion to demonstrate that the distribution of this great wealth has been equitable and just, and that this honest and just distribution of wealth which labor creates is still going forward.

It is difficult to prudently characterize such an exhibition of mental infirmity—such a disgusting display of senility, coupled with miserly greed. A poor old dotard, with one foot in the grave and the other on a banana peel, drooling out platitudes in the interest of wealth, regardless of overwhelming proof that in no period of the world's history have robberies of labor been more infamous and numerous than now. This poor old man, hugging his wealth like a Shylock—proud of being invited to speak on a Vanderbilt platform—tells his audience that 90 per cent. of all the wealth of the country goes to labor and that capital gets only 10 per cent; that he knows this to be true, because "when a boy, his father was a mechanic," and that wages now are about twice what they were when he was a boy. He says capital is getting less every year, a smaller per cent. but *more in the aggregate*, and that the reader may have an idea of what the old man calls capital, it is only required to give his estimate of the cost of the railroads of the United States, which he places at nine billion dollars (\$9,000,000,000), when he knows, or ought to know, that fully four billions (\$4,000,000,000) is pure fiction, and does not represent so much as *one* dollar of cash, and that every dollar of dividends collected upon it is a steal without one extenuating circumstance or condition.

Mr. Vanderbilt, in inviting Abram S. Hewitt to make a speech to his employés, knew his man. He wanted some one to glorify capital, to exalt wealth. Hewitt was the man, and he performed the task to the best of his ability. He said, "Remember that if capital used in business were obliterated, the world would simply perish." Not at all. It is not true. Such language is unworthy of a man of intelligence. But paralyze the arm of labor, then the world would perish. The speaker impressed upon his audience that "the first duty of a member of society is to encourage the growth of capital," and the declaration produced

"great applause." Such remarks must have pleased Mr. Vanderbilt. Growth of capital is his hobby. He has an income of about \$25,000 a day, and Mr. Hewitt would have it \$50,000 a day. The speaker thought it might be true that "some people get too much of the accumulation of capital; but it is a matter of no special consequence, since the masses are better off than they ever were in any previous era of the world." Here again the speaker, to please Mr. Vanderbilt, indulged in a stupendous Munchausenism. In the United States there is more poverty, destitution and wretchedness than ever before. The poor old man, with his charts and his chatter, got things sadly mixed occasionally. He said, "Look up there," (pointing, we presume, to Vanderbilt,) "and you see men worth a hundred million of dollars; and look down here," (pointing, we presume, at New York,) "at the bottom, and you see a seething mass of poverty that turns the stomach of the beholder." Here were two object lessons directly under the eyes and noses of the audience. The millionaire was presiding; just outside of the room was the "seething mass of poverty,"—sickening, horrifying poverty, destitution, squalor, corruption and crime,—and the speaker himself,—the son of a mechanic, reared in a working-man's home, quickened into life beneath the heart of a mother the wife of a mechanic,—a man who in the matrimonial lottery drew millions; an old man, gray haired, forever worshipping at the shrine of Mammon, seeking to condone the crimes of the times which create millionaires, by telling his audience that New York, while it is a city where festering poverty horrifies hell, the "wretchedness" which poverty entails has a less percentage than in any other "age of the world that has existed." Why does this son of a mechanic, born at Haverstraw, who "lived among mechanics" and was "brought up" with them, declare the condition of wage workers now is better than in other "periods of the world!" But suppose the falsehood were a fact, does the fact mitigate in the least the revolting picture of wretchedness which the city of New York presents, and of which abominable duplicates could be furnished in the

mining regions of Pennsylvania, and in all of the large cities of America?

In all of his harangue, the poor old man with his diagrams, never uttered so much as one word in the interest of labor, the dignity of labor, what labor has done for the world and for this God favored land (?). He was engaged to glorify capital.

This poor old dotard, this driveler, said: "Now, as to these very rich men, and as to this very poor class, this wretchedly poor stratum, is there not a duty, is there nothing indicated by such a picture as I have suggested of this little fringe at the top of the social sphere—this fringe of excessive wealth—and this stratum of poverty, of want, of utter hopelessness at the bottom?" He answered the question affirmatively. He said "Yes." He said, "It is an ethical question; it is a moral question; it is a question of conscience; it is a question of religion." He said, "These very rich men have duties," that "this poor, hopeless, seething mass at the bottom have rights," and he thought the "very rich men" should devise ways for "lifting" them up—and this declaration received applause, and the Vanderbilt, who presided, doubtless accepted the applause as complimentary to himself; and it is quite likely that, like old Nebuchadnezzar, Cornelius said, "Is not this great Railroad Men's Building that I have built, for the honor of myself and the glory of the Vanderbilts?"

The poor old man Hewitt, the son of a mechanic, then asked, "What, then, is needed to reach this *apparent* wrong?" Now, then hear him: "It is only *apparent* let me say. It is a part of the *inevitable development of civilization* and of this unprecedented growth of wealth which the world never saw before." Was there ever such a lamentable exhibition of drivel on any platform in any age? This old man, the son of a mechanic, and the son-in-law of a man many times a millionaire, tells of colossal fortunes, of appalling poverty, says something ought to be done to raise up this "seething mass of poverty," and then says the wrong is only "*apparent*," not *real*, that it is a myth, a fancy, a hallucination, and an *inevitable development* of our Christian

civilization. And this is the kind of stuff that is expectorated in the interest of wealth in the Vanderbilt building. In one breath the poor old ex-mayor, rich, but still mercenary, the victim of overmastering greed, viewing the seething mass of poverty in the city of New York, exclaims, "Here is a wrong that appeals to men's consciences—the consciences of the rich to do something to remedy it," and then says it is only an "apparent wrong," and finally that it is an "inevitable wrong" inherent in our civilization.

This old man Hewitt, a railroad president, had a duty to perform to the Vanderbilt dynasty, and it involved a reference to the strike on the Vanderbilt system, and he did not hesitate to indorse Pinkertonism by telling his audience that men, who came from a distance to help their fellow workmen when engaged in a struggle for their rights, should be hunted down like "wild beasts"—shot to death like man-eating tigers, and with these murderous words in his throat and upon his lips he tells his audience that a rich man is one who is worth \$20,000,000, and amidst bursts of laughter asks Mr. Vanderbilt: "That's about it, isn't it?" Mr. Vanderbilt made no reply, and then the old man proceeded to say: "No man ever made twenty millions." He accounted for the possession of the vast sums by *inheritance*. He knew better. He knew the vast fortunes of some men in New York and elsewhere have been accumulated by fraud and robberies, and he knew that a large per cent. of the "seething" mass of poverty in the city of New York, which "turns the stomach of beholders," is the direct result of millionaire villainies.

But why pursue the subject? Old man Hewitt made his speech. He glorified wealth and possibly made the employees in the audience believe that they lived by the grace of Vanderbilts.

Chauncey M. Depew, as in duty bound, added his mite and might to the glorification of the Vanderbilts—the three Vanderbilts. He said:

The Commodore was a railroad organizer. He gathered these vast lines into one great system. Then came his son, *William H.*, who was a splendid railroad manager, and he brought the corporation together so that they would work harmoniously and

like a machine for the accomplishment of the results for the public and the stockholders, for which the consolidations were made, and the system was organized. Then comes the third generation, and it would be folly for them to undertake directly to reach and administer the details of the system which men can be employed to do. They have naturally grown into and acquired an interest in other and broader matters, many of them public in their character and requiring untrammelled liberty of time and action. But at the same time, it is proper for them, in view of their *vast investment* in their properties and of their *heredity of obligation* and trust, to see if something cannot be done which will bring the different departments of the companies in harmony and sympathy with each other, and *lift* the masses up nearer to the top, which will create a point of unity and common sympathy, and give opportunities for education, moral, mental and physical.

It would be difficult to conceive of more fulsome flattery.

Old man Hewitt said no man ever made \$20,000,000. Here are the Vanderbilts with fortunes aggregating \$200,000,000, or more, and there stands Depew, the attorney of the concern, and in the presence of his master exhausting the vocabulary of flattery and praise of the Vanderbilts, and in a patronizing way referring to railroad employ  s as the "masses" and of "lifting them up." It is the same sort of talk that was heard in old plantation times—when the master surveyed his army of "niggers" and deplored the burden divine Providence had imposed upon him, to feed and clothe the "niggers," keep them at work, and when financially embarrassed, auction them off. Such is the millionaire slush of the times—and unfortunately too many workingmen feed upon it until they are as spineless as fish worms.

HERE is something new: "M. Pedrous, a physician at Nantes, France, has the strange gift of being able to see the color of sounds. He says that human voices are red, blue, black, tan, slate, and all other colors, and that the color of some very handsome women's voices is like buttermilk."

AUTOCRATS are constantly searching for explosives that will do the greatest execution when workingmen become too clamorous for bread. Germany has discovered that carbohc acid properly manipulated will prove a great prop to the crown.

FREE SPEECH.

The *American Spectator*, referring to an article in the New York *Herald*, says:

The New York *Herald* has a well considered editorial on the right of free speech, suggested by the action of the Brooklyn authorities in refusing to allow the anarchists to hold a public meeting.

"The position of the authorities," says the editor of the *Herald*, "in this matter, is not well taken. The right of discussion is founded on bed rock. Our citizens, no matter what their peculiarities of belief may be, are guaranteed all possible liberty of speech. They can talk themselves hoarse, or even talk themselves to death, without any infringement of law.

"It is only when an overt act is committed that the rigor of the law should be applied. If they commit a breach of the peace or indulge in deeds of violence, they should be arrested, tried, and sentenced for the offense.

"But free speech, even when it gives vent to disgusting nonsense, should be tolerated. A man who is at liberty to keep his mouth open is seldom dangerous, but it is frequently hazardous to compel a man to keep his mouth shut because he doesn't agree with the views which are generally acceptable."

We are pleased to see great metropolitan journals taking this stand. It is time that all persons who value free speech, free thought, and indeed liberty, should boldly stand forth and demand that every citizen of the Republic should be protected in the orderly exercise of his rights.

We do not propose to discuss anarchism nor anarchists—simply "free speech," particularly this proposition announced by the *Herald*. "But free speech, even when it gives vent to disgusting nonsense, should be tolerated." Is that true? It covers the entire field of speech—all topics—all questions relating to politics, religion and morals. It imposes no restraints. Speech is not an "overt act" and therefore should be subjected to no restraint whatever. Is that true? Is it right? Is it in consonance with our best notions of civilization?

There are in the country a class of people who advocate what is called "free love." These people denounce marriage; they advocate indiscriminate sexual intercourse. They go into communities and in the exercise of "free speech," so-called, transform homes into brothels, pollute every shrine where virtue worships. Is that what the *Herald* calls "disgusting nonsense" which is to be "tolerated," which "should be tolerated?"

Again there are those who would exercise *free speech* in the advocacy of polygamy—and for a quarter of a century or more,

did advocate polygamy, unmolested, until thousands and tens of thousands were debauched, and a great territory became more loathsome than a charnel house; until the air was foully infectious and every mountain stream poured its floodtide of nastiness into Great Salt Lake. Was this simply "disgusting nonsense" which "should be tolerated?" Mind, we are running no parallels between such filth and anarchism. We are simply surveying the field of *free speech*, to inquire whether or not society has the right to protect itself from unrestrained liberties in that direction?

Let it be understood that free speech is not necessarily a crime, advocating speech. That which the *Herald* styles "disgusting nonsense" is all too often a deadly virus which inoculates the mind with diseases for which there is no remedy, a fact which the *Herald* understands full well.

This *Magazine* believes in free speech and a free press—but with limitations. It would have no free speech Satans in American Eden homes; no square foot of American soil defiled by the advocates of polygamy; no brothel beasts, advocating free love; no Sodoms, inviting Heaven's wrath in storms of fire. In a word, certain forms of free speech are crimes against humanity and should be suppressed and will be suppressed.

THE Massachusetts Bureau of Statistics has issued its annual report, showing the average wages paid by forty-seven industries in 1889 was \$419.17, or about \$1.33 a day. How low down wages were in these industries the report does not name. It appears their investigations included 1364 establishments, while wages are given for only forty-seven. What the public would like to know is, how low wages were crowded down in Massachusetts during the year 1889.

SOME genius, being asked by an ambitious youth how to get on in the world, replied:
Start in boldly, and go faster,
Be a Vanderbilt or Astor.

FRENCH workingmen want a ten-hour day and they are going to have it. The French Minister of Commerce says so.

It seems to be in order to compliment the Italians who are coming to this country by thousands as superior workingmen. A paragrapher says that "those who watch Italian laborers employed in building operations can easily see why so many contractors are desirous of securing their services for other reasons than their cheapness. They work hard; they work steadily; they are sober in their habits. They are as patient as the men of Germany and as alert as the men of Ireland. They go through the routine of their daily toil as though they were destitute of ambition, but it is a fact that many of them grow ambitious of rising in this world after they have been two or three years in this country." The Dago works for small pay, and lives far more like a savage or a wild beast, than the Chinese. He fattens on garbage, and caring nothing for civilization or any of its requirements, is able to underbid an American workingman. It is not difficult, therefore, for him to save money. Italy has millions of them to spare and they are coming.

THE Czar of Russia is watched by three sets of police, but to feel entirely safe, the Czar has to watch them all, and this makes him tired. The Russians want freedom, and he sends them to Siberia. As soon as possible they will send him to a warmer climate.

A PHILADELPHIA firm has turned a pair of scales for the New Orleans mint, which gives the precise weight of a human hair. The old reliable Fairbanks are still used in New York for human heirs.

JAMES S. RICHARDSON, of Louisiana, owns 49,000 acres of cotton land and employs 9,000 negroes. Stanley ought to explore that "Congo country."

ANSONIA, CONN., having been visited with a shower of ants, contemplates organizing a woman suffrage league.

The Single Tax.

MY attention has been called to an article in the March issue of the *Magazine*, by Mr. Charles Marshall, commenting on an article by Mr. S. D. Guion, on the "Single Tax." I have given the economics of the single tax a great deal of study, and although I do not wish to be considered an authority on the subject, I think I can clear up a great many points on which Mr. Marshall seems befogged. It seems to me that Mr. Guion has made an unfortunate use of the term "profits," in that he has used the term in an ambiguous sense. Strictly speaking, it is not "the profit which arises from the use of land," but the *profit which is expected to arise*, that determines its value. A person may be deriving an immense profit from the use of a certain tract of land, yet, if there is no competition for the use of that land, it has no value. Land values arise as a result of the pressure of population, and are determined solely by competition for sites between persons who expect to derive a profit from their use.

Mr. Marshall is inclined to think that in speaking of a tax on land values, as distinguished from a tax on land, we are making a distinction without a difference, and dismisses the subject rather cavalierly. Let us take Mr. Marshall's wool illustration. He did not carry his reasoning far enough. In comparing wool with land, we must suppose that it partakes of the same nature as land, in that it is a fixity, and cannot be moved from place to place. Land in the city of Boston is worth more than land in Texas, because it is nearer the centres of production and exchange. Wool is also worth more in Boston than in Texas, for a like reason, but while Texas wool can be moved to Boston with comparative ease, to move Texas land to Boston is a manifest impossibility. Let us assume, therefore, that wool cannot be moved, and that a uniform tax of 5 cents a pound is declared on wool. I have 100 pounds of wool in Boston; Mr. Marshall has 100 pounds of wool in Texas. My wool is worth \$1.00 a pound, while Mr. Marshall's is worth but 50 cents a pound. We each pay a tax of \$5.00 on our wool, a proceeding which is unjust to Mr. Marshall, as he derives but half the benefit from his wool that I do from mine. This would be a tax on wool (or land). But suppose, instead of declaring a tax on wool, the government should declare a tax of 5 per cent. on the value of wool. I would then pay on my 100 pounds of wool \$5.00; Mr. Marshall would pay on his 100 pounds \$2.50. This would be a tax on wool value (or land value), and as far as any tax on the products of labor can be just, would be a just tax.

Coming now to Mr. Marshall's comments

on Mr. Guion's illustration of the improved farm, Mr. Marshall again arrives at an erroneous conclusion through false reasoning. In order to reason fairly to the single tax, we must suppose 100 acres of wild land adjoining an improved farm, having a land value of \$700, but no improvement value; we must suppose the tax levy for the taxing districts, in which these two pieces of land lay, to be 76 cents and 6 mills on the \$100. Under existing methods the owner of the improved land pays \$45.96, the owner of the unimproved land pays \$5.36, a total for the two of \$51.32. Under the single tax each would pay \$35.00, a total of \$70.00, and a gain to the state of \$18.68, instead of a loss of \$11.00, as Mr. Marshall puts it. Under existing methods, the man who by his labor produces wealth and benefits the community in which he lives, is fined for so doing to the extent of \$40.60 a year, while the man who holds his land out of use and does nothing to benefit the community is exempt. Under the single tax both would be taxed alike. We would say to the owner of the improved farm: Go ahead and improve your farm to what extent you will, you are benefiting the community, and you shall not be taxed for it. We would say to the man who held his land out of use: You are monopolizing natural opportunities having a value of \$700; use them or not, just as suits your fancy, but this value was created by the community, and all the benefits of this value *which might accrue to you as a user*, must be returned to the community which created it, whether you use the land or not.

Mr. Marshall next inquires how the value of bare land is arrived at? I know of no better explanation to give him than Ricardo's theory of rent. This theory has but to be stated to be understood, its truth is self-evident, and it is accepted by political economists of all schools.

"Rent is that portion of the product derived from land, over and above what can be derived from the poorest land in use."

Now, as the selling price or value of land is but *rent capitalized*, it is an easy matter to arrive at; indeed, so easy is this value arrived at, that Mr. Marshall may go to a real estate agent in any city in the country with the description of any tract of land lying within that agent's territory, and he will tell him its value immediately, and without leaving his office. Suppose Mr. Marshall has a vacant lot in the city, and he decides to build a house on it. Suppose the legal rate of interest to be 6 per cent. and he puts up a house costing him \$1,000; he rents the house for \$120 per year; manifestly, his tenant is paying him \$60 per year for the use of the bare ground upon which his house stands; and just as long as he can collect \$10 a month, as rent for his property,

his land is worth \$1,000. In like manner the value which accrues to any piece of improved land can be determined with certainty. Although Mr. Guion uses the term "profits" in an ambiguous sense, I fail to find anything in his article that warrants Mr. Marshall's assumption that the single tax is a tax on profits, or that the profit made from using land, is (under a single tax régime) to be used as a basis for computing values for the purpose of taxation.

Mr. Marshall next makes an assertion that is open to a great deal of criticism. He supposes a city lot standing vacant, upon which a factory is to be built, and says: "Before the buildings were erected, and the machinery put in, and the men set to work, the land had no value. Now it has a value because of labor, and now the tax is levied upon that value." Let Mr. Marshall attempt to put a factory upon any vacant city lot, and he will very soon find out that his assertion will not hold good; he will find the lot *does have a value*. He will also discover that this value is predicated upon the profit that it is expected can be made from the business he desires to engage in, which profit may be estimated from the situation of the lot as regards facilities for carrying on that particular business—in other words, the owner of the lot will demand as rent for the lot "*all that portion of the product that can be derived from the use of the land, over and above what could be derived from the poorest land in use*" for that particular business. This rent the owner will demand either in a lump sum (rent capitalized), as purchase money, or so much per year as will pay him the legal rate of interest on the purchase money. Now, to show Mr. Marshall that improvements can add nothing to the value of land, *per se*, we must suppose a vast tract of land entirely unappropriated, and to be had for the taking; suppose Mr. Marshall to settle on a portion of this land, and that he can put improvements on his land to the amount of \$5,000, and derive a profit from their use; I come along and desire to settle, and think I would rather buy Mr. Marshall's improvements than make my own; I propose to buy out Mr. Marshall, and he agrees to sell, but wants \$6,000. I would very likely say: How is this; you only have \$5,000 invested here, including everything; how is it you demand \$6,000? Suppose Mr. Marshall to say: Why, don't you see, as I have improved this land it is now worth \$1,000 over and above the improvements. I am inclined to think that under the circumstances I should say to Mr. Marshall: Well, as I can get land equally as good as yours for settling on it, and as I can duplicate your improvements for \$5,000, I don't think I will be foolish enough to throw away \$1,000.

I come now to the most important part of

Mr. Marshall's article, viz.: How will labor benefit by the single tax? To fully explain this portion of the subject will take more space than at this time I feel at liberty to use, as I would like to treat the subject fully, and to do so must consider the incidence of taxation, the laws of rent, interest, and wages, and their relation to each other. I propose to treat this subject fully (as I understand it) in a future article, and will close this article after noticing briefly Mr. Marshall's remaining comments.

Yes, Mr. Marshall, it is the theory of the single tax advocates that "bare" lots, *having the same advantages for use as improved lots*, have the same taxable value. Take two adjoining lots in the heart of a populous city, having equal advantages for business purposes, one improved, the other unimproved; there is no value inherent in these lots; but they each have the same site value, which value is created by the community; this value is the only thing the community can justly demand as a means of supporting government. Suppose these lots to be worth \$5,000 each. Now, suppose the city to be moved away to some other location, what becomes of the value that attached to these lots? Why, it vanishes; but if you follow the community that left them, you will find that this same value attaches to other lots wherever they may happen to congregate, which lots formerly had no value.

Mr. Marshall says, he would like to see inaugurated, with as little delay as possible, a system of taxation that would tax the wealth of the country. Such a system of taxation has been the dream of sages from time immemorial, but the fact itself has never yet been accomplished. The old Romans attempted to tax the wealth existing among them, and to enforce the levy the assessors were armed with the most arbitrary authority; they could, if they even suspected a person of making false returns, seize and put them to torture. Yet, with all the forces of torture that stared them in the face, it is a matter of history that the wealth of Rome was not taxed justly; the very wealthy escaped; the moderately wealthy and the poor freemen bore the brunt of taxation. Does Mr. Marshall imagine that what Rome could not accomplish by means of torture, can be accomplished by us by threats of an action for perjury? Why, the very fact of their great wealth precludes the possibility of any such action succeeding. That *highly moral philanthropist and Christian gentleman*, Mr. John D. Rockefeller, recently declared upon oath that he could not estimate his private fortune within ten or fifteen million dollars. How would Mr. Marshall proceed to collect a just tax upon Mr. Rockefeller's fortune? I think he would have to

give it up. There is another side to this question, also. Even if it were practicable to tax the wealth of the country, such a tax would be neither just nor expedient. Wealth is what we are all striving for; the more wealth that is produced (provided its distribution is equitable) the better off we will all be. Consequently, anything tending to restrict the production of wealth is a national injury. The taxation of wealth tends to restrict its production; therefore, the taxation of wealth is a national injury. Take Jay Gould for instance. He is said to be worth \$200,000,000; now, if Jay Gould has accumulated this amount of wealth through his own exertions, and honestly, it is his as against all the world. No person has a right to exact one penny from him, either by means of taxation or otherwise; but if he has *not* come by his wealth honestly, it seems to me that instead of allowing him to go on robbing the people for his own enrichment, and then exacting a portion of his robberies in the form of taxation, it would be the wiser statesmanship to shut off the sources by which his robberies are accomplished. It would be small satisfaction to the poor slaves who are toiling their lives away for a mere pittance, in the coal mines of Pennsylvania, doomed to a cheerless and forlorn existence, because receiving but a small portion of the wealth they create, for our government to say to them: Yes, we know these people are robbing you right and left of your hard-earned wages, *but then we are getting even with them, we are making them deliver it up to us in the form of taxation*, so you just be patient, and God Almighty will take care of you after you die.

W. P. Borland.

School Books.

ORATORS of high repute often refer to the "palladium of our liberties."

This bulwark, this safeguard and security, is not always the same in the opinion of orators and writers. In the estimation of some, this palladium is the church; with others, the ballot; others assert it is the press; and still others, that it is the militia, the army and navy; but probably the greater number regard EDUCATION as the real palladium of American liberty and independence.

National liberty and independence is a splendid theme. Those who have a fancy for the florid in rhetoric, can find all the facts required to sustain them in their highest flights of eloquence when depicting the advantages of education.

In this connection, we notice the following from the Louisville *Courier-Journal* relating to the cost of national education:

Underlying all other public questions, pressing,

persistent, commanding, is the subject of education. Important in every civilized nation, it is in America of paramount interest. In America we have 12,000,000 children enrolled in the public schools alone; how to increase this attendance, how to lower absenteeism; how waste no money, no energy, no time, but to make every effort tell; what methods are best; what studies are essentials; what influences are to be stimulated; how to reach the hearts, the minds, the consciences of these children; what ideas to put before them—these are matters of most profound concern.

Our public schools require 347,292 teachers, and cost annually \$112,455,252—or did two years ago. These figures simply show the magnitude of the system, and are staggering even to imagination, but it is to be remembered that the United States pension list calls for more money than the schools receive. The future of the republic is committed to these 12,000,000 children, and to hundreds of thousands in private and sectarian schools—to these, and not to one or the other of the political parties; to these, and not to any church, nor any organization whatever.

In the foregoing we find a text inviting to extended remarks upon "national education," but our thoughts at this writing run in a somewhat different channel, that of individual rather than national education, and the subject naturally leads to reflections relating to school books.

When reference is made to the 12,000,000 children in the United States, and that more than \$112,000,000 represents the annual cost of their education, sum totals expand to such proportions that it is difficult to grasp them. To simplify the proposition, it is seen, by the simple process of division, that the cost *per capita*, or per head, of school children, is something over \$9; but this sum does not include the cost of school books. And just here comes into view one of the most heartless trusts that has ever cursed this land. We refer to what is called the "School-Book Trust"—a trust organized and maintained to make school books expensive instead of cheap.

The statement is suggestive of reflections every one of which gives haggard prominence to the overmastering greed which distinguishes the times in which we live. On the one hand we behold the people with lavish prodigality submitting to taxation that the children of the Republic may receive the rudiments of an English education; and on the other hand we behold capitalists organizing trusts for the purpose of making the education of the masses expensive—to increase the cost of books, without which all other expenditures are valueless.

We confess that it is difficult to grasp this form of scoundrelism. All things considered, it is an exhibition of rapacity unparalleled for its heartless venality. Those who have sought to measure its debasing influences have found it difficult to find illustrations to impress the public mind with the enormity of the wrongs it inflicts.

The men who organize trusts for the purpose of making school books for the masses dear, who would rob the children of the Republic to the amount of *one cent* in the cost

of school books, are infinitely more infamous than the wretch who "filches" the "good name" of a man. The men who create school-book trusts, that they may rob children, are guilty of an unpardonable sin.

What, we ask, would be thought of men who would organize a trust to make dwarfs, hunchbacks and cripples of children? Would not the world demand their extermination? Would they not be denounced as a scourge and an unmitigated curse? To rob a child of the means of a rudimental education, to place any obstacle in the way of mental growth and grasp, is to create in the land intellectual dwarfs and cripples. It constitutes a crime against mind, the one thing that allies the human being to God. The men who would, for mercenary considerations, make education dear to the children of America by advancing the price of school books, would, if they could, corner air, light and water. They would degrade and bestialize the rising generation; they would levy a tax upon the fountain of knowledge, and by processes compared with which the footpad's vocation is honorable, compel the stream to enlarge their fortunes, though universal ignorance and degradation should be the result.

If such views of the subject are in the line of prudent cogitations, then it follows that whenever the people rise in their majesty to throttle a school-book trust, they are animated by motives as patriotic as when they resolve by force of arms to repel an invading foe. They say that school books shall be practically free—that is, they shall be supplied at cost, and shall not be furnished by capitalists who create trusts for the purpose of making fortunes off of the necessities of school children; that they shall not stand, bludgeon in hand, at the threshold of home and the school, and determine the price of school books.

In this connection our readers are invited to note the splendid example set by the state of Indiana, in rescuing the school children of the state from the grasp of a school-book trust. The fight for state supremacy was one of the most remarkable conflicts on record. The trust, with the tenacity of an Indian, retired from its strongholds one by one, and though finally defeated, never surrendered; and when the law which crushed it was finally on the statute books of the state, it sought, by devices with which trusts are familiar, to defeat the law. But the people of Indiana, having long endured the iniquity, had framed a law which stood the test of legal criticism, and has redeemed them from trust tyranny the scandalous enormity of which it would be difficult to characterize.

We write of Indiana because it is our state and because we are familiar with the

facts of which we write, and not for the purpose of undue laudation because it is our state. We write to impress upon the minds of locomotive firemen and our readers generally, that a trust which seeks to increase the cost of school books is deserving of universal denunciation, and that in any state where such a trust holds sway, a movement to wrest from its grasp its power, is in the highest degree commendable, and that workingmen can with the greatest propriety engage in such a movement.

Such reflections lead us to the consideration of individual education, or *self* education, as distinguished from national education, or the education of the masses in schools.

In thousands of instances young men find themselves, on entering upon their chosen calling, deficient even in a rudimental education. They read indifferently, their orthography is sadly deficient, of arithmetic they know little, of geography still less, and of syntax nothing at all. It is to be presumed that their opportunities have been limited; that their ambition for an education has not been aroused; that they have not comprehended its importance, but now, seeing their deficiencies, they deplore them, and all the more because their school days are past and they are confronted by the cold logic of necessity. Their mission is work, but if ignorant, promotion can not be expected. Here the question arises, what can be done? Is there any way out of this wilderness? Is the highway to knowledge and the blessings it promises and secures forever barred against the young man who is ambitious to learn?

In this writing we would be frank. There is no hope for an ignorant young man who dare not confess his need of knowledge. The moment he assumes to know what he does not know, his case begins to be hopeless. On the contrary, when he says, "I do not know, and I want to know," he is as certain to know, if he lives, as that school books are within his reach. Such a young man will begin in his self education at the point where he knows he is deficient, even if it be with the alphabet. He will study orthography, and learn to spell correctly. He will learn to read, and as he advances he will know the meaning of the words in his lesson. He will advance, not hurriedly—he will make haste slowly, but his speed will increase as he advances. He will climb the acclivities, however steep and rugged; he will remove impediments to progress; he will surmount difficulties; he will break down bars and gates or he will climb over them. His mind thirsts for knowledge, and the more he slakes it the more intense his thirst becomes. His mental vision has a more extended horizon. His mind, invigorated by acquisitions, is eager for new con-

quests, and thus from study to study he proceeds until, emancipated, he is master of the situation.

We write of young men who in their school days were deprived of the training of the common schools of the country; and of those who, having such opportunities, neglected them, but who, comprehending their misfortune, would overcome the penalties it inflicts. And here the question arises, what about the books? Are they within easy reach, so that any young man who has work can obtain them?

We have on our table, as we write, a list of nine elementary school books, rising from "first reader" to "complete geography," of the "Indiana Educational Series," prices "fixed by law" at \$3.05. Such figures settle the question of elementary books. They make self education not only possible, but comparatively easy.

We do not doubt that outside of Indiana school books may be purchased at reasonable prices, but in Indiana the law fixes the price and declares school books shall be furnished at the lowest possible cost.

We have not written of the excellences or defects of national or state education, of qualifications of teachers or of their compensation. We have not alluded to the higher education of colleges and universities, but of such education as a young man may secure by his own efforts, aided only by elementary books.

We could without difficulty refer to a long line of distinguished men who, in their young manhood, found themselves deficient in education, a misfortune which they overcame by the exercise of indomitable will. But we are not writing of exceptional cases, but rather of and to the men of the "rank and file" in the great armies of work, who, deficient in education, can themselves, unaided by schools and teachers, overcome their misfortune and reduce its evil effects to the minimum, by the exercise of a manly determination to obtain an education.

Charles Marshall.

The Duchess of Marlborough.

THE present Duchess of Marlborough was a Mrs. Hamersley, one of New York's "400." She was the widow of a rich and doting husband, who provided for her a princely income, and didn't put in his will any matrimonial restrictions, but during her life time she could rake in the cash, about \$150,000 a year, and squander it as suited her whim.

An American woman with an annual income of \$150,000 is certain to be advertised throughout Europe, where titled beggars are numerous. As a matter of course, Mrs. Hamersley's fame went abroad, and the Duke of Marlborough, who was heels over

head in debt, saw his chance and besieged the rich New Yorker.

His dukedom was founded way back in 1704, when John Churchill was made a duke, for great military services, and money was given him to build the palace of Blenheim on an estate given him by Queen Anne.

The first duke was a splendid general and a wily diplomat, but his honesty was questioned and he was once sent to the tower, was a time or two deprived of his titles and estates, but managed to finally get everything back in good shape and to live until he was 72 years of age.

Such history would be of little consequence were it not for the fact that a live Yankee woman is now Duchess of Marlborough, a title for which she has paid and must continue to pay spot cash in large sums.

To put it square, the old Duke was flat broke. He had sold and pawned about everything he possessed and his palace was sadly dilapidated. He heard of the rich Mrs. Hamersley and went for her.

The lady was dazzled; a splendid title was in sight—that of duchess, a peeress of the United Kingdom. She would have a palace, coat of arms, coaches, footmen, outriders, style—if she was willing to pay for the gew-gaws. Mrs. Hamersley concluded to invest. The noble Duke wanted spot cash and as soon as the nuptial knot had been tied he got it. Mrs. Hamersley went to England and took possession of her palace. It was sadly out of order and soon as the noble Duke put foot upon his native heath he went in for a good time and the spot cash went as Maine once went for Kent, and then the noble Duchess had to try her credit. It was at par and she ran up the little bills amounting in all to \$700,000. She couldn't pay spot cash any more. Her creditors became alarmed and transferred their accounts, in a friendly way, to New York, brought suit and obtained judgment. Then the sheriffs and deputy sheriffs began hunting for property, and as the noble Duchess had come to New York with 180 trunks, containing her semi-royal robes, to dazzle the "400," and make Ward McAllister dizzy, it became exceedingly annoying to the Duchess, particularly as the noble Duke, her husband, was not with her, to wear his ducal crown and state robes—things which a New York deputy sheriff don't value, unless he can levy on them and sell them.

The Duchess became exceedingly exasperated and flew completely off the handle when the custodians of her estate, of which she is entitled to the income only, suggested she did not require \$150,000 a year to live in a respectable style. But these New Yorkers the noble Duchess denounced as a miser-

able set of plebeian galoots, who knew absolutely nothing about style—and she just gave them a piece of her duchess' mind in mighty plain English. She asserted that "her income fell below \$135,000 a year and that she had used all of it in her support as fast as it was received. She also denied with much vigor that a small portion of this amount was sufficient for her support. It was necessary, she alleged, that she should have the whole of the income to which she was entitled in order to properly discharge her social duties and live in the style and state to which she was accustomed, and befitting the usages and traditions of her position as the Duchess of Marlborough and a peeress of the United Kingdom." Her English creditors are very anxious to receive their money so that they can "live in the style and state to which they are accustomed," and it seems that the noble Duchess and her noble Dukey will have to get along on \$100,000 a year from the Hamersley estate, valued at \$5,000,000.

The late Mrs. Hamersley, widow of Louis Hamersley, now Duchess of Marlborough, was the daughter of Commodore Price, of the American navy, and comparatively poor till she married Hamersley. The noble Duke, now her husband, is of no account under heaven, and if required to work for a living would starve. It is said of him that "after going through his patrimony as far as he could, till he was blocked by the English law of entail, he was put to divers devices to raise the wind. I remember well what a time he had to obtain from Parliament, permission to sell two or three of the Raphaels that were in Marlborough House. The English papers made a great ado about the Duke selling the pictures, which were entailed the same as his estate, mansions, plate, &c., but finally Parliament took pity on him and granted him the permission he required. He realized \$300,000 by the sale of two of the pictures and paid some of his most pressing debts. It was thought at the time that the sale of the Raphaels would spoil the Marlborough collection, but the Duke fished up from among a pile of similar artistic lumber in the garret two Genoese tapestries that an ancestor had picked up in Genoa for a trifle, but which now have an artistic value almost equal to the paintings. These were stretched on the walls in place of the paintings and the Marlborough Raphaels were never missed." It is said that Marlborough House is a wonderful place, being the most richly stocked with artistic treasures of any in Europe, all of which would have been sold long ago if the noble Duke could have had his way. But Parliament can't control the Duchess. Her thousands will go to maintain style and keep her pauper husband clad and fed and in gambling money

—a more disgusting exhibition of parasitic degeneracy on the one side and of degradation on the part of American women on the other side, was never made.

The Vanderbilts, the Astors and Mackeys and the whole flunkey tribe, go to Europe to display their ill-gotten wealth and to feed the pauper nobility, and to marry off their daughters to titled vagabonds, who, when the money of these miserable dupes is all squandered, let them drift like abandoned hulks at sea—whither, is a matter of no concern to them.

George Flanders.

The Thistle.

THE thistle is not a beautiful flower, it is not even fragrant; one can scarcely touch it without receiving a painful thrust from some of its sharp defenders. But an old adage says, "Handsome is that handsome does." Taken from this point of view the Scotch think it the most beautiful of flowers, and have learned to love and esteem it for the good it once did them.

"The Danes invading Scotland determined to make a night attack on the sleeping garrison; could this but be gained possession of, without a doubt all Scotland would soon be subject to their tender (?) mercy. Upon the night appointed they slowly and stealthily approached until nearly up to the spot, when one of the soldiers stepped with his bare foot upon a large thistle; the intense pain caused him to utter a sharp cry, which aroused the sleeping soldiers, who seizing their arms fought bravely and repulsed the invading army." Thus was Scotland saved by a thistle, in acknowledgment of which the thistle is found upon the Scotch seal as the national emblem. The pure white lily, the sweet modest violet, or the glowing rose could never have accomplished what the ugly thistle wrought. The moral is plain: it is the thistle in the path of life upon which we tread and which causes the most severe pain that results in the most good.

The sharpest thorn in some lives is the necessity for them to labor. But what is obtained without it? A man may possess the strength of Hercules or the mind of Newton, and without labor, thought and earnestness, it will avail him nothing. He may live and die and still "leave no footprints on the sands of time."

"This life is a drama, the world a stage and we the actors." Each one has his share, part and position assigned him by the Great Manager and must execute it no matter how small, or the great play of life will not be complete.

The privilege of toil to earn an honest livelihood, without sin or taint of degrada-

tion is honorable, and should be so looked upon by all.

In Europe men are advanced according to rank and blood instead of brains. In our own free and glorious country, we see daily self-educated and self-made men rising to places of honor and distinction at an early age—so much for pluck and courage to labor honestly to win the coveted goal.

It is really amusing to see what a genuine awe we have of looking or appearing the least odd, or to be to any great extent different from our fellows. One would imagine all originality was sin, and to be honest one must follow exactly in some one else's footsteps. Not so our brave and worthy forefathers. They shaped their course in accordance with God's law and a kindness and charity towards their fellow men, and fearlessly followed it. Toil was the thistle upon which they trod, which enabled them to throw off the British yoke and be free, braving toil, hardships and peril to secure that most blessed boon, *liberty*.

"Oh Liberty! for thee we humbly plead;
For thee our bravest ones go forth to bleed and die!
Yes, die; and shout with dying breath,
God, give us liberty, or give us death!"

They were brave, industrious and persevering. *Idleness* did nothing toward clearing forests and rearing cities where once the red man dwelt in full possession and the smoke of his council fire curled up gracefully toward the sky.

Every leaf and blade of grass has its duty to perform. It is the little duties of which larger ones are made—little obliging acts, a few kind words gently spoken, or a sunny smile, may lighten some sorrowing one's weary heart. Little deeds, prompted by a tender, loving heart, very small indeed in themselves, all go to make up the sum of life—and as we cannot appropriate the thistle for our motto, let us take the substance, which is, Through patient toil, hope and cheerfulness we may work out grandly the destiny for which we were intended—and lastly let us not forget that while faith, hope and charity are a beloved trio, that the greatest of these is charity and that for all.

Vita.

The Two Sexes.

ALL through history we find humanity permeated with the conception that, as a sex, women have no more rights than those which we men are willing to give them. Just as if human rights could be made or left unmade by men! Just as if human rights did not lie at the foundations of the universe, placed there by the *One* who made the universe! Of course, all human blunders, all human disasters spring up from that misconception about human rights.

On one hand we find the bulk, if not the totality of fathers, infatuated with the idea

that the mothers of their boys—the educators of their boys for the first 10 years in life, anyhow, if not until 15—that those mothers must be kept back in the march of civilization, away from the very human activities through which we prepare the soil for new generations to grow.

On the other hand we find the mothers quietly accepting the situation as a matter of course. The idea of revolting against the oppression of their souls, that idea does not even dawn on their intellects. They will tell me, but how can woman revolt against the superior physical power of men?

But, my dear friends, the ladies, physical power never rules. It never rules in the Cosmos. It never rules among men. Intelligence alone rules. God is infinite power because He is infinite intelligence. The baby born yesterday is utterly powerless because his intelligence is yet down to zero.

In all the struggles of sixty centuries, among men, the masses, 90 per cent. of the men, have been in possession of physical power. All the same they have been invariably crushed. Even in the United States, the home of the free, even here we force 90 per cent. of the race to live mostly a mere animal existence.

We rob them of their manhood, as much as possible—rob them of the most precious gifts, of the most holy joys that God means all men should have, in time temporal, while traveling towards time eternal, towards joys eternal. And all because the 90 per cent. have not yet acquired intelligence enough in comparison with the few.

To be sure, as long as the male sex wants to play the despot against the female sex, however softly, so long shall the many, among men, be crushed by the few. Divine logic is inexorable. Men shall never trifle with God. They may squeeze themselves into Heaven, after a life of blunders and sorrows—of sorrows because of blunders, of blunders because of selfishness; but, the manhood of the race—the joys that can alone be evolved by manhood, individual and collective manhood—all that can only come from *justice* among men, that is, from absolute equality of rights among men. And the word men includes the word women.

Such is at least the divine meaning of the word men in the first and second chapters of Genesis. And those two chapters constitute the *fundamental charter of human rights*.

Now, it seems to me that so far humanity has only written the first volume of human development—the development of the animal man, the development of might against right. And it seems to me, too, that we are preparing ourselves to write the second volume—the development of right, the suppression of might.

The divine economy of human life ex-

cludes all conceptions of monopoly, and hence of all industrial monopoly, and hence of all sex monopoly. In the divine eyes the father and mother are one, the husband and wife are one, the two sexes are but one set of children, with absolute equality in gifts, in responsibilities, in rights.

We are advancing towards the grand and final battles of civilization, and the mothers of future generations must take part in those battles. Hence they must study all human problems, and thus prove—not their superiority over men—there is no other superiority but that of God—they must thus prove that they are willing and ready to help men to make the humanity of the future much more worthy of God than that of the past and the present, and thus corroborate the divine conception of fundamental equality in the two sexes blended with different external manifestations.

Equality in diversity is the divine motto all through the universe.

José Gros.

Socrates.

(Continued.)

THE most admirable phase of the sublime character of Socrates, that rises majestically above the weakness of human nature, was his greatness of soul, and unexampled patience, with which he suffered the ingratitude of his countrymen.

The beauty of the teaching of Socrates and that which strikes me as the most remarkable, aside from the profound wisdom of his doctrines, is their application to existing evils and in every walk of life.

To the youth Glauco, who aspired to the administration of public affairs, at a time when his years and abilities so little suited him, Socrates gave such timely and temperate advice as to entirely change his resolution. "Have a care, dear Glauco," he concluded after a lengthy conversation on the subject, "lest a too warm desire of honors should deceive you into pursuits that may cover you with shame, by setting your incapacity and slender abilities in full light." Glauco listened to the wise admonitions of the philosopher, and took time to inform himself in private before he ventured to appear in public.

Socrates did not urge his friends to enter early upon public employments, but first to take pains to improve their minds by the knowledge necessary to their success in them. "A man must be very simple," said he, "to believe that the mechanic arts are to be acquired without the help of proper masters, and that the knowledge requisite in governing states, which is the highest degree of human prudence, demands no previous labor and application." His great care in regard to those who aspired to public employments

was to form their manners upon solid principles of probity and justice; and especially to inspire them with a sincere love of their country, with a most ardent passion for the public good, and a high idea of the power and goodness of the gods; because without these qualities all other abilities serve only to render men more wicked, and more capable of doing evil. One can scarcely believe that such a wise teacher was speaking to the Greeks 2400 years ago. Who does not recognize the depth of the wisdom shown in this brief address to Alcibiades: "God has always prevented me from speaking to you whilst the tenderness of your age would have rendered my discourses of no utility to you, as an ambitious young man, for whom the laws open a way to the dignities of the republic." He foresaw the danger of holding serious conversation with Alcibiades at a time that would perhaps have given him a lasting disgust of such a subject. One day when Alcibiades, who was one of the most fiery and haughty of the Athenians, was boasting of his wealth and the great estates in his possession (for it is this that puffs the pride of the young in affluence), he carried him to a geographical map and asked him to find Attica. It was so small it could scarcely be discerned upon the chart; he found it, however, though with some difficulty, but upon being requested to point out his own estate there, "it is too small," said he, "to be distinguished in so little a space." "See then," replied Socrates, "what consequence you attach to an imperceptible spot of land."

Rising to this beautiful inspiration, given by that luminary of antiquity, Rollin continues: "For what was Attica compared to all Greece, Greece to Europe, Europe to the whole world, and the world itself to the vast extent of the infinite orbs which surround it? What an insect, what a nothing is the most powerful prince of the earth in the midst of this abyss of bodies and immense spaces, and what a portion of it does he occupy!"

In foretelling the disaster that befell the unfortunate expedition to Sicily, Socrates declared that he had simply spoken the promptings of his genius. A wise man, who sees an affair ill concerted, and conducted with rashness and precipitation, may easily prophesy the result of it, without the aid of any supernatural promptings. All modern authorities agree that it was Socrates' just and piercing judgment, joined with the most consummate prudence, that gave him that foresight and discernment to such a remarkable degree of excellence.

I shall make one extract from his discourse on the power, existence and greatness of the gods, which I believe will be sufficient not only to show his religious character but his conviction in the being of one supreme God:

It is easy to discern that there are gods, though we cannot discover them by our senses. Do we perceive the thunder whilst it crushes everything which opposes it? Do we distinguish the winds whilst they make such dreadful havoc before our eyes? Our soul itself, which is so intimately connected with us, which moves and actuates us, is it visible? can we behold it? It is the same with regard to the gods, of whom none are visible in the distribution of their favors. This great God himself, who has formed the universe, be continued, and supports the stupendous work, whose every part is finished with the utmost goodness and harmony: He who preserves them perpetually in immortal vigor, and causes them to obey Him with a never failing punctuality, and a rapidity not to be followed by our imagination; this God makes Himself sufficiently visible by the endless wonders of which He is author; but continues always invisible in Himself. Let us not then refuse to believe even what we do not see; and let us supply the defects of our corporeal eyes by using those of the soul; but especially let us render the just homage of respect and veneration to the Divinity, whose will it seems to be that we should have no other perception of Him than by His benefits vouchsafed to us. Now this adoration, this homage, consists in pleasing Him, and we can only please Him in doing His will.

At this time in Athens, a sect of assuming men who ranked themselves as the first sages of Greece, but whose conduct was the reverse, had prevailed to some extent among the young men of the city. There was nothing these masters did not profess. They knew everything, and could teach everything. Their young disciples acquired nothing from their precepts but a silly esteem for themselves and a universal contempt for everybody else; so that not a scholar quitted these schools, but was more impertinent than when he first entered them. They called themselves sophists. Socrates attacked this false philosophy with an irony that his dull and ugly countenance had greatly supported; in fact his whole appearance was that of a poor, simple man. When he had retired from the numerous assembly who had listened to the discussion, the admiration that they enjoyed was changed into contempt. Thus the name of sophist became odious and ridiculous. Socrates, for having endeavored to unmask their vices and discredit their false eloquence, experienced from these men, who had lorded it amongst the youth of Athens for so long a time, puffed with pride and arrogance, equally corrupt and haughty, all that could be feared or expected from the most malignant envy and the most envenomed hatred. They forthwith conspired to destroy him, but so strongly was Socrates entrenched in the affections of the people, that it took his enemies many years to prepare the public mind to endorse the slanders and calumnies they had forged against him.

The first blow was struck by the poet Aristophanes, who, to his eternal dishonor and the disgrace of poetry, lent his pen to the malice of Socrates' enemies and employed his whole genius and ability to depreciate the best and most excellent man that antiquity had ever produced.

Aristophanes wrote a very clever and subtle comedy called "The Clouds," in which Socrates was represented as a teacher of the most vicious doctrines and dangerous maxims, while he was perched in a basket swinging in the clouds. It was some time after this that Melitus appeared as accuser and entered a process in form against Socrates: First, that he did not admit the gods acknowledged by the republic, and introduced new divinities; and second, that he corrupted the youth of Athens, which was concluded with the inference that sentence of death ought to pass against him.

Never had accusation so little foundation, or probability a gauzier pretext. Socrates for forty years had made it his profession to instruct the Athenian youth. When the conspiracy thus became public, the friends of Socrates gathered and prepared for his defense. Lysias, the most able orator of his time, submitted to him an elaborate discourse, setting forth in a masterly manner the entire case, yet carrying through the whole some of the most tender and pathetic passages, capable of moving the most obdurate hearts. Socrates read it with pleasure and approved it very much, yet he told him frankly that it did not suit him.

Tim Fagan.

(To be continued.)

Queries for Single Taxers.

M^{R.} W. H. VAN ORNUM, of Chicago, who formerly was a single taxer, and who has since fallen from grace, or, as he would prefer, saw the error of his ways, now turns about and administers rebuke (in the *Twentieth Century*) by way of asking some hard questions. After he asks those questions he says: "It may dawn upon them (the single taxers) that the community has no more right to fix conditions upon which men may be permitted to exercise their natural rights than individuals have; and that the single tax, if carried out as proposed, would merely shift the landlord from the individual, as now, to the community."

He forgot to add the possibility that the community in its corporate capacity might do more to conserve the interests of all than individual landlords would. He might also be asked the question, namely: If the community has no right in the matter, who has? The landlords of all parts of the world would endorse such a theory, no doubt.

These remarks are only preliminaries, however. His difficult questions, the real hard nuts for single taxers to crack, are these, namely: "Is there any essential difference between rent and purchase money? Is not purchase money merely present value, or rent capitalized?"

A little more amplification would be in

order here. As it is, it is a hard nut indeed. It may mean one thing or it may mean another.

Rent is that which is demanded by a land or a house owner, and purchase money is that with which it is paid. Rent is now paid to the landlord as it would continue, in a measure, to be paid even if the single tax were adopted instead of the present system, with this "essential difference," that whereas the state or community now collects the revenue for the defrayment of proper governmental functions from other sources than the holders of nature's bounties, graded as the tax should be, according to the value of their respective holdings, with a system based upon the single tax it would be so collected; resulting, as it surely would, in an equitable distribution of the taxes necessary to maintain government. If Mr. Van Ornum is one of those who think that government is entirely superfluous, that is of course another matter. But unless I am convinced that he is opposed to all government, and, therefore, to all modes of taxation, I am inclined to think that he will agree with me that, of all systems of taxation, the single tax is the most equitable, and therefore the most just.

"If so, when a man rents land to another, say for one year or for any other time, is he not selling it to him for that time?"

He is not. If I had a piece of land and chose to rent it to A or B for a time, I would sell to him the exclusive right of possession of it, governed by certain conditions as to the use he made of it, but that is all I or anyone else would sell under such circumstances, provided, of course, that the proper agreement were made.

"And if it is unjust for one man to rent or sell land, is it not just as unjust for ten men to do it, or ten hundred, or even for the whole community to join in doing it?"

I deny the assertion that it is unjust to rent land, provided always that the nominal owner turns over to the community all moneys so collected, minus only such percentage as he may be entitled to for his services as collector, such revenues to be used only for the legitimate expenses of the community. In reality, the so-called owner of the most valuable land would have his taxes so adjusted that he could have no special advantage over those whose land would be of lesser value.

As for the selling of land under those conditions it seems to me that the repulsive features now so apparent in almost every transfer of land would be almost if not entirely eliminated. The transfer then would imply the absolute surrender of the right of possession to the bare land, and proper compensation for improvements made. The bare land of course would have no selling value.

Henry J. Wingardner.

Manufacturers vs. Farmers.

AN article, captioned as above, from the columns of the *American Machinist*, a paper of acknowledged friendliness to the cause of labor, is deserving of careful reading and consideration:

In some of the Central and Western states a contest is being carried on between the manufacturers on the one hand and the farmers on the other, regarding the enactment of laws supposed to favor the interests of one or the other.

The farmers of the country have become pretty generally and firmly convinced that something is hurting them, and they have evidently determined to right things, without any very clear idea of what it is that is hurting them, or how things can be improved. It is perfectly proper, of course, for any body of men to take concerted action looking to the securing of justice and equal rights for themselves; but it is of the highest importance to them as well as to others that, before taking such action, its ultimate indirect as well as direct effects should, so far as possible, be understood; and, when it comes to a matter of taxation, knowledge of the effects can usually be found only on a thorough study of the principles of taxation.

The farmers seem to have conceived the idea that the manufacturers escape from bearing anything like a fair proportion of the burdens of taxation, and to them it seems to be an easy matter to remedy this by simply giving the tax collector authority to collect additional taxes on manufacturer's articles ready for the market, or raw material stored or in process of manufacture; and they, innocently enough, think that every additional dollar which can be collected in this way will not only help to check the dangerous accumulation of capital in the hands of the manufacturers, but also correspondingly reduce the burdens of the farmers.

In Ohio, for instance, a bill has been introduced, and at last advice had actually passed one branch of the legislature, by the influence of the farmers, which requires every manufacturer to list for taxation all materials used during the year in carrying on his manufacturing operations, as well as all engines, machinery and tools of every description at a fair cash value, and every person who shall hold personal property of any description with a view to making a profit by changing it in any way, is to be considered a manufacturer, so far as the provisions of the law are concerned.

Now, it seems to us that the dullest farmer that ever turned a furrow ought to know that such a law would, if passed, utterly fail to accomplish the object intended by its framers. Let us trace its effects in one instance.

There are blast furnaces in Ohio, and the owner of a blast furnace is by the terms of the law a manufacturer, and will be required to pay a tax upon all the iron ore and other materials used by him in the production of pig iron. That is one tax. This pig-iron, we will suppose, goes to a mill near by, where it is made into bars of wrought-iron, and the manufacturer owning the mill must pay a tax upon all the pig iron used by him, which makes the second tax on the same material. We will suppose the finished bars of iron to go to a factory which makes a specialty of manufacturing bolts and nuts, and here a tax must be paid upon all bar-iron used, which makes tax number three on the same material. These bolts and nuts then go to a factory where machines are built and the manufacturer here must pay a tax upon all nuts and bolts used during the year, which makes tax number four which the same material would have to bear. A dozen such instances could be named, and they would show in the first place what a very heavy burden would be imposed by such a law, and how unequally it would fall upon different establishments, according as they themselves made or bought parts of their finished products. To illustrate this inequality, take the case of a manufacturer making a line of goods composed mainly of small castings and drop forgings. If he made these castings and drop forgings himself he would pay no tax except upon the pig and bar-

iron of which they were made, while, if he bought them of manufacturers making a specialty of such work, he would have to reimburse them for the taxes paid on them as raw material, with probably a profit on the taxes besides, and then himself pay an additional tax upon the castings and forgings. This total additional cost he would have to add to the price of his finished product, to be eventually paid by the consumer. In the case of agricultural machinery, which is extensively manufactured in Ohio, the consumer is the farmer himself, and it ought to be easy for him to see the final effect of the law. In the case of other kinds of machinery and goods, the additional tax would not be so directly paid by him, but in the end he might rest assured that himself, together with the other consumers of the goods manufactured, would pay all the taxes of whatever description levied upon them. All this, of course, is predicated upon the assumption that manufacturers in other states where such laws were not in force are to be in some way prevented from shipping their goods in to compete with those made in Ohio; but of course they would so ship them, and to that extent close up manufactures in Ohio, and cause their transfer to other states, resulting in the loss not only of the taxes, but of everything else of value resulting from the presence of manufactures. If all the states should pass such laws, then the final consumer of the manufactured goods would have no escape from the payment of all the taxes. The farmer could make the consumer of his products pay the additional cost of his farm machinery, were it not for the fact that a large surplus of farm products is produced here, which must find a market by exportation to foreign countries in which prices are fixed with respect to the cheapest possible production in any country.

The fact is that neither the farmers nor consumers generally have any just cause to complain of manufacturers as such. Very few manufacturers not protected from competition by some sort of an unfair monopoly, make more than a fair return upon their capital invested, with a fair recompense for useful work done in managing their business. There are many monopolies by which men are making more than this, and in some cases these monopolists are also manufacturers, in which case they make most of their money by reason of their being monopolists, not as manufacturers pure and simple. And the monopolists are regularly grinding the legitimate manufacturers as well as the farmers, and the remedy is not to lay additional burdens upon manufacturers, but to remove some of the facilities for building up and maintaining the monopolies.

When the farmers or any other body of men go to looking about for something to tax, they should examine to see whether the proposed taxes are likely to remain where imposed, or be shifted onto others, and whether the things taxed are in themselves desirable and useful or not, and, if they are desirable and useful, then whether or not they are likely to be driven elsewhere by the imposition of the proposed tax.

In the foregoing article it is shown that hasty and ill-considered legislation, urged under the hue and cry of one class and aiming at the interests of other classes, will entail harm to the whole of the people. While the farmers of Ohio are aiming at manufacturers, we find that in other states the railroads are assailed, and have to bear the brunt of adverse legislation, which is sure to result in retarding the growth and development of the state. Iowa, with its unequalled agricultural resources and great farm interests, has taken the lead of all the states in this direction, and as a result we find that during 1890 only one mile of new road is placed to Iowa's credit out of a total of over 6,000 miles built in the United States during that year. While Iowa has a

fair share of railroad mileage there is still room for internal improvement in this line, for not all of its 56,000 square miles of territory have their full share of railroad facilities, and it is only the adverse position of its legislature on this point which has interfered with the further extension of its railway system. What have railroads done to Iowa that she should be so much opposed to them? Finding that Iowa is one of the few states that have no debt, it is evident that the railroads have not ruined her finances. In looking at the map of Iowa, as it appeared when I was a boy, I find a large area of its surface blank, except for the words, "Country of the Sacs and Foxes," near the center, and the words "Pottawatomies," "Ottawas," and "Chippewas," across the western end, while the map my children are now using is dotted with the names of towns and cities, some of which have attained to such size as to be known all over the land. Have the railroads been a help or a hindrance to this grand development by which this desert has become populated? Or are the railroads a bar to further advancement?

Being a railroader, and sometimes engaged in freight traffic, I was naturally greatly interested in the tales of an old-time freight line, which a relative of mine, now well advanced in years, helped to operate in his younger days, and I think a good lesson may be drawn from his experience. The motive power on this old-time freight line was a four-horse team, the car a large covered wagon, and the road the old Brunswick turnpike, with New Brunswick, N. J., at one end and Easton, Pa., at the other. The distance between the termini was 45 miles, making 90 miles in the round trip, and this used to be made in five days' time. The average load was two tons each way and the average earnings about \$22 for the round trip; thus showing that the pay was at the rate of about \$4.50 per day; not very big pay for the work of four horses with a driver, and the natural wear, tear and expense incident to a life on the road. Let us apply this method and its prices to some of the present transportation problems and see what its effects would be on all classes of the community. During the year 1890 the D., L. & W. R. R. hauled over 8,000,000 tons of coal to market, the nearest tide-water being 145 miles from the mines. This coal would require 4,000,000 wagons to carry it, or at the rate of about 13,000 every working day in the year. As it would take each team 14 days to make a round trip, it would require 182,000 teams, or 728,000 horses all the year around. As it would take so many to do the work done by one coal-carrier, it is self-evident that there would not be horses enough in the country to haul the coal required for its use, and if all the horses were

used in this service, what would become of all the other trades, arts, manufactures, and agriculture, in which animal power is a moving factor? Again, the 13,000 teams a day, loaded and hauling the coal of this one company, would require nearly one hundred miles of road to allow of their moving along in single file, but as that is much faster than they could move, it would require a road on which five teams could be driven abreast, at the rate of 20 miles per day, to take the coal down, and of course the returning string of wagons would be just as great, thus requiring a road on which five wagons abreast would be moving at the rate of 20 miles a day in each direction, or about 80 feet wide and filled with a continuous moving procession. It would be almost impossible to keep a road in passable condition under such traffic, and would involve a ruinous expense to a state traversed by a number of such highways.

It has been shown that it would require seven days' work to bring two tons of coal to the seaboard, and supposing that the teams got a return load, out of which to make their wages in going back, we would still have to pay for seven days at \$1.50 each, or \$30 cartage on 2 tons of coal, or at the rate of \$15 per ton; this, with the mining, breaking, screening and profits, would bring the coal to about \$20 per ton, and cause high prices in every commodity in which heat was employed, besides the distress and suffering which a lack of fuel, on account of its high price, would cause among the poorer classes of our population.

But it is not in the handling of coal alone that railroads are benefactors to the country, for this extends into every article of manufacture and agriculture; for instance wheat, which forms so large a product of Iowa's fields, is now carried at a cost of about 13 cents per bushel from Chicago to New York, or at the rate of about \$4.34 a ton, or 17 cents a ton cheaper from Chicago to New York than it used to cost to haul a ton 40 miles in the old-time freight wagons. The railroads have thus practically brought New York and Chicago into closer connection than New Brunswick and Easton were by the wagon freight, and to the same extent this has been true of Iowa. But even these connections outside of the state would not help Iowa very much, were it not for its own system of roads, for Iowa is about 200 miles long in a north and south, and nearly 300 miles in an east and west direction, and a haul from its centre to its borders by wagons pulled by horses would cost more than a load of corn was worth, and nearly as much as wheat would bring. About seven years ago, while on a visit to some cousins living in the northwest corner of Missouri, and of course near the southwest corner of Iowa, I had a very good les-

son on the advantage a railroad is to the farmer. The cousins referred to, about three years previous to my visit, were obliged to haul their corn about fourteen miles to reach the Missouri river to find a market for it, and used to get from \$5 to \$6 a load for it, which, as it took a full day to make the trip, was but a couple of dollars more than cartage, even for that comparatively short distance. Their butter they had sold at 6 to 8 cents and eggs at 3 to 5 cents a dozen, but with the advent of a little railroad to connect them with the outside world, these prices were amazingly augmented, for they had a home market for all their grain and produce. While in individual and isolated cases some one may be injured by a railroad, the great public are benefitted by their existence, and even the most rabid "granger" would find that life would be without many comforts, not to mention luxuries, if railroads were obliterated from the face of the earth, as some of the laws passed seem designed to do, but which for the common good it is to be hoped will be repealed and supplanted by more sensible and statesmanlike legislation.

Wm. Weiler.

A Plea for Nationalism.

THE *New Nation*, in a recent issue, has an article captioned "Why all Workers Should be Nationalists," as follows:

A bill has been introduced into the New York Legislature to pension public school teachers after reaching a certain age in public service. The Illinois Legislature is considering a like bill. The Springfield *Republican* comments thus: "Nobody is able to tell for what particular reason" these propositions are brought forward.

On the contrary. It is very easy for anybody to tell what the reason is. A conviction has long been growing in the public mind, and of late has been growing very rapidly, that something is the matter with an order of society under which industry is a useful calling for all the working period of life falls, as it so frequently, and in fact usually, does, to insure sufficiency for old age.

It may very possibly be replied that an industrious person of right habits can lay up enough for this purpose. Now, if this were true, it would be no answer to the complaint, because a person may be faithful and industrious and yet lack thrift and business sense. Men and women who are the very salt of the earth, and the most useful members of society, may, and for that matter very often do, lack thrift, which on the other hand quite often is strongly characteristic of the meanest of men. Therefore, to the complaint that a life of industry ought to insure security in old age, the response that it will do so, if the worker is also thrifty, would not meet the case even though it were true.

But it is not true. No amount of thrift will afford a man nowadays any sufficient guarantee against want in old age. A safe investment for money saved is to-day what no one can find. Fraud, embezzlement, bankruptcy on every hand, with periodical business crises against which nothing can stand, mock foresight, almost justify the improvidence of the spend-thrift.

Therefore, it is not true that to-day thrift will secure the industrious man a safe old age.

Because men have learned this by bitter experience they are turning more and more to the state and nation for an assurance which nowhere else is to be

found. That is why nationalism, which proposes to turn the whole nation into one great insurance company which shall be also a universal employment bureau, finds so much favor.

It will be apparent from the foregoing that if the *New Nation* looks with favor upon laws pensioning public school teachers after a certain age and length of service, it is not because public school teachers are better than other people, but because it believes that it is the business of a true nation, while seeing to it, on the one hand, that there are no loafers, to guarantee, on the other hand, to all who have worked through the heat of the day, whether at school teaching or street paving, a quiet and untroubled evening of life.

But the *Republican* asks for a "particular reason" why the public school teachers, especially, should be pensioned, while the reason we have given is a general one wherefore all workers in useful pursuits should be pensioned. The particular reason is obviously the fact that the teachers are public employees, as soldiers are, and that to pension them would be no innovation in method whatever, but strictly in line with precedent.

Just here comes in the practical application. So long as the present system of the employment of labor by private persons and corporations continues, the workers cannot claim that they are employed in serving the public (except indirectly), and therefore have no clear claim for public guarantees. In proportion as the public control of industry takes the place of private and corporate control, will the workers have a clear claim on the public for protection and maintenance.

The moral is, that workers of whatever grade, from school teachers to street sweepers, who are not nationalists, have not stopped to think.

The closing sentence, "Have not stopped to think," is in the nature of an invitation to stop and think. The present ought to be a thinking age—and we are inclined to be of the opinion that more thinking is done *per capita*—per head, than in any other age, since, according to the Darwinian theory, man was a molecule or a monkey.

But so far, the *New Nation* is manifestly of the opinion that all the thinking going on is to little or no purpose in alleviating the ills to which flesh is heir, and that instead of advancement, the human family has taken the back track, or is plunging along at a fearful speed to conditions the contemplation of which is really appalling, and the remedy for all the woes, individual, social, industrial and political, is nationalism—or Bellamyism—either of which would usher in an era not specially different from the apocalyptic millennium.

There are many people who advocate nationalism. It is not a modern idea. It has been tried, not perhaps with as much intelligence as we Americans could bestow upon it. Nevertheless, it may not be out of place here to recall some of the features of nationalism as history reveals them, due allowance being made for such errors as may have crept into the transmission of facts.

Lycurgus of Sparta was a nationalist *par excellence*. Sparta was a very small kingdom, and Lycurgus concluded to modify the old government and establish one which partook of monarchial and democratic form. His next move was to get possession of all the land and divide it up among the people.

He then divided all the movable goods and chattels. He then cried down gold and silver and gave the people iron money and made it so heavy that it required two oxen to move \$100. His reforms went on swimmingly—nationalism took like wildfire. In the reform movements of Lycurgus he banished all superfluous arts from Sparta and then established public meals—where all ate at common tables and the same food. Nor was this enough: the children became the property of state; those that were strong and healthy were provided for, those that were infirm were condemned to perish. Such is a brief outline of nationalism in Sparta some eighteen centuries before Christ. Lycurgus having put things in shape, and finding the machinery of government running with scarcely any friction, persuaded the people to swear, as he was about to make a journey into a distant land, that they would stand by the government until he returned. Having done this, he consulted an oracle, and being told that nationalism was perfection, he deliberately committed suicide. As a consequence, he never returned to Sparta, and after a time nationalism in that land, as Lycurgus established it, ceased to exist.

Nationalism at one time existed in Egypt, not as in Sparta, but in a way that the government owned everything and the people nothing.

In the days of the famine in Egypt, Joseph, who stood next to Pharaoh, had for seven years previous to the great drouth secured all the surplus grain. He piled it up until no account could be kept of the abundance. Then came the drouth and the famine. When the people had consumed all their store, Joseph sold them corn for *spot cash*, till he had all their money. When supplies again ran low, the people demanded more corn, and Joseph took in all the cattle. Supplies again being exhausted, the people wanted more corn. They came to Joseph and said, "Buy us and our land for bread," and Joseph bought them and their land, and said to them, "Behold, I have bought you this day and your land for Pharaoh." After this the government was supreme. The people owned nothing—they were the slaves of the government.

In the one case, Lycurgus persuaded the people to give up their land; in the other case Pharaoh bought the land and the people also; and in both cases, in so far as the degradation of the people and the exaltation of the government was concerned, nationalism was established—and what came of it? The government in both instances cornered the people. The individual ceased to exist, except as a hanger-on of the government.

What is the American idea? The absolute sovereignty of the people, the sovereignty of the individual. The government is the

creature of the people, but the people are not creatures of the government. Individualism is the American idea, not nationalism as the term is used by the *New Nation*, Bellamy, *et al.*

It need not be contradicted that the people in a governmental capacity can do some things better than individuals, but it does not follow that they can do all things better. It is not required to particularize, life is too short.

The question is well put: "Why pension school teachers, at any age?" Fully one-half of the school teachers are totally disqualified for the positions they occupy. But were they all qualified, why pension them any more than locomotive firemen or any other class of workingmen? Worse still, where is the money to come from to pay their pensions? Labor pays all taxes now. If everybody is to be pensioned after a certain age, the sum total, if the pension is to be sufficient to supply the absolute necessities of life, would swell to such alarming amounts as would make Bellamy himself open his eyes in amazement. But under nationalism we surmise the idea is to pension all the sick, infirm, all who cannot work, and an army besides who will draw pensions at a certain age, sick or well. Again, we ask, how are the enormous sums of money to be obtained? Only labor can produce revenues. If at present, as the *New Nation* says, "no amount of thrift will afford a man nowadays a sufficient guarantee against want in old age," what can nationalism do to remedy the evil? Again, is it proposed that under "nationalism" the government will manage everything from a minstrel show to a gold mine—all the ten thousand business enterprises of the country? It is an axiom in economics that labor creates all the wealth; is the distribution under nationalism to be any more equitable than at present? Or is the government to become the corporation to determine, then as now, how much labor shall have? More, who is to be the government? Are we to have legislatures, congresses and common councils, elected, as at present? Is it assumed that under nationalism human nature is to be more sublimated, or that Satan is to be chained?

One of the reasons why "nationalism" should be promptly inaugurated is because "fraud, embezzlement and bankruptcy" is so prevalent that there is no "safe investment" for surplus earnings. As things are now managed, "business crises" are so common and disastrous that Pharaoh's dream of fat and lean kine illustrates conditions, conditions which it is believed nationalism will so change and modify that, instead of alternate plenty and famine, there shall be continuous plenty; investments will be secure, because fraud and embezzlement will dis-

appear; everybody at a certain age, whether a school teacher or street paver, will be pensioned. "The whole nation" will be "one great insurance company, a universal employment bureau." The "loafer" will disappear and the sun of every old man will set in a halo of supernal glory.

Contemplating such an earthly paradise, we confess to sensations of delight, of rapture, of transports almost divine. Nationalism would give us a new earth, and people would long to live forever. But in the background of the picture we fancy we discover written in characters vivid as lightning, "Labor must pay the bills."

The dream is one of ecstatic felicity. This poor sin-cursed earth, no longer producing briars and thorns, is one vast Eden, *minus* Satan—fruits and flowers, milk and honey, luxury and love abound. The government "insurance company," and the government "employment bureau," provide work and wages, and financial security. As we write, in fancy we take the "wings of the morning" and survey all the lands of our vast domain, and everywhere under the sway of nationalism everything challenges admiration. The bees and the brooks and the birds sing the praise of nationalism. The winds transform leaf and spray into harps to add delightful features to the concert of joy. The mighty forest trees sway and toss high their arms in token of approbation of the new régime. The lowing herds, the "cattle on a thousand hills," or on a thousand ranches, seemingly comprehend that they too belong to the nation.

But after all fancy must give way to fact, and labor comes forth from the mine, the field, the factory, roundhouse and cab, and asks, "Whence come all the revenues to support this splendid fabric?" and the answer comes quick as the flash from the storm cloud, "From your wages;" and "what is the compensation?" In old age a pension. Well, when will nationalism come? Just as soon as men can be educated to give the devil the cold shoulder and be governed by the divine rule, "As ye would that others should do to you, do you even so to them, for this is the law and the prophets."

Frank Forrester.

Advantages of the Single Tax.

IF Mr. Chas. Marshall had read the article in the January number of the *Locomotive Firemen's Magazine*, "The Shifting of Land Rents under the High Tax," he would have saved himself the trouble of writing the article in the March number. Of course it is true that labor pays all bills because labor produces all wealth; and the bills that labor pays now are: \$1,300,000,000 monopoly land rents; \$800,000,000 national and local taxes; \$200,000,000, if not more, interest upon

interest, or indirect taxes; \$700,000,000, if not more, earnings on incidental monopolies, fed by land monopoly; \$3,000,000,000 grand total.

Under that dreadful single tax of ours labor would pay, say, \$1,000,000,000 economic land rent, \$2,000,000,000 balance in favor of labor, equal to \$20,000 income as an average to 100,000 plutocrats. Besides, the single tax would give to labor free access to all the land worth having; that labor needs to become King, and stop being the *Industrial Slave* that labor now is.

In private mortgages and securities, which are but a general mortgage, we have over \$30,000,000,000 (held by less than 100,000 men), embodying not less than \$12,000,000,000 land values. At 5 per cent. single tax, those 200,000 men would pay \$600,000,000 annual taxes, besides taxes on whatever land they may hold directly, and at least one-half of all the valuable land is directly held by those 200,000 men or less.

J. Gros.

Distribution of Wealth.

IN a recent editorial in your *Magazine* you say 62,000,000 of people wonder how 200,000 secure it all—i. e., the surplus wealth labor has created.

I believe the distribution would be more equal if all charters for railroads, bridges, tunnels, mining companies, and the like, were required to raise all their money by sale of stock, nothing to be raised by a mortgage or bond to draw interest and so depreciate the stock. If the Pacific roads had been all by stock, our government, by holding stock for all money advanced, would have saved millions to the people. If ever the distribution is made more equal, dividends on the stock and not interest on the bonds must be adopted.

If this thought is of any value in showing one of the methods by which the few secure the surplus, you are welcome to it.

C. McK. Ingersoll.

Lonely Things.

I.

THERE are so many stars in heaven's high dome,
So many, so many to-night;
And the little stars cluster in loving groups
And merrily twinkle their light:
But the great bright gems that stud yon zone
Are so wide apart and so splendidly lone,—
They're so far, far away
From a kind, kindred ray,—
So brilliantly sad, that I long for the day
To usurp their glittering throne.

II.

There are so many brooks all over the land,
Little brooks running swift and free;
And these chattering streams rush on till they meet
And together rush down to the sea:
But imprisoned fast by its tree-crowned shore,
Lies a quiet lake, alone evermore.
Though unruffled it lies
And reflects the bright skies,
Heaven's wooing is vain: the lake only sighs
For the ocean's distant roar.

III.

There are so many hearts in this busy world,
Throbbing drearily on alone;
Hearts rich in affection, yet drifting apart
With their precious freight unknown:
Souls proudly patient, who utter no word,
No craving cry for the hope deferred;
Whose grand, possible life
Is spent in dumb strife,
While a shallower heart is with gladness rife—
At rest, with no depths to be stirred.

TROY, PA.

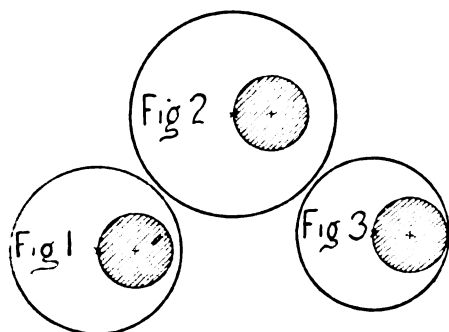

Ellen Oliver Van Fleet.

MECHANICAL.

Communications relating to Locomotive Running, Firing and Management, and other mechanical topics, are solicited for this Department.

Contributors are requested to be brief as possible, to write on one side of the paper only, and to forward copy so as to reach the Editor not later than the *tenth day* of each month.

Turning Down Eccentrics.

The other day I asked an engineer the question, what would be the effect of the throw of the valve if the eccentric were turned down to a true circle after it had worn out all around, and he said that it would lessen the valve throw. Now, I cannot understand why it would lessen it. The same ratio is preserved between the heavy and the light side of the eccentric. The valve would not re-adjust; it would be done by lengthening the eccentric rod by the same amount as was taken off the eccentric; then with a proper sized strap the throw would not be altered. Am I not right?

ANSWER.

Most good builders make the sheave as small as will give the desired eccentricity and throw, so as to reduce the size, weight, cost, and friction. Thus, of the two sheaves shown in Figs. 1 and 2, the well posted builder would use Fig. 1, which gives the same throw as Fig. 2 and has no unnecessary metal, there being on the light side only enough stuff to insure strength; and, in fact, if the eccentric were forged in one piece with the shaft, and no allowance at all would be made for wear and for turning down, it would be as in Fig. 3, which gives the same throw as the other two.

If the sheave shown in Fig. 2 were to be turned down, it would be turned on the original centers and would still leave plenty of metal all around the shaft. But Fig. 1 would, when worn, require to be given a new center nearer the shaft center, so as not to encroach upon the already narrow strip of metal upon the light side. Bringing the sheave center nearer the shaft center would, of course, lessen the throw, no matter what the diameter of the sheave.

This would give the valve less travel and the eccentric rod would, instead of being too short, be too long.

So, turning the sheave down from the dimensions likely to be given it, would generally result in lessening the valve throw.

Robert Grimshaw.

Railroad Ties.

Poor's Manual places the track of the entire railroad system of the United States at 161,397 miles, "therefore taking 2,640 ties per mile of track, there are in use at least 426,088,080 ties. This estimate, large though the total appears, is under the mark, for on the word of the superintendent of a Pennsylvania railroad construction corps, no road uses less than 2,640 ties per mile, and many of the roads with heavy traffic have 2,816, and in a few cases more.

"In a recent lecture on 'American Woods,' Prof. Bickmore mentioned the enormous consumption of wood for this purpose, but it is doubtful if the real magnitude of it was properly understood by his hearers. The life of these ties varies according to their quality and the climatic conditions. On the Eastern roads, where only the best ties are employed, the average life is found to be six years, while in the West, where poorer quality of timber is often accepted, and where dry rot and other disadvantages have to be confronted, the average life is from three to five years, so that even after allowing for a few exceptional cases in which ties may last ten years, the average life of ties in the United States can not be counted as more than five years.

"Therefore it follows that the annual consumption must be about 85,217,616, which, with steady increase of railroad building, must soon exceed 100,000,000—a gigantic demand to be satisfied from the forests each year when one considers the many other calls made upon them." Taking into consideration all the demands made upon the forests of the United States, taking the number of trees annually cut down and burned down—taking into consideration the trees destroyed to make farms and the time required for a twig to become a tree sufficiently large for a tie, and it would be no great task to fix a time when the American forests would disappear. After the forests are gone, then Sahara.

Illinois Railroads.

The State Railroad and Warehouse Commission of Illinois report for 1890 that the state has 10,163 miles of main track and that within the state there were 57,435 employes, whose wages aggregated \$33,991,986, an average of \$591 each a year, or \$1.97 per day for 300 working days.

The Vertical Plane Coupler.

After several years of study and cogitation, and the appointment, investigation and report of committees on the subject of automatic couplers, the Master Car Builders, in convention assembled, were led to adopt and recommend the so-called vertical plane coupler as the one above all others the most desirable. After so much consideration it would appear as if some good results might be obtained from it, but if the free expression of opinion about the defects of this coupler as shown in actual use, and given in the reports of the proceedings of the January meeting of the New England Railroad Club, are any indication of the true state of affairs among the car men, there is reason to believe that the choice was not as prudent as could be wished. In discussing the question, "What constitutes a defect in a vertical coupler sufficient to condemn the coupler?" Mr. Adams, of the Boston & Albany, said, "We do not believe in the coupler, and in saying so I think I speak for the New England railroad men in general," and, indeed, he seemed to have struck the keynote of New England sentiment, for not one of the speakers had a good word for them, and all complained of the liability to breakage resulting from uneven distribution of strains and also from imperfect workmanship. It is a very simple thing to get up a coupling that will work well, provided everything comes together on a level and at a suitable angle; but in actual use, with cars loaded and unloaded, standing in switches sometimes with a very poor surface level and at all angles, it is at once apparent that it will need a coupler with a wide range for all the contingencies of actual service. It is a mooted question whether the vertical plane coupler is a success under all of these unfavorable circumstances, even when it is to be coupled to another one of the same make, but in making up a mixed train the vertical plane coupler is a delusion and a snare; yes, it is not too strong to call it a trap, provoking more profanity and causing more delay and danger than security. Even after the train is made up the trouble is not over, for the inherent weakness of the design makes itself evident in many different forms after a very short period of service. All railroad men are well aware that no other part of a car is subject to as many or as heavy strains as the coupling, and in order to get one to stand these strains it should be so designed as to bring them as near in line as it is possible, and the lack of this feature in the vertical is no doubt the origin of most of its defects. In the first place, a deviation in height will cause the lower part of one "knuckle" to engage with the upper part of the other, and instead of a uniform distribution of the pull or push, as the case

may be, we have a downward torsion on one with a consequent upward twist on the other, which is increased by each movement of the car until fracture becomes inevitable, and it is only a question of time when it will take place. Another destructive cause arises from the fact that while the "knuckles" may be so designed as to draw them together, it is not always done, and as the jaw wears away, much chance for vertical slip is given, and this also keeps increasing with each movement. Hear what Mr. Adams says as to the result of receiving cars slightly defective:

Everybody who has had any experience knows that the breakage of the vertical hook knuckle is very detrimental to the service of the coupler. In other words, if the knuckle is removed entirely, the result is, when the cast iron bar is coupled to it, the connection will break the bar; and this, I suppose, led Mr. Buchanan to issue his order. He found when we carded a car with the knuckle broken, we were only liable for the knuckle at an expense of about \$1; but before it got many miles on his road the bar was broken, and that cost him \$8 or \$10. I found the same thing working against us and I had in mind the issuing of a similar order, and if I had done so should probably have roused the indignation of some other roads. We are removing knuckles or couplers, or both, for very small defects and it is very expensive business for the road.

Now, the question arises whether it is best or proper or safe for us to transfer cars from one road to another with defects existing in the knuckles. We all know that when some parts of them break it weakens them very much, and the tendency is to break worse, and it goes on until they are destroyed. Now, how much of a break shall we allow our inspectors to pass? I am not prepared to say, though I have about made up my mind. I would be willing to take a coupler with a small fracture, where I wouldn't take one with a large piece broken off. A coupler with half an inch broken off at the top or butt, or in the centre either way, I would accept; but if both parts of the center are broken off half an inch, I should hesitate about it. As soon as they are broken off at the top or bottom to any degree they begin to make a larger surface for the pin to spring out, and break worse until they break out entirely.

That these evils are not imaginary, but that they really exist to the great detriment of the roads and the commerce of the country, is proven by the testimony of Mr. Chamberlain, of the Boston & Maine, who says:

Our greatest trouble has been from our connection with the New York, New Haven & Hartford. About October 25 we had tied up at Northampton forty cars with cracked knuckles, some missing knuckles, and some broken bars, and in two weeks more there were sixty cars tied up with the same defects. We finally agreed that when a connecting line offers a defective automatic coupler and has not material to repair it with we will take the car with a common bar, provided the car is carded for wrong drawbar. If defective or missing knuckles are offered, we receive them, if the coupler is safe to run, provided the car is carded for defective vertical plane drawbar; but we will not receive it if carded only for broken, cracked or missing knuckles. We will not receive cars with defects of any kind and then card them.

From October 15 to December 31 we have either rejected or found broken on our line 632 vertical plane couplers broken in various ways. Not having the material to replace the bars, we put into these cars the common bar and carded them for the same—broken vertical plane drawbar. These defects were divided as follows: Cracked knuckles, 165; broken knuckles, 154; missing knuckles, 85; com-

mon bars in place of vertical plane bars, 41: defects of vertical plane bars where the knuckle was all right, 51: defects other than those noted, 136. The Boston & Maine had two of these hook couplers, and broke one. Did not buy any more. Taking the past experience of the roads, I don't see how they can afford to receive cars with broken or cracked knuckles. A small defect in a knuckle leads to a larger one.

One of our connecting roads offered us two cars with cracked knuckles, and we refused to take them. They hung the cars up for three or four days, and then offered them to us again, with new knuckles nicely fitted in, apparently all right, and we broke both of them before we got the cars out of the yard. We traced those knuckles right to a cast iron foundry, a good many miles from any malleable iron foundry, too. (On taking our connecting line inspector to task for that, he said he examined those couplers, and thought they were probably made of cast iron, and, in fact, he supposed they were all made of cast iron.

If such is the delay incident to the use of this "improvement" at one junction or point of exchange, it will defy calculation to ascertain the damage done to commerce by its continued or extended use; but if as indicated above, the inherent weakness is increased by poor material or construction, its effects would be disastrous to the best interests of railroads and shippers alike, for it would keep cars tied up and delay freight in transit beyond the limits of patience or profit. Mr. Barnes, of the Barnes Coupler Co., suggested the establishment of schools of instruction in the use of the couplers, just as if it were possible by that means to bring the draw-bars to a level or the line of pull direct, and stated that while it cost something to repair the vertical coupler, it also cost something to keep up the supply of pins and links. This called out replies from several of the car builders to the effect that the use of links, or rather their destruction, was increased by the use of the vertical coupler, in which opinion all railroad men will concur. With all these points in view Mr. Lauder, of the Old Colony, who ever says what he means and means what he says, gave voice to his opinion in the following strong language:

It is an old truism that the way to get a bad law repealed is to strictly enforce it. I believe the only way that the railroads of this country can get clear of this vertical plane coupler is to strictly enforce those rules that were first promulgated by the New York Central road—to refuse to receive cars with vertical plane couplers unless in perfect order. If that is done all over the country the life of the vertical plane coupler will be exceedingly short. So long as the mechanical men, who are responsible for the transmission in proper shape from one point to another, busy themselves with making rules governing the receiving of cars with defective vertical plane couplers, and the work is being fairly done, and there is no particular detention of cars, the managers may not realize the large expense to which their roads are put on account of this coupler. If every defective coupler or drawbar caused the stoppage of the car until the owner was notified and until he furnished a new knuckle or drawbar, the matter would come to the attention of the managers, and they might be surprised that the detentions were so often caused by this so called master car builders' coupler. This coupler has been foisted upon the roads by the mechanical papers,

not only by advertising, but by procuring the writing of editorials, to make the managers believe that the so-called master car builders' coupler was a panacea for all the ills we are troubled with in the interchange of cars. I do not refer to our friend Sinclair (who I see is present) nor to his paper in making this statement.

The experience of the last two years has proved that the most dangerous thing on our roads is this coupler, and I trust that some organized effort will be made toward rescinding the action taken by the Master Car Builders' Association some years ago—action taken honestly, because they thought that type of coupler held out something better than we had before. I think the unprejudiced men at the head of the mechanical departments of the railroads of this country would almost unanimously, were it not for their pride, condemn that coupler. Of course a man does not like to admit that he has made a mistake. That coupler, in my judgment, has got to be abandoned, because of its danger—danger of breaking apart and giving out on the road.

Others of his colleagues were not in the least backward in their expressions about the matter; for instance, hear Mr. Griggs, of the N. Y. & N. E.:

We are very short of links and pins, and the vertical hook coupler is one great cause. We may receive ten or fifteen cars, one from one direction, and the others from other places, and we have got to couple them up, and have to furnish the links and pins to do it. If I had my way, I would not take a car with a vertical hook coupler with any defect whatever; and still further, if I had my way, I would not take one if it was perfect.

Such are the deliberate ideas of these men, not formed amidst the hurry and bustle more or less incident to a convention, when often the fellow with the most gift of "gab" will carry his point over the best reasons on the other side, but forced upon them by watching the performance of the couplers in actual use. It is very evident that a change will have to be made for something better or more practical.

Vulcan.

Speed of Locomotives.

Mr. William Buchanan, superintendent of motive power on the N. Y. C., says: "It would be hard to say just how great a speed a locomotive and train can develop for a short distance over a perfect track and road-bed. I can imagine steam propelling trains above 100 miles an hour, but it is a mistake to say that any locomotive has ever been built which has accomplished the feat with a train of cars—even in England." Mr. Buchanan then refers to the performance of a locomotive, 541, built after his own plans, which made an extraordinary run in 1886, and says: "The special newspaper train made a pretty good record, and it is a fair sample of the best that can be done under existing circumstances of roadway and construction of locomotives. Locomotive 541, which drew the train, ran for all she was worth, and she had every chance. She pulled an average heavy train, with three cars, a stretch of eighty and three-quarter miles between Syracuse and Rochester, at a sustained average of sixty-seven

and one-quarter miles an hour. She made a spurt of twelve and three-quarter miles between Palmyra and Fairport at nearly seventy-five miles an hour, but the grade may have had something to do with this." Mr. Buchanan then proceeds to state what he regards as necessary for high speed in engines. He says: "The best possible speed for a continuous run of from 60 to 100 miles is less than 70 miles an hour under the most favorable existing circumstances. If we are to see anything better, it is clear that conditions must be changed. How are locomotives, cars and roadway to be improved? Engine 541 weighed 84,700 pounds, was eight-wheeled, with four 5½-foot drivers, had 17 by 24-inch cylinders, and an ordinary boiler. I could design a faster engine for long runs. It wouldn't be any heavier, but it would have fewer parts to its machinery. It would have a single pair of 6½-foot drivers and 19 by 24-inch cylinders. It would require some figuring to elaborate the details, for everything must be proportionate, so that the frame won't carry any superfluous weight, and so that it will be properly balanced. The boilers should be constructed with as much heating surface as possible. The American locomotives have every advantage over the compound English style. We had 7-foot drivers on the Hudson River Railroad thirty-five years ago, but for the repeated stops that were necessary they were not any better than the smaller wheeled ones, and much less economical. The smaller drivers get under way more quickly after a stop, but once the big 7-footers are started, they do good work on a long run. I think that a 6½ foot wheel would be in better proportion to the frame and balance of the engine, and that as high speed can be obtained from it as from a 7-foot wheel." The question of speed is up for debate and experiments will continue in the construction of locomotives. Never before, in the history of the world, has the maxim, "Time is money," had such a hold upon human affairs. Men of business and men of leisure when they travel want to go with the speed of electricity—though they go to their death.

SACRAMENTO, CAL., March 1, 1891.

MR. EDITOR:—I wish you or some of your correspondents would please tell me what is the cause of an engine pulling her fire. I fired a ten-wheeled McKay & Aldus locomotive, with a straight boiler and a straight stack, and she had a habit of pulling her fire when working hard on the hill. I also had the same engine after she had been through the back shop, and had a diamond stack put on and she would still pull her fire. After she had the diamond stack put on she would not steam unless she had a split put in her nozzles.

J. M. Brayton.

Theory.

It is frequently said of some one, "Oh, he has got too much theory," or "Well, maybe he will get along all right if he only don't let theory get away with him;" and various similar remarks are frequently made when discussing the merits pro and con of some intelligent, studious fireman whose prospects for promotion seem good.

Now I want to say, and in saying it I utter my own deep-rooted convictions, that theory never did hurt a man—unless it was some crank who thought he had a theory and in trying to solve it went crazy—and it never will; but theory and theorizing are two very different things, the one correct in its every detail, the other varying from nearly that to utter failure.

Let us look back to the days gone by and see what theory has done for advancement and enlightenment. Columbus had a theory that the world was round and that by sailing westward he could reach India. He sailed, and although he never reached India, he demonstrated his theory and discovered a new world; and so with everything invented, produced or discovered, there was a theory at the bottom of it.

Theory has produced the watch by which time is so regularly and accurately recorded, a marvel in itself when we stop to consider the regularity with which it performs its functions. The sewing machine, which immeasurably lightens work in that line, had theory as the spur to impel it forward to its final perfection. The printing press, that great educator by whose aid all are brought in easy reach of educational facilities, by which the learned and wise, the philosopher, the discoverer, the inventor, and all interested may convey to the world the results of their thought and research, was evolved from a theory.

Stephenson, after fifteen years of toil (from 1814 to 1829), proved that there was something in theory when his engine, the Rocket, took the prize of £500, or \$2,500.

Fulton had a theory, and the success of his steamboat proved that the theory was as solid as rock. The vast number of steamboats which to-day ply between cities along our river courses, the number of steamships that constantly cleave the waters of the great oceans, carrying the commerce of nations from shore to shore, demonstrate every day the validity of that theory.

Look at every material we have for use in every walk in life, every article or invention, from a sewing needle to a threshing machine, reaper, binder, mower, loom, automatic cut-off engine, locomotive, in fact, every piece of machinery in existence, and we can trace one or more theories in their origin and development. Metals are compounded on theory, cloth is

woven on theory, houses are built on theory, gardens and farms are cultivated on theory, people are educated on theory, medical science rests on theory, stock is bred on theory. Can any one who reads this tell me anything that is being done which did not in the beginning have a theory as the basis of its existence?

It used to be said of me that I had too much theory, but I deny it. The fact is, with my limited knowledge and education, I never had enough theory. I wish I could master the situation so that I could comprehend theory more fully, get right down to the bed-rock of it like a miner hunting for placer gold, and there I would be sure to find it if it existed, and if I failed it would be because I was on the wrong track, like H. W. Hall, of East Portland, on *leverage*, but as "Vulcan" has illustrated the lever question in the March issue, I presume Bro. Hall sees that he did not have theory, but was theorizing.

Take the entire universe, everything rests on theory; then can a man in such a limited capacity as his brain and reasoning power, have too much of it? I am inclined to think not, and as for me, I will say crowd in all the theory you can—it is like virgin gold or genuine diamonds, but don't accept pyrites of iron for gold, or quartz crystals for diamonds; be sure you have the genuine article and if you have one you are in doubt about ask some one who knows, and if the result of the query is not satisfactory make a practical demonstration, if possible, the first opportunity you have, and if you were wrong maybe you will find out what the correct theory is.

Seven months ago, after long years of toil and more or less anticipation, I found myself on the right-hand side, manipulating the throttle and reverse lever. I had every bit of that theory which it had been said was too much, but I have come and gone, pulled trains with different engines, and am ready to-day to say that my theories are as deep-rooted as they were when I was on the other side of the engine, and I have had twenty different firemen with me in that length of time, some "old timers" and some on their maiden trip, but have always got along, and all of the firemen, old and young alike, endorse my theory.

There is a certain place on our road a little over thirty miles from here where a train gets a terrible jerk; it is a famous place for breaking the train in two, a piece of down grade about a quarter of a mile, then a little pitch, then a little sag and then upgrade a little way. Over that pitch, just as the engine gets over the top, if there are any weak links, pins, or drawheads the train will part under ordinary circumstances. One night about two months ago I had a time order against a passenger train over

this same piece of track, and as I had only eighteen (18) minutes to make eight (8) miles and stop for a railroad crossing, I naturally did not want to part the train. I came down the light grade with throttle wide open, reverse lever in first notch, fairly burning the wind. (I was theorizing.) The engine started up the pitch and I was just congratulating myself on the success of my plan when the train gave such jerk as to almost throw me off the seat-box. I looked back but as an exhibition of more luck than sense the train was all coming. I made the run and reached the station all right in the allotted time, and then I began to investigate my theorizing on that subject, and decided that it was just the reverse of the true principle; so, a few days ago, coming over the same piece of road, after having been off of it for nearly two months, I tried another plan. I left the throttle wide open coming down the grade and about half way up the pitch (which, by the way, is not quite a train length); I then eased the throttle down so I could scarcely hear the exhaust until after I had gone several car lengths over the top, then commenced to open her up by degrees, and it was successful. I did not feel the slightest jar; and so with most reasoning—if false, a demonstration will prove it so, and then we must investigate causes to determine what is right.

I am pleased to see "Vacuum" still in our midst and must say that his illustrations of the force in condensation are so pointed that to me the injector mystery is no longer shrouded in impenetrable gloom, but as clear as the broad open light of day.

Now here is something lately brought to my notice: Take an engine with, say, left front cylinder head knocked out, engine placed on one side, and from whatever cause, the valve on disabled side becomes misplaced so as to permit a large quantity of steam to pass out through broken cylinder head; what effect will it have on the engineer's ability to stop by reversing the engine?

I decided the question a few days ago when I was brought in by one of two engineers, who had argued on the subject for several hours. I had never previously thought on the subject, but, as I saw at a glance a theory, I unhesitatingly gave my view, and when called on by the contestants, demonstrated my reason in a few minutes and ended the controversy. I hope to hear from all on this topic, as it is about as important as the breaking of an

Eccentric Strap.

The terminal facilities of the Philadelphia & Reading road in Philadelphia were estimated to cost \$8,000,000; \$2,000,000 of this amount has already been spent.—*American Journal of Railway Appliances.*

Free-Steaming Locomotives.

At a recent meeting of the New York Railroad Club, Mr. A. E. Mitchell, Mechanical Engineer of the N. Y., L. E. & W. R. R., read a paper on "The Qualities Essential for a Free-Steaming Locomotive," which was published in full in a late issue of the *American Journal of Railway Appliances*, and as it is replete with valuable information, I have clipped the following extracts which will no doubt be of special interest to locomotive men:

To make a locomotive boiler steam freely, it is essential that it should be designed correctly, that the various parts should be adjusted properly, and that the fireman should obtain as perfect combustion of the fuel used as possible.

The main feature in the design of a locomotive boiler is to get sufficient heating surface, and, having obtained this, the water space should next be taken into account.

Heating Surface.—Ample heating surface and grate area should be allowed in designing locomotive boilers, to insure that, with average coal, steam will be generated faster than the cylinders, under the heaviest work can use it; otherwise the locomotive will fall far from when a poorer quality of coal is used, or when the flues and sheets become incrustated, as they will be more or less, in a very short time, on the majority of railroads in this country. * * * * * From experience based on practical observation and tests of many free steaming locomotives on several roads in this country, I have come to the conclusion that on account of the various qualities of good and bad coal used the greatest amount of heating surface possible to obtain, under the style of construction adopted, should be furnished, and that the boiler should be designed to supply one inch larger cylinders than are to be applied. * * * * *

I will give short, unscientific but handy rules, which I have found from data obtained by careful study of the free steaming locomotives which have come under my observation to give very approximate results, which may be of value to many of you.

1st. Use cylinders one inch smaller in diameter than you design your boiler for.

2d. The smallest diameter of shell of boiler should be as nearly as practicable three times the diameter of the one inch larger cylinder.

3d. The required amount of heating surface in square feet, for bituminous coal burning engines, should never be less than four times the square of the diameter of the one inch larger cylinder in inches. One-tenth of this heating surface to be in the fire box and the balance in the flues. On anthracite coal burning locomotives more heating surface is needed in the fire box on account of the larger grate area required, but the heating surface of the flues, as given by above rules, should not be materially decreased. * * * * * The grates should be also designed to admit the greatest amount of air possible, as I know of no coal that can get too much of the oxygen of the air through the grates; but should there be, the amount of air admitted could be regulated by the dampers. Some time during the life of that locomotive, it may get coal that requires more air than it is possible to admit through the grate, and it would not then come amiss.

The grate should be designed of such shape as will prevent clinkers from adhering to it, and thereby cause it to stick, preventing cleaning and at the same time partially stopping the admission of air which is so essential to the free combustion of coal.

Water Space.—Ample water space should be provided in designing the locomotive boiler. A large body of water at the temperature of the steam acts as a reserve force, ready to come to your assistance whenever necessary, and these times are very frequent; often a train is taken over the last few hundred feet of a long, heavy grade on account of this reserved force, when without it the train would have to stop and wait for the boiler to be filled and steam generated. The large water space has also

another advantage—viz., the supply feed water in mixing with the large body of water in the boiler does not chill the mass as much as would be the case if the body of water was smaller.

Many, if not a majority, of the railroads, use what is known as the extension front, either in full or in part, in order to get the benefit of the receptacle for the sparks and cinders as well as the straight stack and cheaper maintenance of the netting. The extension front and smoke box is composed of the usual diaphragm plate, high nozzles and wire netting. We will take them up in regular order and explain their uses and what part they take in making the locomotive steam freely.

The Diaphragm Plate.—The object of the diaphragm plate is—

1st. To act as a deflector to deflect the sparks and cinders to the bottom of the smoke box and thence into the extension front, which, in turn, acts as a storage receptacle to carry the sparks and cinders to the destination of the engine, where they can be dumped through the usual hopper casting secured to the bottom of the extension front. With the half or shorter extension the heavy exhaust lifts the cinders and sparks and hurls them against the netting, causing them to become broken into particles sufficiently small to pass through and thereby escape to the atmosphere.

2d. The diaphragm plate is used to regulate the draft upon the fire, but does not increase the draft or suction through the flues, as many suppose. Care must be taken to have the apron, lower or adjustable plate, attached to the fixed diaphragm plate, horizontal at its lower edge in order to have the fire burn uniformly traversely across the box. Lowering the diaphragm plates causes the fire to burn stronger at the front end of the grates, whereas raising the plate will transfer the strongest traverse fire line further back; but when this plate is properly adjusted the coal will burn with nearly the same brilliancy over the entire surface of the grates. In adjusting this plate I prefer to place it in such a position that the fire will burn a little stronger or brighter at the front end, thus giving the unconsumed gases of combustion liberated at the rear end an opportunity of being consumed as they pass over the hotter fire at the front end. After this plate is adjusted properly for the average quality of coal it should never be disturbed unless the engine has to burn continuously one grade of coal, when it should be adjusted for that special grade. The improper adjustment of this plate produces a large waste of coal, hence it should have the proper attention.

The High Nozzles.—The high nozzles are placed above the netting in order to have an unobstructed opening to the atmosphere, but, inasmuch as the netting must necessarily be above the opening below the fixed diaphragm plate, the nozzles will be at a height somewhere between the top and fourth row of flues and above the center line of the boiler. The height of the nozzles, in my opinion, enters as a factor in the steaming qualities of a locomotive boiler; but to what extent I cannot state at present. The diameter of the nozzles, however, enters very materially as a factor in the steaming qualities of the locomotive.

Many draft their fires entirely by the nozzles, reducing their diameter to increase the draft on the fire and opening them to decrease the draft; hence we find many locomotives of to-day laboring under a heavy back pressure caused by too small a nozzle, this heavy back pressure crippling the power of the engine very materially and reducing the number of cars it is capable of pulling over the division.

The correct method of drafting a locomotive is, first, to enlarge the nozzles as much as possible and increase the draft, if required, by means of the stack, or at some other point; then, after all other methods of increasing the draft have been tried without avail, reduce the nozzles a little if more draft is required on the fire.

The Wire Netting.—The purpose of the netting is to prevent throwing sparks of a size sufficient to cause fires along the line, endangering the company's and adjacent property, and rendering them liable for damages. * * * * *

The usual netting used is 3x3, or 3½x3½ mesh per in., No. 11 to No. 13 wire, Birmingham gauge. With

this netting we get about fifty per cent. of opening for the gases and smoke to pass through, and care must be taken to have the netting of sufficient area to insure that the smoke and gases will have a free exit to the stack, otherwise it will choke the flues and decrease the draft. I believe in making the area of netting at least four times the area of the flue opening.

With the old style smoke box equipped with low nozzles and lifting pipe, the netting is placed in the bonnet of the diamond stack, the lifting pipe being used to adjust the draft on the fire and the diameter of same, together with the diameter of nozzles and stacks, determining the amount of draft on the fire; with this device it is usual to place the bottom of the lifting pipe on a level with the nozzles, and regulate the draft by a sliding sleeve at the top. Reducing the diameter of the lifting pipe increases the draft, and enlarging this pipe decreases the amount of draft.

Care must be taken not to get the pipe so small that the exhaust steam will be retarded by friction along its circumference, and that the stack is of a size to permit the steam to expand and fill it without choking; much of this can only be determined by experiment.

Knowing, therefore, that the stack is practically an ejector, we can utilize it for producing an increased draft on the fire, and therefore make our exhaust nozzles larger, as can be determined by experiment. Under this rule different sizes of cylinders will require different sizes of stacks; but if we equalize these values of stack and nozzle diameters we find it possible to use one stack with all usual-sized cylinders (17 inch to 20-inch diameters) and vary the nozzles accordingly. Having one stack to fit all locomotives, the cost of maintenance is wonderfully reduced, and if the stack is made of cast iron the scrap from a damaged stack will go far toward paying for a new one.

The subject of combustion is a very important one, and should be carefully studied by every fireman while attending to his every-day duties.

It is not necessary that he take up the study of chemistry to solve this problem, but, by carefully watching cause and effect, as he applies the coal, he will soon be master of the subject. The fuel expense of every railroad is one of the largest expenses to be met, and, as there are so many firemen engaged in handling this immense amount of coal, a little waste by each one means a large total waste, whereas a little saving made by each means a large total saving. Inasmuch as the railroads to-day are using many grades of coal—some good, containing but a very small percentage of foreign substances and ash, others poor and containing a large percentage of non-combustible matter, often as high as 25 per cent.—it is absolutely impossible to lay down any hard and fast rules as to the proper method of firing. We will, however, give a few general rules and mention the effect of firing to the contrary.

1. Never carry a heavy fire. Why? To burn coal successfully—that is, to get the greatest amount of heat out of a certain quantity of coal—it is necessary that a large amount of air be admitted to aid the combustion, and this air is admitted through the grates; it is also necessary that this air shall be heated to a high temperature, called the igniting point, so that the ingredient called oxygen, one of the components of air, shall be liberated and unite with the gases and carbon of the coal in the proper proportion to produce the most perfect combustion, represented in the fire box by that intensely white-hot flame so well known and sought after by firemen. If a heavy fire is carried a sufficient quantity of air cannot be admitted through the grates to furnish oxygen in sufficient quantities to successfully burn the coal, and this state of affairs is easily recognized by the firemen by a red-hot fire, instead of the intensely white-hot mentioned above.

To maintain this intensely white-hot flame in the fire box coal should be added only in such quantities as will not reduce the temperature of the flame and fire below the temperature required for heating the incoming air and liberating the oxygen; hence the coal should be put on in very thin quantities and at frequent intervals. This is readily illustrated by taking a pot of water, boiling violently, and adding

a small amount of water at frequent intervals. The water in the pot continues to boil, showing that the water added did not detract very materially from the temperature of the mass, but if a large quantity of water be added at one time, the water in the pot will be reduced in temperature below the boiling point, and the water will cease to boil; just so if too much coal be placed in the box at one time, the intensely white-hot flame is lost, the red-hot flame takes its place, the gases liberated from the coal pass off through the flues as black smoke and the steam pressure falls, all because the heavy bed of coal prevents a sufficient quantity of air to be admitted and heated to properly burn the fuel.

With anthracite coal, which is in a lumpy form, a heavier fire must be carried, as otherwise too great a quantity of air at too low a temperature is admitted to produce perfect combustion.

2d. Care must be taken in firing not to allow any holes or very thin spots to develop, especially with anthracite coal, as the air rushes in in such quantities at these spots as to chill the fire, causing imperfect combustion. When such thin or dead spots appear, nearly, or quite, exposing the grates, push live fire over the spots with your hook and then gradually build them up instead of throwing green coal on the dead spots and thereby spoil your fire. Firemen can readily detect the spots where the coal is getting thin by the exceptionally white-hot fire at such points.

3d. Bituminous coal, containing iron ore and sulphur, or other foreign substances producing clinker, should be fired exceptionally thin, so that the clinker will not congeal on the grates, but fall into the ash pan in a molten state.

As there are so many grades of coal, each fireman should carefully study the effect, first, of a very light fire, then gradually increasing its depth until that intensely white hot flame is produced, when he should maintain that depth as nearly as possible.

4th. When the locomotive is standing and will not be used for some time, close your dampers and open your furnace door on the latch, if necessary, to prevent the unnecessary waste of steam at the safety valve. Every pound of steam passing off through the safety valve means a waste of the coal required to generate it, which if it was saved on all locomotives on a road would result in a saving of hundreds of tons in a year.

5th. Seldom shake your grates. If your fire is properly taken care of there will not be much necessity of shaking the grates, as a large portion of the ashes and clinker will fall through the grates into the ash pan by the jar of the locomotive in passing over the track. Frequent shaking of the grates generally means a poor fireman on duty; he has either fired too heavy, causing ashes and clinkers to form on the grates, or else he has had dead spots in the fire which were not properly taken care of. Much coal is wasted by this practice of frequently shaking the grates, which could be avoided if the fireman handled his fire properly.

The engineer should carry the boiler water level, or as nearly so as possible, to assist the fireman in his work. If the boiler water is first up and then down, the steam pressure usually follows the same course and the fireman is crowding his fire with hook and shovel one minute, and the next opening his fire doors to prevent the steam from blowing off. This frequent forcing of the fire causes it to become dirty and inefficient, and is a great source of annoyance to a good fireman.

Again, many engineers are guilty of the bad practice of pulling out of a station, or from a dead stop, with their injectors on, when the boilers cannot more than supply the steam for the cylinders with the valves cutting off at full stroke. Engineers should have their boilers sufficiently full to supply all the steam required until they hook up their reverse levers to running position, when they can apply their injectors without danger of producing low steam pressure, otherwise they have simply themselves to blame for this state of affairs. Many engineers pull out of a station and let their valves work at full stroke until the train has gained sufficient speed to hook back their reverse levers to the running position, the frequent and sharp exhausts incident thereto tearing large holes in the fire.

causing extra work on the part of the fireman, and damage to the fire that cannot be repaired on that trip. Should low steam pressure result, the blame is often laid on the fireman when the fault was strictly attributable to the engineer; had he hooked back his lever notch by notch as he gained in speed, no material disturbance to the fire would have taken place.

Engineers and firemen should work in perfect harmony with one another, each trying to aid the other as much as possible with their several duties. Too many engineers consider it out of place to assist or instruct young and inexperienced firemen, adopting the rule that, as no one showed him how to fire when he was young and inexperienced, he in turn would do likewise by his firemen; this policy on the part of the engineer is very selfish and should not be tolerated by any railroad company. The progressive engineer is one who is anxious to get his train over the road at the least expense of coal, or repairs to power, and will render all the assistance possible to his fireman. Were all locomotive engineers and firemen interested in the railroad company's welfare and handled their property as carefully as they would were the same their own, an enormous saving to the company would result, not alone in the fuel expenses, but in the cost of maintenance of locomotives and cars.

The extracts relating to design and construction are of great value to the students of the locomotive, but those in reference to firing and running are of special interest to our readers, the great majority of whom are employed as engineers and firemen, and I have therefore quoted the latter in full believing that a careful perusal of the same will be fruitful of practical knowledge to those who are interested in the subjects discussed.

The Webb Compound Locomotive—How It "Did the Work."

Concerning the Pennsylvania Railroad Company making any statement of its performance (the English compound), they have not, neither is it likely they will do so. It is, and has been a standard rule of that company, not to give any data of any trial of things tested on that road, and their reason for not doing so is that they are not in the "advertising business" and do not write letters endorsing anything, not even "Pears' Soap" after Henry Ward Beecher had done so.

Their idea of testing anything is, that they are at the expense of it, and it appears to them that the data acquired is their private property. Are they not right?

Now as to the English compound engine "doing the work, etc." It is an open secret that it ran months on the 8:20 A. M. train from Philadelphia to New York and returned in the afternoon, and was run by different men. The train often consisted of eight cars, which it has taken over the road in two hours, and burning from two to three thousand pounds of coal less than was used by the standard P. R. R. engines.

It also ran from Jersey City to Long Branch on the "Brokers' Express," hauling six cars, which was scheduled to leave Jer-

sey City the same time as the "Congressional Express" for Washington, which had five cars and one of the latest P. R. R. passenger engines, weighing much more than the English engine, and having cylinders 19 in. \times 24 in. with 68-in. wheel, while the English compound's cylinders were 14 in. \times 24 in. with 75-in. wheels.

Whenever there was any delay about getting off on time for these trains, it gave them a chance to go as fast as they could, and both used the same track as far as Rahway. The compound always went out first; as soon as one block was cleared the "Congressional" followed.

I will here state that the engineer on the standard engine was not once stopped by a signal on account of closing up against the "Brokers' Express." If that did not show it to be doing the work beside a standard engine, it certainly showed it doing its work away ahead of it.

There were many reasons why the English compound had no friends. Some of them were as follows:

First. "It was English."

Second. "It rode bad."

Third. "It was an awkward engine to handle."

Fourth. "The cab was no protection in bad weather."

Fifth. "Many runners did not know what the different parts were for, and it was much easier for some to condemn a thing that they did not understand, than it was to learn its use."—*American Journal of Railway Appliances.*

Current Notes and Comments.

Defective Air Brake Equipment.

The percentage of passenger cars that are running with their air brakes in a useless condition may be inferred from the fact that on one of our first-class roads, where particular attention is bestowed upon every part of the car equipment, 1,432 passenger cars arrived at an inspection point with the air cylinder piston at the end of its travel. Of these cars 1,091 were sleepers, 48 day coaches, 254 express cars, 18 dining cars, and 21 refrigerator cars running on passenger trains. The Potts piston indicator is used on the road and appeared to have had the effect of gradually reducing the number of cars that were running with their brakes in a useless condition. In January the number of cars reported to have their pistons up was 204, while in the December following the number was reduced to 74.—*National Car and Locomotive Builder.*

With the introduction of air brakes on cars it was reasoned that a greater speed could be given to trains without passing the limits of safety, because by means of the air brake the train could be checked and stopped in so much shorter space than with the old hand brake, and the responsibility for the control of the train was thus shifted to the engineer, while the risks were increased by added speed. While engineers have accepted the added trust and have generally been able to discharge the duties imposed by it to the satisfaction of all con-

cerned, isolated cases are on record in which the air brake failed and as a matter of course the first person to fall under criticism was the engineer, but the above article goes to show that if the engineer is not assisted by a competent and faithful corps of inspectors, the utmost care and vigilance on his part will be neutralized and rendered ineffective by the neglect of others. A train of cars may pass a certain inspection point and be called all right, and yet after making a number of stops and wearing the brake-shoes a little more, this wear may let the piston to the end of its stroke and render the brake ineffective for a number of the cars and cause damage, and this is very likely to be attributed to the engineer in charge.

Freezing to Death on English Railways.

The comment aroused by the case of an unfortunate English lady who froze to death in a first-class railroad compartment on an English railway last week will not result in the general introduction of American cars. The prejudice of the British public against the American car is so great that two resident agents of our car companies have recently returned permanently from London. Foreign railroad men acknowledge the superiority of the American car fully, and it has been adopted everywhere by the continental railroads. But in England the public is obdurate. For two years a Pullman car has been attached to the regular train between Edinburgh and London. This is an eight hour trip and it is calculated to bring out the advantages of the American car in the full-st manner. Yet English travelers invariably take the cramped compartments of the English carriages rather than the comfortable American cars. They sleep all night, wrapped in rugs and shawls, and keep partially warm by cans of hot water which are pushed into the cars every two hours during the night. They might for the same price have a comfortable berth in a car that rolls on luxurious springs, is beautifully upholstered, admirably warmed, lighted by electricity, and in the hands of a skilled attendant who can serve breakfast or supper on board.

Nowadays American cars are attached to the Liverpool trains, but that is only because Americans going to and from Atlantic steamers insist upon them. There are numerous and successful methods of heating cars, but none of them secures adoption in Her Majesty's kingdom. At certain stations along the route they have a big tank of hot water. Before a train is due this water is poured into cans and the cans are piled on small four-wheeled trucks. When the train comes to a standstill a guard rushes along and throws open every door from the beginning to the end of the train. This lets in a blast of icy air and incidentally any rain or snow that may be flying about. The passengers wrap their rugs and shawls more tightly about them and sit there and shiver. Then one guard pushes the truck along beside the train, while another man pulls out the cold water tins and puts the freshly filled ones in their places. The tins are slammed down in the middle of the floor and the doors closed. Then the shivering passengers move up and place their feet on the tins of hot water and extract what comfort they can before the water turns cold again.—*The Engineer*.

While they do not have the car stove in England they seem to have a very primitive mode of warming, which would not be endured by the comfort-loving Yankee for one winter without protest, and innumerable improvements in the machine and its operation.

.

Better Passenger Service. The Rock Island & Pacific railroad has been taken to task by the Iowa railroad commissioners for inadequate passenger service. It has been held that the present service is a discrimination against local travel, and facilities must be afforded by which local passengers can be carried to the county seat or trade centers in the morning, and back again in the afternoon of the same day.

The action of the commissioners is of interest to the limited number of passengers who wish such service, but during the writer's acquaintance with the road he traveled thereon many times, and was forcibly impressed by the small number of passengers carried upon that road. After securing better accommodations for the passengers the commissioners had better secure more passengers for the accommodations.—*American Journal of Railway Appliances*.

It occurs to the writer after reading the above that it is a poor rule that will not work both ways.

.

New Railroad Mileage in 1890.

As was predicted in these columns a year ago, the increase in the railroad mileage of the country for the year just closed, has equalled and even surpassed the record of 1889, the mileage added during 1890 being 6,080 miles, or 850 miles more than the previous year. While this mileage has been exceeded in some of the past twenty years it is above the average, which for these twenty years is 5,700 miles per year, and thus seems to indicate a normal, healthy growth and development of our railroad systems. The increase of 6,080 miles is reported by 337 roads, thus giving an average of only 18 miles to each road, clearly showing that it was short lines and branches or feeders to already existing lines which made up the greater part of this increase. Only three lines report over 100 miles and only a few others more than 50 miles of new construction.

The South Atlantic and Gulf States are now leading in the rapidity of railroad development in their borders, and are credited with an increase of 2,006 miles, or about one-third of the whole amount; while the Southwestern States, including New Mexico and Arizona, and the Northwestern States beyond the Mississippi, are credited with another third; the Pacific Coast States furnish 624 miles and the Central States, from Ohio to Wisconsin, 802 miles, leaving Pennsylvania, New York, New Jersey, and the New England States to furnish about 600 miles of the last third.

.

Send It to the Chicago Fair. There is a railroad in Georgia 330 miles in length which has been in operation forty five years and has never killed a passenger. Probably this is a freight railroad, and never handles passenger traffic. If anybody ever rode over the line, better send the road to the Chicago Fair and hold it up as the model of American safety in railroad practice.—*American Journal of Railway Appliances*.

This Georgia road is deserving of a place in the "Great Fair," but we have a road in New Jersey which, we can with truth

claim, beats even the record of this Georgia road, for, as a part of the road was opened for traffic in the year 1835, it is now fifty-six years old. In age, therefore, the "Jersey" road is ahead by eleven years. Now as to size, it is with some degree of reluctance we have to confess that we have not room enough in "Jersey" to lay down a road 300 miles long, but in all probability that Georgia road is only a single track affair, and our "Jersey" road has four tracks to a point forty miles out and double track the rest of the way across the state, a distance of forty-five miles more. This would equal 250 miles of track to which about seventy miles more of double and single track branches must be added, thus bringing our "Jersey" road out ahead in size without taking into account over 100 miles of track in turn-out and yard switches, which are necessary to handle the traffic of the road. It started at first with only about twenty miles of track, mainly designed for passenger business, but was extended from time to time up to 1867, at which period it had nearly reached its present size. This is now over twenty years for the whole road.

In regard to its passenger traffic we have to admit that it was small when the road was first started, for the people had not got to regard the "new-fangled machine" with any degree of favor, and it took some time before it could overcome the popular prejudice, and gain a decided victory over the stage line it was built to rival. The stage line was well established and equipped, and backed by a large amount of capital, and had such good and direct roads, that the little locomotives, running on the imperfect strap-rail of that time, around the curves and up the grades to reach the summit, were often outstripped in the race. But that time is past, and the passenger traffic has now reached such proportions that it requires the service of 146 first-class trains every working day in the year to carry the 30,000 passengers who arrive and depart from the Morris & Essex depot in Hoboken each day. Although thirty-two of these trains run by the way of Paterson, enough suburban trains are needed at Newark to bring the number of trains arriving and departing from that city up to 138 each working day. This ought to be ample proof that the road does some passenger business, and in all probability far more than any road in Georgia, yet this Morris & Essex Railroad, 56 years old, owning over 320 miles of track and carrying over 30,000 passengers a day, claims that "no passenger has ever been killed on the Morris & Essex Railroad," and thus ought to be placed on record as a safe road to ride on.

An item appeared last month in a Buffalo daily paper mentioning some new locomotives that were

to run between Niagara Falls and Point St. Charles. The readers were informed that the engines had power-transmission rings capable of keeping the tires on the boilers.—*National Car and Locomotive Builder.*

The editor of the "Buffalo daily" must have been tired when he wrote the article on tires, and as a consequence he thought all the rest of the world, boilers included, were tired.

An English inventor has patented what he calls a sans-exhaust engine, by the use of which he expects to save the immense loss of heat passing out with the exhaust steam, common to all steam engines. This engine is designed to use steam for forcing the piston through one stroke, and then be driven back into the boiler by the return of the piston, aided by the inertia imparted to the fly-wheel during the first stroke of the piston. The would-be performance is based on a fallacy induced no doubt by observation of the pressure given to compressed steam in ordinary engine cylinders. Compression does very well to cushion reciprocating parts, but those who try to get the steam back into the boiler by this means will soon discover that they are just short of the margin of energy that finally brings all perpetual motion devices to the goal of exploded fallacies.—*National Car and Locomotive Builder.*

Hold on, friend Sinclair; don't hit him quite so hard! You know that the steam may become condensed but be able to keep its momentum, and by being thus reduced in size but heavier in bulk, and keeping its speed, the exhaust may be able to get back into the boiler against a greater pressure; somewhat after the manner in which our friend "Vacuum" has been explaining the action of the injector to our readers.

Wm. Weiler.

A Pioneer Railway Train.

In the life of John Ericsson, the famous engineer, by William Conant Church, and published by Charles Scribner & Son, there is a rather interesting picture of the trial of Ericsson's locomotive, the Novelty, which competed in 1829 on the Liverpool & Manchester Railway with Stephenson's "Rocket" and other famous locomotives. Vinogles, the delineator of the train, was a famous French engineer of the early railroad era, and his picture is likely faithful to the truth. There is the locomotive and four cars. The locomotive had a small upright boiler on one end and a cylindrical water heater and the steam cylinders on the other. A plate-iron water tank is hung in the middle of the machine under the frame, which stands very high. The cylinders are vertical and transmit power to a cranked axle. The engine is carried on two pairs of wheels of equal size, but not connected. A blower was used to keep up artificial draft for stimulating the fire. This engine was considered a remarkably well-designed machine, and was the favorite of those entered for competition. It failed on account of the blower getting out of order, just as Peter Cooper's locomotive on the Baltimore & Ohio failed in a race with a horse about the same time.

The first car in the train is a four-wheel "goods wagon" loaded with bales of wool. They seemed to think that would be good material to get bumped against in case of collision. The second car was a street omnibus of a kind then common in England, with the doors on the sides and having seats in front of and behind the doors. This eventually became the pattern for the railway carriage all over Europe. The last two cars were flat cars with private pheatons mounted upon them in which were seated the people who considered themselves too fine for sitting cheek by jowl with persons of lower degree.

This picture recalls a fad of early English railway experience now almost forgotten. The "carriage" people of that country were at first vigorously opposed to the leveling tendency of railway carriages that called for people to travel together who had never been introduced. Did you ever see a McLean who had not a boat of his own? said the Lochabar man on being asked how his ancestors traced their origin beyond the Flood and not through Noah. Did you ever see a Jenkins who could not ride in his own carriage? said the snobs of 1830, and they hired a flat car to carry their carriages, which they occupied with complacent dignity. They tried at first to hold to the roads, but bad weather and miry roads forced them to the railways. Two or three cases of private carriages getting blown off the train eventually brought the practice of riding in them into innocuous desuetude.—*National Car and Locomotive Builder.*

American Locomotives in Demand.

To the average American it must be a source of just pride to know that the United States is selling locomotives in localities where, under ordinary circumstances, the English article would have precedence. In this connection, the Philadelphia *Record* says:

Twenty-seven locomotives are in course of construction at the Baldwin Locomotive Works, which, when built, will be shipped to New South Wales, Australia. This is one of the largest foreign orders ever filled by the Baldwin works, and, coming from an Australian province under the dominion of Great Britain, is very significant. These twenty-seven locomotives will be used on a railroad owned and operated by the government. Heretofore the English government roadways were mainly supplied with English-made locomotives. The contract for the iron monsters was made about two months ago, and the last one will be finished in February. Ten of them are passenger locomotives built on the ordinary American plan, and are especially designed for runs on heavy grades and over sharply curved tracks. The English locomotive is not so well adapted for mountain climbing and curve-turning as are the ones made at the Baldwin works. These ten passenger engines will each weigh about thirty tons, exclusive of the tender, which, loaded, will tip the beam at the same figure. The freight locomotives are of the heaviest and strongest build, and, with tender attached, will each weigh from eighty to eighty-five tons. The cost of the American-made locomotive is from \$8,000 to \$12,000. Those destined

for Australia will be sold to the government there for about \$10,000 apiece, the sale aggregating over \$250,000. There has been a lively competition among English ship-owners to secure the contract for carrying this valuable cargo from Philadelphia to New South Wales. A big 5,000-ton steamer will come here in February to take the locomotives to their place of usefulness. A member of the Baldwin firm said last evening about the contract: "This is a large order for a foreign country, but we send locomotives to all countries on the globe using railroads to any considerable extent. We have them in Australia now, but mainly on roads owned by private corporations. We have had contracts to build 100 for a company in this country. We turn out three complete locomotives a day, having made this year over 900."

But, after all, there is nothing singular about the transaction. The United States has half the railroad mileage of the world, and it would be strange, indeed, if where there is such a demand for locomotives, American genius should not produce the best, and distance all other people.

Expired Railway Patents.

The following list of railway patents, furnished by F. B. Brock, Patent Attorney, Room 26, Atlantic Building, Washington, D. C., expired during the month of March, 1891, and are now free to be used by anyone, viz.:

Car ventilator, G. E. Crutchfield.
Electric railway signal, F. L. Pope.
Railway car, E. S. Stiles.
Cattle guard, Cleveland and Beal.
Car spring, C. T. Schoen.
Railroad gate, S. Wright.
Extension step for cars, H. Albert.
Passenger register for cars, M. H. Wier.
Rail joint, W. G. Dunn.
Car coupling, A. K. Kline.
Safety car, H. B. Myer.
Switch, C. H. Kock.
Trestle, J. N. Becker.
Dumping car, E. M. Hesselborn.

Persons desiring copies of patents, drawings and specifications, can obtain the same for fifteen cents, by applying to Mr. Brock, whose address is as given above.

A Long Fast Run.

Two hundred and fifty miles, from Suspension Bridge to Windsor, without stopping, is what they propose to do on the Michigan Southern railroad. The new compound engine from the Schenectady shops will be one factor, and two water scoops another assistance in the work.

Ellie's Brother.—Do you love my sister Ellie?
Ellie's Steady Company.—Why, Willie, that is a queer question. Why do you want to know?
Ellie's Brother.—She said last night she would give a dollar to know; and I'd like to scoop it in.—*Puck.*

"So you are no longer traveling with Prof. Rednose, the temperance lecturer?"
"No. He objected to my drinking at the same bar with him, so I left him."—*Yankee Blade*

He.—Elsie, we must be married next April.
She.—Oh that's far to soon! Are you afraid I'll change my mind?
"No, love, but perhaps I might."

Woman's Department.

EDITED BY IDA A. HARPER.

Letters pertaining to Woman's interests in educational, reformatory and domestic matters are requested.

Correspondents are requested to write plainly, on one side of the paper only, and forward their manuscript so as to reach the Editor not later than the *tenth day* of each month, directing all communications for this Department to

MRS. IDA A. HARPER,
INDIANAPOLIS, INDIANA.

THE NATIONAL WOMAN'S COUNCIL.

It will not be an exaggerated statement to say that never before in the history of the world did the cause of woman make so great and so permanent an advancement as during the month of February, 1891. For one week she was not only the center of attraction at the capital of the nation, but the attention of the whole country was directed to that point. Every prominent paper in the large cities has contained the proceedings of the Woman's Council and editorial comment upon its work. Almost without exception this comment has been dignified and reasonably fair, in many instances highly eulogistic, in no instance has it been characterized by the pointless wit and coarse sarcasm which were formerly applied to conventions of women. Prior to the opening of the Council a mass temperance meeting was held in Washington by the W. C. T. U., and at its close the National Woman Suffrage Association held its annual convention, and while the distinguished women were gathered together they took occasion to hold all sorts of branch meetings. The Lady Managers of the World's Fair held a session, and the members of the Universal Peace Commission and those of the Mary Washington Monument Association, and the organization of the King's Daughters, and the Woman's Press Club Federation—indeed, it would not be possible to name all of them. The proceedings of each were important and interesting, and doubtless there are those among our readers who would be especially pleased to read of the particular one in which they are most interested. We are warned by the limitations of space, however, that even to briefly touch upon these various gatherings would be an impossibility. We must, therefore, confine ourselves to the Woman's Council as being the most important and embracing within its scope all of the others and many more.

It will be remembered that three years ago, in 1888, an International Council of

Women was held in Washington, at which were present delegates from all parts of the United States, from Canada, England, France, Finland, Norway, Germany and India. This Council was conceived, arranged and managed by the National Woman Suffrage Association, who felt that, after forty years of hard work, it would be a good plan to take an inventory of stock and see what had been accomplished along all lines of progress. So they invited delegates from all great organizations of women, those engaged in the industries, in charities, in reforms, in church work, &c., and all came together in Council in Washington. Millions of women, banded together in organization, were represented by able members of their own sex. Albaugh's great Opera House was filled day and night for nearly a week to listen to their addresses. The attention of the whole country was attracted, and there was universal astonishment at the indisputable evidences of the progress made by women in every department of the diversified work of the world.

So great was the interest manifested and so evident were the advantages of such a meeting, that it was decided to form a permanent organization to be known as the National Woman's Council, which should assemble once every three years. There was a unanimous desire to make Miss Susan B. Anthony President of this Council, but she declined because, with her name at the head of it, it would be impossible to convince the public that it was not distinctively a "suffrage" organization. Therefore Miss Frances E. Willard was made President. The first regular meeting has just been held in Washington, opening February 22d, with services by six women ministers, and closing four days later. The convention was an unqualified success in point of interest and attendance. At all of the ten or twelve sessions the audiences were large and representative. A fifty-cent admission fee was charged to defray expenses. Forty great organizations were represented and the list of speakers included the most distinguished women in the country. It must be explained that this Council recognizes delegates only from national organizations and not from local societies. There are at present many such bodies in this country, including the Woman's Christian Temperance Union, the Woman's Relief Corps, the Red Cross Society, the Home and Foreign Missionary Societies, the Collegiate Alumnae, the Women's Press Federation, the Woman's Branch of the Knights of Labor and of the Farmers' Alliance. It is only when local and state societies are banded together into a national organization that they may be represented in the Woman's Council. In this way alone can that body be kept strictly representative

and prevented from becoming so large as to be unwieldy.

Of the daily proceedings of this Council, space will not permit a detailed account. One session was devoted to philanthropy and reform, one to temperance work, another to the church and missionary cause, one to suffrage and another to the industries. The Board of Lady Managers of the World's Fair was represented by its President, Mrs. Bertha Honore Palmer, and the Queen Isabella Association by its President. To give even a list of the distinguished women who spoke would require more room than we can spare, but all questions of woman's mental power, of her executive ability and her capacity for organized and sustained work, were settled for all time to come. While this Council may not perhaps be called an equal rights convention, yet every representative of every branch of work demanded equal opportunities for her sex. While it may not be termed an equal suffrage convention, yet there was probably not a speaker out of the one hundred on the platform who is not an advocate of woman suffrage and a member of the National Suffrage Association. The handwriting is on the wall, he who runs may read.

But the objects of the Council will be by no means attained through great conventions every three years, eloquent speeches, congratulations upon past successes, flattering predictions for the future. The ramifications of this body are to extend to every city and town in the country. The President of the Council is to have her Cabinet, composed of seven wise women representing the industries, the professions, education, philanthropy, reform, the religious and the political interests of their sex. They will comprise a republic, and from every National organization in the land shall be chosen two delegates who will form a Senate, and every State society will be entitled to two delegates who will compose a House of Representatives. But this is not all. Each state is to have its Legislature, composed of delegates from all of its local societies in the various towns and cities. All the women in the United States who belong to a society for any kind of legitimate work may be represented in this great organization. It expects to make its influence felt in many different ways: in securing better laws for women; in improved methods for the care and education of children; in placing a proportion of women upon the boards of all benevolent, reformatory and educational institutions; in bringing about many needed reforms in municipal government. There will be nothing in this organization which shall be in any way antagonistic to the better class of men, but it will thoroughly co-operate with them and supplement their efforts to overcome the almost

universal corruption which exists in high and low places and which good citizens over all the country are vainly endeavoring to overcome. It will be a vast reserve force which has been waiting all these years for an opportunity to bring mankind back to its first and best estate.

By a wise provision in its Constitution, the President of the Council may hold that office for but one term. Miss Willard therefore retires, and Mrs. May Wright Sewall will take her place. Mrs. Sewall is the founder and principal of the Indianapolis Girls' Classical School; the originator and President of the Propylaeum, the finest woman's club house in the country; the President of the Contemporary, the largest club in the city, composed of men and women; and Chairman of the Executive Committee of the National Woman Suffrage Association; a woman of splendid abilities and great force of character. The Council will not meet again until 1895, on account of the International Council of Women which is to meet in Chicago during the World's Fair. Delegates are expected to be present from all parts of the civilized world, and it will undoubtedly be one of the most prominent features of the great Exposition.

ALL other editorial matter is crowded out because of the length of the article on the Woman's Council. It was condensed as much as possible, but we believe it to be a good thing for our readers to fully understand this important movement, which is destined to play a very prominent part in the next two or three years.

GLADSTONE, MICH., Feb. 5, 1891.

Editor Woman's Department:

My boy is a fireman and has taken your *Magazine* for quite a while and always feels as interested in the Woman's Department as I do. I thought I would send a few lines and if you think them worthy of printing, why do so. I know somebody's mother, wife, sister or sweetheart, has to write in order to have a Woman's Department. As I sit here writing I see a train moving by and I cannot help but think that some mother's pride is on for fireman. Perhaps she is worrying now and thinking, Will he come home safe from this trip? Let us all hope so. My boy is an Odd Fellow and I think tries to be a true one. I have often told him to be true in whatever he undertakes. Let it be in the roll of secret societies, husband or lover, whatever it be that concerns his honor, and he is not ashamed to put his arms around his mother's neck and kiss her, either. Ah, I never think my darling boy will get too old to kiss his mother, as I have heard of sons doing; and shall I tell you a secret? He has a little sweetheart that is very true to him and who is very fond of reading your *Magazine*, too, for his sake. Now when they marry I will try and let you know, so you can wish them joy through your friendly *Magazine*, as I know it would please them to hear from you. Now I think I have written quite enough, so I will close for this time, but if I see this in print you may hear from me again. In conclusion I would say, God bless the noble firemen, as I understand a good deal depends on them in moving our vast trains. Wishing them all the good luck that is possible, I remain

A Fireman's Loving Mother.

BLOOMINGTON, ILL., Feb. 3, 1891.

Editor Woman's Department;

We have only had the *Magazine* in our family a few months, but I have enjoyed them so much I feel constrained to write a few words and add my mite to the good work. Contrary to "Friar Tuck's" plan I will give a little sketch of our way of "managing," as I think one's own personal experience helps more than to say what we would do if we were in some one else's place, when the real fact is, we don't know all the circumstances, and consequently don't know just what we would do. My husband is a fireman, and we have been married nearly eight years, and I know we love each other more now than the day we were married, if that were possible, because we have learned that lesson, which I think all married people have to learn sometime, that of living together. I think those lines of Cowper's so beautiful and so true, they are:

"The kindest and the happiest pair
Will find occasion to forbear;
And something every day they live
To pity, or perhaps, forgive."

I always try to be as neat in household arrangements and personal appearance as I possibly can and I try to keep him so, watching the rips, and buttons that are always minus. I don't always know when he will come in, but if it don't happen to be meal time, why, while he is washing up I can have something hot for him to eat in fifteen minutes. He don't notice the time, for he is telling me of his trip, and I all that may have happened at home in his absence. He is never too tired to put the little ones up to the ceiling and if you could see how they clamber for a kiss when he comes in, you would know they were glad papa had come. Even when he sits down to read the paper and our little three-year-old boy bobs his curly head under his arm and says, "Lift me up papa," he isn't cross or crabbed, and I know feels repaid for his good nature when the little one hugs him, saying, "Oh you dear, old, sweet papa, I'm so glad you's tomed home." He knows I am not very strong and always helps me all he can when he is home, and is not above putting his arm around me as I go about my work and giving me a good kiss. He may forget it in a few minutes, but the memory of it lives with me after he has gone on the road again, and makes my heart light and happy. I think the trouble with most men is, they are thoughtless. If they only thought such little things as these were worth so much to their wives, they would not be afraid to give that which costs them so little. They see a constant change every day, while often the four walls of her little home, and the same everyday work over and over, are all his wife sees for days at a time, and so she thinks of these trifles more than he imagines. I don't think either of us ever gives a thought to "managing" the other. Don't think we are perfection—far from it, we each have faults and our way has not always been what it is now. We have had three children, and laid away our eldest, a bright boy, the same week the second child was born. My husband did not always kiss me when he went from home or give me many of those little attentions I enjoy so much now. I fretted a good deal in secret over it at first and then tried to find a reason and remedy. Reason was this, he had never been taught so at home. I have seen him taking leave of his mother on starting on a long journey, when she gave him the tips of her fingers to shake hands with so icily that I actually felt the cold chills chasing each other down my back. After that I no longer wondered at his appearing cold and tried to overcome it and when he found I so enjoyed those little attentions which one of your correspondents so fittingly styles "the pie and cake" of everyday life, why he gave them to me in his own quiet way, and now its like second nature to him. Above all things he is a sincere Christian, and that is an unbounded source of comfort to me. I think young men in general don't know enough about their wives before marriage. My husband knew me for more than five years before we were married, saw me in everyday life as well as my Sunday best, knew that I could work, sat at our table and ate bread as well as cake of my making and knew I could wash and iron my father's shirts and collars as well as my mother, and

that my education was as good as any other young girl of seventeen. He often says now that he has to thank my mother for training a careful wife for him and I am satisfied she should have all the credit, for I know she deserves it. I really think this subject of managing husbands and wives goes further back than the objects themselves, to their parents. Mothers, train your daughters to be poor men's wives; then even if they should be fortunate enough to marry a rich man, they will know how to use their riches to the best advantage; also train your sons to be kind and affectionate and not to slight those polite attentions to mothers and sisters which mark the true gentleman and will later on be the blessing of a wife. Edward Ames' letter in February did me good and I know his wife feels proud that he is *her* husband. I don't know who "Again" is, but would like to shake hands with him and tell him, if, as he says, he has no wife, I would advise him to find one, good and true, and make her happy, as soon as he can, for there is a scarcity of husbands nowadays, such as he would make if he means what he says. I feel truly sorry for poor "Ruby" and hope her husband will make up and think of the duties he owes a loving wife. You may hear again from *Mary*.

[A most refreshing and helpful letter. It is a pleasure to hear of such a home.—ED.]

COLLINSWOOD, O., Feb. 9, 1891.

Editor Woman's Department:

Upon reading Shandy McGuire's neat little poem on the management of a wife, the idea struck me—not with sufficient force to do any great damage—that it was my "bounden duty" to enlighten the world on that important subject.

My first impulse was to write a poem which would throw Tennyson, Longfellow and all those mediocre old scribblers so far into the shades of oblivion that Gabriel's horn would have to toot with unusual vigor to bring them to light again, but to my great sorrow Pegasus was balky. With my usual zeal I went at him and squandered at least three cents' worth of midnight oil in a vain endeavor to make him soar, but he wouldn't soar. Then I began to expend some of my surplus vitality in cudgelling my brain and finally became inspired with the idea that my literary talent does not take the form of poetry.

In the first place I don't like the idea that every wife needs to be managed, and if she does, I have discovered that the best way is to let her manage herself. If a man has a good wife—and every man thinks his own the best—she will certainly succeed without a great deal of domineering on the part of her lordly spouse. I flatter myself that I have succeeded admirably in the management of my wife. I will impart to you the secret of my success. My wife is an excellent cook, and makes such good bread that when she has a "streak of bad luck," and for once produces a "poor batch," it is painfully noticeable. On such occasions I never kick. I eat that bread as if it was the greatest delicacy of the season and declare that it is excellent. I may not stand so well on the books of the Recording Angel after that statement, but you can safely wager your month's pay that I stand better with my wife than if I grumbled and cursed at the poor bread.

Then when pay day comes I don't give my wife a half dollar and read her a lecture on extravagance. We take our money and pay our bills. Then the balance is laid away and we both use it as we see proper. Don't imagine, dear brothers and sisters, that neither knows what money the other expends. We take pleasure in telling each other of our purchases, or our subscriptions to charitable objects, or whatever outlays of money we may make.

I have a neighbor who earns good wages and manages his wife in the "Kicker" style. When he draws his money he pays his bills, and if he decides in an outburst of generosity (?) to donate a half dollar to his better half—and she is so by far—it is with so much kicking about her extravagance and reckless waste of money that she is tempted to throw the beggarly pittance in his face.

I did not commence this letter with the intention of talking about my neighbors, but I want my read-

ers to compare the two methods of "managing a wife."

I have no desire to pose as a model husband, and would be a very inferior model for any young husband, but in my limited experience I have found that I can manage my wife best by kind words and by treating her as my equal in all respects. By following this course I have made some discoveries. I have found that an intelligent woman is the equal of any man in business ability; that she is possessed of vastly more tact, and that she can make one dollar do the work of twice that amount in the hands of most men.

Shandy Maguire complains about his boy being twins. He need not kick. My boys are both girls. In conclusion I will say the whole sum and substance of my knowledge of this subject is: If a man would successfully manage his wife, let him first learn to manage himself. Then, if his wife is worthy of the name, the rest will be easy.

Hoping to hear more from Lake Shore Lodge, and that this will be favorably received, I remain

Buckeye.

[This method could hardly be improved upon.—Ed.]

ELDON, IA., Feb. 5, 1891.

Editor Woman's Department:

As my "fire boy" has gone to work, and I am left alone, I will write a few lines for the "Woman's Department." I have been a constant reader of the *Magazine* for three or four years, and think it the best magazine published.

I notice in the February number an article on "The Importance of Paying Dues," and I too think the case described a sad one, and I think it a woman's duty (as well as a man's) to see that the dues are paid. If they (the women) were more interested in this, I think there would be fewer expatriations—even if money is rather scarce. Don't you think we can manage to save \$5.00 every three months to pay the dues, even if we have to do without a few other things? For think of how many things we should probably have to do without if any accident should happen to our loved ones, and they were behind in their dues.

Wishing the brotherhood unbounded success, I remain,

Lyle, A Fireman's Wife.

TO MY BLIND MOTHER.

And must thy path through life
In darkness evermore be clouded?
If one might see by faith, thy path
In light would evermore be shrouded.

I know you meekly bow your head
And say "Thy will be done, O God;
Thou leadest, and I'm led
Beneath thy chastening rod."

Thy "three score years and ten"
Are very nearly passed,
Thy work on earth is nearly done:
O! mother, rest will come at last.

If God loves best
Those chastened most,
By love thou wilt be blest,
By God and all his host.

My brothers three and sisters two
Have gone before:
Mother, they will meet you
On that Heavenly shore.

In fancy now I see their hands
Outstretched, and calling,
"Mother, come, we're on the strand,
No danger now of falling."

And as the phantom bark glides o'er the waves,
Down to the shore there'll come the One who saves.

He'll gently take thee by the hand
And lead thee to His throne,
And bid thee welcome to the Heavenly land,
Where storms and sorrow never come.

Phillipa.

NOT LOST, BUT "GONE BEFORE."

(Written in memory of C. H. Payne, Jr., who was killed near Tyrconnell Mines, W. Va., September 17, 1890. To his mother and brother, the following lines are respectfully dedicated.)

The shadows fall o'er a darkened home,
For death has entered that humble abode,
And the victim this time was a man in his prime—
A brakeman employed on the B. & O. road.
While setting the brakes he fell from the train,
Crushed, bleeding and dying he was found on the rail.

From the fast paling lips came the keen, anguished cry,

"Boys, take me to mother, for soon I must die;
She is waiting to greet me with a fond, loving kiss—
Oh, God! Dearest mother, such a home-coming as this!"

Strong arms gently bore him to that cottage so near,
Where waited the loved ones, that to him were so dear.

Cold and white are his lips and labored his breath,
While the watchers are waiting with bated breath
For the end that must come. He is nearing the goal
Where infinite joy greets the weary soul.
"Dear mother," he murmurs, so tender and low,
"I am going to Jesus, one kiss ere I go."

"Cease thy weeping, dear mother, clasp me close to thy breast,

For the angels are calling—I shall soon be at rest.
When twilight shall deepen o'er valley and hill,
The heart's deep pulsation will forever be still.
Farewell all ye loved ones." His spirit has fled,
And the mourners are weeping beside their loved dead.

The white hands are folded o'er that still, pulseless breast,

The mute lips so silent give no answering caress,
Yet ye have the assurance that with him all is well,
That the one ye loved fondly with angels doth dwell;
Tho' his presence shall gladden thy home nevermore,
He is waiting to greet thee on yonder bright shore.

Mrs. Nellie Bloom.

WEST OAKLAND, CAL.

A MADE-OVER WIFE.

When I married Ebenezer's father everybody was opposed to it, as they had a perfect right to be, at least they thought so. In fact I was opposed myself. But Ebenezer, Sr., threatened to overturn heaven and earth if I didn't marry him. I didn't marry him to save the earth but I didn't want heaven disturbed. I don't want to be a homeless wanderer after I die, so I married Eb.

I supposed that I just exactly suited him; he called me an angel and lots of other sweet things. Imagine my surprise when the very first thing he went at was to make me over.

He said if I would wear my dress longer I would look taller. He admired tall women; and he suggested that I wear my hair in a knot at the back of my head. It would make me look more dignified. He wanted me to stand up straighter and carry myself more gracefully. He ordered me to cut up that red dress that he always admired so much before I became Mrs. Eb. and make carpet rags of it. He didn't like it. He objected to any pot plants, though he knew I was passionately fond of them.

He wouldn't have a cat in the house. He used to pet my beautiful malted for an hour at a time. He couldn't endure a malted and my sweet singer had to be given up. He was sorry that I had no voice for singing.

I began to think I was a very defective angel and to wish I had let him overturn heaven.

I don't like this make-over business. I don't feel natural, and sometimes I am not certain this is I. I was very well satisfied with myself until Eb commenced to make me over; but I am in despair, for I know it will be a botched up job.

There isn't enough of me to make such a wife as Eb wants. I will have to be pieced right where it will show and I know it won't match.

Pebble.

THE MAGAZINE.

Rejected Manuscripts are not returned unless accompanied with required postage.

Subscriptions must begin with the January, April, July or October number, and expire with the year.

Changes of Addresses of subscribers should be reported to us promptly to insure the safe delivery of the Magazine.

Contributors are required in all cases to give their real names, not necessarily for publication, but as a guarantee of good faith.

Subscribers failing to receive their Magazines will please notify us, giving name and location of Agent through whom they subscribed.

THE ORGANIZATION OF WORKINGMEN AND THEIR PURPOSES.

There is not a man in the United States capable of comprehending conditions, and of forming an honest opinion, who, if he has given the subject any proper consideration, does not know that organization has been of incalculable benefit to workingmen in advancing them intellectually and morally.

If this is true, and we do not hesitate to challenge denial from any quarter, what is the line of reflection the facts suggest to those who are capable of grasping and analyzing them? We submit that the subject in its entirety, in its height and depth, in the far-reaching sweep of its influences for the welfare of society, looms up and stands out boldly as a new departure in the progressive movements of the times.

We are inclined to give the matter special consideration, because the organization of workingmen, for their intellectual and moral advancement, is a movement purely, absolutely of their own. It was never suggested by what is called the "upper strata" of society. It was not suggested by the rich. The church did not originate it. Neither the much advertised philanthropists, nor profound political economists, nor educators, nor evangelists—politicians nor statesmen, whose names figure in print, had ought to do with founding organizations of workingmen in America. The credit belongs to workingmen themselves.

Take the various organizations of railroad workingmen, beginning with Locomotive Engineers, and trace their history to the day when the first step was taken, and the same bed-rock fact is discovered, that a few men, unlearned in book lore, seeing the necessity for intellectual and moral improvement; laid deep and strong the foundations of organization, and then began building the splendid superstructures which today challenge the admiration of all men, except the base-born worshippers of wealth.

Let us go one step further to find another original purpose workingmen had in or-

ganization, especially railroad employes. The investigation discloses the fact that it was a benevolent purpose—to give relief in case of distress, sickness, disability or death. Nor was this all. There was in the beginning, a belief that wages were not sufficiently remunerative, and that for the services rendered, railroad companies could and ought to pay better wages.

Here then we have all the purposes in full view. Benevolence, the development and growth of a fraternal spirit, intellectual advancement, the enforcement of moral obligations, and better pay.

Out of all this grew the establishment of the mutual insurance scheme by which, in case of disability the member should receive a stipulated amount of money, and in case of death the money should go to the member's heirs.

In the foregoing are seen purposes involving the highest welfare of large bodies of workingmen—every one of which challenges approval. They are in every regard commendatory. We know of no organizations of men that can boast of higher, nobler aims.

If there are organizations of men in the country, which are more creditable to our advanced civilization, whose principles are more in accord with the welfare of society at large—which voice a profounder comprehension of good citizenship, those who are in possession of the information ought to make it public. We are not aware of their existence.

Would it not be well for those who discuss profoundly or superficially economic, social, educational, vital and criminal statistics, to investigate the various organizations of railroad employes in their relation to such subjects?

Should students deem it prudent to do so, they might lighten their task greatly by beginning with the economic phase of the subject—a moment's reflection will satisfy an investigator that a failure in wages results almost necessarily in failure all along the line.

It does not matter what place in the list of the purposes of organized labor you place wages, for though it be assigned the lowest, or last place, it will soon be discovered that it ranks first in importance. The proposition invites discussion.

In the first place, to organize at all, requires money. The organization is sustained by money. To organize, workingmen submit to self-imposed taxation. They take a certain amount of their wages and put it into a general fund as preliminary to every other requirement.

To be practically benevolent, there must be money—a man in distress needs something more than kind words. To supply relief there must be available funds. Work-

ingmen, in organizations, understand this, hence their laws relating to dues. With money the sick are cared for, the hungry are fed, the naked are clothed, the dead are buried.

To advance intellectually there must be books and papers, hence we see organizations of railroad employes establishing publications, "organs," as they are called, which are steadily taking higher rank in the literature of the times. These publications require money, and workmen contribute it from their wages.

If wages are down to a point which barely supply the absolute necessities of life—nothing is left for the organization, nothing for benevolence, nor books, nothing for intellectual improvement, and therefore nothing for moral improvement, and the organization becomes a failure.

Poverty is not favorable for intellectual or moral advancement. Men who are forever on the ragged edge of penury, want and destitution, are not in a position to secure moral and intellectual improvement. Hence the only hope for workmen is to obtain and maintain fair wages.

With fair, honest wages, their rightful share of the wealth they create, the members of railroad employes' organizations are in a position to be of incalculable benefit to their employers, to society, and to themselves—to their employers, because they supply the most competent and reliable men for responsible positions; to society, because workmen fairly paid, become a potent factor and force in all matters relating to progress; to themselves, because they provide against destitution in the event of sickness, disability and death.

What are the facts? The Brotherhood of Locomotive Engineers has paid out to its members in cases of disability and death, in round numbers about \$3,300,000.

The Brotherhood of Locomotive Firemen has paid out in such cases \$2,100,000.

The Brotherhood of Railway Trainmen has paid in such cases \$1,000,000.

The Switchmen's Mutual Aid Association, in the same line has paid out \$260,000.

The Order of Railway Conductors has paid out for disability and death the sum of \$750,000.

The Brotherhood of Railway Conductors, the youngest organization of railroad employes engaged in the train service of the country, has paid out in similar cases \$25,000, showing a grand sum total of \$7,435,000.

It should be remembered that this amount has been paid out exclusively for beneficiary purposes, i. e., death and disability losses. It has been paid to the widows and orphans of deceased members and to such members as were maimed or otherwise incapacitated from following their occupation.

It is safe to say that an equal amount has been paid out for local benefits in cases of sickness, injuries or other misfortunes to members, their families and dependent ones.

With these figures in full view, what must be the conclusion of men, capable of comprehending philanthropic or economic propositions?

What enterprises of the times have been more successfully or intelligently managed? Every step is an exhibition of comprehension of needs and of methods to solve difficult problems, every one of which is of such unquestioned importance, that the more they are discussed the stronger must be their hold upon the public mind and the more vital the conviction that these organizations contemplate the welfare of the body industrial, social and political.

And just here comes into view a fact entitled to profound consideration. The corporation has ceaselessly antagonized these organizations. Why? Simply because they have sought to obtain fair compensation for work. And to such a length has this opposition been carried, that in some instances, the fact of membership has been sufficient to prevent employment. The corporation has said, the penalty for membership is idleness—that to secure work, the member of an organization must abandon his organization, and submit to such degradations as it may deem proper to impose.

Is it required to say that the organizations will not disband? Is it required to say, that the great body of railway employes will not wear the corporation collar? Will not be degraded to serfs? That they will be men, and though the stars fall will assert their rights?

Workingmen, unaided by corporations, laid the foundations of their organizations—in the face of corporate opposition, have carried them up to splendid proportions, and will not permit them to be torn down nor remanded to decay.

RAILWAY EMPLOYEES.

Some one who pretends to speak by authority, says that in 1889 the railroad employes of the country were as follows:

General officers	4,797
General office clerks	20,817
Station agents	24,171
Other stationmen	58,037
Engineers	30,217
Firemen	31,990
Conductors	20,993
Other trainmen	55,160
Machinists	25,214
Carpenters	35,211
Other shopmen	75,000
Section foremen	25,000
Other trackmen	115,001
Switchmen, flagmen and other watchmen	55,011
Telegraph operators	16,957

601,123

It is now claimed that the number reaches 700,000, an increase in one year of 98,577.

RAILROAD FEDERATION.

Mr. Jay Gould has realized his expectations in bringing about what is termed a "traffic compact" between the big lines beyond Chicago and St. Louis, a federation of immense proportions and power.

The meeting where this compact was completed was held, says the *New York World*, at the residence of J. Pierpont Morgan, and the session lasted about eight hours, the magnates taking an hour for lunch.

It seems that some time since the Vanderbilt and Pennsylvania lines formed a "compact," then the several lines represented by Jay Gould entered into an agreement, and then federation upon a still grander scale was conceived by Mr. Gould, which resulted in getting together representatives of the following roads: Chicago & Northwestern, by Marvin Hughitt, President, and H. K. McK. Twombly, Director; Chicago, Burlington & Quincy, by C. E. Perkins, President, and Gen. Charles J. Paine, Director; Chicago, Rock Island & Pacific, by R. R. Cable, President; Chicago, Milwaukee & St. Paul, by Roswell Miller, President; Union Pacific, by Sidney Dillon, President; Missouri Pacific, by Jay Gould, President; Atchison, Topeka & Santa Fé, by Allen Marvel, President, and Col. J. J. McCook; Wabash, by O. D. Ashley, President; Chicago, St. Paul & Kansas City, by J. M. Egen, President, and A. B. Stickney, Chairman; Illinois Central, by Stuyvesant Fish, President; Southern Pacific, by C. P. Huntington, President, and J. C. Stubbs, Vice President; Denver & Rio Grande, by Geo. Capbell, Chairman of Board; Northern Pacific, by T. F. Oakes, President; Rio Grande Western, by Gen. W. J. Palmer, President, and Geo. F. Peabody, Director; Great Northern, by J. J. Hill, President, and J. Kennedy Tod, Director, and Iowa Central, by Russell Sage, President.

Mr. Gould read his paper on federation as he had perfected it between roads he represented, and Mr. Morgan explained the plan of federation as agreed upon between the Vanderbilt and the Pennsylvania lines and then presented the following:

Resolved, That the presidents here assembled agree to recommend to their respective boards of directors the passage of the following resolutions:

"Whereas, It is to the benefit of the public and of the railway companies whose lines are situated west of Chicago and St. Louis that they should cooperate closely with each other in the management of their properties for the purpose of securing uniform, reasonable and stable rates for transportation and such economies in the operation of their properties for the better accommodation of the public as will insure equitable returns upon the capital invested.

"Therefore, be it resolved

First—That a new association shall be formed between the several companies whose lines are situated west of Chicago and St. Louis, or such of them as may now become or may hereafter be admitted as members thereof.

Second—That the affairs of this Association shall be under the management and direction of an Advisory Board to consist of the President and one

member of the Board of Directors of each company.

Third—That the Advisory Board so constituted shall have power to establish and maintain uniform rates between competitive points and to decide all questions of common interest between the members of the Association. It shall also have entire charge through properly constituted representatives of all outside agencies for the securing of traffic at competitive points. If any officer or representative of any company shall authorize, or promise directly or indirectly, any variation from established tariffs, he shall be discharged from the service, with the reasons stated.

Fourth—The rates established and the policy adopted by the Advisory Board at any time shall continue in force and be binding upon all companies comprising the Association until altered by subsequent action of the Board.

Fifth—A vote of at least four-fifths of the members of the Association shall be required to make its actions binding upon all.

Sixth—That the Advisory Board shall appoint proper arbitrators, commissions and other representatives and adopt by-laws to carry out the purposes of the Association.

Seventh—That no company shall withdraw from the Association except after ninety days' written notice by resolution of the Board of Directors to every other member of the Association, with the proviso, however, that the Association shall continue for at least six months from January 1, 1891.

Eighth—That under existing conditions it is expedient for this company to set in operation the policy and plan indicated in the foregoing as early as practicable.

Ninth—That the President and Mr. _____, one of the directors of this company, be, and they are hereby appointed to be, the representatives of this company in such Advisory Board, with full power to act for this company in carrying the foregoing preamble and resolutions into full effect."

The foregoing was adopted by the fifteen companies present, all voting in the affirmative, and then the following resolutions were adopted:

Resolved, That Roswell Miller, President of the Chicago, Milwaukee & St. Paul Railway Company, should act as chairman of the adjourned meeting, with power to call the first meeting of the Advisory Board, after receipt by him of notices of the action of the several Boards of Directors upon the foregoing resolutions, such notices to be sent to him at Chicago.

Resolved, That it is the sense of this meeting that the several Boards of Directors be called together to act upon the resolutions above adopted on or before January 1, 1891.

In commenting on the foregoing the *World* says:

The most perfect harmony prevailed at the meeting, and it was considered by all present that the action taken was a great stride towards securing conservative and effective cooperation between all the companies in arranging to vest absolute power in one body of men constituted as the Advisory Board will be and acting with full authority for all companies members of the Association. Such a body, better than any other, can be relied upon to act under all circumstances with deliberation in the interest of the public as well as the railways, to provide for strict economies in the administration of the properties, and to make suitable provision for the proper protection of all the lines concerned, whether strong or weak. A great element of conservatism in the plan will be the fact that no withdrawal can take place without the formal and deliberate action of a board of directors.

In view of all the facts, we ask if the course pursued by these great lines of railroads is not practically identical with the plan of federation adopted by the four orders of railway employes? The "Advisory

Board" of the railroads is what the federated orders call the "Supreme Council." A critical reading of the railroad "compact" will show that the purpose in view was in every regard similar to the purpose of the federated orders. In both cases, it is federation, pure and simple, to better conditions.

The action of the railroads triumphantly vindicates the wisdom of the federated orders of railroad employes, and such will be the conclusion of all men capable of comprehending the proposition, that in union there is strength.

FEDERATION IN AUSTRALIA.

In all matters pertaining to the well-being of labor, we doubt if there is a country on the globe where workmen are wider awake than in Australia.

We have on our table a copy of the *New South Wales Railway and Tramway Review*, of September 18, 1890, which gives a full account of a meeting held at Sidney, N. S. W., August 25, 26 and 27, 1890, to inaugurate federation between the various associations of railway and tramway employes of four of the Australian provinces, viz.: *Victoria, Queensland, South Australia and New South Wales*, which was accomplished, the federated authority being lodged in a body called the "Senate."

It may be interesting to our readers to know something relating to the railway interests of Australia, a country in area about equal to Europe or the United States. As we have stated, there are four provinces represented in the Federation Senate, and we give area, railroad mileage and population according to the latest data at our command:

PROVINCES.	Date of Statistics.	Railroad Mileage.	Area Square Miles.	Population.
New South Wales	1888	2,102	399,192	1,030,762
Queensland	1887	1,765	668,221	313,768
South Australia	1887	1,419	907,125	312,439
Victoria	1886	1,753	87,884	1,033,062
Total		7,039	1,968,702	2,720,021

It will be observed that the men of Australia propose to begin early in their efforts to maintain their rights against the inroads of corporate greed, and this fact finds expression in many forms.

It appears that an effort was made to bring the railway associations of New Zealand into the federation. New Zealand in 1888 had 1,753 miles of railroads. It has an area of 104,406 square miles and a population of 589,226, and will eventually be in the Federation Senate. A letter was received from the *Amalgamated Society of Railway Servants*,

of New Zealand, in which federation is unequivocally indorsed, and the Amalgamated Society was, at the time the letter was written, completing arrangements for federating with the Maritime Council, which would give the federation 19,000 members, and they had just come out of a great struggle which they had won by "dogged determination." Such facts are interesting, as showing what railway employes are doing in other lands to maintain their rights; and just here it should be said, that the chief reason why the New Zealand men did not federate with their Australian brothers, was the great distance (1,500 miles) New Zealand is from Australia. Still, though isolated and weak in numbers, they win battles because they are true to their interests. (Of the 4,200 men engaged in the service in New Zealand, 4,000 of them are in the organization.)

It appears from the *Review* that our Australian brothers are confronted with the corporation insurance, or pension scheme, and are bitterly opposed to it.

A number of excellent speeches were made against the corporation compulsory insurance scheme, notably that of Mr. Schey, secretary of the Senate, and a member of the Parliament of New South Wales. So admirable were his views and conclusions that we reproduce them as reported in the *Review*:

Mr. Schey said he thought this Senate owed it to all the associations of the colonies, and should put it on record that they declare their unalterable hostility to compulsory insurance. He hoped some other gentlemen would move a resolution on the subject. Personally, he would use his last breath in his endeavor to defeat any compulsory insurance or benefit society. He was not prepared to give his opposition without very good reasons. If they looked at the legal aspect of the matter, the operation of all these societies had been radically bad. They were only entitled to judge of what might happen in the future by what had happened in the past. Their operation in the past had been the means of enslaving the men, and one and all should use their strongest possible endeavors to defeat anything of the kind being introduced into these colonies. He was prepared to prove to the satisfaction of any person that there was not one single word to be said in favor of these societies. If the commissioners of all the colonies could accomplish it, they would introduce the same thing into all the colonies. New South Wales was no exception to the rule. They had to meet the same thing that had been defeated in New Zealand and Queensland. Now he wanted them to declare their hostility to all such societies, and that the largest amount of opposition which was possible should be urged against them from the very jump.

He was about to speak of the fund instituted by the London & Northwestern Railway Company in England. The company contributed £1,000 a year to the fund. It was found that the employes had to give up rights which they were entitled to, and that the whole amount of the contributions amounted to little more than the rate of interest on the amount of the fund, and of which the company had practically free use for nothing. It was called philanthropy, but although put forward on philanthropic lines, was quite the reverse. The men gradually became dissatisfied with the administration and rose up in arms against it. When men should have retired and drawn their pensions, it was often found necessary to sack them, and they forfeited their claim to the pension. Favoritism was shown, and those who

chose to be independent, and did not please their superiors, were cut off from the benefits which belonged to them. It was supposed to be under the management of the men, but the officers really managed it, and the men had to beg for the benefits to which they were entitled. At last the agitation against the fund reached such a point that the men desired to take a ballot as to whether the fund should be continued or broken, and the cry to break up went all over the service. The officials and directors absolutely refused to allow the ballot to be taken on the matter, and it was not until Mr. McLaren, M. P., publicly shamed the directors before the House of Commons that the men were allowed to take a ballot on the management of the fund which belonged to them. Eventually the ballot was taken, the result being that the fund was broken up by a majority of 12 to 1, those in favor of it being the elderly portion of the service who were about to retire. The fund was broken up, and the company took away their funds and full interest thereon, leaving 80,000 or 90,000 pounds to be divided amongst the men; so that after a continuance of many years in this work, and making a merit of subscribing £1,300 a year, they drew out the whole of their money with interest and allowed the men to break up the fund. After that the Northeastern Company thought it would be a good thing to institute a fund, but it was necessary for them if they wished to extend their operations to get a bill passed. The men rose in revolt against it; they exposed the iniquities of it, and the company was compelled to withdraw the bill and allow the scheme to drop. The Great Northern Company had a fund of the same kind, but so frequent were the complaints that at last the Amalgamated Society of Railway Servants took the company into court and defeated them, and soon after the Amalgamated had to take action against the same company to enforce the claims of a widow whose husband had belonged to this benevolent fund, and the company, although they blustered, gave in, and would not face the courts again. In this country the same thing was going on. He was prepared to prove beyond all doubt that wherever these funds had been instituted the men had to give up their citizen rights, and they ought never to submit to such a thing. At the present time railway men had the same rights as other men, and if they were killed in the execution of their duty their representatives had the right to sue the commissioners in the courts for the recovery of damages. If they joined the proposed fund of the commissioners they would have to give up their rights under the Employers' Liability Act. They would have to pay more than the benefit societies asked them to pay and receive less benefits. Not long ago a driver was killed and his widow received £175. Under the proposed fund the outside sum she could receive would be £100, and the commissioners were freed from all liability. Although the fund was nominally for the benefit of the men, yet it enabled the officers to exercise tyranny. It was said that the men had half the representation on the committee, but they had lately seen cases where the men were not allowed to select their own representatives, and were compelled to accept others as their representatives. Therefore, the idea of giving the men the management was entirely false and misleading. It was an effort of bogus philanthropy for the enslavement of the men, and they would not do their duty if they did not express their unwavering hostility towards its introduction.

Railroad employes of the United States are constantly confronted by the same schemes, the most transparently bogus philanthropy ever devised, designed from the first not only to tie men to the corporation, but to otherwise degrade them. Mr. Schey fully comprehends their purpose, and the federated railroad men of Australia will, as he says, fight them from "the jump."

The Review ably champions the cause of railway men in Australia.

RAPID RUNNING.

A Buffalo dispatch, referring to the Vanderbilt party on a tour of inspection of "our Western" property, says "a special train was made up at Suspension Bridge, consisting of the private cars of Cornelius Vanderbilt, President Depew, Vice President Webb, President W. S. Webb of the Wagner company, and President Ledyard of the Michigan Central, and a baggage car. All the officials named were on board. The special left Clifton, Ont., at 5:38 A. M. From there to Detroit is 227 miles, and this distance was covered in four hours and fifty-six minutes. Deducting fifty-six minutes for stoppages, the actual running time was four hours. At different times along the route the recorder registered a speed of from sixty-two to seventy-three miles an hour, and the average for the whole distance traveled was 57.21 miles per hour." The entire party consisted of the above named gentlemen and Col. H. Walter Webb, of the Pinkerton Department of the N. Y. C. & H. R. R. R. There were only five gentlemen, but it took two private palace cars to hold them and their refreshments.

THE TYPOGRAPH.

It is now stated that the Rogers Typograph is a success, and many prominent newspapers are ordering them. These typesetting machines are rented for \$1 a day each, and the indications are that it will prove such a labor-saving invention that fully two-thirds of the printers will be out of a job in offices where it is used.

The Union Printer rises to remark:

Let the typographical unions demand that each machine be turned over to the operator, the rent and other expenses for running it to be deducted from his weekly wages. Let union printers refuse to operate any machines except on these terms. Then let the men charge their employers the same price per 1,000 ems as now. In this way if they have more composition to do they will earn more money; if the same amount of composition, they will get through quicker, and thus reduce their hours of labor. In either case it is the workmen who will get the full advantage of the invention, not the employing capitalist.

In this, as in many other cases, the proprietors of "prominent newspapers" will at once go hunting for "scabs," and they will be found, to take the places of "union printers," in which case what will the American Federation of Labor be able to do for the union printers?

In all the years of freebooting, no scheme known to pirates was ever half so successful as the "Trust." It simply beats the devil. The number of trusts is increasing so rapidly that it is difficult to keep track of them. The villainous feature of the business is that they exist under the sanction of law, and rob the men who are in the majority and who are responsible for the laws.

EVERY OTHER SUNDAY.

The *Railway Age* remarks that "Vice President Crocker, of the Southern Pacific Company, is a strong believer in the physical as well as moral necessity, for railway employees and all other men, of one day's rest in seven, and to meet the difficulty resulting from the apparent necessity of keeping railways in operation every day, he has a plan of giving station agents in odd numbered towns along his line a vacation every other Sunday, alternating with those of even-numbered districts. If it be admitted that Sunday labor cannot be abolished altogether, such a plan is certainly preferable to the existing practice, on the principle that half a loaf is better than no bread." The simple demand for a railroad trainman is rest, as absolute, one day in seven. If it can't be had on Sunday, give it some other day. It would not be difficult to divide the force so that every man would have one day of rest in seven. Some extra men would have to be employed, but in the long run the movement would be in the line of economy.

A WOMAN ON THE WAR PATH.

Banker Kean, as has been stated, was a pious rascal. In addition to the swindling process resorted to, the pious Mr. Kean was shown to be a bare-faced perjurer. Notwithstanding all this, Miss Frances E. Willard, President of the National Woman's Temperance Union, published a letter in defense of S. A. Kean & Co., which attracted widespread attention.

A Chicago special says:

Miss Willard opens with an ardent defense of Mr. Kean, reciting his thirty years of clean life and helpful service in Chicago home missionary work; his continuous and honorable connection with the banking business, and the fact that he has successfully weathered all previous financial crises.

She says that she has been waiting for days to see some leader in pulpit or pew leap into the arena of public controversy in the banker's defense. "I am pained beyond expression," said she, "by this silence of the good. It is, then, true that the world's people stand by each other better than do the members of the household of faith. The Woman's Christian Temperance Union and its affiliated interests have had Mr. Kean for a banker during several years. He is a leading prohibitionist representative and a Methodist layman. Who knows what hatred of the temperance cause may be back of all this, what blow is aimed at an organized movement against the liquor traffic?"

Miss Willard says that the losses of the organization and its branches are happily small, and adds: "But I know by my correspondence that the press of the country has been given to understand that an appalling calamity has overtaken the white ribbon movement. Possibly the wish is father to the thought. There is joy in heaven over one sinner that repenteth; there is doubtless joy in hell over one saint that falls. Beyond peradventure there is rejoicing in every grog shop of the city when the temperance cause or any of its advocates is overtaken by misfortune, seeming or real."

Miss Willard concludes with a hope for the best, be it in the rehabilitation of the banker's reputation and the triumph of eternal justice toward the banker as well as his depositors.

It is difficult to account for such hearty inorsement of a notorious scoundrel by a woman in the position of Miss Willard, and it

shows that all too often religious sentiment and sympathy, in cases of villainy, when a man is a *pillar* in a church, won't do to trust at all. If Miss Willard were a judge, as a great many women aspire to be, it is easy to see than Banker Kean would never wear stripes if the judge could prevent such an act of justice.

FEDERATING TO RAISE FREIGHT RATES.

The great railroad corporations are to have a Supreme Council to regulate freight rates. A Kansas City railroader outlines operations as follows:

No line should have the authority to take individual action, even to meet outside competition, but all complaints as to non-maintenance of rates should be filed with the chairman, who, before authorizing a reduction, should try other remedies. If the line complained of be a member of either of the associations, a fine should be assessed equal to the revenue obtained on the business carried at cut rates, with a minimum of \$100, and if the rate be not withdrawn within ten days after the order is made, all divisions with other lines members of the associations, should be withdrawn, and no line be allowed to receive from or deliver business to said line except at local tariff rates. When lines not members of the association are found to be cutting rates that affect the revenues of members, the chairman should authorize rates to meet the same, and at the same time order all divisions with the offending line to be withdrawn until such time as it agrees to withdraw the disturbing rates. The rule as to proposed change in rates now in effect in the Western and transmissouri associations should be continued, except that the arbitration committee should be the final court, and lines could only get rates into effect not authorized by the arbitration committee by withdrawal from the association, which should require sixty days' notice and the payment of its proportion of the expenses until the end of the current year. The present rules as to fines should be continued, except that the general managers should have no authority to remit such fines.

It will be observed that the Supreme Council of the association of federated roads, controls the situation, and that strikes will not be permitted, except as the Supreme Council declares. Straight federation is the word now, all along the line.

RAILROAD PASSES IN LEGISLATURES.

The people of Minnesota are profoundly impressed with the idea that the railroad pass is doing more to demoralize legislatures than all other forms of bribery combined, and a dispatch says that "a bill has been introduced in the lower branch of the Minnesota legislature providing that any public officer, state, municipal or county, accepting any gifts, free pass or other favors, not granted to the general public, from any railroad or other corporation in the state, shall be held guilty of felony and be punished by a fine not less than \$1,000 nor more than \$5,000, or by imprisonment in the state prison not less than six months nor more than one year, or both." This is as it should be. In every legislature where an effort is made to enact laws favorable to workingmen, the railroad pass is used to debauch the law-makers, and enough of them *tumble* to the bribe to secure what the corporation desires.

WM. D. ROBINSON AND A MONUMENT FUND.

In the December *Magazine* appeared an obituary notice of Wm. D. Robinson. In closing that notice we said:

In this hour, when Locomotive Engineers and Firemen stand uncovered at the tomb of Wm. D. Robinson, the question arises, What can be done to perpetuate the name, the fame, the memory of a man who gave the best years of his life for their benefit? Is not the answer, We will build him a monument worthy of his deeds, of his labors and sacrifices? We will believe that such is the response.

If it is, let the good work begin, and let it be carried forward until a granite or a marble shaft shall mark the spot where his dust reposes.

"What hallow's ground where heroes sleep?"

'Tis not the sculptured piles you heap!

In dew's that heavens far distant weep

Their turf may bloom,

Or genit twine beneath the deep

Their coral tomb.

"What's hallow'd ground? 'Tis what gives birth

To sacred thoughts in souls of worth!

Peace! Independence! Truth go forth,

Earth's compass round,

And your high priesthood shall make earth

All hallowed ground."

The poet's idea is correct. Where Wm. D. Robinson sleeps his last sleep, is hallowed ground, and monumental marble could add nothing to its sacredness. But it is all of that without reference to the living. What can the living do to bear testimony that the last resting place of Wm. D. Robinson is hallowed ground?

We do not believe the name of Wm. D. Robinson is soon to perish and be forgotten. We believe the brotherhood he founded will be his imperishable monument, and that his name in connection with that great order is to increase in luster as the years flow on. But that does not cancel the debt of gratitude the two great brotherhoods of the locomotive owe his memory, which if not met, will, in the judgment of mankind, cover the living with obloquy.

We believe the Brotherhood of Locomotive Firemen will respond in a way that will bear eloquent testimony of their appreciation of the life-work of the man that made their organization fruitful above measure of blessings to locomotive firemen. Alone and unaided, our order, for the small sum of 25 cents each, could do the work. But we prefer doing it in conjunction with the Brotherhood of Engineers; nor would we confine subscriptions to the two orders, but would invite all the brotherhoods engaged in the train service of railroads to join in the great work of gratitude.

The idea of building a monument to perpetuate the name and fame of Wm. D. Robinson, originated with the *Firemen's Magazine*. The time has come for action. Contributions should be made. We have said that 25 cents each from the members of the B. of L. F. would build the monument. But we surmise that other orders would want a place in the splendid work proposed, and we have opened in the Grand Lodge office of the B. of L. F.,

A ROBINSON MONUMENT FUND.

Every contribution, however small or large, will be acknowledged in the columns of the *Magazine* under an appropriate head, and when the contributions approximate a sum which gives assurance of success to the enterprise, a commission made up of the members of the various brotherhoods, will be constituted to take charge of the fund, and prepare for work.

Members of the various orders subscribing should designate their calling, and if

they will give their address it will be regarded as a favor.

Now, let the good work proceed. Wm. D. Robinson, when alive, was the friend of the workingman. He wrote and spoke and toiled to establish a brotherhood and to teach men the power of organized labor. Railroad trainmen had no more ardent and unselfish friend. Let a monument bear testimony that death did not sever the tie that bound him to the living.

CORPORATIONS VS. FEDERATION.

In a recent issue of the *Rights of Labor*, published at Chicago, we find the following:

From every point of the compass we are informed that capitalists and employers of labor are uniting to fight the labor unions. A railroad combination to fight the federation of railway employes. The owners of the London docks to fight the dockers' union. The street car owners to fight the street car unions. The carpenters and builders' association to fight the carpenters' union. The mine owners, headed by that delectable prince of plunderers, W. L. Scott, to fight the miners' union. Poor deluded workmen everywhere are being used as clubs to break the heads of their fellow workmen. What do these corporation crooks and cold-blooded employers hope for? Do they imagine they can destroy the unions, the hopes and aspirations of the workmen, by uniting against them? May they not by their uncalled for war against trade unionism, arouse passions that it would be better for them not to arouse? It is barely possible that these men may discover their mistake when it is too late, when they are shorn of their ill-gotten gains and compelled to work as their fellow men do. It is best not to unfetter a lion, even though you may imagine it is a tame lion.

The foregoing is highly suggestive. We do not doubt but that federated labor is at an early day to be tried, as if by fire. We are of the opinion that the decree has gone forth. We do not believe it will be revoked. The right to organize and to federate is conceded.

That there will be railroad combinations "to fight federation" we do not doubt.

Let us state the case tersely and fairly.

Organizations of railroad employes federate to secure rights and to maintain them.

If, therefore, railroads combine to fight federation, they combine in the interest of injustice and wrong.

The crisis is approaching. The crucial test is near at hand. We say, let it come.

If labor is to be enslaved, if it is to be manacled, if Corbin ideas are to prevail, if liberty and independence are to be enjoyed only by the employer, and the badge of serfdom is to be worn by the employe, let the facts be known—let the trial come.

We know that the federated orders of railway employes make no unjust demands, tolerate no improper methods to secure their rights.

We do not underestimate the power of money. We are not unmindful of the growth of aristocratic and autocratic ideas—but we have an abiding faith in organization, in federation, in union.

We are not prepared to contemplate the unrestricted sway of the corporation.

We would have no French revolutions in America.

Carnegie and Carnage sound much alike. The American railroad ought not to symbolize despotism; better, far better that a mile of track had never been laid.

Navery is better than serfdom. It is enough to say, we have faith in federation.

Without federation there may come desperation, and should the era of despair come, the storm god would rule.

We prefer reason and righteousness.

CORBIN'S SCABS.

In a recent issue of the *Scranton (Pa.) Truth*, we find the following telegram, dated Philadelphia, March 2d:

"Since last June the wife of a Reading railroad trainman has probably sold more valuable silks, laces and velvets than the richest lady in the land has purchased in the same time. She was the medium through whom an organized gang of train robbers in the railroad's service disposed of their wholesale plunder. Part of the gang are under arrest and will have a final hearing at Doylestown to-day. For months past complaints have been made to the officials of numerous thefts of merchandise from freight cars, and claims have been presented to the company for the loss of cloths, velvets, silks, hosiery, etc., lost in transit over the road. The case was placed in the hands of Chief John G. O'Brien, of the Reading special officers, to ferret out. The clues were traced to the trains on the North Pennsylvania branch, and the thefts located as taking place in Bucks county from trains between New York and Philadelphia. Lewis Hansell and Wm. Coyle and Abraham Kulp, brakemen, have been arrested and taken to Doylestown, and given a hearing and bound over for a further hearing. The value of the goods taken will amount to many thousands of dollars.

For a number of years, the Philadelphia & Reading Railroad management, has been engaged in selecting scabs for employes—creatures who at the behest of Corbin, McLeod, Bonzano, *et al.*, would lick official boots and kiss the cat-o'-ninetails with which, like galley slaves, they were scourged to their work. That any number of characterless scamps should be caught by such an autocratic, degrading policy, was a foregone conclusion and has panned out as might have been expected. Nor is it remarkable. The Philadelphia & Reading, for many years has been in the hands of thieves, men who wrecked the corporation, squandered its funds and created universal demoralization. That such a management should employ thieves to do its work was eminently consistent, and the poor devils who stole silks and satins to the amount of "many thousand dollars," simply emulated the scoundrelism practiced by the high official freebooters, who have stolen millions, while their beardless serfs have only taken thousands.

The various organizations of railroad employes would have given the P. & R. honest and capable men, but the management preferred scabs, men without character or qualifications, and now the corporation, everywhere known for its infamies and denounced for its Russianizing policy, must make good the thefts of its scabs. And thus the mills of the gods grind on.

SLEEP'S GRIP ON ITS VICTIMS.

When sleep gets a good hold upon a man he is to all intents and purposes dead to passing events, and this fact is illustrated by the condition of a postal clerk on the Denver & Rio Grande, not long ago, when a wreck occurred. "The postal clerk," says the *Denver Republican*, "had pigeon-holed the mail and retired to his berth in the rear end of the mail car. He was wrapped in slumber that could be heard above the rumble of the train and agonizing snorts of the engine when the collision occurred. The pilot was wrenched from the engine, the iron horse was derailed, the front steps of the baggage car smashed in, and the dreaming clerk pitched headlong from his nest of blankets to the other end of the car. After considerable time had been spent in replacing the engine and clearing up the debris, amid a series of painful jerks and jogs the train rolled away on its journey. An hour later the aforesaid clerk awoke to find himself in the midst of an incongruous mass of mail pouches and discarded wrappers, dreaming of being a prince, feasting in a magnificent castle, which seemed to be ruled by a princess fair beyond compare. It was not the shapely arm of a beautiful princess, but a hard leather mail pouch that encircled his neck. The young man arose in bewilderment and succeeded finally in restoring the railroad postoffice to order. It was not, however, until he read the papers of the succeeding morning that he learned how he happened to be sleeping on the floor." The *Republican's* report is somewhat playful, but it is easy to get at the fact that the postal clerk, overworked to exhaustion, was utterly incapacitated for the performance of his duties.

Postal clerks are not the only men who are overworked. Engineers, conductors, firemen, brakemen, switchmen and telegraphers are also overworked, which accounts for many of the wrecks constantly occurring throughout the country.

FROM ROME, ITALY.

The letter we publish below is from Hon. A. G. Porter, late Governor of Indiana, and now Envoy Extraordinary and Minister Plenipotentiary to Italy. It is needless to say that such commendation, unsought and unbought, is peculiarly satisfactory to the editor of the *Magazine*, and as we believe will be equally agreeable to the brotherhood:

ROME, Feb. 17, 1891.

My Dear Mr. Debs:

I have read in a copy of the *Indianapolis News*, that you are about to resign the office which you have so long held, and with such general satisfaction, in the Brotherhood of Locomotive Firemen. I write to express my ardent wish for your success in whatever business you may engage.

Very sincerely yours,

A. G. Porter.

The Brotherhood.

Correspondence concerning the Brotherhood is solicited for these columns.

Communications should be written on one side of the paper only, and forwarded so as to reach the Editor not later than the *fifteenth* day of each month.

"THE GOOD OLD DAYS."

When first I went to throwing blocks, 'twas in "the good old days;"
And, oh, dear Lord, the furnace door did often me amaze!
It was so small, and down so low, one inch above the deck,
It made my hands a mass of sores, and made of me a wreck.
I'd pile them up, the sawed ends out, then swing the door with speed,
And every one would bear the trace of how my hands would bleed;
The slivers like a hedge hog's back my tender fingers tore,
When first I went to throwing blocks, along in sixty-four.

My limbs were kinked from stooping down, my knees were swelled with pain,
My back was stiff enough to break, so fearful was the strain;
Blood-blisters grew so thick upon my knuckles, fingers, thumbs,
They looked just like a pudding stuffed with ripe and juicy plums!

'Court plaster by the yard I bought and kept it in the cab,
Cut up in strips to paste upon each freshly bleeding scab;
Tobacco juice and sturdy quids were also plastered o'er
The gaping gashes which were made with blocks in sixty-four.

Right soon I learned to know the grades we had upon the line:
Black ash and hemlock, birch and spruce, wet cedar, elm and pine.
Had not the substance to endure the nozzle's ceaseless call:

'Twas "deck and throw and deck and throw," they always seemed to bawl!
'Til my eyes I'd open wide, and straighten up my back

To see if every block I'd throw was fleeing from the stack!
But nothing, save a cloud of sparks, departing in a roar,
Could I behold in those old days of long gone sixty-four.

But then I was a fireman bold, besides both blithe and young,
An awkward lad, and didn't care just how the door I swung,
As long as I could send them home, right up against the flues,

To satisfy his royal nibs that on the seat would snooze.
The lever in the corner down between his lazy legs,
Without a thought of how I stood upon my painful pegs.

When every bark the engine made seemed screaming "give me more,"
'Til I'd hint to hook her up, in eighteen sixty-four.

How gleefully I'd jump upon the seat with smiling face,
When to a station we would come, a well known form to trace!

And if the charmer I'd espy among the staring crowd,
Oh, gracious! how my heart would jump, and then I'd feel so proud.

In measured tones to strike the bell I'd pause it in the yoke,
'Til the tongue, at every toll, a mystic language spoke,
Unknown to all but just ourselves, that one I did adore,
Who bled my heart just like my hands in June, of sixty-four.

Then when our daily trips were made and in the round house stowed,
I suffered more a hundred fold than out upon the road!

The acid scorched my very brain, and often made me dumb,
'Til I thought old Beelzebub had me in kingdom come.

The way 'twould run through every gaah, when polishing the brass!

'Twould bite just like a devil's tooth the lacerated mass

Of scabs, that spoke with gaping lips, till blood from every pore

Ran down upon each spot I'd rub, in eighteen sixty-four.

Oh, yes, "those were the good old days," I've heard old fogies say;

The devil a much they ever toiled in my laborious way,

For if they did they'd surely have another tale to tell:

They'd shun such reminiscent talk the same as shunning hell!

Give me the slash-bar, hook and scoop, likewise a tank of coal,

Besides, the beautiful black crooks which on our railways roll.

They're good enough to sing about. I'll never once deplore

The brassy brutes, which ruled the roost, in eighteen sixty-four.

Shandy Maguire.

A Defaulting Receiver.

SAGINAW, MICH., March 3, 1891.

MR. EDITOR:—On the 24th of January last, the Receiver of our lodge, Fred J. Hill, departed for parts unknown. Whither he has gone the members of the lodge have no knowledge. He took with him all the cash on hand, together with all the books, papers, receipts, etc., belonging to the lodge.

You will perceive by the date of his absconding that the members of the lodge had about all paid their dues for the new quarter, beginning February 1st.

This act of villainy has put us all in a tight place, besides hurting our standing among business men, to know that honesty did not prevail among the "Tried and True."

On February 8th, this man was expelled from the order. He is of medium height, light blue eyes, brown hair—wore a mustache with long ends, has lost two middle fingers on his right hand, and the first finger on his right hand is stiff. He has a scar on his right cheek. Besides he is a card player.

Any brother hearing of this scoundrel will do a favor to "281" by letting us know his whereabouts. He was not under bonds, and as a consequence, we lose what he stole, but it will be some satisfaction to follow him up and expose his character.

We warn any brother of the order against assisting him, and urge them to keep him

from further imposing upon the brotherhood.

If railroad men and our brotherhood journals and magazines would publish a card relating to this scoundrel—Fred. J. Hill—and help to hunt him down, they would greatly favor Saginaw Valley Lodge, No. 286.

Fraternally yours,

Will F. Carle,
Secretary.

[The foregoing letter is a warning to the lodges. The Receiver of Saginaw Valley Lodge, No. 286, in some way ingratiated himself into the confidence of his fellow members, and this done, in the absence of a bond, he robbed the lodge. If he was a card player the lodge might have prudently suspected him. Regrets are of no avail, unless they lead to reforms. There is absolutely no means whereby villains may be prevented from getting into our order—but it is possible to so guard the finances of lodges as to reduce to the lowest point the chances for robbing them. The fact that the Receiver of Saginaw Valley Lodge stole its valuables should not hurt its standing in the estimation of business men. It is simply a misfortune to which all organizations are liable, and if it serves to put lodges on their guard, and make them more watchful, the lesson may be worth all it cost.—ED. MAGAZINE.]

MICHIGAN CITY, IND., March 2, 1891.

MR. EDITOR:—The history of early railroading is a theme of interest to all students of our national growth and development, and more particularly to those who are engaged in the railway service, and in this connection I have been prompted to present a few facts relating to the building of what is now one of the largest and best equipped roads in the country, viz., the Michigan Central. This road was constructed by installments, as will be seen by the following statements from the Michigan Railroad Commissioners, to-wit: Detroit to Ypsilanti, Feb. 5, 1838; Detroit to Ann Arbor, Oct. 17, 1839; Detroit to Dexter, June 30, 1841; Detroit to Jackson, Dec. 20, 1841; Detroit to Albion, June 25, 1844; Detroit to Marshall, August 12, 1844; Detroit to Battle Creek, Nov. 25, 1845; Detroit to Kalamazoo, Feb. 2, 1846; Detroit to Niles, Oct., 1848; Detroit to New Buffalo, May, 1849; Detroit to Michigan City, Oct., 1850; Detroit to Chicago, May, 1852.

When the road terminated at Marshall the trains were run on a strap rail. Few readers of the *Magazine* have any appreciation of the term "strap rail." It was an entirely different affair than the present "T" rail. It took all day to run from Detroit to Marshall, 108 miles. There were two engines on the road, all told, and the trains were run every other

day; one was the passenger engine and the other was the freight. These two diminutive engines ran from Detroit to Marshall one day and from Marshall to Detroit the next day. There have been vast changes within the last few years. What was then a one-horse road is now a double track three-fourths of the distance from Chicago to Detroit; and from the little one-horse dummy train there are now 18 passenger trains daily, all of which stop at Michigan City to exchange engines and obtain running orders. There are from 20 to 30 freight trains daily. The West end is 57 miles, the middle division 153 miles, and the east end 75 miles. The Canada Southern is now controlled by the Michigan Central, which controls and operates 1144 miles of road. Our fastest train, known as the North Shore Limited, makes its run from Chicago to Detroit in 7 hours and 20 minutes.

The members of Harbor City Lodge, No. 300, all sanctioned Bro. Debs' reply to Bro. E. A. Ferrill's communication in the February *Magazine*. Just such literature is what we want, to let *Russianized serfs* and Czars Corbin, Depew, Webb, and others of their ilk, know we are not asleep, but up and soliciting subscribers for the best *Magazine* published in the interest of railroad employes.

W. H. R.

Address Wanted.

HOWARD WILLIAMS.—A member of Gate City Lodge, No. 93, who, when last heard from, was in Illinois. Anyone knowing of his whereabouts will please communicate with E. J. Kelly, 519 Ridge St., Keokuk, Iowa.

Literary Notes.

THE *March Arena* opens with a critical essay by Prof. Alfred Hennequin, on "The Drama of the Future." Rev. Chas. F. Deems, D. D., LL. D., who has for so long been identified with the Church of the Strangers, of New York City, writes on "Evolution and Morality," taking the position maintained by conservative orthodoxy. Prof. Joseph Rodas Buchanan contributes an essay of great force on "Nationalization of the Land as First Presented." This contribution will doubtless call forth much comment. Rabbi Solomon Schindler discusses immigration, this being the third paper of a series on emigration and kindred topics, written by this profound thinker for the *The Arena*. The Rev. Howard MacQuarry, so well known on account of his fearless yet thoughtful work on "Evolution and Christianity," writes on "Shelley the Scripture." Albert Ross, the author of "Thou Shalt Not," writes on "What is Immoral in Literature," arguing that a revelation of the actual conditions of society, depicting the fact that the wages of sin is death, and containing a strong plea for a higher moral standard, is not only not immoral but is severely moral, as well as necessary, if any positive reform is to be consummated; but that works which make vice alluring, such as the books that make boys desire to be train robbers or thieves, are distinctively immoral. C. Van D. Chenoweth contributes a well written paper on the wonderful discoveries being made by students of psychology, and which promise to reveal truths of great moment at an early date. W. D. McCrackan, of New York, writes on "The Swiss Referendum," a paper of great interest, as it gives in an interesting style a description of the workings

of what has been termed the most perfect republic in the world. Henry A. Hart, M. D., argues at length that drunkenness is a crime, and should be punished as such. One of the most interesting papers in this issue is entitled "The Malungeons; a Forgotten People." It is contributed by Will Allen Dromgoole, a young Tennessee author of great promise, who re-discovered this strange people, and has spent many weeks in their midst. A full-page picture of a typical Malungeon accompanies this paper. The story for this month is contributed by Hamlin Garland. It is a vivid sketch of Western life, entitled, "The Test of Elder Pill." The No-Name paper this month is a poem of some length, entitled "By the River." It is said to be written by a well-known magazine essayist. The editor contributes short papers on "Home Influence and the Child," "An Object Lesson in Freedom," "Class Interests and the Rights of the People," and "Herbert Spencer's Arraignment of Class Medical Laws." From the above it will be seen that *The Arena* for March contains a remarkably varied and inviting table of contents. The contributors also are marked by deep thought, and represent a reflex of the best ideas of the day, both among liberal and conservative thinkers.

THE HOUSEKEEPER'S FRIEND.

The pioneer friend to the American Housewife is "The Household," a monthly publication founded by George E. Crowell in 1868, and printed at Brattleboro, Vt. until last January, when it was moved to Boston, that it might better serve its rapidly increasing list of subscribers. "The Household," as its name implies, is devoted to the family, and contains helps and suggestions fitted to every department of the home, and to every member of the family. Practical women contribute practical articles, to the Kitchen, Dining Room and Sewing Room. Mrs. D. A. Lincoln, author of the famous "Cook Book," furnishes "Practical Kitchen Talks," and a "Menu For One Week," in each month's issue. The Easter Number of "The Household" is now ready. It contains an elegant cover, choice Easter stories, and the Practical Departments are illustrated. You can obtain copies at the News Stands or you can send ten cents to The Household Company, 50 Bromfield St., Boston. The Easter-March-Issue contains the offer of three costly presents to the three subscribers who obtain the largest lists of new subscribers to The Household between March 1st and August 1st. The first present is a \$700 Horse and Carriage, the second an upright Miller Piano, and the third a Columbia Bicycle. This is the first time a horse and carriage have been offered by a publisher in payment for obtaining new subscribers. It affords an opportunity for the ladies to obtain the best "Household" publication for one year, and also to secure for themselves a fine horse and carriage, or for a favorite pastor or officer of a lodge. Another special feature is that every bride in the country, of six months or less, can have "The Household" for one year, by sending ten two-cent stamps and a printed notice of her marriage enclosed in the letter, addressed to The Household Company.

In presenting to the public "Valmond, the Crank," an entirely new departure is made in literature, and by all odds the very boldest, as it shatters in one powerful stroke the very foundation on which society is built. Coming, as it does, like an overwhelming avalanche, an attempt, at least, in the near future will be made to suppress it, that is, if it be a crime to tell the truth, and to open the eyes of the general public.

It will be sure to find a multitude of readers, and to arouse the thought of the thinking public everywhere. The theme is told in style of an exciting romance; is a recognized work of unmistakable genius, and perhaps the most absorbingly interesting book of fiction extant.

For us to make the bold statement that the unknown writer of "Valmond, the Crank" is the coming literary Napoleon of American novelists, and that this book will produce a moral volcano in the community by its rugged, crude, and almost brutal dynamitic treatment of probably the most daring

theme ever handled by a native author, may seem to some like the announcement of a publisher's advance agent. But the readers in this instance are respectfully requested to remember now what may seem to them as the arrogated prophecy of a mercenary publishing company, that "Valmond, the Crank, the Forbidden Book," is destined to reach a wider circulation than any other American work of fiction. The Twentieth Century Publishing Co., 4 Warren street, New York City.

THE ARTIFICIAL LIMB INDUSTRY.

The development and progress of artificial limb making is so pronounced that it deserves a distinct classification among the industries. The shoemaker and tinsmith were the artificial limb makers of the past. Their knowledge of the requirements was limited and we are not surprised that their productions were lamentable failures. One must graduate from the school of experience in order to become qualified to make artificial limbs that will fill the conditions.

Mr. A. A. Marks, a man whose successes in this line are proverbial and acknowledged throughout the world, says that it required the greater part of his life to learn just what the legless and armless required. It is a common error among those who aspire to success in this industry to endeavor to imitate the natural limb in mechanical simulation of its parts, instead of endeavoring to obtain natural results, and as a consequence, the production is too mechanical and complicated to be of any practical value. The firm of A. A. Marks, 704 Broadway, New York City, control upward of a hundred inventions and have the largest producing capacity of any house in the world. Their aim has been to produce an artificial leg that would enable the wearer to walk naturally, comfortably, helpfully and safely—a leg that possessed durability and shorn of every unnecessary complication; one that would last many years with as little expense as possible, not only in the purchase, but in the item of repair. Also to produce a hand that would simulate the natural member, without noisy, heavy, useless mechanical movements. The rubber foot and the rubber hand are the evolutions of their thought and experience. By employing rubber in these extremities, artificial legs and arms have become realities and have won the favor of the entire world. The firm of A. A. Marks, established in 1833, has for twenty years occupied the foremost rank in the art. Their manufacture largely from data supplied by the crippled while they remain at home, and ship limbs to all parts of the world.

As firemen as a rule are not over fond of sitting down and writing to an advertiser after a hard day's work, and many would undoubtedly patronize our advertisers were it not for the trouble of writing and waiting for a reply, Alva's Brazilian Specific Co., one of the old patrons of our advertising pages, has published in their ad. in this number, a partial list of wholesalers handling the Cactus Blood Cure in different parts of the United States and Mexico. Your retailer will order for you from any of these firms if he has none of the medicine in stock.

FLOWER SEEDS FREE—A LIBERAL OFFER.

All of our readers who are interested in flowers and have a place in which to cultivate them, should accept the liberal offer of S. H. Moore & Co., 27 Park Place, New York, who agree to send their charming paper, "The Ladies' World," on trial three months for only 12 cents, and 200 varieties of Choice Flower Seeds free, as a premium, with every subscription. See their advertisement on another page of this issue. Our members should take advantage of this reliable and very liberal offer for the benefit of their wives and daughters.

By reference to the advertisement of the National Mutual Building and Loan Association, of New York, which appears elsewhere, it will be observed that the loans made are now in excess of \$385,000. The third annual report to the banking department of the state of New York, shows the business affairs of the association to be in a most prosperous condition.

GRAND LODGE.

These columns are reserved as the official department of the Grand Lodge.

All Official Documents, including notices of dues and assessments and other notices, reports and statements will be published in this department.

Officers and Members of Subordinate Lodges are requested to note carefully each month the contents of this department.

APRIL, 1891.

Notice to Custodians of Protective Fund.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., April 1, 1891. }

To Custodians of Protective Fund:

SIRS AND BROTHERS:—Pursuant to the action of the Second Biennial Convention, held at San Francisco in September last, this call is issued by the Grand Lodge for the Protective Fund, collected under the provisions of Section 214 of the Constitution, and now held by the several subordinate lodges. There has been forwarded to each lodge a blank *Protective Fund report*, which must be filled out correctly by the Custodian of the Protective Fund and forwarded to the Grand Secretary and Treasurer with a bank draft, money order or express order, in the amount the report calls for, so as to reach the Grand Lodge not later than May 1st, 1891. In preparing their report, Custodians of the Protective Fund are required to show seventy-five (75) cents for each member on the rolls in each of the several quarters in which said fund was collected. Said reports will be compared with the grand register, and if not accurate will be returned for correction. This call was officially issued by circular under date of December 14th, within ninety (90) days from the close of the Convention, as ordered by that body, and this is the final notice of said call.

Upon receipt of this fund the Grand Secretary and Treasurer will deliver the same to the Board of Grand Trustees, taking their receipt therefor, and the Grand Trustees (who are required to file a sufficient bond for the safe keeping of said fund) will invest the same, as directed by the Convention, in such a manner as to make it, although subject to immediate call, a source of revenue to the order.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Notice to Receivers.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., April 1, 1891. }

To Receivers of Subordinate Lodges:

SIRS AND BROTHERS:—You are hereby notified, as provided in Section 54 of the Constitution, that no beneficiary assessment is required for the month of April, 1891, and that therefore none has been levied for said month. Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Notice to Secretaries.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., April 1, 1891. }

To Secretaries of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to Section 130 of the Constitution, you are required to report to the Grand Lodge as expelled all members who fail to make payment of their quarterly dues for the quarter ending July 31, 1891. The names of said members must be reported to you by the Collector of your lodge not later than May 2d, and by you reported to the Grand Lodge, in the prescribed form, immediately thereafter. Failing to report the names of expelled members as herein provided, the Grand Lodge will hold subordinate lodges liable for their assessments, as per Section 53 of the Constitution.

Fraternally yours,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Quarterly Dues Notice.

OFFICE OF THE GRAND LODGE, B. OF L. F.,
TERRE HAUTE, IND., April 1, 1891. }

To Members of Subordinate Lodges:

SIRS AND BROTHERS:—Pursuant to Section 129 of the Constitution, you are hereby notified that the dues for the quarter ending July 31, 1891 (such an amount as may be determined by the several lodges, provided in no case it shall be less than five (\$5.00) dollars), are now payable, and must be paid to the Collector of your lodge on or before May 1, 1891. This amount will be in full payment of all subordinate dues and beneficiary assessments levied by the Grand Lodge for said quarter, as provided in Section 132 of the Constitution. All beneficiary members now enrolled and all those admitted prior to June 1, 1891, are liable for the full amount of quarterly dues for said quarter. All members initiated during the months of June and July, are exempt from payment of quarterly dues for said quarter, as provided in Section 129 of the Constitution. Any member failing to make payment as above provided, will be expelled from the order, as per Section 130 of the Constitution, said expulsion taking effect May 2, 1891, and the Secretary is required to make due report thereof to the Grand Lodge.

Yours fraternally,

F. P. SARGENT, G. M.

EUGENE V. DEBS, G. S. AND T.

Bound Volumes.

We still have a limited number of bound volumes of the *Magazine* for the years 1887, 1888 and 1889, which we are disposing of at \$1.50 per volume. They are neatly and substantially bound and will make a handsome addition to a fireman's library. The books will be forwarded to any address on receipt of the price.

Beneficiary Statement.

OFFICE OF GRAND SECRETARY AND TREASURER,
TERRE HAUTE, IND., March 1, 1891.

To Subordinate Lodges:

SIRS AND BROTHERS: The following is a statement of the Beneficiary Fund for the month of February, 1891:

RECEIPTS.

Respectfully submitted,
EUGENE V. DESS, G. S. & T.

Acknowledgments.

ALBUQUERQUE, N. M., March 1, 1891.

To the Brotherhood of Locomotive Firemen:

This is to certify that I have this day received from Mr. W. C. Glover, Receiver of Pacific Lodge, No. 173, a draft for the sum of fifteen hundred dollars (\$1,500), the full amount of the policy held by my late husband, Fred Kaufman, for which please accept my sincere thanks.
Respectfully,
Mattie Kaufman.

CHARTERS, PA., March 6, 1891.

To the Officers and Members of Holbrook Lodge, No. 378, B. of L. F.

DEAR SIR:—Please accept my thanks for a draft for \$1,500.00, the full amount of the policy held by my late husband; also I extend to the members of Lodge No. 378, my sincere thanks for their many kind acts during my great affliction. May the blessing of God rest upon you and your grand order.

Yours respectfully,
Mrs. C. W. Barclaus.

JACKSON, MICH., March 1, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I have received through Mr. H. H. Burkhardt, of Monte Sano Lodge, a draft for the sum of fifteen hundred dollars, the full amount due me on the policy held by my late brother, James F. Phelps, who was killed on the M. & C. R. R., Nov. 21, 1890. Please accept my thanks for the prompt payment of the same. My father and sisters wish to join me in expressing our heartfelt thanks to the committee, from Monte Sano Lodge, who accompanied my dear brother's remains home. They were very kind and sympathetic and we will never forget them while we live. May God's blessing rest upon every member of your noble order.

Sincerely yours,
Beatrice Phelps.

BUFFALO, N. Y., March 1, 1891.

To the Brotherhood of Locomotive Firemen:

GENTLEMEN:—I would that I could find words to express my heartfelt gratitude for the kindness and sympathy which the members of Lodge No. 241, to which my beloved husband, William J. Williams, belonged, showed me and my family in our great affliction. Let me add my sincere thanks for the most excellent order my other obligations to the amount of \$1,500, the amount of insurance. Hoping that the order may be prosperous and thus aid others who are in distress and affliction, I am

Most truly and gratefully yours,
Mrs. Alma S. Williams.

OUR NEW 1891 FLOWER SEED OFFER.

A Magnificent Collection of FLOWER SEEDS

200 Varieties, FREE!

An Unparalleled Offer by an Old-Established and Reliable Publishing House. The Ladies' World is a mammoth 16-page, 64-column illustrated paper for ladies and the family circle. It is devoted to stories, poems, ladies' fancy work, artistic needlework, home decoration, housekeeping, fashions, hygiene, juvenile reading, etiquette, etc. To introduce this charming ladies' paper into 100,000 homes where it is not already taken, we now make the following colossal offer: Upon receipt of only 12 Cents in silver or stamps, we will send The Ladies' World for Three Months, and to each subscriber we will also send Free and Just paid a large and magnificent Collection of Choice Flower Seeds, two hundred varieties, including Pansies, Verbenas, Chrysanthemums, Asters, Phlox, Drummondii, Balsam, Cypress Vine, Digitalis, Double Zinnia, Pinks, etc., etc. Remember, twelve cents pays for the paper three months and this entire magnificent Collection of Choice Flower Seeds, put up by a first-class Seed House and warranted fresh and reliable. No lady can afford to miss this wonderful opportunity. We guarantee every subscriber many times the value of money sent, and will refund your money and make you a present of both seeds and paper if you are not satisfied. Ours is an old and reliable publishing house, endorsed by all leading newspapers. Do not confound this offer with the catchpenny schemes of unscrupulous persons. Write to-day—we don't put it off! Six subscriptions and 50 Seed Collections sent for 60 cts.

SPECIAL OFFER! To anybody answering this advertisement and naming the paper in which she saw it, we will send free, in addition to all the above, one package of the new and popular imported *Tropaeolum Lobbianum* (various), containing "Lucifer," "Spitfire," "Vesuvius," and other luminaries of high degree, bright and highly colored. An abundant bloomer and easily cultivated. A beautiful climbing flower for vases, hanging baskets, old stumps, etc., most glorious in effect. Address: S. H. MOORE & CO., 27 Park Place, New York.

Alexander's Ready Reference.

For Engineers and Firemen Broke Down.
What I Should Do.

This book contains all of the items that were in all previous editions, none of which have been greatly improved. Two pages have been added to the time and speed tables, also forty-five pages of new items have been added. Two very fine and costly engravings of the Westinghouse Automatic and Air Brake Gear have been substituted for the old ones, one of which is 9 by 31 inches, showing on one sheet the whole brake arrangement from the pump on the engine to the rear end of a passenger car. The new Quick Acting Tanker Valve, and the New Engineer's Brake Valve is shown also, and very clear explanations of the operations of all its parts as well as the manner of handling them are given. A diagram of STEAM VALVE MOVEMENT, 16½ by 12½ in. here accompanies each book, the explanation of which is made so clear that any person can understand it. It shows EVERY PART OF VALVE MOTION from the eccentric to the steam chest, as well as the cylinder in which steam is admitted to and discharged from the ports to the cylinder. It shows the piston also and everything connected with it. There are also three large engravings of engines, making five in all in a pocket in each book. The work is without doubt considered MORE VALUABLE INFORMATION IN FEWER WORDS, and is easier understood by railroad men, than any other book now in print, because it is written in the same manner that railroad men talk to each other, and by one who has already had FORTY-TWO YEARS PRACTICAL EXPERIENCE. NEWBORN FOR BREAK DOWN AND REPAIRS. EVERY KIND that they are likely to occur on the road are given in language familiar to every engineer or old fireman, also the BEST PRACTICES FOR RUNNING, and careful study of the principle items of the old editions has qualified every ready good FIREMAN FOR EXAMINATION AND PROMOTION. Their letter to me says in substance: "I would not have been promoted without it." It put me on the right side." The book is very valuable to MEN WORKING ON REPAIRS OF ENGINES, and is a gold mine to locomotive FIREMEN ASKING FOR PROMOTION. EVERY CONDUCTOR AND BREAKMAN, as well as ENGINEERS and FIREMEN, should become acquainted with the principles of the Air Brake now in use. One hour careful study of this description of the operations of the Westinghouse Automatic and Air Brake will qualify any interested person for examination on that subject. This item has been recently added to the edition. No books sent C. O. D. Price of Ready Reference, postage prepaid, \$1.50 per copy. Address—

S. GLENSOR, New York.

Lady agents do well also. Address MRS. K. F. MILLER, General Agent Ladies Dept., 8 Union Square, New York, for particulars.

Send for list of 500 claims paid in '91.

THE FIREMEN'S MAGAZINE recommends this firm as thoroughly reliable.

Established 1874.

1891 will be sent to any address on receipt of 10 cents in postage stamps. Our watch and jewelry repairing department is the best equipped in this country. Fine and complicated work promptly done at wholesale prices.

IT REGULATES THE LIMITED.

The Standard Watch for Railway Service. A Watch That Will be Passed by The Most Critical Railroad Inspector. Within the Reach of All.

Where to obtain a thoroughly reliable watch that will stand the hardest kind of usage without impairing its value as a time-keeper, is a question the locomotive firemen, as well as railroad men generally, often find hard to get answered. **The difficulty is overcome** by the opportunity presented in this advertisement. This is no less than the offer of our celebrated **Standard Watch** for Railway service, which is well known as one of the very best time-keepers now on the market, at prices so low that one cannot afford to buy any other. **It is a watch that will be passed by the most critical Railroad Inspector.** The movement contained in this watch is made by the celebrated Waltham Watch company. It is Non-Magnetic, gilt, has fifteen red ruby jewels, four pairs of jewels in gold settings, chronometer-compensation balance, patent regulator, patent Brequet hair spring, double sunk dial with fine Arabic figures, quick train, dust band; is ADJUSTED TO HEAT AND COLD AND THREE POSITIONS and is NON-MAGNETIC.

Styles and Prices—We furnish these watches in the following styles and at the prices named:

4 oz. Silverine cases, open face	\$15.48
4 oz. Plain open face, gold joint, coin silver case	21.48
14 K. gold filled case, open face, screw bezel and back, handsomely engraved and warranted to wear 21 years	23.48
14 K. gold filled case, hunting, handsomely engraved, and warranted 21 years	26.48
14 K. gold filled case, open face, Louis XIV. style, screw bezel and back, handsomely engraved, and warranted 21 years	28.48
14 K. gold filled case, hunting, Louis XIV. style, handsomely engraved, in assorted designs, and warranted to wear 21 years	31.48

Any watch here described will be sent by express C. O. D., subject to thorough examination, on receipt of \$1.00 as a guarantee of good faith, which amount will be credited on the bill. All goods are guaranteed to be exactly as represented.

References—Your local bankers, managers of express companies doing business in Chicago, the Prairie State National Bank of Chicago, and the publishers of this paper. Our 160 page illustrated catalogue for 1891 will be sent to any address on receipt of 10 cents in postage stamps. Our watch and jewelry repairing department is the best equipped in this country. Fine and complicated work promptly done at wholesale prices.

FOSTER'S PATENT UNION ARTIFICIAL LIMBS.

112 and 114 Bates Street, corner Congress Street,

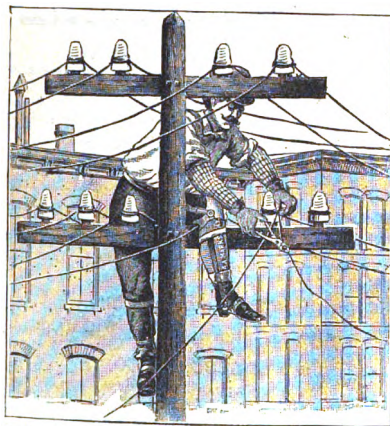

DETROIT, MICH

Blank applications for limbs and transportation—or commutation therefor—and Illustrated Catalogues furnished free.

ARTIFICIAL HUMAN LEGS AND ARMS, (MARKS' PATENTS.)

WITH . RUBBER . HANDS . AND . FEET.
DURABLE IN THEIR CONSTRUCTION,
NATURAL IN THEIR ACTION,

NOISELESS IN THEIR MOVEMENTS,

and the MOST COMFORTABLE for the wearer. It is not unusual to see a farmer working in the fields with an artificial leg, or a brakeman plying his brake on a fast running train, or an engineer with hand on the throttle, or a fireman, carpenter, mason, miner, in fact, men of every vocation at labor in the full capacity of their employment, wearing one or two artificial legs with rubber feet, performing as much as men in possession of all their natural members, earning the same wages, in fact, experiencing little or no inconvenience in the use of their rubber extremities.

ALVAH YOUNG is a living example of the remarkable degree to which rubber feet restore lost members. He is a limeman employed by an electric light company. He lost one of his legs some years ago in a railroad accident. He had a Marks' rubber foot artificial leg applied and since then has engaged in active manual labor earning his livelihood. He will climb a pole as dexterously as any of his associates, hold himself on the cross bar with his artificial limb and place the wires in a thoroughly workmanlike way.

ments will be sent without charge. Established over 37 years. Over 11,000 artificial limbs with rubber hands and feet in use. U. S. Government manufacturers.

Catarrh Cured, ONE CENT!

If you suffer from catarrh, in any of its forms, it is your duty to yourself and family to obtain the means of a certain cure before it is too late. This you can easily do at an expense of one cent for a postal card, by sending your name and address to Prof. J. A. Lawrence, New York, who will send you FREE by return mail, a copy of the original recipe for preparing the best and surest remedy ever discovered for the cure of Catarrh in all its various stages. Over one million cases of this dreadful, disgusting, and oftentimes fatal disease have been cured permanently during the past five years by the use of this medicine. Write to-day for this FREE recipe. Its timely use may save you from the death toils of consumption. Do not delay longer, if you desire a speedy and permanent cure. Address,

Prof. J. A. LAWRENCE, 86 Warren Street, New York.

\$1,000 FOR AN OLD COIN

**IF YOU HAVE
ANY COINS**

dated before 1871, with plain date, send us a list. We pay high prices for hundreds of dates and kinds. Among coins that we want are: silver dollars dated between 1794 and 1868; dates of half dollars before 1864; quarters of all dates before 1868; all dates twenty-cent pieces; all dates dimes before 1869; silver five-cent pieces before 1867; five-cent nickels of 1877 and 1883; all dates of silver three-cent pieces; nickel three-cent pieces before 1870; two-cent pieces

between 1864 and 1873; all large copper cents, also small cents with eagles on, also cents of 1873 and 1877; all half cents; foreign coins, fractional and Confederate currency, etc. For above we pay big amounts over face value, if in required condition. This is a comparatively new business, and by merely keeping your eyes open when handling money, you may find many coins that we want. A short time since (Jan. 23), a Scotchman in an Illinois town found one coin worth \$700. Others have done even better. The New York World says: "Many people have become rich by looking after coins wanted by collectors." The Home Journal says: "Collecting coins is a very profitable business nowadays, as there are but few in it. One Boston broker, Mr. W. E. Skinner, buys from agents all over the country, and pays them big sums for rare coins." Coins that are very hard to find in one section of the country are often easily found in others. Largest business, highest prices, prompt payments, best references. Write at once for further particulars, enclosing stamp for reply, which may be worth hundreds of dollars, perhaps a fortune, to you.

W. E. SKINNER, Largest Coin Dealer in the U.S., 325 Washington Street, Boston, Mass.

**RAILWAY
OFFICIALS AND EMPLOYEES'
ACCIDENT ASSOCIATION**

WM. K. BELLIS, Sec.

THE WHEEL

Of progress too often becomes the Wheel of Destruction, and at such times the possession of a staunch, true friend to whom the

RAILROADER'S FAMILY

Can appeal in their sorrow is the greatest boon on earth. Such a friend is the RAILWAY OFFICIALS' AND EMPLOYEES' ACCIDENT ASSOCIATION, of Indianapolis, whose unparalleled growth during the past year, showing an increase of

\$21,000,000.00

Over the previous season, unanswerably demonstrates its overwhelming popularity with the Rail-
roaders of America.

THINK OF IT!

If you should get caught in that fatal accident which visits so many noble men, and leave nothing to your dear ones, what would become of them? A Certificate of Membership in the RAILWAY OFFICIALS' AND EMPLOYEES' ACCIDENT ASSOCIATION is as safe and certain as a landed estate, and the relief it secures to the bereaved family is flashed over the wires the very moment the news of a stroke of misfortune reaches the Home Office. No sensible Railroader longer doubts it his duty to carry first-class Accident Insurance. Do not postpone until it is too late, but take a membership with us

ST. LOUIS OFFICE, 904 OLIVE ST.

Mexican Mustang Liniment.

This old and reliable preparation instantly subdues all surface pains and is a speedy relief for Neuralgia, Rheumatism and kindred diseases, even in their chronic stages. Invaluable in case of accident or sudden illness. It is strictly a home remedy.

Tried and True.

Keep it on Hand.

Apply it Vigorously.

It is the universal panacea, wonderful in its healing powers, exerting an effect almost magical. In many families for upwards of half a century the only medicine, always a household favorite, with a prominent place in the confidence of the people.

Sold everywhere. Put up in 25c., 50c. and \$1.00 bottles.

CHICAGO. PHILADELPHIA. BOSTON.

VARIABLE EXHAUST DAMPER, FOR LOCOMOTIVES.

PATENTED NOVEMBER 10, 1885.

The use of the Damper, placed under control of the Fireman, assists him in the performance of his duties, so that, according to his testimony, the difference is as day and night, as compared with an engine without the Stack Damper.

RESULTS:

TO THE FIREMAN.—Less labor, no coal gas in the cab, no blowing of cinders and sparks into the front of the cab when open, and easy control of the fire and steam pressure.

TO THE R. R. CO.—In most cases large saving of fuel, also preservation of the flue joints and firebox, and safety against fire from sparks.

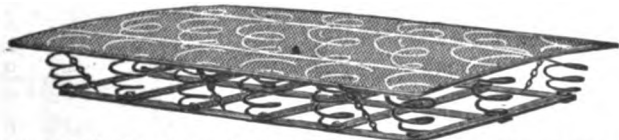

TO THE PUBLIC.—Cleanliness and noiselessness.

Send postal for pamphlet to:

H. A. LUTTGENS.

Box 131, PATERSON, N. J.

FIREMEN, ATTENTION!

Why not make your seat in the cab easy by having one of the BUCKEYE CAB SEATS, like above cut? Have been tested and not found wanting. They are cheap and durable, having steel tempered springs and band steel bottom. Save unnecessary jarring. Over 400 in use. Price \$2.00 per seat not over 24 inches long.

CELEBRATED

Pocahontas Semi-Bituminous Coal.

1 Broadway, New York. 308 Walnut St., Philadelphia
70 Kilby St., Boston. 36 Main St., Norfolk, Va.
1 Fenchurch Avenue, London, England.

The Pocahontas Coal is acknowledged by all railroads that have used it to be the best American coal for Locomotive use. It generates steam with great rapidity, and at the same time holds the fire an unusually long time. The merits of the coal are shown by the unprecedented growth of the mines, which were not opened until 1883. Since that time the outputs have increased over 1,200 per cent., amounting in 1887 to 1,300,000 tons. During the present year it will be at least 2,000,000 tons. We are therefore prepared to fill all orders with prompt dispatch.

This certifies that Mr. W. S. Roberts received, free of ALL cost, FINEST Howard Gilt Movement, No. 206947; Finest 14-K Filled Boss, Box-Joint, Hand-Engraved Gold Case, No. 0272507.

Sworn before me, October 1st, 1890.

GEORGE S. CONGDON,
Notary Public, Eureka Springs, Carroll County, Ark.

Copy of letter received from W. S. Roberts in acknowledgment: "The watch is a beauty. I am more than pleased with it. Thanks for the handsome monogram."

American Keystone, Hampden, Springfield, Rockford or Waltham, fine nickel movements, 15 jewels, 4 pairs extra in settings, chronometer balance, patent regulator, patent Breguet hairspring, hardened and tempered in form, quick train, straight line escapement, patent pinion, adjusted to heat, cold and position, in Columbia, Dueber, or Fabry's gold-filled engraved case. Warranted for twenty years (assorted engravings). This watch is warranted a good timekeeper.

Open face, net \$30 00
Hunting case, net 33 00

Send 50c for express charges and we will send it for examination; if

satisfactory and as represented, you can pay for it, otherwise it will be returned. A complete line of Cases in the newest and richest patterns. Gents' and Ladies' sizes, in gold, gold-filled and silver; also fine diamond ornamented cases suitable for presentation.

All Railway Men will do well to patronize the old friend of the Orders, J. S. Townsend, who has a rich assortment of new and beautiful goods in the jewelry line, and some new grades of watches he wishes to introduce. Fine catalogue, containing 280 pages, filled with illustrations of handsome goods, sent on application.

J. S. TOWNSEND.

1554 WABASH AVE.

CHICAGO, ILLINOIS.

FIREMEN, and all Brotherhood men, remember A new feature in Emblems is the Lapelle Buttons; we have them for all Orders, in plate and gold, from 50 cents to \$1.50. Townsend originates, manufactures and sells more Railroad goods than any house in America. We are headquarters for emblem goods of all kinds. FIREMEN ARE INVITED TO EXAMINE.

TOWNSEND'S NEW WATCHES

While maintaining the old-time high standard of general excellence of our goods, are fitted with the new Non-Magnetic Balance, Hairspring and Escapement. They are sold with the Guarantee of Absolute Freedom from Magnetic Influences and to Pass Inspection under the Time System on any Railway. For a high class, accurate watch, get the new **TOWNSEND**. Our specialty is "Watches for Railway use." We handle all makes and in greater quantities than any house in the Country, and will give you honest goods at the best possible figures. We are specially appointed agents for the celebrated Howard Watches.

WE WILL SUPPLY:

American Keystone, Hampden, Springfield or Elgin, stem-wind, 7-jeweled movements, chronometer balance and straight line escapement, hunting or open face, 14-carat gold-filled engraved case, warranted for 20 years (assorted engravings), as per cut, (warranted).

EUGENE V. DEBBE, . . . *Editor and Manager.*

"THE FARMER, THE INVESTOR AND THE RAILWAY."

Without regard to space or expense we reproduce from the *Arena*, for February, the masterly paper by C. Wood Davis, bearing the above caption, and ask for it the careful perusal its merits demand.

This *Magazine* from time to time has discussed the cost of railroad building in the United States, the purpose being to demonstrate that if dividends were declared on *actual* cost, the roads could pay their employes better wages and make the distribution of the wealth they create more equitable. In the January issue of the *Magazine* we said:

There is high authority for saying that there are now 160,000 miles of railroad track in the country, which, it is said, required the investment of \$8,500,000,000.

Of this investment, it is said, railroad corporations represent \$1,500,000,000, and private individuals hold the remainder, \$7,000,000,000, and of this remainder vast sums are owned in Europe.

This investment, for the year 1889, earned \$1,089,985,831, or 12.80 per cent. on \$8,500,000,000. The total expenditures, for all purposes, amounted to \$88,507,000, leaving a balance of \$101,388,736.

There is not a man in the wide world, who knows anything at all of railroad building, who believes that the railroads of the United States cost \$8,500,000,000,—\$33,126 a mile—including every conceivable item of expenditure.

It is universally conceded that \$25,000 a mile is a large average estimate, and that the cash invested in the railroads of the country does not exceed \$4,000,000,000; hence, it is believed, that of the \$8,500,000,000, not less than \$4,500,000,000 is water.

We have stated that the gross earnings of the railroads of the country in 1889 amounted to \$1,089,985,831, or 12.80 per cent. on \$8,500,000,000. But assuming that the railroads cost in *actual* cash but \$4,000,000,000, then in that case their earnings in 1889 was 27 per cent. on that amount.

We have stated that the total expenditures of the roads for all purposes amounted to \$88,597,000. In these expenditures is included dividends on stocks and interest on bonds, estimated, as we have shown, at \$8,500,000,000.

Suppose we put the rate of dividend and interest at 4 per cent. In that case the expenditure would reach \$40,000,000—\$8,500,000,000 at 4 per cent. yielding that amount. But estimating the cost of the roads at \$4,000,000,000, 4 per cent. dividends and interest would require only \$160,000,000, showing a saving to the earning fund of \$180,000,000.

The *Daily Advertiser*, of London, Ont., sees in the statements of the *Magazine* such errors that it feels called upon to say:

The *Locomotive Firemen's Magazine* has an article which goes to show to what extremes some people will go in order to carry their point. From the article the following, which gives the keynote of their argument is quoted: "There is not a man in the wide world, who knows anything at all of railroad building, who believes that the railroads of the United States cost \$8,500,000,000—\$33,126 a mile—including every conceivable item of expenditure. It is universally conceded that \$25,000 a mile is a large average estimate, and that the cash invested in the railroads of the country does not exceed \$4,000,000,000; hence, it is believed, that of the \$8,500,000,000 not less than \$4,500,000,000 is water." These assertions cannot be verified, therefore the editor of the *Firemen's Magazine* has falsified the facts; or, perhaps,

he knows no better. Or else all the railroad officials, contractors and builders who say that railroads in this country cost over \$50,000 a mile are prevaricating. In the name of common sense, how is it possible for railroads to cost less than \$25,000 per mile, when it costs more than one-third of that per mile to equip them with cars and locomotives? Just compare the cost of railroads in this country with what they cost in other countries. In New South Wales the cost is \$68,000 a mile; Victoria, \$70,000; India, \$81,000; Germany, \$100,000; France, \$120,000, and England, \$190,000 a mile. In most of these countries the railroads are built under the direction of the governments. How preposterous it is to assume that railroads in this country cost less than \$25,000 a mile. Labor and material cost more here than in any of the countries named, and this country is on the average more rough. Are we to admit that the Canadian and American engineers are behind the world in ability and skill? No! Is it a fact that the railroads of this country are built for less than the ties, rails, cars, engines, stone and timber cost in other countries? These perversions of the truth are getting too common. It is astonishing that men—railroad men who earn their bread and butter by being interested in the truth—are too ready in the United States to swallow such absurdities as are too often published in various journals. The average Canadian, however, is too intelligent to be gulled by such statements.

Our London contemporary in making an argument in defense of the scoundrelism practiced in American railroad building was not required to make our estimate of actual cost per mile less than we put it,—\$25,000.

We have on our table as we write the official statement of the value of the railroads of a state for taxation, 5,825 miles of main track, including second main track, side track, rolling stock and improvement of right of way—everything from bed to building—and the average value is \$11,371 per mile.

We do not attach special importance to such figures, and yet they serve to give special prominence to the difference in estimated values, when in the one case the people are to be benefited, and in the other case when a basis is wanted upon which to earn interest and dividends for the benefit of the corporation.

Without further prefatory remarks we introduce the paper of Mr. C. Wood Davis. To read it is scarcely sufficient. It needs to be studied. It goes to the bottom of the subject. Its arraignments are terrific; its arguments crushing and the conclusions arrived at are invulnerable. The paper is in

itself a text book and men at all capable of comprehending facts, will be amazed at the methods pursued by railroad builders to increase their gains at the expense of the people, and of the men who carry forward the great enterprises. Mr. Davis writes as follows:

Agriculture having been the first industry of settled life, we may assume that the farmer has pursued his calling since the dawn of civilization; yet, necessary as have been such labors, he has borne many burdens from which his brothers have been exempt, doubtless owing to the difficulty experienced in forming combinations with his fellows for concerted action, while those representing aggregates of capital, being comparatively few in numbers, easily affect such combinations. This is especially true of the present era, and of those controlling the great mass of capital represented by the railways of the country, nominally amounting to \$9,369,000,000, and appearing to equal 60 per cent. while being not over 30 per cent. of the capital invested in farms, yet, the influence exerted upon economic and other questions by railway owners and farmers is in an inverse ratio to their respective numbers and the magnitude of their investments.

One is a compact force, disciplined, alert, living in the midst of the greatest activities; the other exceedingly more numerous, undisciplined, leading isolated lives and with few incentives to quickening thought.

Those familiar with the history of the last sixty years will not question the great benefits resulting from the construction of railways, or grudge the men who have carried forward these great undertakings a rich reward.

By the aid of the railway the wilderness has been made productive, countless farms brought within reach of the great markets, mines opened, mills, factories, and forges built, villages, towns, and cities brought into existence, and populous states carried to a higher development than would have been possible in centuries without such aids. Such are but a part of the beneficent results flowing from the construction of the railway.

While the builders of the railway have been exploiting a continent and piling up the greatest fortunes ever known, the farmer has taken an unproductive wilderness and literally hewn his way through the great forests which clothed seaboard and central region to the open prairie, there developing the most productive of states, continued his toilsome march up the arid slopes, scaled the mountains and planted orchard, vineyard, and farm by the shores of the Western Ocean.

His labors have enabled the nation to flood the markets with a plethora of bread, meat, and fibre, to meet the enormous expenditure of a devastating war, to repair the losses and havoc of those bloody days, and then to turn the balance of trade in our favor.

Willingly has the farmer performed this labor, expecting to share in the prosperity of the country, yet not always content with his part of the rewards,

and coming to believe that those controlling the carriage of his products were exacting as toll more than a just proportion thereof. He has seen the carrier yearly adding to his property, building new lines from the tolls collected on the old, increasing his wealth and power, and leaving a constantly lessening proportion of the proceeds arising from the sale of farm products to the grower. As population has increased, railway property has grown in relative value, as has the power of those controlling it, and this increase has been very largely made from revenues derived from tolls levied to pay interest and dividends on the water in the bonds and shares, hence made at the expense of railway users, a large part of whom are farmers.

All are fairly prosperous except such as are engaged in the basic industry of civilization, and the one cloud in the industrial horizon is the unsatisfactory condition of a large part of an agricultural population numbering some 25,000,000, and the railway is chargeable with so much of this as results from the exaction of unjust tolls, and this inquiry is instituted for the purpose of ascertaining if the complaints, as to the unreasonableness of such charges, are well grounded.

The highest tribunals hold that railway companies are public trusts, and can exercise the power to enter upon and take private property solely in their public character; and that the exercise of such exceptional power can be defended only upon the ground that the good of the public can best be subserved by a corporation under obligation to treat all justly in rendering services which each citizen cannot perform for himself; that the state could perform the functions delegated to railway corporations, which are trusts organized for the service of the public and charged with remuneration for the private capital employed; that the corporations thus endowed must provide all needed facilities for conducting speedily the business for which they were created; and that the charge for the services rendered shall be no more than just and reasonable; and the federal courts have not hesitated to determine what was a just and reasonable charge.

The courts hold that rates fixed by the state are *prima facie* reasonable, and while railway companies can not be barred from showing the unremunerative character of such rates, they can only do so by disclosing—in addition to the cost of maintenance and operation—the exact cost of the plant employed, and that in arriving at such cost account can be taken only of moneys actually expended in construction and equipment. Railway companies have evinced no desire to make disclosures of this character, although it would be easy in this way to show that the schedule of rates established by the state was unremunerative, if such was the case.

The cost of maintaining and operating any given railway is readily ascertainable, and it should be equally easy to determine its cost, but such a procedure is surrounded with grave difficulties—difficulties growing out of syndicates and construction companies, the manufacture of securities, of bond and stock waterings, the purchase and construction of branch lines at low cost, and unloading upon the stockholders at high cost. Stock and scrip divi-

dends, bonus* of stock to purchaser of bonds, bonds sold to pay unearned dividends that much stock may be unloaded at high prices a la Wabash; the building of branch lines at low cost, capitalizing at high cost, and covering resulting profits into the treasury of the parent company to be distributed as dividends, and forever taxing the railway user to pay interest and dividends on the profits thus enjoyed, as well as by a thousand and one other shady devices by which water is added to the basic power of levying tolls and increasing the amount upon which the public is expected to furnish the means of paying interest and dividends.

The cost of the railway is known only to its managers, and rarely to them, as the constructors but seldom retain the management, and railway accounts are manipulated in numberless peculiar ways for the sophistication of investors. For instance, on page 184 of the 1889 report of the Kansas Railroad Commissioners, there is appended to the statement of bonded indebtedness made by the Atchison, Topeka & Santa Fé, this note: "The early records of the company are very incomplete, and it is impossible to tell, with any accuracy, the amount realized from the issue of these bonds," *i. e.*, \$14,061,500 of first mortgage, land grant, and consolidated bonds. Another typical case is that of a railway company in whose service was the writer, and which built a costly line of passenger steamers for lake service; but, by reason of the building of railways north and south of the lake, the operation of the line became unprofitable, the steamers were dismantled, engines sold, and the great sum they represented dropped from the annual report of the company, without a word of explanation.

Managers dealing thus with stockholders are not likely to be more frank with the public. Indeed the cost of the railway, and the manipulations of such cost, are of the professional secrets which are employed to defraud railway users and investors, and a case or two in point may not be uninteresting, as showing some of the processes adopted in the manufacture and marketing of stocks and bonds, which are so frequently but evidences of corporate fraud, rather than ownership.

An illustration of the ease with which investor and user are alike plundered, is found in the case of a corporation controlling a valuable dividend-paying property, which a second company parallel with expectation of profits only from construction, and by forcing a sale,—eventually effected,—to the older company, the result being the trebling of railway capital, without an increase of traffic.

Another form of corporate fraud is the payment of unearned dividends from the proceeds of bonds sold, thus adding to the capitalization, and necessitating the collection of unjust tolls to pay interest. These fraudulent payments are often made to enable the management to foist upon the public immense issues of worthless shares, such dividends being continued as long as bonds can be sold, and a market found for the stock, and when one of these bubbles is about to burst, the manipulators make further

*The Santa Fé and other companies have given as a bonus as much as ten shares of stock with each \$1,000 bond sold.

vast profits by selling "short," and then having disclosures made of the hopeless condition of the corporate finances.

Yet another form of corporate fraud is the purchase or construction of cheap branch lines, and selling them at two, three, or four times their cost to the company of whose interests the profiting parties are the trustees. Sometimes these lines are consolidated with that of the parent company, and new issues of securities made to cover the added mileage, while in other cases the old company enables the schemers to sell immense issues of the shares and bonds of the auxiliary line at high prices by guaranteeing the bonds of the latter and leasing its road at an exorbitant rental. Loaded down in this way, the old company frequently ceases to pay dividends.

Again, the parent company resolves itself into a construction company, and covers into its treasury the profits arising from the construction of cheap branches. For instance, it is shown on page 391 of the 1889 report of the Kansas R. R. Commissioners that the St. Louis and San Francisco Railway Company derived a profit of \$67,871 from the construction of ten and one half miles of road that should not have cost over \$10,000 per mile, but which, with this profit added and stock issued for a nominal consideration, is capitalized for \$28,845 per mile. This company has built many hundred miles in recent years, and construction profits have aided in the payment of dividends on preferred stock, while providing a basis for levying, for all time, tolls to pay interest and dividends on the bonds and stock representing the profits divided. Thus, the greater the profits from construction, the greater the sums which can hereafter be extorted from the user of the railway.

"Poor's Manual shows that to make contemplated extensions the stock of the Missouri Pacific was, during 1886-7, increased \$15,000,000, and the funded debt, \$14,376,000, and while the capitalization of the parent company was thus increased \$29,376,000, † the lines built or purchased were capitalized from \$8,000 to \$32,000 per mile, the result of such multiple capitalization being to add an immense amount of water to old as well as new issues. There are some very instructive phases of the construction of this new mileage. For instance, the 310 miles of the auxiliary Fort Scott, Wichita & Western is shown by Mr. Poor to have cost \$4,666,000; the funded debt is shown by Kansas R. R. Commission to be \$3,666,000, and Mr. Poor shows that \$4,666,000 of such bonds are deposited with the Union Trust Company to secure \$4,666,000 of Missouri Pacific trust mortgage bonds issued to provide the \$4,666,000, which the road is said to have cost. Has the user of this railway a right to ask what became of the other \$1,000,000 of mortgage bonds and the \$7,000,000 of capital stock upon which rates are based, and which make up a capitalization of \$8,000,000 in excess of cost, and what was the consideration therefor?

In the case of the 411 miles of the Missouri Pacific's Denver, M. & A. line, Mr. Poor shows the cost to

* "Poor's Manual" is a compendium of such financial and traffic statements as the railway companies prepare for publication.

† August, 1890.—It is now stated that the Missouri Pacific has added \$20,000,000 to its capitalization.

have been \$4,920,000, and Kansas report shows bonded debt to be \$6,561,000, the first mortgage bonds exceeding the cost by \$1,641,000, and the entire capitalization being \$8,202,000 in excess of cost, a large part of which cost was borne by the municipalities along the line. Like conditions obtain with all Missouri Pacific lines built of late years except two short ones not yet mortgaged.

Another mode of collecting excessive tolls and defrauding the public is that practiced by the subsidized Pacific lines in paying \$900,000 per annum to the Pacific Mail Steamship Company to forego competition, and then charging the public two or three times this sum to recoup themselves for such illegal diversion of corporate funds.

A unique case is that of an Ohio corporation, where the men who afterwards became the directors and managers, gave their notes to certain bankers for money borrowed for the purpose of buying the shares which were to give them control of the corporation, and, having by this means secured control, applied—in whole or in part—to the payment of such notes, the first mortgage bonds of the company to the amount of \$8,000,000, although such bonds had, in compliance with the requirements of the statutes of Ohio, been issued for the express purpose of equipments, double tracks, and other betterments.

Many auxiliary lines have been built at costs ranging from \$8,000 to \$15,000 per mile, and capitalized at two, three, four, and even five times their cost, as in the case of the 107 miles of the Kansas Midland, costing, including a small equipment, but \$10,200 per mile, of which 30 per cent. was furnished by the municipalities along its line, yet with construction profits and other devices this road shows a capitalization of \$33,000 per mile.

Or take the 1,055 miles in Kansas of the Chicago, Kansas & Nebraska, built by the Chicago, Rock Island & Pacific in much the same way and capitalized for \$38,000 per mile. Kansas municipalities aided to the extent of \$2,500 per mile in building this road, receiving the stock of the company in exchange for municipal bonds; now, however, foreclosure proceedings are pending in the interest of and at the procurement of the parent company (which owns, practically, all the bonds and stocks of the auxiliary line except the stock issued to the municipalities), whereby the municipalities are to be despoiled of this \$2,500,000.

This is no uncommon device for plundering the farmer and other taxpayers; and railway presidents, directors and managers, who would scorn to put their hands in the pocket of the farmer and abstract a (single) silver dollar, rarely hesitate when, by the devices described, they can take from the same farmer and his congeners a lump sum of \$2,500,000, and the successful workers of such schemes, by one and the same act, acquire vast sums and a reputation for great financial ability.

Another type is found in the Marion & McPherson line of the Atchison, Topeka & Santa Fé,† built largely from old and much worn material, and or-

* See the seventh annual report of the Columbus, Hocking Valley & Toledo Railway Company.

† Known as the "Atchison" in New England and as the "Santa Fé" in the West.

iginally capitalized for \$28,000 per mile, being more than three times its cost. Under the recent reorganization of the Santa Fé, each mile represents a much larger sum; but how much larger I am unable to ascertain from the accounting officers of that company, to whom application was made for definite information.

Other Santa Fé lines show peculiar phases of railway administration. For instance, the Santa Fé, jointly with the St. Louis & San Francisco, built the Wichita & Western, extending 125 miles through a sparsely settled district and not paying operating expenses, yet the Santa Fé, although having another and parallel line—the Southern Kansas—less than twenty four miles south of the Wichita & Western, doubly paralleled itself by building a third line between the two: this third line, for one hundred miles, being eight to fourteen miles from the Wichita & Western on the north, and, for seventy miles, but ten to sixteen from the Southern Kansas on the south.

In this way has money been wasted in construction, the farmer unnecessarily burdened, the parent company loaded with an immense unproductive mileage, and rendered unable to pay fixed charges, and thousands of those investing in its securities reduced to sore straits, the reason for all of which is probably to be found in the profits—private or corporate—growing out of construction.

Perhaps the Santa Fé affords as fair an illustration as can be found of the ease with which twelve men, sitting in directors' chairs, can issue an edict for the creation of an hundred million or more of fiat property, the only evidence of the existence of which is found in reams of paper, and affording additional evidence of the great and growing utility of printers' ink as an instrument of advanced civilization. By this simple process and without any addition to the property of the corporation, the liabilities of the Santa Fé have been increased more than \$100,000,000, and while rates of interest may have been scaled down, the total of interest and principal have been scaled up. When an individual or firm fails, creditors usually accept large reductions of principal in adjustment; but when a railway company like the Santa Fé fails, they insist on doubling the principal and increasing the total of interest.

Although the earnings of the Santa Fé, in 1888, amounted to \$2,944,529 less than operating expenses and fixed charges, the managers paid an unearned dividend of \$2,625,000, which, with other enormous additions to the liabilities, are to be an endless burden upon railway users and the warrant for the execution of unjust tolls.

The Santa Fé's recently acquired control of the St. Louis & San Francisco lines—which are to be operated as a distinct property—is a remarkable instance of the fiat process of multiplying securities without the addition of one dollar's worth to the world's stock of property.

The St. Louis & San Francisco controlled 1327 miles of railway, capitalized for the enormous sum of \$70,402,800, being \$52,200 per mile. The Santa Fé

acquired control of this property by issuing \$30,000,000 of new Santa Fé stock, not to retire the stock of the "Frisco" but to buy it and place it in the treasury of the Santa Fé and apply such dividends as may accrue to the payment of current Santa Fé liabilities.

The result to the railway user will be that, whereas the "Frisco" property has been represented by \$70,402,800 of "Frisco" and auxiliary stocks and bonds, it is now represented by that sum plus \$30,285,175 of Santa Fé stock, which is an addition of fictitious capital upon which the user is expected to furnish revenue, and the owners of Santa Fé shares have that amount of water injected into their holdings.

The Santa Fé holds 711,120½ shares, of the par value of \$71,112,000 of stock of auxiliary lines built wholly from land grants, municipal aid, and proceeds of bonds sold, and for this immense number of shares the only consideration—as shown by the Santa Fé ledger—was \$4,000, or a fraction over half of one cent a share. For 663,306½ of these shares, of the par value of \$663,306½, the only consideration shown is \$15,000, being at the rate of 11½ shares of the par value of \$1,122.00 for one cent. Such is the stuff which passes current as railway securities, and on which the railway user is taxed to pay dividends.

The Santa Fé affords a most instructive example of what may be accomplished in the way of multiplying securities by the hoodooing of accounts, by reckless construction, the payment of stock dividends (\$18,000,000), the giving of vast quantities of stock to the purchasers of bonds, the payment of unearned dividends and the creation of \$100,000,000 and more of fiat securities at one or two sittings.

The seventy miles of the Columbus & Cincinnati Midland, built at a cost of about \$17,000 per mile—of which some \$1,500 per mile was donated by the people along its line—is capitalized at \$57,000 per mile, and earns nearly twelve per cent. on the money furnished by its builders, yet appears to earn but three per cent., while in its immense fictitious capital the foundation is laid for further exactions.

The enormous profits accruing from the operation of the construction company, and the unjust tax thereby forever imposed upon the public, is exemplified in the case of the "Credit Mobilier" and other construction devices connected with the building of the various Pacific lines, out of which grew no little corruption of legislators, the ruin, politically, of promising statesmen, and the amassing of so many great fortunes, typified in the case of the four men who built the Central Pacific and whose united worldly possessions in 1890 are said to have been but \$120,000. Now, however, their estates are estimated at more than \$120,000,000.

Mr. Poor states that "the cost per mile of the roads making returns (1888) as measured by the amount of their stocks and indebtedness equaled nearly \$90,732 as against \$38,000 for 1887," being an increase of \$2,125 per mile, and at the price recently prevailing it would require 145,000,000 bushels of the farmers' corn annually to pay 5 per cent. on the

Include such lines as the Kansas Midland, etc., built at costs ranging from \$10,000 to \$15,000 per mile.

¹Financial Chronicle of May 31, 1890.

²Poor's Manual, 1889, page 723.

³Ante, page 5.

water absorbed by railway securities in one year, and by such waterings yearly it will take but fourteen years to absorb the entire corn crop to provide revenue on the added fluid. How long shall this process be permitted to continue?

Mr. Poor also states that, in the eleven central farming states, railway earnings have in eighteen years increased 175 per cent., and the bushels of wheat and corn grow 160 per cent.; yet he forgets to tell us that such has been the shrinkage in the prices of farm products that the value of the wheat and corn crops in these states increased but 57 per cent., showing conclusively that the railways are taking a constantly increasing proportion of the proceeds arising from the sale of the products of the farm.

This is still more clearly shown on the same page in the statement that in these states railway revenue in 1870 was \$12 for each unit of the population as against \$18 in 1888. Thus the *per capita* transportation tax is shown to have increased 50 per cent.

Mr. Poor says, "With these facts before us, it is difficult to understand the extraordinary antipathy to railroad corporations in the West."

If such antipathy exists, possibly Mr. Poor could understand it if he would but look at these facts, and others herein stated, in all their nakedness, keeping in view their true bearing upon the greatness of the nation's industries.

That no such antipathy exists is shown by the fact that, while the railways of Illinois are capitalized for \$42,450 per mile, they are assessed for purposes of taxation at \$7,863 per mile, those of Iowa are capitalized at \$38,069, and assessed at \$5,189, those of Nebraska are capitalized at \$40,172, and assessed at \$5,829, and those of Kansas are capitalized at \$52,155, and assessed at \$6,595 per mile.

We have seen some of the processes by which the investor is shorn, and an enormous fictitious capitalization piled up to aid in taxing the farmer and others. Is it any wonder that when his wares are selling at starvation prices, the farmer becomes restive under the burdens thus imposed and seeks to replace present ownership by that of the nation?

According to Mr. Poor, there existed 156,082 miles of railway at the close of 1888, showing a capitalization—including floating debts—of \$9,369,398,954, to pay interest and dividends on which a toll is levied on all the industries of the country.

How much of this vast capitalization is real, and how much the fictitious outgrowth of the practices described?

Owing to the practices illustrated, it is impossible for railway companies to show the cost of their properties, and we are compelled to reach an approximation by estimating such cost, and thus determining the sum upon which revenue should accrue.

ESTIMATED COST PER MILE OF EXISTING RAILWAYS.

Grubbing and clearing	\$100
Right of way and land damage	2,500
Earthwork and rock cuttings	4,500
Bridges, culverts and masonry	3,000
Ties—3,000	2,000
Rails, splices, bolts and spikes	4,000
Switches, side-tracks, cattle-guards, road crossings and fences	1,100

Track laying, surfacing and ballasting	\$2,300
Depots, water-tanks, stockyards, shops and terminals	3,500
Equipment	4,500
Engineering, rents, interest, taxes, and contingencies	2,500
Total cost per mile	\$30,000

* That this estimate is more than ample is assured by the statement (in substance) of Mr. H. V. Poor that the capitalization of the roads built from 1880 to 1883 is double the actual investment and, could the fictitious capital be eliminated, railways, as investments, would have no parallel; and in the statement that within five years ending in 1883, "about 40,000 miles of line were constructed at a cash cost of at least \$1,100,000," being \$27,500 per mile; and that "in 1884 only about 4,000 miles of new line were constructed, the cost of which did not exceed \$20,000 per mile and perhaps not over \$15,000."

For each mile of railway costing more than \$30,000 per mile, ten can be found that have cost from \$8,000 to \$20,000. The eastern two hundred miles of the Kansas Division of the Union Pacific, built in the era of high prices, cost less than \$20,000, although now bearing a capitalization of \$105,000 per mile, but a well known manipulator—who made restitution of millions to the Erie—supervised its reorganization, which may account for the generous volume of water incorporated in the securities.

The Missouri Pacific line from Eldorado to McPherson, Kansas, a comparatively expensive prairie road, being located across the line of drainage, cost much less than \$10,000 per mile, as have thousands of miles of other prairie lines.

Possibly \$30,000 per mile is less than it would cost to duplicate the railways, east of Ohio, but the most of the mileage being west of that region where the cost, outside of a few mountain roads, is at a minimum, the estimate, if erroneous, certainly errs in placing the cost too high. Moreover, we have a factor of safety in the fact that the nation, to aid in building railways, has granted 197,000,000 acres of land, a large part of which has passed into the possession of the railway companies, and from which they have realized vast sums, probably more than \$300,000,000, to which should be added state and municipal aid and individual donations to the amount of \$150,000,000 to \$250,000,000.

Taking no account of the sums loaned the Pacific railways, the people have contributed at least \$2,000 per mile towards the cost of existing railways, hence we are warranted in assuming that \$30,000 per mile is the maximum sum on which the user should furnish revenue, less such revenue as the corporations derive from rents, interests and dividends, from lands, buildings, railways, mines, stocks, or bonds bought or brought into existence by an expenditure of any part of such \$30,000 per mile or the earnings therefrom, such revenue, aside from traffic earnings, being now about \$90,000,000 per annum.

It is claimed that in determining the amount of capital on which the rates of toll shall be based, the people are entitled to no voice; but, as the compensation is to be reasonable, and the measure of such

* See Poor's Manual for 1884 and 1885.
